Since the sutlers took possession of the ground assigned to them they have increased in vast numbers. Instead of a dozen tents selling every species of goods under the sun, from Cheshire cheese to buttons, and from canvas and to the last volume of Miss "Shilling Library," we have men of speculations—the tinman, saddler, and armourer the shoemaker, and the baker. Even the soda-water maker has erected his shop; and taverns are to be seen, with "Qui si vende vino e altre cose," "Vente de vins et d'eaux gazeux"—the spelling is not mine—and Jews of every country, venders of every sect, clime, and denomination, are busy The sutlers' town has joined hands with that of the labourers', and thus we have the foundation of a city which will soon have its streets and lanes marked by names, whilst quarters of them will be recollected in the future as the "Crosts' Suburb," the "Jewry," "German-land," &c

The most curious of all these quarters at present is that of the Croats, of whom there are not less than 3000 settled in the vicinity of Balaclava. These men are not Sclavonians, as their name would lead one to suppose, but Mussulmans of the Austrian and Turkish borders. They have all the habits of the East; they provide their own meat and water when on shipboard, refusing to consort with Christians. They are large and muscular men, capable of the heaviest labour, and exceedingly tractable. Their martial spirit, exercised by the constant habit of carrying arms, rendered them troublesome at first; and it became necessary to deprive them of the little arsenals of pistols and knives which each of them carried; and the possession of which made them dangerous, not so much to the English, of whom they have a wholesome dread, as to each other. They were furnished on their arrival with large quantities of planks and beams, with which to erect huts for themselves. Children as they were in the art of building, their efforts went no further than the formation of rude shelters, beneath which they retired for the night, braving alike the frost or the rain which penetrated through the numerous apertures in their ill-contrived sheds. But, though rude, and ill arranged, these edifices were of the most picturesque description—just as in their rude method of clothing they exhibit an instinct knowledge of the harmony of colours. These buildings of theirs, however, were not permitted to remain, and rows of large huts were made for them, in which raised platforms line each side of the place, and each man stretches his carpet on which he squats and sleeps without much thought of personal cleanliness. They were not long established in these square and unpicturesque houses, than they began to build galleries outside, with rails to recline against; and they sowed melon-seeds and barley and beans which created a little verdure round them. In the long evenings, after work is over, they may be seen reclining in picturesque groups on these outer balconies, smoking pipes, and lazily inhaling the evening breeze. The narghilé, which is their favourite relaxation, they could not at first obtain, but necessity, the mother of invention, spurred their dull intellects, and you see them smoking narghiles not perhaps of the most orthodox description, but certainly acting as well as the most perfect of its kind. The base of this instrument, instead of being a bulb of crystal, is a pickle-jar still labelled "gherkins," or a flask from some medicine-chest in which "Pulv. rhei" no longer reigns supreme.

But these Mussulman Croats have no more remained unattended followers than any other portion of our army; and several picturesque erections of wood or canvas occupy the ground near them, where the fragrant chibouque and coffee, the perfumed narghilé, are obtainable for a few paras, and where those who are willing to expend find everything that is a luxury to the Oriental. Indeed, there is not one of these men who is not perfectly able to afford himself every enjoyment of this kind; for, in addition to the rations which are served out to them daily, they receive half-a-crown a day, which, being regularly handed over to them, makes each man independent, and even able to save for future wants. Whether at work at the roads, or driving piles at the quays, or carrying like the *hammals* of Constantinople, the Croats of Balaclava are eminently picturesque; but they are nowhere more so than when at rest, either in their *cafés* and balconies, where their variegated and richly-coloured rags form scenes which would have delighted Etty or Müller, had those gifted artists been here to see them. As it is, the quarter which they inhabit has a set of features peculiar to it, and will probably be remembered as the "suburb of the Croats," long after the last of that race has ceased to tread the soil of the Crimea.

July 11, 1855.

It will perhaps be some chat startling to you to learn that the pay announced by Lord Panmure to the House as intended to improve the position of the army before Sebastopol, has not been received here with any marked degree of favour. The subject of pay and allowance is one on which soldiers are generally talkative. It has often been asked, long before the measure contemplated by Lord Panmure was announced, what reason there could be for withholding from the soldiers in active service before Sebastopol the allowances granted to those who serve in the Colonies—the climate of the Crimea being almost as dangerous as that of the West India islands, and the service there much more active and more dangerous. There is no doubt that double pay is a very great boon to soldiers; but, in order that it may be felt, it must be palpable, and the clause which declared that the money would not be repaid, but must remain in the savings-banks in England, effectually destroyed whatever charm might have been made upon the mind of the soldier. "What knows" says the men—(this I have myself heard)—"who knows how long I may live in the Crimea, or whether I shall ever get out of it, and what use is money then to me in the savings bank?" Such as the reasoning, and such undoubtedly the feeling here upon the subject; and this is rendered stronger still by the impression that the measure is not adopted as an act of justice to the old men who have fought, as for a stimulus to recruiting. "It's a very good way," says Johnny, to do doubt," says Johnny, to raise more than 1000 recruits a week; but I wish they would put the money in our pockets." That this is a measure of expediency rather than one intended to reward courage is rendered more apparent by the fact that [illegible] out from a share in it. Nothing, indeed, can be more [illegible] the manner in which the officers on active service [illegible] by the Government. Here are a number [illegible] their months with the fire of the enemy, [illegible] [illegible] [illegible] whose interest is great. Why should they [illegible] which is extended to the lower ranks? But the [illegible] Whilst these officers are toiling, and many of them laying down their lives for the service of their country, an army of Turks is in course of formation at Constantinople whose officers are to enjoy double pay, Indian allowances—advantages of every sort, in fact, which are denied to the regular service. This Turkish Contingent will doubtless act admirably when it comes into the field, but in the meanwhile why, in the name of common sense, should it be so favoured? It may be urged that the officers of the Turkish Contingent are drawn chiefly from the Indian service, where it is customary to give large pay and much comfort, whilst in the field. Such officers would refuse to serve unless they received their habitual reward. But [illegible] the officers in the new corps are not from the [illegible] the objections which are now made should [illegible] that which was raised on [illegible] many partakers of the same [illegible] to them in attainments and [illegible] that they have not, as a body, seen service in this war.

Nor are the feelings of our officers spared in other matters. They are neglected in more ways than one, and, strange as it may seem, there is no money at head quarters to pay them. It has been a common cry in the Camps that there is not a penny in the office; but there is of course open to those who have the means; but [illegible] what the Jew bankers in Camp charge for risk and [illegible] other additional expenses indentured bills on London, which is at present a price money is to be obtained at this moment in the [illegible] able to ascertain the cause of the emptiness of the army chest, [illegible] positively refused to speak a word to be told, but the truth is that the officers have not had any for a considerable time.

July 21, 1855.

Another week has elapsed without any considerable change in the relative positions of the armies, and it is needless to hazard conjecture as to when our Commanders will think fit to reopen fire against the town. The time has not been inactive since the Green hill and Gordon's Batteries are gradually being deprived of their heavy guns, which are being moved to the works in the [illegible] as these works have become as perfect as art can make them: and, at the same time, daily progress is made in the covered ways that lead towards the town. Of these the most prominent are those which the French are pushing against the Malakoff, which can be seen with ease from the heights. The advance is slow, as it proceed, however, without considerable annoyance of every kind to working parties, which they diligently shell, so that at night there is a continual succession of large flashes; whilst the bursting shells, with their lighted fuses turning round and round, are visible as they describe their parabolas, and look to the eye like glittering balls thrown up by a gigantic juggler—falling, perpetually to be thrown up into the air with unvarying agility. Our plans since the failure of the 18th have been rather to harass the enemy by mortar practice than to damage the works by direct firing—the [illegible] of the port will be complete when the French have entirely armed their [illegible] on the extreme right, while [illegible] ping moored in the harbour. The former, of these [illegible] retired to a greater distance, but cannot be moved [illegible] they are at present on account of the boom of sunken [illegible] lie. A few small steamers still remain [illegible] to shell the Malakoff

The Russians who have been forced to abandon some of their works in the vicinity of the White-works and Mamelon, now the Lavernaia and Brancion Redoubts determined, on the morning of the 19th, to destroy the advanced parallels finished by the French towards Malakoff, and they issued in force out of the Black Battery. They were met by heavy fire from our allies, and some pretty mortar practice was made against the Russian works. The Russians, repulsed at the first onslaught, came to the charge a second time, but in twenty minutes after the commencement of the affair they were finally driven out, and retired into their works with the loss of many killed and wounded, and one officer and five men taken. An officer of the 42nd, whilst looking on from one of our trenches, was killed by a round-shot

The French cavalry in advance have made reconnaissances in advance of Baidar, and penetrated through the Phoros pass. The Russians were said there were no Russian soldiers on that side, or between Phoros and Yalta. It will be interesting to know this fact, and reconnoitre the head waters of the Belbec which trends in a very curious way to the northward, and may offer us future facilities

Great numbers of pack horses arrive here daily, and their number will soon reach 10,000. Of these the Turks have already received 3000, which they are to feed. The want of men is now seriously felt, and those who are here, having too much work, are not improved by having to attend to more than they care for. The same causes act on the cavalry, where there are more men than horses, and the service said [illegible] from the want of forethought in providing them. Should no movement into the field be contemplated, we shall again winter here. Indeed, as large depôts are to be formed before the end of September, when the weather renders the Black Sea dangerous, there is reason to suppose that whatever may be the future operations of the Allies, a considerable force will still remain here. It is not uninteresting to note, therefore, that the Croats are detached to improve the road between Balaclava and Kadikoi. Thence to the front it is still the same unmetalled way as we suffered from last winter.

Omer Pacha and suite left Balaclava for Constantinople, where he has been preceded by Skender Pacha. There were rumours about of disagreements between the former and General Pelissier. These I can neither confirm nor deny.

It is also said, in camp quarters very positively, that General Simpson has resigned. This is denied by many, although it is generally said that the Commander-in-Chief is anxious to be discharged of the burden of his command.

General Dacres ill of cholera. General Filder has found his health failed, and goes to England. We hear that he is succeeded by Sir John Michel, K.C.B., having formed part of one of the commissions sent out here.

Since I wrote respecting the increase of pay, proposed by Lord Panmure, the news of a change in the measure has been received and gives much more satisfaction.

THE SORTIE ON THE 16TH JULY.

The letters received from the Crimea by last mail contain particulars of the sortie made against the advancing gap of our allies on the Mamelon hill, on the morning of the 16th ult. The attack was preceded by the usual characteristic yell of the Russians, but this cry was only raised a little moment of coming upon the troops covering the working parties. The night was dark, and a high wind was blowing; and to these circumstances it was owing that the approach of the enemy was not previously ascertained. The shout was sufficiently loud to be heard at some of the pickets in front of the camp, and appeared to proceed from a large body of troops. A sharp fire of musketry lasted about half an hour, and then subsided; about an hour afterwards, another fusillade was noticed in the same direction, but speedily terminated.

The explanation given by the French is, that the enemy came as friends, and in great force upon the working parties before the latter had time to make the necessary arrangements to meet the attack. Hence so much confusion ensued at first, and the French not [illegible] several struck down, and to retire to the next covert way. At the time of the sortie of the allies were converting the small redoubt on which they had lodged themselves in a line in front of their advanced trench. These being joined together, [illegible] established with the trench trenches, the latter [illegible] of the [illegible] up the Malakoff, all would be completed in [illegible] and [illegible] the progress of this work, and destroy [illegible] already done.

[illegible] therefore, as the French had retired, the enemy commenced [illegible] of [illegible], and filling up the trenches. The French [illegible] by their reserves, and speedily formed again for the attack, and [illegible] evidently upon the Russians. The latter were taken [illegible] a number had had some their arms and accoutrements and were busily engaged in shovelling down the parapets. After [illegible] the volley, the French charged with the bayonet, and a precipitate retreat of the Russians followed. A large quantity of arms and apparel were left in the hands of the French.

The engagement of the attack occurred between one and two o'clock. The enemy did not attempt to renew it. In the course of the night the French not only repaired the mischief done by the enemy, but extended the trench considerably. The Russian loss is said to have been very severe compared with that of the French, numbers having fallen in the second charge. One officer and several men were taken prisoners. The French loss is killed as reported as one officer and thirty men.

OFFICIAL DESPATCHES.

DESPATCHES FROM GENERAL SIMPSON.

Head-quarters, July 30, 1855.

Lord Panmure has this day received two despatches and [illegible] enclosures, of which the following are copies, addressed to his Lordship by Lieutenant-General Simpson, Commanding her Majesty's forces in the East:

Head-quarters, Camp, July 17, 1855.

My Lord,—I have the honour to submit for your Lordship's information the accompanying letters from Lieutenant-Colonel Campbell, 50th Regiment, one referring to his personal services, and the other to those of a party of the 50th Regiment on the occasion of the capture of the Quarries in front of the Redan, on the night of the 7th inst.

With regard to Lieutenant-Colonel Campbell's own services I think it right to inform your Lordship that it had, upon inquiry, that the original and lingering Quarries on the night in question, and of repelling the repeated attacks of the enemy, was confided to that officer after he had effected the assault, and was, in fact, a separate and detached command from that of Colonel Shirley, who was also as general of the day in the trenches at the right attack; the despatch of that [illegible] Field Marshal Lord Raglan from whose address I was directed to [illegible] performed by the brave men who were under the [illegible] direction of Lieutenant-Colonel Campbell.

The Lieutenant-Colonel's letter, recording the good conduct of the party of the 50th Regiment under his [illegible] have, &c.,

JAMES SIMPSON,
The Lord Panmure, &c. &c. Lieutenant General Commanding.

Camp, Light Division, July 13, 1855.

Sir,—The despatch of the late lamented Field Marshal Lord Raglan, of 8th June, mentions that I commanded the storming party on the Quarries on the 7th ult. I beg, therefore, to request, respectfully, that you will be pleased to bring to the notice of Lieutenant-General Simpson, Commanding the Forces, that not only had the honour of commanding the storming party, but that, having been twice wounded in the assault, I retained the sole command on each of the Quarries, not only of the original attacking force and its supports, but of all reinforcements, during the whole night, until relieved at seven a.m. on the 8th. The despatches must have explained already that the enemy made several desperate efforts during the night to regain the works, and that on three occasions recovering in numbers, succeeded in re-entering, but were on each occasion driven back at the point of the bayonet. The entire night was, indeed one continued struggle for this position, the fatigue and anxiety of which I have never recovered from. When Lord Raglan's despatch was compiled I have reason to suppose his Lordship had not received the details as my own report to Colonel Shirley, general of the trenches, was unavoidably delayed in consequence of my wounds, and not being able to write. In addition to myself, [illegible] of the 50th, I performed an important duty, to the best of my abilities, and successfully. I therefore submit this statement to the Commander of the Forces, with the hope that he may be pleased to have my services on this occasion recorded and particularised. At present, several officers have equal praise in the 50th, who were not on the quarters at all. I have, &c.,

ROBT. CAMPBELL, Lieut.-Colonel Commanding 50th Regiment.

Lieut.-Colonel Waugh, Military Secretary, &c. &c., Head-quarters

Camp, July 13.

Sir,—I have the honour to forward the enclosed letter from Lieutenant-Colonel Campbell, of the 50th Regiment, detailing the services performed by a party of the Regiment under his command on the night of the 7th of June. I took care to mention the services of the 50th Regiment, which appear to have been overlooked in the late Field Marshal's despatch.

I have, &c., H. SHIRLEY,
Colonel 88th Foot, commanding in the trenches [illegible] 7th June.
The Military Secretary, Head-quarters

Before Sebastopol, July 8, 1855.

Sir,—I beg to draw your attention to the meritorious conduct of Lieutenant-Colonel Campbell, of the 50th Regiment, during the night of the 7th June, of any mention of the 50th Regiment, and the attack and defence of the Quarries, during the night of the 7th June, in my report, as they were not given over to me as part of the attacking party; but the officer commanding the party informs me that they, being originally told off as a working party, were directed by the Engineer (Captain Browne) to throw down their tools and that they were moved by you as a support to Egerton's Rifles, which they moved to support the attacking party, and did good service in clearing the Russian trenches, and in the defence throughout the night, as the [illegible] list of killed and wounded attests (53 out of 180). I am sure you will be glad to find until the flag of truce, when their bodies were found in the trenches they had gained.

The officer in command of the party, Captain (now Major) Cure, reports that [illegible] conduct of Lieutenant Stone, who was killed at the head of his men charging the Russians in their trench with the bayonet, and of Captain Elton, who, with a small body of men, formed a covering party on the right to those who were reversing the trench, is particularly deserving of notice. To this also of Lieutenants Scott and Williams, who were most actively performing their duties.

I regret that the Commander of the Forces may deem this statement sufficiently satisfactory to enable him to move in the subject.

I have, &c., ROBT. CAMPBELL,
Lieutenant-Colonel, 90th Regiment, Commanding Assault.

To Colonel Shirley, Commanding 2nd Brigade, Light Division.

Before Sebastopol, July 17, 1855

My Lord.—I have the honour to transmit herewith the nominal and numerical return of casualties in this army, from the 13th to the 15th instant; also the weekly report of the Inspector-General of Hospitals, which will be sent during to your Lordship, as showing a steady decrease in the number of cases of spasmodic cholera.

I have to report to your Lordship. Our siege operations are steadily progressing.

[illegible], about seven o'clock, a sortie was made by the enemy on the [illegible] French works in front of the Mamelon: the [illegible] and fire of musketry was exceedingly heavy, but I have not as yet been made acquainted with any particulars of it.

I regret to have to announce to your Lordship the death of Captain Rowan Fraser, of the 42nd Highlanders, a very talented young officer, who was killed in the trenches of the night attack, last night, by the splinter of a shell.

I have, &c., JAMES SIMPSON,
The Lord Panmure, &c. Lieutenant-General Commanding.

Head-quarters, Camp before Sebastopol, July 17, 1855

Sir,—I beg to transmit to you the weekly state of sick, I have much satisfaction in being able to report to you a continued improvement in the health of the army. There has been an increase of fever cases this week, but a marked decrease in both the frequency and severity of bowel affections.

I have, &c., JOHN HALL,
Inspector-General of Hospitals.

To Lieutenant-General Simpson, Commanding in Chief.

RETURN OF OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES KILLED AND WOUNDED FROM THE 13TH TO THE 17TH JUNE, 1855, INCLUSIVE.

[illegible]

[illegible] 30th Foot: Private William Ward
[illegible] Battalion Scots Fusilier Guards: Private James Kidd. 49th Foot: [illegible]
[illegible] 41st Foot: Private T. [illegible]

WOUNDED.

Cavalry: Thomas Hoare, 17th Foot, slightly, July 15 [illegible]
[illegible] Foot: Private Wm. [illegible]
[illegible] Lieut. John Bowes severely, July 16 [illegible]
[illegible] Lieut. Charles Bowes severely, July 16 [illegible]
[illegible] Private Wm. [illegible]
[illegible] Private Wm. Mahon severely [illegible]
[illegible] Private [illegible]

[illegible] Foot: Private [illegible]

[illegible] Foot: Private [illegible]

[illegible] Foot:

BURIAL AT SEA.—SKETCHED BY J. W. CARMICHAEL.—(SEE PRECEDING PAGE.)

THE GUN-BOAT "RUBY," AND BOATS OF "THE ARROGANT" AND "MAGICIENNE" RECONNOITRING THE STRAIT OF STRALSUND.

RECONNAISSANCE OF THE STRAIT OF STRALSUND.

On the evening of Friday, the 13th ult., Captain Yelverton, commanding the detached squadron in the Gulf of Viborg, made a reconnaissance of the Strait of Stralsund, leading to Viborg, in the gun-boat *Ruby*, accompanied by the armed boats of the *Arrogant* and *Magicienne*. This operation was stoutly resisted by the enemy, who kept up a very heavy fire in the boats engaged on sounding, as well as on the *Ruby*, from an earthwork erected on the left bank, and from two steamers and some large row gun-boats. The reconnaissance was effectually accomplished, notwithstanding the severity of the fire, which was returned with admirable effect by the boats' howitzers, rockets, and the long gun of the *Ruby*, with much slaughter to the enemy.

The passage was found to be completely blocked up with piles and masses of granite; and some unfinished earthworks on either side showed the apprehensions entertained of the insecurity of the defences. We regret having to record the loss of Mr. Story, midshipman, and one seaman killed and nine wounded.

BURIAL AT SEA.—A SKETCH IN THE BALTIC.

To those who have never witnessed a ceremony of this nature a few details may be acceptable. It is, we believe, the custom in the Navy always to inter the dead on shore whenever opportunity offers; but when the ship is at sea, or lying off an enemy's coast, where a landing is impracticable, the following routine is usually observed:—Immediately after death the body is sewed up in a hammock, together with two 68lb. shot, and then placed between two guns on the main-deck, to await the burial. This

"THE CÆSAR."—"HANDS PIPING TO BATHE."—(SEE NEXT PAGE.)

generally takes place the next day. On the tolling of the bell all work in the ship ceases for the time, and a funeral procession of three boats is formed alongside. In the first are the body of the deceased, which is [illegible] and [illegible] on the gangway; and in the [illegible] the [illegible] and others who attend as mourners. The grating and Union Jack (which serve as bier and pall) having been properly arranged in the stern of the centre [illegible], the oarsmen are dipped to half-mast high, and the boats proceed on their solemn errand. When they have arrived at a convenient [illegible] from the ship, the [illegible] men of each mess in the [illegible] with the exception of the [illegible] who remain in charge of the ship, are [illegible] to the [illegible] boat. The [illegible] selected as the coxswain of the first boat is [illegible]. At the command of the steersman, the oars are [illegible], and the boats return to the ship in the same order as before. It is not [illegible] to our sailors to say that nothing can exceed the decorum and propriety with which the whole ceremony is conducted. [illegible] men of rough manners and habits, there are occasions on which, more than they are at [illegible] to the [illegible] of our nature, and those good qualities which all respect, [illegible] to the hearts of Englishmen.

THE [illegible] SEA.

"The solemn words are said [illegible]
[illegible] the lead;
In its vast unfathomed [illegible]
The [illegible] have laid to rest.
The fire-flying of waves [illegible] of the keel, the breeze,
Is all his ocean grave—all his storms of life are o'er.

His messmates sit on well-known places of their [illegible] mess,
The [illegible] in their comrade has not a trace she did now be seen;
The waves still roll and [illegible] chamber of his sleep,
Down, down in the [illegible] as though he had [illegible].

[illegible] few [illegible] him not a [illegible],
Cradest him!" Sad [illegible] Who [illegible] years heard?
When seated at their mess [illegible] not [illegible] less,
Each shows his kind distress though he does not speak a word.

Some think that when again they [illegible] that restless mai
They'll be [illegible] and [illegible] messmate's place of rest,
And, seeing sadly [illegible] wish that when they die
In each hand they may tie with those they have lov'd the best.

[illegible] will not come and go without his fitting woe,
Methinks 'tis doubly so when he meets us on the sea:
The World is then so small, a Ship contains it all -
The dead man 'neath the pall! How large a part was he.

L.

PIPING ALL HANDS TO BATHE.

On a sultry day in July or August, the boatswain's signal piping all hands to bathe must be a very welcome one to all on board. A few days ago while the ship's company of the *Cæsar*, lying off Cronstadt, were enjoying themselves in the ballin, a seaman stoker was suddenly taken with the cramp and sank below the surface of the water. Every assistance was tried by those around him to save the poor fellow from sinking, but all in vain. At last Mr. John Ward, the boatswain of the ship, hearing the report of one of his messmates being in the act of drowning, immediately took off his jacket and plunged into the sea, and, to the joy of all hands on board, he succeeded in bringing the poor fellow to the surface of the water by the hair of his head, but not until life was nearly extinct. This is the twelfth person this gallant fellow has saved from a watery grave—the second in the *Cæsar*.

LUBCOCK'S RECONNOITRING REFLECTOR.

THIS simple and ingenious apparatus has just been patented by Mr. John Lubcock, of the eminent banking firm of Munsion-house-street, and is intended for reconnoitring purposes, giving the person using it, under the cover of any defence-works which can afford personal protection, the power of inspecting objects on either side of him without directly exposing himself to the fire of an enemy whose position he is anxious to obtain information about.

The apparatus consists of a simple reflector of glass, or polished metal, attached to a brass bar (which fits on the end of the telescope tube, as in the Engraving), this is connected with a divided vernier and screw for adjusting the angle of the reflector, and opens from the front of the eye-piece with a spring

The whole can be attached or removed from the telescope in an instant. At the present time its introduction must be a great boon to officers and others serving at the seat of war, and the expense, being of the most trifling character, puts it within the means of every one.

THE LATE EARTHQUAKE.—The east of France from Valence [illegible] Metz felt very perceptibly the shock of earthquake which, as has been already mentioned, did some slight damage at Lyons on the 25th ult. at noon. At Orleans three or four shocks were felt, which continued during a period of about 30 seconds. The shock of the earliest at was stopped [illegible] the same time as strong a shock was felt at Joinville-le-Pont—the coincidence, which I should think either [illegible] and [illegible] of production from east to west. Several of the ordinary rooms in upper parts of houses were cracked, others [illegible] were thrown down. Some inmates fled from the attic and several farms in the neighbourhood were [illegible] to make that peculiar lowing [illegible] denotes a fear of approaching danger. The shock at Besançon also lasted [illegible] about 30 seconds. The furniture in some rooms was displaced, the [illegible] ringing, and some ceilings cracked. There was no particular atmospheric [illegible] to announce the phenomenon. The weather was wet and stormy, and the barometer above "variable." At Belfort, in the Doubs, the shock was violent, several chimneys being partly thrown down and others damaged. At Belvoir, the same department, the shock, which lasted six seconds, was so violent that the [illegible] were felt to be [illegible] chimneys were thrown down here, and [illegible] walls were much cracked. The movement was accompanied by a rumbling [illegible] and by a strong smell of sulphur. At Strasbourg the shock was felt in the midst of a violent storm and heavy rain. The clock in the house of the keeper of the cathedra., and a waiter on the platform of the building was stopped. The water in the reservoirs was so agitated as to flow over the [illegible] of its basins. The shock lasted [illegible] seconds. In the upper part of the [illegible] as the soldiers ran out in great haste, imagining the house was about to fall. At Dijon the shock was [illegible], was felt in the direction of north-east to south-west. [illegible] Geneva, in Italy, Switzerland, and part of Germany. [illegible] at that [illegible] extended to all those countries. The time indicated varies from ten to twenty minutes past one, but the [illegible] is generally only caused a difference of clocks. Among other places over the shocks were felt were Erlach, in the Oden-wald, Carlsruhe, Erlangen, the Bade Oberland, Stuttgardt, Bayer-sburg, Esslingen, Ptolemgen, Aix-la-Chapelle, Spa, Liege, Namur, and three out-stations were felt; they went from the north-east to the south-west, and were strong enough to shake the windows, ring bells, [illegible] light articles of furniture; but the barometer and thermometer remained in a variation. The day was cloudy at the time, and the wind blew from the south-west. A letter from Milan of the 25th says, "A severe shock of [illegible] was felt at Milan to-day, in the direction of east to west. It [illegible] seconds, and terminated in undulations. Most of the clocks in the town stopped, and the thermometer [illegible] from 27 deg. R. [illegible] 14 deg. (33 deg. to 64 deg. Fahrenheit). The weather [illegible] the following morning [illegible] was thick [illegible]."—*Allgemein Mass-ung.*

"NO PLACE LIKE HOME."—An Irish Roman Catholic priest, lately dead in the United States, [illegible] on his coming [illegible] most pressing calls upon his Celtic fellow-countrymen, to avoid the shores of America. The Rev. gentleman, [illegible] the state of society on the States as not very desirable, and he devoted a great deal of time to convince the [illegible] that there is something in the atmosphere of the "land of liberty" [illegible] a tendency to destroy the seeds of the truth [illegible] Catholic peasant.

THE PUBLIC HEALTH.—(No. I.)

THE impure, or to say positively, condition of the Thames, has once more awakened attention to the necessity of sanitary reform. I have one remark, that health is the most precious of all blessings, the [illegible] deprives wealth of all its charms, and even [illegible] all the evils of poverty. To those who have to live by daily toil, illness is equivalent to the [illegible] wages; and hence it has been truly said, in reference to the [illegible] classes, that of all those [illegible] fever tax is the most costly. [illegible] that typhus and other epidemics, principally arise from overcrowding, [illegible], the decay of animal and [illegible] matter, with [illegible] causes here, the want of personal cleanliness, and the absence of effectual [illegible] to sink to the [illegible] collecting somewhat out of the [illegible] selected as the [illegible] At the commencement of the session, the [illegible] and the boats return to the ship in the same order as before. It is not [illegible] to our sailors to say that nothing can exceed the decorum and propriety with which the whole ceremony is conducted. [illegible] men of rough manners and habits, there are occasions on which, more than they are at [illegible] to the [illegible] of our nature, and those good qualities which all respect, [illegible] to the hearts of Englishmen.

Dr. Lankester, in a letter addressed to the Editor of the *Times*, has made a very valuable contribution to the literature of the subject. He says:—

> "Sir,—Your leading article of this day's date, on the Thames nuisance, is so admirably written, and contains so many facts and arguments which I have long had at my command, that I am induced to trouble you with a few remarks, in the hope that they may help to keep the question before the public mind, and to urge the necessity of immediate action.
>
> "The Thames is being rapidly converted into a [illegible] of the most virulent poison.
>
> "But life and health are not only assailed by the atmosphere being thus vitiated; the supply of water [illegible] the [illegible] is [illegible] another source of disease. Dr. Hassall [illegible] week before the Committee now [illegible] Drains, &c. Drains, and the following statement:—
>
> "At Vauxhall, the mechanical [illegible] matter, [illegible] [illegible] chemically, [illegible] the [illegible] At the south end [illegible] [illegible] [illegible]

IMPERIAL PARLIAMENT.

HOUSE OF LORDS. MONDAY.

Lord [illegible] moved for [illegible] former return on the Criminal Law.

The Lord CHANCELLOR did not oppose the motion, and after a short discussion the returns were ordered.

HOUSE OF COMMONS. MONDAY.

[illegible]

The House of Commons, at the morning sitting was occupied in Committee with the details of the Limited Liability Bill.

ITALIAN LEGION.

Lord GODERICH inquired of the Government whether there was any ground for a statement which had appeared in the newspapers within the last day or two, that it was the intention of the Government to form an Italian legion." He had understood that the Government had previously stated that it was not their intention to admit Italians into the Foreign Legion

Mr [illegible] said that at one time it was not the intention of the Government to admit Italians, but that now it was determined that they should be admitted as part of the Foreign Legion

BUSINESS OF THE SESSION.

Lord PALMERSTON called the attention of the House in the evening to the state of the public business, and, observing that there were reasons upon which he would not then dwell, why the Session should be closed by the 10th or 15th of next month (following the precedent of last Session), moved that on Tuesday orders of the day have precedence of notices of motion. The motion was agreed to.

CLAIMS OF OFFICERS.

On the order for going into a Committee of Supply,

Admiral WALCOTT called attention to the memorial of the Board of Admiralty relating to the claims of certain officers to be recommended for the honour of the Bath, complained of injustice done to officers, himself included, who had been passed over.

An address was seconded by Captain SCOBELL, and supported by Sir G. [illegible].

Sir C. WOOD said, the object of the motion, namely, that of framing the Bench of Admiralty to recommend to the Queen the grant of honours, was one which the House ought not to entertain. As he explained, unless the rules of the order were altered, it would be impossible to recommend the gallant officer. He opposed the motion.

Lord J. MANNERS and Sir De LACY EVANS supported the motion.

[illegible] STANSFELD said, [illegible] no more unreasonable appeal to the House of Commons from [illegible] than to the Government as to the grant of honours which ought to flow from the Crown. It was quite impossible to carry [illegible] any and several services if it was not left to the Crown, acting [illegible] to recommend to the Queen the persons to determine who should or should not receive these honours. He hoped, therefore, that Admiral Walcott would be content with having brought his services and those of his brother officers before the House.

Lord BOYNHAM suggested that in the arrangements respecting the new Order of Merit care should be taken that no regulations were unintelligible [illegible] Order [illegible] session. The motion was rejected.

SALARY OF SCOTCH SCHOOLMASTERS.

Mr. [illegible] ROBERTSON called attention to the inconvenience that would [illegible] in not regulating the salaries of the parochial schoolmasters [illegible] Act, [illegible] would expire without further provisions to meet [illegible] explanations upon the subject, and stated [illegible] making the necessary provisions next Session.

CIVIL SERVICE ESTIMATES.

The House then went into Committee of Supply upon the Civil Service Estimates.

Various votes were agreed to, after discussion, and the CHAIRMAN reported progress

THE SALE OF BEER BILL.

Mr H. BERKELEY moved the second reading of the Sale of Beer, &c., Bill.

Mr. HORSFALL expressed his regret that the Committee had come to the decision upon which the bill was founded.

After some [illegible] on the bill was read a second time.

HOUSE OF LORDS. TUESDAY.

THE ROYAL SOCIETY.

Lord BROUGHAM drew attention to the withdrawal of the grant of £1000 a year to the Royal Society. He contended there never had been a time in this country when [illegible] the amount of grant proposed by the expenditure of so small a sum as in this instance, for the judicious application of this income grant to the Royal Society had resulted in the greatest benefits [illegible] country and the world.

Lord GRANVILLE said that the state of the case of the Royal Society was this:—In 1850 the society applied for a grant, which was given, on the ground that [illegible] applicable to charitable purposes. The year the President wrote for a renewal of the grant, but the reply of the Lords of the Treasury was to the effect that, having received the application of the society, their Lordships were not aware that there had been any change [illegible] that they should have an annual grant from the public funds. He might say that the application would meet with serious and most favourable consideration from her Majesty's Government.

METROPOLITAN LOCAL MANAGEMENT BILL.

The Lord [illegible] presented a petition from certain ratepayers [illegible] St Pancras and Marylebone, praying that the jurisdiction of the old vestries under the Metropolitan Local Management Bill [illegible] in unions and simultaneously.

Their Lordships then went into Committee on the bill, and were for some time engaged in considering its details. The alterations were mainly verbal and very unimportant.

HOUSE OF COMMONS. TUESDAY.

NEWSPAPER POSTAGE.

Mr. [illegible] SCULLY called the attention of the House to the unsatisfactory state of the regulations regarding the transmission of newspapers to the British Colonies, the effect of which, he said, was very considerably to increase the expense of English newspapers to subscribers in Canada, Australia, and generally in the Colonies.

Mr. WILSON admitted that the recent regulations were not working [illegible] and that [illegible] authorities were now engaged in [illegible] with a view to improvement.

COMMISSARIAT.

Mr. LABOUCHERE then called attention to the large additional expenditure [illegible] and a half when the House was soon about to ask for the Commissariat. He believed the Government would hardly vote [illegible] Sir [illegible] Commissariat had been recently transferred from the Treasury to the War Department, he was unable to know whether any efficient control had been provided over its expenditure.

Mr STAFFORD was very glad [illegible] honourable gentleman had brought the matter in question. It was [illegible] than a twelve months [illegible] Department had [illegible] reorganised, and yet to this hour the House had received no information respecting the details. The Commissariat in particular [illegible] was much neglected.

Colonel [illegible] DUNNE expressed the alarm which was felt by all military men at the system [illegible] which was now going on of all military offices to civilians.

Mr. [illegible] SCRETARY OF THE EXCHEQUER said, as the Commissariat had been [illegible] from his department, he could give no information as to details. He admitted, the additional estimate was a large one, but it was [illegible] that the House and the country had insisted on the army being amply provided with supplies; and the Government had [illegible] to [illegible] wishes. He did not know that any report would be likely to [illegible] of the transfer of offices, or the details of the [illegible] there was [illegible] should lay it before the House

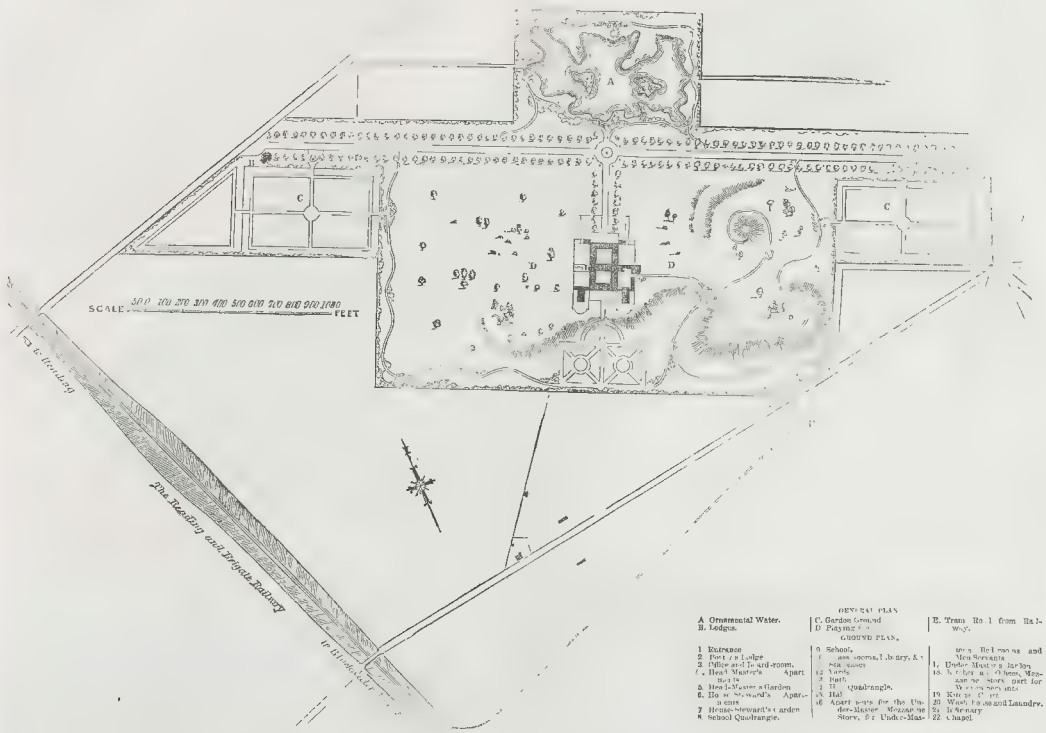
Mr. [illegible] thought that the transfer of the Commissariat to the War Department had [illegible] reorganised, and yet to this hour the House had received no information respecting the details. The Commissariat in particular [illegible] was much neglected.

Colonel [illegible] DUNNE expressed the alarm which was felt by all military men at the system [illegible] which was now going on of all military offices to civilians.

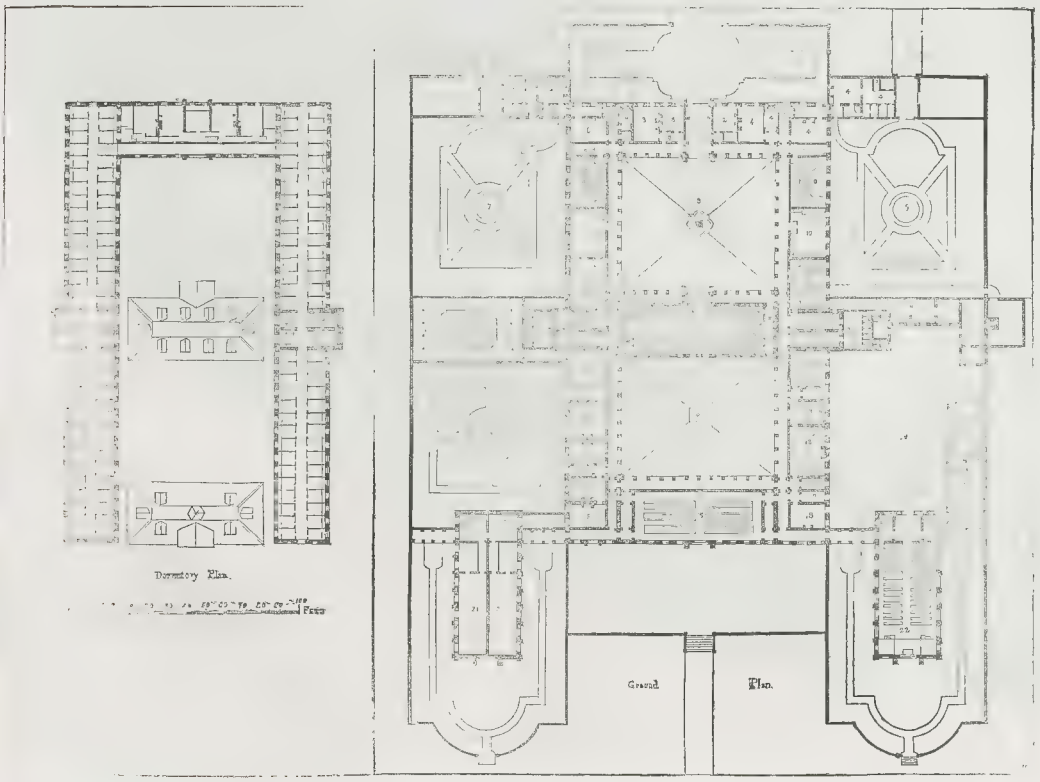
Mr. [illegible] SEC

THE WELLINGTON COLLEGE, NEAR SANDHU

SOUTH FRONT.—JOHN SHAW, ARCHITECT.—(SEE NEXT PAGE.)



GENERAL PLAN OF THE WELLINGTON COLLEGE.



THE WELLINGTON COLLEGE.

AMONG the most gratifying instances of the wisely-administered benevolence of the present age is the foundation of a class of national monuments, which, while they honour the memory of illustrious dead, still provide for the existences of the meritorious living. In such an enlightened spirit has originated the noble scheme of the Wellington College, for the education of orphan sons of officers in the military services of the Crown or of the East-India Company.

We have engraved upon the preceding pages the accepted design for the building, and quote the following details of the institution from an appeal which the Governors have just issued to the public:—

"The Committee, in the first place, address themselves to the memory of the Duke of Wellington, as it was very generously left to them to appropriate any amount that could be raised to his memory in a manner which, while it would perpetuate his name, would also afford the best practical assistance to the children of those who had served their country in the hour of need. They have, therefore, resolved to establish a College for the Sons of Officers of the Army, Navy, and Indian Services, who may have died in the service of their country, or who may have survived their fathers, but left their families unprovided for. They have also resolved that the College shall be called by the name of the Duke, in order that the memory of his glorious services may be perpetuated to future generations, and that his name may be associated with the noblest feelings of the British nation.

"The Committee have also resolved that the College shall be established in the neighbourhood of Sandhurst, in order that the Royal Military College and the Military College of Addiscombe, with which it is proposed to unite it, may be within easy reach of it. The Committee have also resolved that the College shall be established on a scale sufficiently large to admit of the reception of 500 boys, at a cost not exceeding £120,000, and that the annual payment for each boy shall not exceed £35, which sum is considerably less than the average cost of the education of boys in the higher class of private schools.

"

NEW AMBULANCE TRANSPORT SERVICE.—(SEE PRECEDING PAGE.)

LAYING DOWN POSITION LIGHTS FOR MEN-OF-WAR.

WE have to thank an obliging Correspondent for the accompanying Sketch and details of this operation, taken off Sebastopol.

For various reasons it had been deemed inexpedient for the men-of-war to make an attack on the Russian batteries during daylight, since the damage we might inflict would be by no means commensurate with the injuries we ourselves would sustain. Much chagrin and mortification were felt generally through the fleet when we saw the contest raging under our eyes, and were unable to share in its perils and participate in its glory. No one, from the Admiral down to the common seaman, witnessed the battle of artillery, and heard day and night the deep sullen mutterings of the Russian guns replying to the cannonade of the Allies, without a sigh that we were passive spectators and not active combatants. A plan, however, was conceived and proposed by Lord Clarence Paget, Captain of the *Princess Royal*, immediately adopted by the Admiral, and executed by Mr. Hall, the master of Lord Paget's ship, with such consummate judgment, ability, alacrity, and skill, that he has merited and met with the warmest approbation of all those who have been thus enabled to come in contact with our enemies. By means of this plan of Lord Paget, the men-of-war are now important actors in the struggle. All along they occupied a prominent position: they paralysed the hostile squadron; they withdrew a part of the garrison from the positions against which the weight of the Allied attack was directed, by perpetually menacing the batteries on the sea-board; they covered the left flank; protected the rear: and afforded supplies to the army, without which, in this poorly-cultivated country, our troops could not have existed for a week. But now, by means of position lights of different colours being erected at suitable places along the shore, we are enabled to take up the best position for discharging our broadsides into the besieged town. The duty of superintending the erection of those lights, of course, devolved on Mr. Hall, and it was a duty requiring care and attention, and entailing considerable danger, the slightest derangement of one of the lights from its proper position would cause the ships to run on the Constantine or Quarantine shoals; and whilst we were determining a suitable position for their erection, the shot furrowed the ground around, and the huge shell discharged at the French Battery A, on the extreme left of our attack, sent their whizzing fragments unpleasantly close. On the night of the 16th, guided by those lights, fifteen small vessels in succession went in, and fired on the town, allowing an interval of half an hour to elapse between each vessel delivering its fire: the only two-decker as yet that has been permitted to go in against the batteries is the *Princess Royal*. On the night of the 18th Lord Paget obtained permission to try his guns against Muscovite Forts: the night was dark, the moon had sunk beneath the horizon; the rocket-ships occasionally sent up one of their projectiles with its long train of light; but, unfortunately, they showed us to the enemy too soon, and permitted them to find our range accurately, and in a moment the silence and grim repose that wrapped the northern batteries was broken, and a perfect storm of shot and shell was hurled on us, from the mouth of the Belbec to the Quarantine Fort. But soon we took up our proper position, and a wild, fierce, and lurid burst of flame issuing from our broadside for an instant, dissipated the gloom; with horrid clamour forty-six shell-like globes of flame, rushed blazing through the night, and carried with them ruin, devastation, and dismay—each shell as it ricochetted, flaming along the surface of the water, seemed like some strange sea-monster, and presented an appearance so grand, wild, terrific, and strange, that description fails to convey even a faint idea of the scene.

In the accompanying Sketch, on the extreme left, is the French battery much exposed and injured by the fire of the Quarantine. Next is a Russian earthwork in front of the crenelated, firing upon the aforesaid battery. In about the centre of the picture are the sailors placing the position lights, to each of which is attached a wooden screen for conceal-

PREPARING TO MAKE SIGNALS.

THE WORONZOW ROAD

ment from the view of the Russian batteries; while also are shown the boats of the *Princess Royal*, with Mr. Hall, at the entrance of the Streletzka Harbour, with materials for constructing the lights, and on the right is the marine tent of the sentries of the *Princess Royal*, who are posted there for the purpose of attending the lights over Streletzka Harbour.

SKETCHES IN THE CRIMEA.

VALLEY OF VORUTZA, WORONZOW ROAD.

Our Correspondent writes: "In the valley on our left, coming from Baidar, we fell in with a party of Turkish troops, camped in their peculiar way. One of those encampments and the aspect of the surrounding scenery was peculiarly characteristic. Each sentry is protected by a sort of parasol, made of foliage. Behind the *faisceaux* (rows of piled arms) there is a long gallery, constructed of boughs, under the shadow of which the men lie throughout the greater part of the day, instead of remaining under canvas. Piled drums and bugles; arabas drawn by buffaloes, and containing a group of soldiers (the Tartar driver in front of the car); soldiers on foot and on bât-horses;—here are all the pell-mell of a Turkish *colonne en marche*, showing the total absence of any regular transport service, with all the inconveniences of the traditional *impedimenta*. In the background is the "Omer Pacha Tent," surrounded by large ones for his suite, with carriages and horses.

VALLEY OF VORUTZA—TURKISH BATTERIES COMMANDING THE WORONZOW ROAD FROM BAIDAR.

This singular scene is thus described by our Correspondent:—"The pieces are covered with foliage, as well as the *caissons* (waggons) behind; they are in position so as to command the Woronzow road. The sentry, a foot artilleryman with a small sword and a belt, is, as usual with the Turks, placed under an umbrella like shelter made of a pole and foliage. An officer is crossing a little rivulet at the bottom of the hill; the artillery are in two lines behind and hidden under the trees; and beyond are the huts.

New War Projectile.—A remarkable series of experiments were made on Monday in the grounds adjoining Chelsea Hospital, by Captain Disney, the inventor of a new war projectile, which he says has been brought before the notice of the proper authorities, but does not yet appear to have been adopted in the service. The invention is one of a very simple description, and there seems to be no good reason why it should not be used with great advantage in the contest in which we are now engaged with Russia. It consists in fitting shells with a bursting charge of powder contained in a metal cylinder, and filling the rest of their space with a highly combustible fluid, which upon exposure to the air ignites everything with which it is brought into contact. This fluid does not act upon the substance of the shell, is not in itself explosive, and, being prevented from leaking by a nicely-fitted brass screw-plug, enables the missile to be carried about without much risk. Directed against ships or houses, or masses of troops, the new projectile would have all the destructive properties of the rocket, without its uncertainty of aim. Water only temporarily extinguishes its inflammatory power, which is so great as to make even woollen materials burn with a quick flame. Captain Disney also states that by a similar use of another chymical fluid he can cause blindness for several hours to all troops coming within a quarter of a mile of its operation; but this portion of his experiments was, for obvious reasons, omitted. A shell to contain explosive substance which he exhibited on Monday would be found very destructive, but its chief use would probably be as a charge for large shells. As the Select Committee of the Ordnance has now been reformed and enlarged, the attention which it pays to this and other inventions of apparently a practical character will be narrowly watched by the public.

TURKISH BATTERIES COMMANDING THE WORONZOW ROAD.

OUR LODGERS. (No. II.)

THE BACK ATTIC.

WELL, it really seems as though it should have happened on purpose to form a sequel to this second sketch of mine. I dare say you wonder what I mean by such a remark. Nay, don't pretend to wonder, for I know you have penetration.

Shortly after Mrs Mungo I and were married we succeeded to my mother-in-law's house, the old lady having died, as I told you. All the rooms in that house, save the back attic and all as we thought it was occupied by a widow and her daughter—a Mrs. and Miss Watson (mark well that name, for reasons to be named hereafter). They were poor, but quiet people. Inherent, and consequently, were great favourites with us all. Miss Watson painted flowers on velvet, and used to sell them to some person in the Soho Bazaar. Mrs Watson did nothing, but what she pleased, and I have reason to believe she had been well off at some period of her life. She was a very quiet lady-like woman, and kept her room most of the day. She was very fond of flowers, and I at once took a great fancy to see Miss Watson, for she was cheerful and "back attic" used to look in summer, I reckoned out in it was with the gayest and sweetest bower that could be brought together out of pots. Indeed, so attractive was it to me, by saying that her daughter required them as patterns to paint from, and I dare say she was. The Watsons were very quiet, and at first too silent for me, being much too melancholy. She even went what proud to send in their dinner when they had company, which was not in her disposition—Mrs Mungo, of course, being the cook. I used to delight in sending them up nice little dishes, for I soon found out that they loved her dearly, and that she was the only comfort they had in life. I love you both, dear Mrs Watson, and I know you love me, and have to thank me for many a comfortable meal which I have sent in to you when you were ill, but I think, since then, you have had no reason to complain of your landlady.

"Mrs Watson," I said to her one day, "you have a very pretty daughter."

"Yes, sir," she replied, with a sigh, "she is very pretty, and I am very proud of her, but I wish she were not so handsome, for her beauty is a source of much anxiety to me."

"Why so, ma'am?" I asked, for I could not understand what she meant.

"Because, sir," she replied, "I am afraid that some one will take her away from me, and I shall be left alone in the world."

"Not while I am in it, ma'am," I said, with a bow, for I was very much struck with the beauty of Miss Watson, and I thought that I could not do better than marry her myself.

"Thank you, sir," she replied, with a curtsey, "but I am afraid that you are married already."

"Yes, ma'am," I said, with a sigh, "I am married, but I am sorry to say that my wife is not at all like you."

"I am sorry to hear it, sir," she said, "for I am sure that she must be a very disagreeable person."

"She is, ma'am," I replied, with a groan.

"Then I pity you from the bottom of my heart, sir," she said, "for I know what it is to have a disagreeable husband."

"Indeed, ma'am," I said, "I am very sorry to hear it."

"Yes, sir," she replied, "I have had a very disagreeable husband, and I am sure you have a very disagreeable wife, for I am certain that no one else could have driven you to say what you have said in my presence."

"I am very sorry, ma'am," I said, "that I should have said anything to annoy you, but I assure you that I have a very disagreeable wife."

"I am sorry for it, sir," she said, "for I know what it is myself."

"Mrs Watson," I said, "I am very unhappy at home, and I love your daughter dearly, and I wish you would allow me to marry her."

"Mr Mungo," she said, "I am very much obliged to you for your kind offer, but I think, under the circumstances, you had better not say anything more about it."

"Why, ma'am," I said, "I am sure you cannot have any objection to me as a husband for your daughter, for I am a doctor, and have a very good practice, and I am sure I could make Miss Watson comfortable."

"I am sure you could, sir," she said, "for I know you have a very good practice, and I am sure you could make Miss Watson very comfortable, but I think, under the circumstances, you had better not say anything more about it."

"Why, ma'am," I said, "I am very unhappy at home, and I love your daughter dearly, and I wish you would allow me to marry her."

"Mr Mungo," she said, "I am very much obliged to you for your kind offer, but I think, under the circumstances, you had better not say anything more about it."

"Why, ma'am," I said, "I am sure you cannot have any objection to me as a husband for your daughter, for I am a doctor, and have a very good practice, and I am sure I could make Miss Watson very

months only. Altogether her yearly gains average from 350,000 to 400,000 francs. On the 15th of May last a remarkable benefit was given in the part of *Fenella* in "Masaniello," for the benefit of Mademoiselle the famous "Jenny" Inside the [illegible] a certain set presided over by the ridden [illegible] taken up [illegible] and were in hopes of [illegible] *Mars. Stuart* and *Calista* in the Old Pl.

We shall not regret all the strictures on the great [illegible] personal defects, nor the little artifices of detraction and [illegible] descriptions of Rachel's want of intelligence and [illegible] unscrupulous biographer indulges. With the one set of things we have nothing to do; as to the remainder, when they do not carry truth on its contradiction with them, the envious spirit in [illegible] too apparent

MUSIC.

Grisi and Mario made their last appearance this season last Saturday night. Although it was a mere leave-taking for the season—not a word being now said about the rest remnant of other of them from the stage—yet there was an immense house, and the utmost excitement prevailed. The opera was the "Huguenots," and certainly it never was more beautifully performed. The unrivalled pair excelled themselves, and when the curtain fell upon the pathetic scene [illegible] the third act, the house was positively in a tumult of delight. When the two performers came forward together, the whole audience rose at once, and applauded with the utmost vehemence for several minutes, while the stage was literally covered [illegible] was thrown to the fair [illegible] was so, for later Grisi, the public have forgotten [illegible] formances [illegible] impressed [illegible] when she disappeared [illegible] and drowned in tears [illegible] when her reappearance [illegible] signs of displeasure were expected. But nay [illegible] her presence. The public [illegible] her all" and during the [illegible] charming, more powerful [illegible] When Grisi took leave of us with [illegible] not believe that [illegible] year she was in [illegible] arduous exploit in [illegible] had accomplished that task it would be time to seek ease and [illegible] the banks of the Arno. [illegible] as ever she was to appear before the public. And why should she not? Plans are liable to be changed by [illegible] any remarks on the subject of her return to the stage after having taken leave of it may be something like *Bombastes* at Furioso: "When I said I would die a bachelor, I did not expect [illegible]

The "Etoile du Nord" [illegible] Thursday this week; and it will be [illegible] is announced as the last of [illegible] loss in the departure of Lablache, [illegible] *Carpani Gottardi*, [illegible]

The "Prophète" was performed [illegible] with the same cast, and in precisely the same manner [illegible] season.

As operatic combinations [illegible] Scotland, Ireland, and [illegible] under the auspices of the enterprising Mr. Beale. [illegible] the artists of the Royal Italian Opera; including Mesdames [illegible] Marai, Vandorf and Bednarz; Signori [illegible] Tagliafico, Polonini, Gassier, [illegible] during the months of August, September, and October. [illegible] are to give the *oh fa dimora* of the Covent Garden [illegible] Mr. Lavenu, the conductor, [illegible] Manghan, Lavigna, Hau[illegible]

NEW METHOD OF PUBLICATION.

When a new book of instructions for the [illegible] pianoforte, it becomes a necessary [illegible] novelty—anything to [illegible] same class already before the [illegible] author serves as a guarantee [illegible] profession, and of such [illegible] work on the art professedly [illegible] rience, we may safely believe [illegible] useful. This is the case [illegible] which has just appeared from [illegible] clarity of the book is that it treats of fingering *in connexion with expression*. The author observes, very truly, that "the art of fingering on the pianoforte has often been treated of as though it were only intended to be the means of discovering the easiest way of executing notes as passages, the infinite [illegible] that the art of fingering has much higher claim upon our consideration. "It is, in fact," he says, "or ought to be, the power of giving to music its true character and right expression, to accomplish which it may often be found necessary to finger otherwise than the mere execution of the notes would require." To illustrate this proposition by precept and example is the chief object of his treatise.

To the accomplished pianist this is no novelty. Every fine player shows by his performance that he is aware of the influence of fingering upon expression, as well as execution. It is by diversity of fingering that he will give variety of character to the self-same notes, imparting to them a fresh interest every time they are repeated. [illegible] acquired this knowledge empirically as it were, by [illegible] and experience, without any guide to general principles. In all existing methods of fingering, faculty of execution is the only point aimed at; where peculiarities of character and expression are required, the player must find methods for himself. But expressive fingering has its principles, from which clear practical rules may be deduced, and Mr. Neate has laid down those principles and pointed out their practical results in a manner which will guide the pupil to many of the greatest delicacies and beauties of pianoforte playing.

To show, by particular examples, how successfully Mr. Neate has accomplished his object, would require the aid of musical typography; but a very attentive examination of the work has convinced us that its object is successfully accomplished, and must render it a most valuable assistant to the teacher as well as the student of the pianoforte.

Mr. Clinton, the eminent Professor of the Flute, has published a little pamphlet, entitled "A few Practical Hints to Flute-Players upon the subject of Modern Flutes," which will be exceedingly interesting to the amateurs of this elegant instrument. All who are acquainted with the flute know that during the present century it has been in a state of constant improvement. Old amateurs still living can remember when it had but one key. To remedy defects of intonation and difficulties of execution the number of keys was gradually increased to eight, the greatest number in general use. The holes opened by these keys remained shut when they were not touched; so that if the performer did not think proper to use any particular key, he might play in the same manner as if there were no such key at all. Then came an alteration in the mechanism of the instrument of a more sweeping description. The *Boehm Flute* (so called from the name of its inventor) is furnished with keys to close holes when remain open when they are not touched. The effect of this has been to make an entire change in the system of fingering, a person who has learned the common eight-keyed flute cannot play the Boehm flute, and *vice versâ*. The advantages of the Boehm flute, nevertheless, were so great, as regard to equality of tone, truth of intonation, and facility of execution, that it was adopted by many eminent performers, among whom was Mr. Clinton himself.

Still, however, the Boehm flute is attended with the very serious objection already mentioned, that it cannot be used by those who have learned to play in the ordinary manner. The skilful performer must begin again from the beginning; and this is what a skilful performer is not disposed to submit to. Several ingenious men, consequently, have applied themselves to the improvement of the flute without altering its mechanism; and no one, we think, has accomplished this object so successfully as Mr. Clinton. He has constructed an instrument precisely upon the principle of the ordinary flute—the principle, namely, that the keys are used for the purpose of opening holes previously shut; so that, when any key is not touched, the tube is in the same condition as if there were no hole corresponding to that key at all. Mr. Clinton has added several new keys, which have the effect of giving certain notes of the scale with a better tone, and more perfectly in tune than before, and also of facilitating the execution of difficult passages; but the general method of fingering remains unchanged, and the player may use the new keys in whole or in part, or not use any of them, at his pleasure; so that a flute-player who adopts Mr. Clinton's instrument may gradually acquire the use of the new keys, without being debarred, in the meantime, from playing in the ordinary way. This is not the only improvement which Mr. Clinton has effected. Sounder pitch [illegible] notes has been [illegible] of the tube and the [illegible] construction of the instrument, which have contributed not only to more correct tune, but to a better quality of tone throughout the whole extent of the scale.

NOTES OF THE WEEK.

THE grouse, speckling through the Premier, have uttered their cry of summons and defiance to the Peer in the night. But to go into the House of Commons, one of these evenings, you would think that, like the Greek augurs, the moment to decide not only with regard to the Flight of Birds, but by Dreams also. Such a sleepy-looking assembly it would be difficult to conceive. They were now by the other night that they went busily out to a division, and only discovered, on taking the numbers, that the two sides together would not make a House. The benches are nearly empty, as the Supplemental Estimates [illegible], sometimes contested, but usually carried. About three Ministers occupy the Treasury bench—in the centre is Lord Palmerston, sleeping soundly under the shadow of his broad hat, though his well-trimmed trousers do turn slightly up—[illegible] Disraeli, the strap, many elderly [illegible] still adhere) look too tightly dragged for comfort. A whipper-in keeps about, in case of accident. The regular Opposition stays away, except when some little "spirit" is to be got up; and Mr. Spooner, in the second row, sturdily represents the united force of Protestantism—the simple and colossal effect of his attitude being somewhat marred by his having at the end of his bench one round-faced neighbour, who [illegible] sleeping with his mouth wide open, and with his white hat, fearfully on one side, overhanging the gangway. The Irish benches are vacant [illegible] Sharman Crawford, [illegible] on most amusements. Mr. Wilson Patten [illegible] carries the items before him in a [illegible] and can understand only [illegible] not always that) struggle in [illegible] Sir Charles Wood [illegible] that he will be [illegible] the Indian Budget [illegible] less convenient [illegible] Disraeli is knocked on [illegible] convinced [illegible] the course of a most stupid evening [illegible] expectation, to see the machine of Government at work, and after the first [illegible] came [illegible] for the last time, and the "[illegible] Major Reid, if Government think it their duty to call Parliament together [illegible] And as for reasonable [illegible]

The Hyde Park [illegible] the Police Recorders are hearing the defence of the police. Mr. Superintendent Hughes' evidence is amusing, [illegible] with one exception, which probably [illegible] Parker Well [illegible] the Duke's [illegible] Lord Derby's last Minis[illegible] dem," who raved and stormed at the supposed culprits; but, being made aware of his mistake, declared, amidst [illegible] he had done it out of goodness, to make an unreasonable [illegible] trouble again. Moreover, Mr. [illegible] not a great man of the present day who uses strong language. People belonging to the political clubs recollect who it was to whom Mr. Disraeli alluded, when Lord Derby's last Ministry was being formed, and it was asked what should be given to a certain person—"Oh, let him *swear* in the new members."

It seems to have been as difficult to get the *Marlborough* out of her stocks, as to get a guinea of his stocks out of her great namesake. The new "sea-castle" not only "frowned on the brine," but actually turned restive at being brought to it, like a tiresome brat on the steps of a bathing machine. However, two thousand men got her in at midnight; perhaps as curious an inauguration of a naval career as ever ship had. Irreverent people say that the superiority of mind over matter is triumphantly established by these Government mishaps: while the Dockyard ships stick at every thing; the jobbers in Dockyard patronage stick at nothing.

A story, which has obtained considerable circulation, represents some Parisian notorieties as having revived certain practices which, about the middle of the last century, were supposed to be carried on to an alarming extent by divers of the worst members of the aristocratic class in Paris, spirit rapping being too ridiculous, and table-turning having been demolished by Professor Faraday with one merciless letter of explanatory sarcasm, the "used up" world has, it is said, taken to downright conjuring of the boldest kind, and black magic is a study in the saloons of the aristocracy. I have heard nothing of it from any private source on which I can rely, but the statement has been printed, and we know the corollary. The story goes that certain ecclesiastics had, moreover, joined in the business—of course with the best intentions, and designing to show the incredulous that there did exist terrible influences from which the Church alone could protect the faithful; but whether the spirits objected to being held up as "awful warnings," like unreformed tipplers at a teetotal meeting, and grew malicious, or whether silly heads were easily disturbed, I do not know, but it is said that these individuals have frightened, not their friends, but themselves, so outrageously that one of them has necessarily been placed in a lunatic asylum. I suspect a good deal of the story to be fudge. It is certain that the foolery of "spiritualism" has driven scores of persons into insanity in America; and I was not sorry to read the other day, in a San Francisco magazine, a detail of a tremendous hoax which had been cruelly and elaborately practised upon Judge Edmonds, one of the most distinguished fanatics. A writer in a periodical cooked up a rather cleverly-told story of his having had communion with the spirit of a man whom he had previously seen die, and whom he names one Lane, I think, and the Judge, in ecstasies at this confirmation of his own insane creed, writes to say that it is all true, for that he also has had communion with the spirit of Lane, who repeated what he had said to the original reporter. Then the latter replies that the whole thing was fiction, and that there was no such person as Lane; and the Judge can only reply that the original spirit-monger is no gentleman.

IRISH AGRICULTURAL RETURN.—The returns just published show that the cultivation of wheat has decreased to a remarkable extent in Ireland, the number of acres in 1853 being fifty-five per cent less than in 1850. The extent of land under this crop in the latter year, but barley has decreased about seven per cent. Potatoes, while they only show an increase in acres of about twelve per cent, have increased in produce about forty-five per cent since 1850, the produce of 1853 crop being 10,01[illegible],000 barrels more than that of either 1851 or 1852, and 14,000,000 more than that of 1850.

A NOVEL FREIGHT. The ship *Sunny South* (says the *San Francisco Herald* of the 19th June) cleared yesterday for China, having on board the dead bodies of 70 Chinamen. It appears that there is a company of Chinamen in this city doing quite an extensive business in disinterring and shipping the dead bodies of their countrymen to the order of the relatives of the deceased in China. The cost of the operation is about 50 dollars—a sum willingly expended by the wealthier class of Chinese, who consider it a duty as well as a privilege to pay this tribute of respect to the remains of deceased relatives.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

A triumphal arch is being erected in front of the terminus [illegible] at Joinville Railway, in honour of the visit of Queen Victoria.

The Emperor and Empress of the French arrived in Paris [illegible] Biarritz, on Monday.

(With power to increase to £100,000)
In Shares of £1 each (25 Francs), to be paid by an Instalment
COMMITTEE OF MANAGEMENT.
CHAIRMAN
Monsieur Jean Adolphe Bridget
Monsieur Eugène Chatard de Bergue
Monsieur Dewez, Ing.
Monsieur Jules Dubois
Monsieur Edouard Lefebvre
Monsieur Victor Lemaire
Monsieur Jules Petit
Monsieur Edouard Tyer
SECRETARY
Monsieur Jules Petit
BANKERS—Messrs. Tyer and Brown, 6, Clement's-lane, City.
OFFICES—London: 30, Cornhill (Solicitor and Bill Broker, Reginald Odell). Paris: 85, rue Richelieu
The necessity of ensuring a certain means and efficient mode of signalling Railway Trains has become an imperative, that a bill for the Prevention of Railway Accidents is now before Parliament, and which, with much
[illegible] and patented by Mr Tyer
[illegible] Railways, the results of which [illegible] to establish
[illegible] Company to enter into a contract with the proprietors for the use and adoption of their Patent.
Experiments with such success, have also been made in France, and the Northern and St Germains Railways.
The Company having purchased Mr Tyer's Patents (together with all future improvements which he may suggest) for Great Britain, France, and Belgium, are prepared to enter into arrangements with Railway and other Companies for the supply erection, and maintenance of their Electric Signal Instruments, and to adapt their system to meet the wishes and requirements of respective lines, and the traffic thereon.
The application of the principle to a few only of the main lines now existing in the countries for which patents have already been granted, must realise a highly remunerative net profit, as the capital required will be comparatively moderate.
A power is reserved in the "Acte de Société" to purchase any invention or improvement of a similar nature that may be devised by Mr Tyer, or which he may be established advantageous to the Company.
The promoters of the Patents have disposed of their interests (including all existing and expensive experiments up to the present time, amounting to nearly £3000) for 10,000 free shares, with a right to receive one-half of the net profits beyond 10 per cent on the capital advanced. They will therefore be equally interested with the other shareholders in promoting the success of the undertaking, and the terms on which they will be paid for devoting to carrying out and obtaining the general business of the Company
Application for Shares to be made to the Secretary; or to Messrs Price and Brown, 6, Change-alley, Cornhill

THE ILLUSTRATED LONDON NEWS

No. 756.—VOL. XXVII.] SATURDAY, AUGUST 11, 1855. [PRICE FIVEPENCE. STAMPED (POST-FREE) 6d.

RUSSIANS IN HIGH PLACES.

Lord John Russell still aspires to be the leader of a party. The sweets of power are too sweet to be renounced without a pang and a struggle by a man who loves patronage and his cousins so dearly. Though, if such an act as political suicide was ever committed, Lord John did the deed on his return from Vienna, there is still some spasmodic life left in him. He finds others in the same predicament as himself. He looks around him, and discovers strange companions at his side—some like the clever but erratic Mr. Gladstone, who respect if they do not adore Russia, as the impersonation of Might, and consequently of Right; others like Mr. Cobden, who can imagine any or every cause to be a good one except that in which their own country may happen to be engaged; others like Sir James Graham, who helped to get us into the war, and who, when they heard the booming of its guns,

> Back recoiled, they knew now why,
> Even at the sound themselves had made

and others like John Bright, who hate all war but that which is made with the bitter invective of the exasperated tongue. Out of this mass Lord John Russell has apparently bethought himself that he might reconstruct a party. With himself as Premier, Mr. Gladstone as Foreign Secretary, Sir James Graham as Minister of War, Mr. Cobden as Home Secretary, Mr. Sidney Herbert as Colonial Secretary, and Mr. Bright as Chancellor of the Exchequer, we should have an Administration that would carry joy into the councils of Count Buol, make glad the heart of the King of Prussia, and fill St. Petersburg with rejoicing.

> Come the eleventh plague rather than this should be;
> Come, sink us rather in the sea!

On Tuesday Lord John put forth a feeler, to ascertain from the opinion of Parliament and the country whether any chance of political resurrection was yet left to him, or whether, as a Minister, he was indeed defunct. We do not think his Lordship will gather much comfort from the reception he met with. The ostensible object of his speech was to call attention to the occupation of Italy by foreign troops; but whether to complain of the Austrians in Lombardy and Venetia, or of the French at Rome, no one could discover. Nor after he had delivered his speech was any one much the wiser in this respect, though it will be painfully evident to most of his Lordship's former admirers, and evident without the pain, to those who never ranked themselves under his banners or those of the Whig party, that his career as a practical statesman is at an end; that he has not the great heart for a great occasion, and must stand aside with other pragmatics and theorists, and allow the business of the world to be carried on by men of sounder intellect, more heroic temperament, and more patriotic purpose. The speech was remarkable for nothing except its irrelevancy; and what is more humiliating—considering the high position the speaker once held, and might have continued to hold—its persistent exaggeration of the sacrifices which the country has been and will yet be called upon to make; and the equally persistent concealment of all the brighter colours of the picture. But it called forth a reply from Lord Palmerston which was worthy of a British statesman. The speech of the Premier was a large antidote to a small bane; and Lord John may for Lord Palmerston's sake be forgiven for his last effort to damage his ex-colleagues—and to raise himself an inch out of the Slough of Despond, into which he has not fallen, but leaped. There let him lie; and with him, all such men as will not, in the day of sacrifice, and in a just cause, aid their country with their whole heart and strength.

The condition of the States of Italy, with the parenthesis of that of Spain, thus incidentally brought before the notice of the House of Commons, has, however, drawn attention to the whole subject of the minor States of Europe, and their influence—near or remote, actual or possible—on the conduct of the war. "Holy Russia" the great object of the respect, if not the adoration, of Mr. Gladstone—is busily at work amongst them all. No doubt it is a wise policy on the part of the Czar to attempt to create diversions in his favour wherever he can. If the great Powers are against him, the smaller Powers may be of service in his cause. Nothing is too little for his needs or too remote for his machinations. If Austria and Prussia—who might be great, but whom cowardice, if not treachery, makes little—are not in the position to help him as effectively as they might, there are other States in Europe which, by timely and astute management, may be made conducive to bewilderment of council among the Allies, if not to the dispersion of their strength.

Greece afforded the first and most tempting field for the Czar's experiments in this direction. For the present the design has been foiled; but that miserable little kingdom requires to be closely watched, lest renewed attempts should be made by Russian emissaries—in the much-abused name of religion—to foment rebellion on the Turkish border. But it is in the smaller States of Germany that Russian agency is most busy and most powerful; and it is towards these States, if Austria and Prussia continue by their dastardly neutrality to play the Czar's game, that the watchfulness of Great Britain and France must be most earnestly directed. Already, under Russian dictation, the amiable but silly King of Hanover—an Englishman, who ought to have known better—has abolished the Constitution granted to his subjects by his father, and has appealed to the Germanic Confederation for the aid of a military force to prevent his betrayed and outraged people from rising in insurrection. We learn, at the same time, by the publication

PALACE OF ST. CLOUD, TO BE APPROPRIATED TO QUEEN VICTORIA DURING HER VISIT TO PARIS.—(SEE NEXT PAGE.)

in the Paris journals of a remarkable correspondence seized on the person of a Spanish refugee, that the pretenders to the Crowns of France and Spain have severally and jointly been engaged in intrigues with Prince Gortschakoff at Vienna, of which the object was to procure a supply of Russian gold, to foment insurrection in France in favour of the legitimist Count de Chambord; and in Spain in favour of the equally obsolete, equally blinded, equally stupid and impracticable pretensions of the Count de Montemolin. It does not appear with what favour the negotiations were entertained; but the very proposal shows the idea which the enemies of popular right in all parts of Europe have formed of the part to be played by Russia in the great drama of our day. Things like these, and the jesuitical attempt of Lord John Russell to throw odium on the occupancy of the Papal States by the troops of France, will tend to bring about what the Governments of England and France have striven to prevent—the extension of the war into a war of principles. In such a war it will be Austria, Prussia, and Russia that will be the sufferers. Neither England nor France has any reason to dread it. Its conclusion would leave neither of them smaller or less powerful; but, with a free Italy, a free Germany, a free Hungary, and a free Poland, the ambition of Russia, and the mean cowardice of Austria and Prussia, would be effectually and appropriately punished. If this be the consummation to which events are tending, neither France nor England will have to reproach itself with the protracted horrors of the war which will be the consequence. Austria might have prevented it had she been wise and honest, and been blessed at this moment with a Schwarzenberg or a Stadion in her councils, instead of a Buol. In the meantime the Allies, as well as Russia, have their eyes on the smaller States of Europe, and on those populations and races that have political aspirations. The same journals that will convey to the world the valueless opinions of Lord John Russell upon the state of Sardinia, Naples, and the Papal Territories, contain the announcement that France has urged upon the Pope the immediate secularisation of his Government, and that the Pope and the Cardinals have refused to accede to the proposal. Lord John Russell and Mr. Gladstone may thus be assured that Italy will be properly cared for when the time is ripe. But if either of these eminent persons have any common sense left him, and be not in the painful position which Sir William Molesworth supposes to be that of Mr. Cobden a state of aberration of mind—he will do well to pause ere he serve to extend the war by the insane efforts which he makes to put an end to it.

THE PALACE OF ST CLOUD:

THE RESIDENCE OF HER MAJESTY DURING HER APPROACHING VISIT TO PARIS.

In a few days the Queen of England will watch a summer sunrise from the windows of St. Cloud. Remarkable as are the historic episodes belonging to the Palace which derives its name from St. Clodoald, the grandson of Clovis, this visit must be considered, by every sagacious student of public events, the most important element of its varied story. We propose to draw a rapid outline of this story from the time when Edward III. of England burned the village, and put its inhabitants to the sword, after the battle of Poitiers, down to the occupation of the château by the present Emperor of the French. We may pass rapidly by those troubled times when St. Cloud was the scene of civil wars the most bloody, and when the pious monks were continually running away to Paris with the body of their saint and the valuables of their church, to avoid the rapacity of the conquering party. The village grew in spite of the enemies who continually menaced and often damaged it, till, in 1547, we find there an episcopal palace, sufficiently magnificent to be the long and grim ceremony—the funeral service of Francis I. Here the effigy of the dead King was placed, and the officers came, and did duty as though he were alive, during eleven days. They served his dinner, and went through all the etiquette of the Royal repast in solemn silence; and then the clergy of Paris carried off the corpse to St. Denis. During the reign of Henry II., son of Francis, a Royal country residence, in the Italian style, was built here; and the King ordered the old wooden bridge to be replaced by one in stone. This structure so far excited the wonder of the villagers as to lead to the belief that supernatural agency had been evoked to complete it. The legend ran that the builder being unable to finish his work, the devil appeared to him and offered to complete it, if he might have the first thing that should venture upon it. The builder assented, and, when the last stone was fairly placed, threw a cat upon it, which the devil carried off, much enraged at so slight a reward for so fine a structure. Scenes of carnage were still in store for the villagers, during the struggles between the Huguenots and Catholics of France; and it is said that in the country seat here, which formed the kernel of the splendid present château, which then belonged to the banker Jerome Gondi (one of the followers of Catherine de Médicis), amid the pleasures of a sumptuous fête the first idea arose of the massacre of St. Bartholomew! It was in this residence also that an assassin's hand destroyed the last scion of the houses of Valois—the patron of omelettes powdered with musk and amber—Henry III. of France! Dark were these days to the villagers of St. Cloud when the assassin Jacques Clement was quartered in the square before the church, and burned; and when, a few years later, the men of the League picked up the ashes of the monk, and went on their way with them by water to Paris, only to find a grave in the river with their ashes. Many difficulties lay between Paris and the Bonapartes, who finally entered his capital, resolved to "forget all errors, and bear in mind only the services he had received." A gap here occurs in the history of St. Cloud. From the date of Henri Quatre's death, to the time when Philippe Duke of Orleans, and brother of Louis XIV., built the Palace of St. Cloud, this spot was not the scene of any important event. Turenne's presence in the borough, and the vain efforts of Condé to wrest it from him, may be passed by. The only point in the history of Louis XIII. in which we find any mention of the Maison Gondi is that where this provost of the merchants, &c., of Paris brought him the keys of the capital

We now approach the interesting part of the story of St. Cloud, and particularly of its connection with the Royalty of France. It appears, according to one authority, that the Maison Gondi long remained in the hands of the Gondi family, and that it was bought by Louis XIV. of J. F. de Gondi, first Archbishop of Paris, on the 8th of October, 1690. On the other hand, we are assured that it was in the possession of Hervard, Comptroller of Finances in 1655, since it was in this year, according to the *Gazette de France*, that Louis the Fourteenth, accompanied by his brother, paid the Comptroller a visit, and dined with him. The King was delighted with the house and grounds. Already water-works enlivened its undulating park; since we find that Hervard had bought all the waters of Garches from the Lady Dupré. The satisfaction of the Monarch and Monsieur probably cost the proprietor his pleasant retreat. A few days after the Royal departure, Mazarin paid Hervard a visit, and, artfully questioning the Financial Minister on the value of his splendid residence, contrived to force him to depreciate its worth, lest he should be too narrowly questioned as to the price at which it is said that on the morrow of this visit the Cardinal sent Hervard 300,000 livres, with a letter informing him that the King wished to possess his house for the Duke of Orleans, his brother. A notary was the bearer of the letter and the money, the contract was drawn up, and the proprietor dared not refuse his signature. Thus, according to one authority, the Maison Gondi passed into Royal hands, and an unscrupulous Comptroller was made to disgorge a large proportion of his ill-gotten gains—the real value of the property being nearly one million of francs. According to the archives of the Crown, however, Monsieur bought the Maison Gondi for 240,000 livres.

This old residence formed the nucleus of the spacious château now prepared for the Queen of England. To its dependencies the Duke of Orleans added *le Val*—a house belonging to the Duke de Charost, the fief of Villeneuve; while, on the other hand, to add to the park, Louis XIV. gave his brother upwards of thirty-one arpents of land, situated on the top of the hill, half of the manor of Sèvres, and other properties. The Duke made so many changes and additions to the house that it has become a difficult matter to determine where and when the Maison Gondi remained and the new château began. It is, however, certain that when the Duke bought the Comptroller's house it was already a splendid residence, and fit for its illustrious purchaser to inhabit. According to the journals of the time, Louis XIV., accompanied by Marie-Thérèse and Anne of Austria, went to St. Cloud in a richly-ornamented bark, and was entertained by his brother with great magnificence. In the evening a play was acted by the Royal troupe in the illuminated gardens; and boats filled with musicians enlivened the river. When, however, the King thought of his brother's marriage, he determined to have this pleasant retreat turned into a fine Royal château. Accordingly, in 1660, his Majesty confided the architectural part of the improvements to Lepaute and Girard; the park and gardens were entrusted to the taste of Le Nôtre; and a little later Jules H. Mansard reconstructed the cascades. In this year a splendid ball was given at St. Cloud to celebrate the Duke's betrothal to Henriette, daughter of Charles I. of England In the following year the marriage took place at the Palais Royal. From this time the château, and the splendid grounds that encompassed it, were the scenes of brilliant fêtes and spectacles. The Duchess was a most charming hostess; and in the end, there is too much reason to believe, a helpless victim. She died at the château on the 30th of June, 1670, in her 26th year. This death threw but a passing gloom over St. Cloud, for in the August of 1671 the grounds were once more illuminated to please the King; and in November of the same year the widower became the husband of Elizabeth Charlotte of Bavaria. Thus revels rapidly succeeded the gloom which Bossuet had depicted in one of his energetic *oraisons funèbres*.

Soon after this marriage the Duke gave a fête to his brother the King which illustrates the capacity of St Cloud at this epoch. The château was crammed with rare flowers, intermixed with babbling fountains, and the gardens and the alleys, and unseen machines played behind the bosquets The great cascade, and the basin with thirteen fountains, were playing; there was the Cabinet de l'Aigrette, approached by a maze, in which the visitor was delighted to be lost. Here, amid orange-trees, tuberoses, and phashing sprays, the brilliant Court wandered under a cloudless sky. At the decline of day this fairy spot was left for a pavilion recently built at the extremity of the Long Avenue. Here the king found a splendid show of flowers, supported by silver sticks, tied with gay ribbons, and contained in costly porcelain vases. Here the night was prepared; which being prolonged till after dark, the King only issued from the pavilion to find an artificial daylight in the grounds We are told, in the bombastic style of the times, that it seemed as though the sun had hastened his return, in his curiosity to see so illustrious a company. It appears, however, that the illuminations were most artistic and extensive; amid which the great jet, illuminated to its full height, seemed to throw columns of fire into the basins below, where floated swans of motionless with wonder! But the illuminated cascade was the triumph of the night. Here fire and water appeared to have lost their power over each other, and to mingle in rolling masses of solid light! After the illuminations the King entered the château, which was brilliantly lighted, and decorated in every part with rare flowers. Here a comedy was played; then a supper was served; then a ball was given; and then the illustrious guest returned to St. Germain

Fêtes in the style of the foregoing were given at the birth of the Duke de Valois, the baptism of the Duke de Chartres (born at St. Cloud, and afterwards Regent), and that of his sister. From the enjoyment of these fêtes the Duke went to give battle to William of Orange upon the plains of Cassel; and to return, with the glories of a conqueror, to Saint Cloud. Once more arrived at St. Cloud, the whole population of the borough turned out to meet him. This popularity displeased the King, and the two brothers became, for the time, rivals. The Duke carried out his rivalry even in his château. The King had employed Le Brun to decorate Versailles. Mignard, the jealous rival of Le Brun, was now appointed to decorate a great gallery at St. Cloud. Mignard was employed for a considerable time in the decoration of the ducal château. The Gallery of Apollo, that of Diana, and the Salon de Mars, are evidences of his genius. The inauguration of the Gallery of Apollo was the occasion of a brilliant fête given by the Duke to Louis XIV. The hero of Cassel appears to have sought every possible excuse for a festival at his favourite residence. Here he celebrated the Peace of Nimeguen, the departure of Marie Louise of Orleans for Spain; the first visit of the Dauphin to St. Cloud, the visit of an ambassador from the Emperor of Morocco; the birth of the Duke of Burgundy; and, when hard pressed, probably, for an occasion, the success of a surgical operation performed upon the King. These festivities were given with prodigal pomp, and the illustrious visitors often carried away with them valuable presents. These presents were distributed among the guests by lottery. One of the more remarkable of these lotteries was that of the Galley of Gold, a present of the Ambassador from Venice, on the 9th of August, 1681. Among the ladies who obtained presents on this occasion we find the names of Madame de Valentinois, Madame de Montanban, and Madame de Portsmouth. The death of Marie Thérèse suspended these fêtes, and hither the bereaved King retired to mourn his loss with his brother.

It was on the 27th of August, 1698, that an exiled King of England, with his Queen, visited St. Cloud. James II. and his wife came to assist at the baptism of Mdlle. de Chartres. On this occasion, we are reminded, a fine banquet was given in the Orangery. At all these fêtes, the cascades, enlivened with flowers, or splendidly illuminated, were the great feature. Repaired about this time, by Mansard, they became celebrated all over Europe.

The death of the Duke of Orleans, and the succession of his son to the property, made St. Cloud a quiet place during two years. The new proprietor then gave a grand dinner upon the grass, and a monster concert in the Salon de Mars. But the Regent could not enjoy quiet, voluptuous life of his father. His rights once recognised by the Parliament, the Palais Royal became the seat of the Government. Still he found time to add the "Ermitage" to the property. The next remarkable point in the story of the château is the visit of the Czar Peter, on the 22nd of May, 1717. He was received with that severe simplicity which accorded with his taste. Mehemet Effendi, Ambassador of the Sultan Achmet, on the contrary, was here entertained with great pomp a few years later. In 1722, on the last Sunday after having assisted, in the coronation of the young King, at Rheims, the Princess Charlotte of Bavaria, mother of the Regent, died at the château. Her remains had hardly been deposited in the kingly tomb of St. Denis when the Regent, her son, expired. Again the château was a place of mourning.

It now fell into the hands of Louis d'Orleans, and soon after wards many changes were effected. The statues of the Seine and Marne were added to the cascades; and in 1743, after the marriage of Louis Philippe d'Orleans, the Salle des Spectacles was built. Louis was the Prince who welcomed it was from the park of St. Cloud that the Duke de Chartres, father of Louis Philippe, went up in an aërial ship (constructed by the brothers Robert, and their brother-in-law Collin-Hullin) and nearly lost his life. Here King Louis Philippe passed the years of his infancy, occupying himself upon his own garden, and upon military operations against a toy fort. But Madame de Montesson found St. Cloud too near Paris for her comfort, and desired to live in some place more retired, and free from the stiff etiquette of the time. At the same period Marie Antoinette manifested a desire to become the owner of the château. The Duke, accordingly, sold his property to the Queen for six millions of livres, and her Majesty entered into possession on the 1st January, 1785. Instantly M. Mique, her Majesty's architect, began to effect the changes desired by his Royal mistress, and to look about for little rooms and retreats, like those of Fontainebleau and the petit Trianon. But the works of Girard, Lepaute, and Mignard were respected. A new church was begun upon the ruins of Clodoald's edifice, and upon the foundations of the little house wherein Charlotte of Bavaria had idled away her time, listening to the harmony of the playing waters. Marie Antoinette desired a retreat which, she called "Felicité." Poor lady! she was destined never to enjoy the changes she ordered: for soon the revolutionary storm forbade her retreat to St. Cloud, which she never afterwards visited.

We now take up the thread of our story in 1793, when the National Convention had ordered potatoes to be planted in the Tuileries Gardens, "for the subsistence of the people;" and St. Cloud had been set apart "for the amusement of the citizens of Paris." Soon we find a more surrounding military force. Napoleon was about to seize the reins of power. The Council of Five Hundred met in the Orangery, to the air of the "Marseillaise." The reader remembers the many histories the world has had of this stormy meeting, whence, amid cries of "Down with Cromwell!" "Down with the tyrants!" Napoleon was rescued from the fury of the deputies by his brave Grenadiers; while Sieyès, seated in a coach, drawn by six horses, directed the various strings of the coup d'état of the 18th Brumaire, from the avenue of St. Cloud. Lucien Bonaparte, in his harangue to the troops assembled in the court of the château, declared that the factious deputies were, no doubt, "in the pay of England"! It was in this Orangery that Bonaparte, Sieyès, and Roger Ducos were named joint Consuls. When Napoleon had been, afterwards, appointed for life, when he was Emperor in all but the title, he chose St. Cloud for his summer residence. The boudoirs of Marie Antoinette disappeared; a theatre was built at the extremity of the Orangery; many changes were made to meet the taste of the new occupant; but the galleries decorated by Mignard were left untouched. It was about this time that the lantern of Diogenes was built upon the high ground of the park. It was constructed by the brothers Trabuchet, and was much admired at the exhibition of the year VI. It is properly the lantern of Demosthenes, being copied from a plaster model of an Athenian monument, so called, conveyed to France by M. de Choiseul. When Bonaparte slept at the château, the lighted lantern told Paris that the Chief of the State reposed at St. Cloud. During the Empire the château was the scene of many memorable events. Here Pope Pius VII. baptised the eldest son of Queen Hortense. Here, after Napoleon's divorce from Josephine, the long council was held, at which three Kings assisted, presided over by the Emperor himself, to consider the most advantageous alliance for the conqueror of Marengo. The decision of the council fell upon the Archduchess Marie Louise, for whom Napoleon had a secret liking. Here also the marriage—that is, the civil ceremony—was performed, on the 1st of April, 1810; the contract having been drawn up on the model of that which united Louis XVI. with Marie Antoinette. On the 15th of August, 1811, the park was once more illuminated—on this occasion to celebrate the birth of the King of Rome. Every tree glowed with lamps; the cascades seemed to be playing with columns of fire; above, the air was bright with wonderful fireworks; and in every direction music arose to enliven parties of dancers. In the midst of this gaiety a violent storm arose, and torrents of rain put out the lamps, leaving only the lightning to give fitful brilliancy to the scene. Sinister predictions accompanied this interruption of the fête; still, here Napoleon passed the quieter days of his active reign—now working in his cabinet—now chatting with the ladies of the court—now listening to a piece read by his favourite, Talma

When Napoleon fell, Blucher found his way with the Allied Generals to St. Cloud. Here the coarse Prussian threw himself upon Napoleon's bed; and his dogs were found in the boudoir of the Empress. But we pass rapidly by these sad pages in the history of the château—from the fête here given by the Prince of Schwarzenberg to the Allied Sovereigns in 1815; from the few improvements which Louis XVIII. made to a château of which he does not appear to have been very fond; to the time when Charles X. sent forth the fatal ordonnance of the 25th of July, 1830, from this residence—an ordonnance which cost him his throne. Here, while blood flowed in the streets of Paris, he sauntered in the gardens, and over the gardeners the names of various flowers. At last, awakened from his apathy, he retired to Versailles, then, from point to point, to Cherbourg, where he finally took leave of the nation he had misunderstood and misgoverned.

Although Neuilly was incontestably the favourite residence of Louis Philippe, he took care to embellish St Cloud, where he had passed his infancy. During his reign the architect Fontaine added considerably to the ornamentation of the property; paintings from Scheffer, Allaux, and Picot were added to the internal embellishments, and splendid specimens of Gobelins tapestry, after Rubens, were hung upon the walls. In 1840 the Duke of Nemours was married at St. Cloud, in the Gallery of Apollo. During the reign of the present Emperor of the French the château has been constantly in a fit state for occupation, and has been greatly altered. Here, in 1851, the Emperor, then President, gave a splendid breakfast to the Exhibition Commissioners and the Lord Mayor of London. And here, it may be interesting to add, the first French Exhibition of Industry was arranged by the Marquis d'Avèzy, at the close of the eighteenth century.

We have now rapidly noticed the interesting points in the story of the residence selected to receive the Queen of England. They include events illustrative of the varying fortunes even of the most powerful and gifted Monarchs.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 9

Month and Day.	Corrected Reading of Barometer at 9 a.m.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Mean Temperatures from the Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Ins.
Aug. 3	29.7	79	52	62	0	87	S W	0.05
" 4	29.61	71	55	61	1	90	W N W	0.30
" 5	29.61	71.2	54.6	61.9	1.1	79	N W	0.03
" 6	29.68	71.2	51.9	60.5	2.6	90	S W	0.16
" 7	29.67	74.6	55.7	64.9	1.9	83	S W	0.23
" 8	29.624	77.9	56.9	67.7	1.2	93	S W	0.42
" 9	29.621	77.3	56.3	66.8	2.1	91	S W	0.01

N.B. The + denotes below the average and the — above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100

The reading of the barometer decreased from 29.75 in. at the beginning of the week to 29.66 in. on the 4th; increased to 30.05 by the 6th, decreased to 29.62 in. by the 8th; and increased to 29.84 in. by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.80 in.

The mean temperature of the week was 66·9°, being 1·1° *below* the average.

The range of temperature during the week was 27·7°, being the difference between the lowest reading of the thermometer on the 6th, viz., 49·3°; and the highest on the 7th, viz., 74·0°.

The mean daily range of temperature during the week was 13°. The greatest was 23·5°, on the 6th; and the least, 11·2°, on the 9th.

Rain fell during the week to the depth of rather more than six-tenths of an inch.

The Weather during the week was dull and gloomy, and the sky almost completely overcast. On the 4th, at 9 p.m. on the 6th, a thunder storm occurred; but no damage was done.

JAMES GLAISHER.
Lewisham, Aug. 10, 1855.

HEALTH OF LONDON. The births of 1678 children were registered within the week ending Aug. 4: 880 were boys, and 798 girls. The average number in the corresponding weeks of the last ten preceding years was 708 boys and 670 girls—so that 300 children were born within the week above that average. The deaths numbered 963: viz., 471 males and 492 females. The deaths were respectively 1049 in the year 1849 the deaths rose to 1067; and in that of last year to 1455: cholera was then raging in both those years. Taking corresponding weeks in the last ten years, the deaths ranged as in the table; in all the weeks of the series except three, those of 1845, 1847, and 1850, when the numbers were 837, 964, and 917 respectively so that, considering the increased population, the deaths returned present a very favourable view of the public health.

PROROGATION OF PARLIAMENT.—It is now said that the Session will not be prorogued to-day (Saturday). The state of business is such as to render that impossible; and, from the indications given in the House of Lords on Tuesday night, it is more than probable that it will not terminate on Monday. Her Majesty will not prorogue Parliament in person.

ENCROACHMENTS ON VICTORIA PARK.—A deputation of gentlemen from the Tower Hamlets visited upon Sir Benjamin Hall, the Chief Commissioner of Public Works, on Tuesday, for the purpose of protesting against the encroachments on Victoria-park. Sir Benjamin Hall said he feared the deputation had misunderstood his powers. It was the Commissioners of Land Revenue, who had the control of the property, who were the proper parties now to apply to. A great portion of the money required on the formation of the park was realised from the sale of hereditary property of the Crown, and the Crown, having given the rest to the public, retained one-fourth of it to reimburse itself, and must naturally wish to make the most of it. After some conversation the deputation withdrew.

GREAT FIRE NEAR WHITECROSS-STREET PRISON. On Tuesday night, between the hours of nine and two, a fire, attended with the destruction of several thousand pounds worth of property, broke out in an extensive pile of premises belonging to Mr. Thompson, fancy-box manufacturer, situate in Whitecross-street, nearly facing the prison. The premises were five storeys high, and contained a great amount of stock; in fact each floor was well filled. To save any of the stock in trade was an impossibility, and the inmates had difficulty in saving their lives. It was midnight before the conflagration could be arrested in its progress. As to the cause of the fire nothing could be ascertained.

THE PROGRAMME OF THE WELLINGTON FETE, which is to take place on Monday, at Cremorne Gardens, promises the presence of the six bands of the Horse and Foot Guards and Royal Artillery; but the most remarkable effect will be the enactment of the storming and capture of the Mamelon Vert and rifle-pits on a set scene, and mode.s erected for the purpose, with real trenches, earthworks, and batteries in front of the colossal panoramic view of Sebastopol, extending over nearly an acre of ground Five hundred sailors, with three battering trains, are to be engaged in the spectacle. The result, we feel assured, will be largely tributary to the Wellington College fund, to which the proceeds are to be generously appropriated by the proprietor of the gardens.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

FRENCH preparations are daily being made to celebrate the arrival of the Queen. Three different palaces—St. Cloud, Fontainebleau, and Versailles—are to be placed at her disposal; and it is expected that a grand fête will be given at each. That at Versailles will, as we have before stated, be of the most surpassing magnificence. The ball will take place in the Galerie des Glaces; the supper in the Salle de Spectacle. All the galleries will be lighted up, the park illuminated, and for the first time—the Grandes Eaux will play at night.

Since their return from Biarritz the Emperor and Empress, the health of the latter being still delicate, have been residing in retirement at Villeneuve l'Etang, but his Majesty has been none the less occupied in personally superintending the preparations for the fête at Versailles.

It is reported that the Emperor and Empress will proceed to Boulogne the day before the Queen's arrival, and that, on her joining them there, a splendid review will take place on the sands before the bathing establishment. The Royal and Imperial party will then proceed together to Paris. It is probable, also, that a grand review will be passed in the Champs de Mars at Paris. Six magnificent carriages are being decorated with scarlet and gold for her Majesty's use, and forty persons of different ranks have been selected to attend upon her during the period of her stay.

While death has been busy in the ranks of the French army abroad, it has not spared some of its most distinguished illustrations at home. On Sunday evening, at his residence in the Rue d'Agnesseau, expired and died the General Comte Alexandre de Girardin, at the age of seventy-nine. General de Girardin began, at eleven years old, to serve in the navy; later, he entered the army. At Austerlitz he, with ten men, made 400 prisoners, and took four pieces of cannon. At Osonio, in Spain, he, at the head of his regiment, captured a division of three thousand strong. At Ostrowna, with two battalions of infantry, he repulsed six thousand Russians. At Monterey he destroyed a body of four thousand men; and in the campaign of 1814 he was, after Champaubert and Montmirail, made General of Division by the Emperor for having taken eight thousand Russians, 163 superior officers, the whole of General Olsufief, and twenty-four pieces of cannon. General de Girardin was [illegible] with the spirit of order, an ardent patriotism, great mental activity, and clear-sightedness; and when a succession of dynasties—to which he was too independent to attach himself—deprived him of the opportunity of exercising his military skill and courage, he turned his attention to the most abstruse questions of finance, which he treated with remarkable clearness and depth; to the amelioration of the race of horses; and to the carrying out and preservation of public roads. In 1844 he published a very remarkable work, "Mémoire sur la Situation Politique et Militaire de l'Europe" a book full of valuable information, of profound research, and of just and clear views.

On the 15th, the fête of the Emperor, the public buildings will be illuminated, the theatres gratis, as well as the Exhibition and the Beaux Arts; the Pont des Invalides, the Pont d'Alma, the Pont de l'Hôtel de Ville, and the Joue St. Jacques will be inaugurated, and the first stone of the Imperial Asylum for Labourers, in the Bois de Vincennes, will be laid.

Madame George Sand is said to have just concluded an arrangement with the Librairie Nouvelle for the publication of various works, with an agreement that each edition is to consist of at least twenty thousand copies. A new book, long expected, "Les Contemplations" of Victor Hugo, is about to make its appearance, which is looked for with lively interest.

It appears pretty certain that, notwithstanding the announcement that the Industrial Exhibition was to close on the 31st of October, it will remain open for two months longer, during which period the exhibitors will be free to leave their property, to carry it away, or to sell it on the spot, the purchasers being permitted to remove the object at the time of the purchase. No doubt an immense majority of the objects exposed will be disposed of in this way, the proprietors of most of the articles finding it more to their advantage to get them off their hands at very low prices, than to undertake the trouble, risk, and expense of repacking and carriage, with the uncertainty of finding a sale for them at home. The Prince Napoleon has been engaged in a series of organised visits to the Exhibition, attended by the various Commissioners, in order to examine closely and fully into all the details of the various productions. In the collection of Lyons silks we were a few days since shown by one of the persons about the Prince the dress pronounced by him to be his favourite of all the display. It is an extremely rich chesnut-brown silk, with stripes round the skirt in velvet and plush. The article of furniture most admired by connoisseurs for the extraordinary execution of the wood-carving is that sent by Messrs. Jackson and Graham, of Oxford-street, London. The figures, ornaments, &c., in wood, carved and gilt, present a finish and skill superior to anything of the kind yet produced.

MM. Scribe and Auber are engaged on a new opera, which is, it is said, to be produced at the Théâtre Lyrique. Madame Ristori, crowding triumph upon triumph, is drawing fresh crowds to her marvellous representation of *Pia de' Tolomei*. In this is a new phase of her genius. Each character in the hands of this marvellous tragedian is made to bear the stamp of its own identity. Adelaide Ristori nowhere appears on the stage: you behold *Mirra, Marie Stuart, Pia* each displaying an idiosyncrasy as distinct as did the originals.

THE CONSTITUTIONAL STRUGGLE IN HANOVER.

The first step taken by the new Hanoverian Ministry is one which will not fail to awaken the indignation of the whole kingdom. In an evil hour the King had been induced by the small Court party by whom he is exclusively surrounded to throw himself into their arms, and upset the existing liberal constitution, against the advice of the late moderate Cabinet, and in direct opposition to the wishes of the people. A Royal proclamation was published on the 1st inst., dissolving the Second Chamber of the Estates of the Kingdom; and the next step will of course be to convoke a new Chamber, based upon the limited franchise of the former elective law. The country is completely taken by surprise. The Hanoverians, who have always been conspicuous for their loyalty to the family of the reigning King, are startled at the position they are placed in of being obliged, in self defence, to offer a steady but universal opposition, in order to preserve the dignity and independence of the kingdom. The opposition will no doubt be confined to the present to the legitimate steps guaranteed to them by the provisions of the constitution, but people already put their heads together in knots, and ask, each with blank countenance, "If these constitutional means fail, which they inevitably will, what next?"

SPAIN AND THE WESTERN ALLIANCE.

After all that was said to the contrary, it now turns out that the Spanish Government has taken certain steps for entering into a closer alliance with the Western Powers, and taking part in the war in the East. Nothing is yet known as to the terms on which the adhesion of Spain is offered; but it is said in a letter from Madrid, dated August 3, that the Government has expressed its wish and readiness to take part in the Eastern question later on, when its domestic affairs are more settled, and to help the Allies with 25,000 or 30,000 men. The matter will have to be laid before the Cortes, and it will be discussed whether the reenrolment shall be voluntary or not, and other details. The visit of the President of the Council and the Minister for Foreign Affairs to the Escurial on the 2nd inst. is said to have been to communicate to the Queen the views of the responsible Government on this head—views to which the Court are strongly opposed.

AUSTRIAN ADVANCES TO THE WESTERN POWERS

A change for the better has taken place in the relations between Austria on the one hand and England and France on the other; and at the present moment the Allied Governments are, or profess to be, satisfied with the Cabinet of Vienna. I do not pretend to answer for the sincerity of the declarations recently made by that Cabinet, nor can I affirm that these declarations are accepted by the generality of the public as *bona fide* expressions of Austrian policy. All I mean to say is, that this Government does not hesitate to express its satisfaction at the present position of affairs as relates to Austria. Prussia has sunk so completely in public estimation, that little regard is there of her doing anything honourable or spirited, that not a word need be said. I have already contradicted, on good authority, the statement put forth in several of the German papers, that England and France considered themselves disengaged, in consequence of the negotiations of the Cabinet of Vienna, from the obligations contracted by the Treaty of the 2nd of December, or that a circular had been issued to that effect by the French Foreign-office to its diplomatic agents abroad. There was never any foundation for such a statement, but I presume it must have produced a certain effect, inasmuch as the Austrian Minister for Foreign Affairs thought it necessary, some days since, to demand of the French Minister at Vienna whether his Government still considered itself as engaged by the Treaty of the 2nd of December, or the contrary. The demand was accompanied by the most positive declarations that Austria regarded herself as much bound as ever by that instrument; that she was still the ally of France and England; that she held and should hold the Danubian Principalities, but only as against Russia, and should resist any attempt on the part of that Power to invade or commit any act of hostility against the Ottoman territory in that quarter. It is [illegible] that in the present state of the war, confined as its theatre now by land was to the Crimea, there were considerations of a preliminary kind, not, however, relating to any regard for Russia, which prevented her for the present from commencing hostilities, but that when the proper moment arrived she should not hesitate to join the Allies, and to fulfil the obligations she had voluntarily contracted, and means faithfully to fulfil. A good deal more passed on the same occasion, but I believe I have given the substance of the conversation. In a word, her explanations were considered as satisfactory to the French Government. Communications immediately took place between Vienna and Paris, and between these two capitals and London. The English Government, on being made acquainted with these assurances, given spontaneously, as I am led to believe, by the Cabinet of Vienna, not unnaturally hesitated to give them credence. They feared that it was little more than the repetition of the past; the same vagueness, the same fair professions with no meaning, or without the intention of fulfilling them. Of the members of the English Cabinet, I suspect that Lord Palmerston was the least disposed to take for granted the sincerity of Austria, and the name of no august personage is mentioned as sharing largely the incredulity of his Lordship. That this should be the case is not astonishing, but, if I am informed rightly, and my information is derived from an excellent source, these scruples gave way, and I believe, at the moment I write, both Governments are rather satisfied than otherwise—satisfied that Austria disclaims in a positive manner any sympathy with Russia: that she considers herself still the ally of France and England, and prepared on some future day to join the policy of action which, up to the present day, they have followed out alone. The Emperor of the French, who had found it difficult to believe that his young Imperial brother meant to act otherwise than in the most honourable manner towards the two Governments, but who subsequently found reasons to change his mind, has again, I believe, returned to his original impression, and has very recently manifested his satisfaction at the resumption of the former friendly relations with Austria. Whether these are destined to be again modified I cannot say, no more than I can vouch for their actual truth; but it is certain that the Russian clique at Vienna, which had succeeded to a certain extent in influencing the mind of the young Emperor, and was lately so triumphant, has become, within the last six or seven days, completely discouraged and indignant. It so happened that the change to which I refer took place during the short absence of Prince Gortschakoff at Stuttgard. The Prince left Vienna in the highest spirits, and confident of the triumph of his policy. He returned to his post, and found that all was completely changed; and he has expressed his disappointment and his indignation in no very measured terms. The Austrians at St. Petersburg, who were so lately the objects of the most delicate attentions, will again, I presume, be treated with the same contumely as after the Treaty of the 2nd of December. This state of the relations with Austria has been communicated by the other diplomatic agents at Vienna to their respective Governments and I know of one, whose residence for many years at that Court, and an intimate uninterrupted intercourse with most of the leading personages of the day, ought to render him an authority on such subjects, who thinks himself authorised to communicate his own favourable opinion to his Government. Nevertheless, there are others, and those also versed in political affairs, who are far from being so sanguine, and who persist in doubting, if not the good faith, at all events the possibility of Austria ever drawing her sword against Russia.

On a very recent audience which Prince Gortschakoff had of the Emperor of Austria, he did his utmost to obtain from his Majesty the formal acceptance of an engagement from Russia that she would not attack the Danubian Principalities so long as the Austrians continued to occupy them. The Prince at once wrote off to St. Petersburg, to say that the Emperor had accepted the engagement, and subsequently stated so to M. de Buol. M. de Buol unhesitatingly and bluntly told the Prince that he did not credit the statement, and invited him to repeat it in the presence of the Emperor himself. The Prince did so, when the Emperor, in the most positive terms, contradicted the Prince—or himself. Who shall say? If the young Emperor spoke the truth, as I hope he did, it is rather surprising that any Ambassador, and especially a Russian, should so misunderstand what was said to him.—*Paris Correspondent of the Times, Aug. 7.*

THE SOUND DUES AND THE UNITED STATES.

Last April the President of the United States gave official notice to the Danish Government that the Treaty of the 26th of April, 1826, will expire after the lapse of a stipulated period (a twelvemonth), as the American citizens can no longer recognise the right of Denmark to levy the Sound dues on their ships and cargoes. The Danish Cabinet have sent off a note on the subject to the American Government, in which the Minister for Foreign Affairs expresses his concern that the Cabinet of Washington should not have thought proper to enter into negotiations with Denmark on the subject before taking so very decided a step. The substance of the notice given deprives Denmark, as he alleges, of the power of devoting that time and attention to the subject which are due to a question of so complicated a nature, especially at the present moment, when that country is in a critical state, and pressed on all sides to give up her neutrality and take part in the war against Russia. An unlimited acceptance of the demand of the United States would involve the loss of a large sum annually, and this would be sacrificed in favour of other States which pay the great bulk of the Sound dues, whilst the whole annual amount borne by the United States seldom exceeds 200 dollars. He goes on to say that Denmark is not prepared to make such a sacrifice, especially in the present state of her finances, and the uncertainty of the result of the diplomatic negotiations now pending with respect to the present political crisis. Under these circumstances, he cannot help considering the notice given by the United States to terminate the treaty of commerce and amity existing between the two countries as an act of unfairness and severity not to be recalled for and unprovoked by the conduct of Denmark. On the contrary, he says, many cases might be quoted in which the Danish Government has refunded sums of money paid by the American merchants for Sound dues, merely for the sake of preserving the friendly relations between the two countries. The Danish Minister concludes by observing that it will scarcely be possible to come to any arrangement before the expiration of the short period of time named by the American Government; and even in that case it is hardly likely that such arrangement would give universal satisfaction to those other States most deeply interested in the result. As the United States have frequently expressed their determination not to resume any diplomatic intercourse with Denmark till invited by her to open serious negotiations for the abolition of the Sound dues, it is probable that the note of the Danish Minister for Foreign Affairs will remain unanswered, at least for the present, and that the negotiations will be resumed only after the 26th of April next year, when the twelvemonth's notice will have elapsed and the treaty become a dead letter.

AMERICA.

The steam-ship *Pacific*, which left New York on the 25th ult., arrived at Liverpool on Sunday.

The *New York Herald* publishes a communication from its Washington correspondent, dated July 30, which states that the President had received an autograph letter from the Emperor of Russia, in reply to one of congratulation on his accession to the throne. The document, which alludes in highly complimentary terms to the increasing greatness of the United States, contains a paragraph to the effect that the dying admonitory advice of the late to the present Emperor conveyed an injunction to him to study the private papers, to be found in the Imperial escritoire, which he (the Emperor Nicholas) had received from the eminent man in the United States, among whose names were to be found those of Jackson, Clay, Webster, and others. The letter proceeds to acknowledge the value of those papers, and expresses his Majesty's sense of obligation at the strong national interest manifested by the American people in the success of the war upon which his great father had entered. It concludes by proposing the most lasting friendship between Russia and the United States

The Washington *Union* states that the Secretary of State and the Hon. Wm. L. Lee, his Hawaiian Majesty's Minister to the United States Government, on Friday signed a treaty of commercial reciprocity between the United States and the Sandwich Islands. The President has also made proclamation of a convention between the United States and the Kingdom of the Two Sicilies, having for its object the recognition of the principle that free ships make free goods

The Treasury Department gives notice that all wines and distilled spirits transported in bond from one port to another in the United States are required to be branded and sealed; and it is directed that all cigars so transported must be encased and sealed before delivered from store, in the same manner as provided for when passing through the United States to Canada or Mexico.

The parties taken out of the British brig *Buffalo* and conveyed to Boston, where they were tried and acquitted of the charge of violating the neutrality laws by enlisting men for the Crimea, have brought actions against Captain Clark, of the revenue cutter *James Campbell*, for illegal detention and imprisonment. The damage claimed amounts to 40,000 dollars.

The *New York Herald* of the 25th ult. says:—

It having been stated that the French Government are in our markets for the charter of vessels for Constantinople and the Crimea, we have made inquiries on the subject, and have the best authority for stating that the French Government have made no charters of the kind here or elsewhere in the United States, and will not. The vessels they may require are [illegible] taken by direct application from the agents on arrival at a port in Europe, and after examination by the Government surveyors. It may thus be well for our shipowners to be on their guard against swindlers.

THE HANGO MASSACRE.

After a most unaccountable delay, the following statement of Lieut. Geneste regarding the foul atrocity at Hango has been forwarded to Captain Fanshawe:

LIEUTENANT GENESTE TO CAPTAIN FANSHAWE.

Helsingfors, July 8, [illegible]

SIR,—In obedience to your order, on Monday, the 6th of June, I proceeded to the landing-place at Hango Head in the cutter, carrying a flag of truce, in order to land Russian prisoners and communicate with the officer at the telegraph station. We arrived at the pier, and, no person being visible on the shore except two or three women standing near the houses, I landed the Russian prisoners, and, in company with them and Dr. Easton, proceeded towards the houses to communicate with the people, and with the officer at the telegraph. The three stewards also accompanied us, in order to purchase fresh provisions. But all the boat's crew were left in the boat, with strict orders not to land, as you had directed. We also carried with us a white flag of truce on a long staff. Norton, the Mediterranean steward, carrying it beside me. We had only proceeded about fifty yards from the boat when suddenly Russian soldiers (who had been concealed behind the rocks and houses, and of whose vicinity we were completely ignorant) rose and fired on us and the boat from all sides. Taking the white flag from the steward Norton, who was shot down by my side, I endeavoured with it in my hand to prevent the soldiers firing at the boat, and so called the attention of their officer, who came near me, to it. However, I regret to state that the firing did not cease until many of our people had been hit. As we were completely surrounded by soldiers it was impossible to effect our escape, the soldiers being within a few yards of the boat on every side; and seeing the impossibility of making any resistance, not having a loaded musket in the boat, and the greater number of our small boat's crew of eleven men being killed and wounded by the first fire of the enemy, not a shot was fired on our side. We were all seized by the soldiers, taken to the houses, and without a moment's delay placed in carriages which appeared to me to be ready for us, and transported to Eckness, where we arrived the same afternoon. I regret to have to state that we have lost six of our men killed, and four have been wounded (including myself, the others having slight scratches. One Finnish captain was also killed, and two Russian captains wounded. The wounded men were carried to Eckness, and placed in hospital there. I enclose a list of the killed and wounded. The fate of several of the killed I know only by the officer's report, as we were hurried away too quickly from the scene of action to ascertain it for ourselves; but I fear their report is too true, as we have six men missing, and they report seven dead bodies at Hango Head, which would be correct with the six named and the old Finnish captain, whom we saw shot down and bayonetted. We remained at Eckness during Tuesday, and on Wednesday Mr. Sullivan, myself, and the four unwounded men were removed to this place, leaving the four wounded men at Eckness, with Dr. Easton to attend them. The wounded men were all doing well when we left Eckness. One of them, Gliddon, had to undergo amputation of his right arm, near the shoulder, which had been successfully performed. Since our arrival at Eckness we have received every attention and kindness from the Russian General and officers that our position would admit of. The wounded men have been treated with the greatest care and consideration. I requested General Moller, the officer commanding at Eckness, to send a boat on the day following this unfortunate affair, to the ship, with a flag of truce, to inform you what had happened, but he declared it to be impossible. I do not know how this letter will reach you, but the General will forward it by the first opportunity. As we were taken prisoners under a flag of truce, I presume we shall be shortly released, but am at present in perfect ignorance of their intentions with respect to us. I send this letter open and unsealed.

I am, &c., LOUIS GENESTE, Lieutenant

On the receipt of this report Admiral Dundas wrote a despatch to Prince Dolgorouky, summarising the whole case, and pointing out how the facts elicited established his original assertion of the violation of the privilege of a flag of truce. He recapitulates the facts of the case:—

The point of landing to which the boat was ordered to proceed was near a telegraph station, from which the *Cossack* head must have been plainly observed. The habitual vigilance at these telegraphs is known to the officers under my orders. The boat quitted the ship at a considerable distance from the shore, and was for a long time in full view of the telegraph. It is impossible to believe that her motions were not watched, and the flag was hoisted at a mile from the shore. It was therefore clearly the duty of the principal officer on the spot either to give timely warning to the boat that her approach was objectionable, or to report the flag which she displayed, if [illegible] been unguarded, negligently.

Timely warning to the boat would have prevented the catastrophe; but wilful neglect of the flag, and concealment by those on shore, could be nothing but gross treachery. I have next to compare the statement of Lieutenant Geneste with the third version of the fact, as presented to your Excellency by your own officers. It is asserted by them that the flag of truce was not observed; and I repeat again, without fear of contradiction, that it was hoisted. It is alleged that the crew of the *Cossack* boat, at the commencement of the attack upon them, threw overboard the gun (cannon) with which she is supposed to have been armed. You may, perhaps, be surprised to learn that the boat in question was not fitted with one, that none ever mounted one upon any occasion. I am myself forced to the conclusion that wilful falsehoods have been invented in vindication of a decided outrage, and it is not unimportant to inquire for what purpose the carriages and horses mentioned by Lieutenant Geneste had been previously collected. Some stress is laid on his avowed intention to endeavour to communicate with the officer to the telegraph, and with the people, and to purchase provisions; but, in the absence of troops, some little precaution to the nearest authority, or to the unarmed residents, was at least desirable and natural on behalf of the prisoners intended to be released. A moment of forbearance on the part of the officer who planned the ambush would have been sufficient to afford it; and you are well aware that acts of courtesy, and attentions to ordinary refreshments, are not uncommon on occasions of truce. The *Cossack* was in no sense short of provisions, nor had she been long without refreshments; and I can discover nothing in the statement of Lieut. Geneste to justify the inferences which have been wrested from them.

THE BISHOP OF DURHAM.—The venerable Bishop of Durham has, we understand, had an operation performed for a cataract in the eye. Mr. Wharton Jones was the officiating surgeon, and displayed his usual skill and success. The symptoms are favourable; but the progress of the cure is of course slow. All friends of classic learning and religious toleration will rejoice to hear the perfect recovery of Dr. Maltby.

MADEIRA COLLEGIATE SCHOOL.—The third annual examination and distribution of prizes at this seminary took place during the last week of June, in presence of the Government Inspector of Schools, professors of the College, and friends of the pupils. The gold medal (offered by the Masters of the High-school of Glasgow) was won by Henry Davies; the silver medal by L. A. Ribeiro; Sir Archibald Alison's Prize for History by A. C. Ross: First in Classics by W. C. Hinton and M. Park; and other prizes for English, Latin, Greek, French, History, Geography, Arithmetic, Drawing, Writing, Chemistry, &c., by H. Davies, O. Davies, L. A. Ribeiro, W. C. Hinton, M. Park, A. Park, A. C. Ross, J. Ross, H. J. Elliott, A. Freeman, J. Jeffery, H. Burnett, and L. M. D'Urso.

BOATS RECONNOITRING THE PASSAGE TO WYBORG.

THE BOATS OF THE "ARROGANT" AND "MAGICIENNE" OFF WYBORG.

The transaction, represented in this Sketch, took place a few weeks ago. The boats of the *Arrogant* and *Magicienne*, with a gun-boat in company, manned and armed, were sent in to reconnoitre in the passage leading to Wyborg. When within some 200 yards of the shore an ambuscade of Russian sharpshooters opened fire upon them, which was sharply returned by our men. Finding that they were too much exposed to the Russian musketry, the boats retreated under cover of the gun-boats. In this encounter we regret to add that four or five men were severely wounded, and, in consequence of the explosion of one of the boat's magazines, a midshipman was thrown overboard and drowned. The masts and rigging of the boats were also very much cut up by the fire of the riflemen. Owing to the shallowness of the water, the *Arrogant* and *Magicienne* were unable to render any assistance.

As regards the recent proceedings of the Baltic fleet, a letter from Nargen of the 31st ult., says:—

The *Amphion* has been for some time reconnoitring all the channels near Sveaborg, and has found many valuable anchorages, and several points where the coasting trade between Borgo and Helsingfors, which was carried on to a considerable extent, can be entirely stopped; and some surprise is expressed that so little was attempted in this way last year by the vessels stationed in that vicinity. The Admiral, to assist Captain Kay in carrying out this service, had placed the *Dragon*, and a French and English gun-boat under his orders, with which vessels he proceeded very nearly to Borgo, which appears to be without any defences, and they met with no resistance whatever, except from shoals, the gun-boats having grounded several times.

It is added that—

All the gun and mortar boats are going over to Helsingfors. The town will probably be shelled; but it is not expected that the fortifications can be destroyed.

CELEBRATION OF THE EMPRESS DOWAGER'S BIRTHDAY, AT CRONSTADT.

Soon after twelve o'clock on the night of the 13th ult., the sailors on board the Allied fleet before Cronstadt were startled by a tremendous glare in the sky over the island. On looking a little more closely, a number of large bonfires were seen; and, from various symptoms, it was evident that some festivity was going on. At first it was supposed some victory gained was being commemorated; but it was ascertained next morning that the rejoicing was in honour of the Empress Dowager's birthday.

FIRE OVER CRONSTADT, SEEN FROM THE QUARTER-DECK OF "THE CÆSAR."

THE "LADY NANCY" RAFT ATTACKING TAGANROG, IN THE SEA OF AZOFF.

RAFT IN THE SEA OF AZOFF.

(*From a Correspondent.*)

I send you a Sketch which perhaps may serve to acquaint the authorities at home "what is really useful in the Sea of Azoff." During the recent rapid and brilliant operations in that sea it was found that the shallowness of the water prevented the heavy guns of the ships being brought into play. A raft was accordingly constructed on board the *Stromboli*. It consists of twenty-nine casks placed in six rows, cradled, as it were, in a framework of spars 45 feet long and 15 feet broad; a portion of the upper part is firmly planked over; a spar lashed athwart ships is ingeniously fitted with straps, to which the side tackles, &c., are hooked; the train tackle being hooked to one similarly fitted abaft; while a spar taken to two stout towing bollards abaft serves to keep the raft in any direction required. When this novel gun-boat was finished, the *Miranda* hauled alongside the *Stromboli*; purchases from both vessels were applied, and the enormous mass was raised a little above the *Stromboli's* gunwale; by steadily heaving in on their cables, the ships slowly separated, the purchases were lowered, and the wide-famed *Lady Nancy* was added to the British navy.

Seldom has a more lively scene, or a more perfect display of energy been witnessed, than that which presented itself on the quarter-deck of the *Stromboli* during the building of the *Lady Nancy*. The ever-being-swept dazzling white parade ground, was now a building yard; all hands saw not only the importance, but the necessity of the work; and in the incredibly short space of twelve hours the *Stromboli's* zealous crew had provided themselves with a gun boat, which, when carrying a long 32-pounder gun, weighing forty-two cwt, 100 rounds of ammunition, a seven-inch hawser, and eighteen men, drew only twenty inches of water. I hear it is cheerfully admitted by the squadron, how nobly, and coolly her crew fought her. At Taganrog this flaming *Lady Nancy* fired more than eighty rounds with a precision that elicited hearty cheers from our allies. She has been towed more than 200 miles, in boisterous weather, not a nail or lashing has started, she is still what she was designed to be—perfection. The following was the crew of the Raft:—1. Mr. A. K. Forde, Senior Mate (in charge). 2. Mr. F. Armstrong, Gunner. 3. Mr. Albert, Master. 4. Mr. J. S. Adams, Assistant-Surgeon. 5. Lieut. John F. Ross, Commanding the Raft, and Senior Lieutenant of the *Stromboli*. 6. Mr. John Retallick, Paymaster (in charge).

THE ARTILLERY TAKING LANCASTER GUNS DOWN TO THE FIRST PARALLEL BY NIGHT.

What whipping and spurring, not unmingled with volleys of very irreverent language, to say the least of it, must the carriage of these huge pieces of artillery have cost, as they passed along these rough roads, which must be difficult enough even in the daytime, without adding the evils of darkness. One may imagine what a striking picture the scene would present to any one of the drivers who had curiosity enough to look round him. Looking towards Sebastopol the view must be very grand from some of the heights, on a fine night, especially when the firing from the Malakoff Tower is brisk. So far as the carriage of great guns is concerned, however, the drivers would, probably, not rejoice greatly in the sight of such fireworks, which must have rather disturbed the horses employed in that very responsible occupation.

BEFORE SEBASTOPOL.—ARTILLERY TAKING LANCASTER GUNS DOWN TO THE FIRST PARALLEL, NIGHT.

CALENDAR FOR THE WEEK.

SUNDAY, August 12.—10th Sunday after Trinity.
MONDAY, 13.—Old Lammas-day.
TUESDAY, 14.—Printing invented, 1437.
WEDNESDAY, 15.—Assumption
THURSDAY, 16 Riots in Montreal, 1849
FRIDAY, 17.—Duchess of Kent born, 1786.
SATURDAY, 18. Beattie died, 1803.

THE QUEEN'S VISIT TO PARIS.

COMPLETION OF THE GREAT EXHIBITION IN FRANCE.

THE Subscribers to the ILLUSTRATED LONDON NEWS are respectfully informed that every arrangement has been made to ensure correct and splendid Illustrations of the above interesting events. All the best Artists in London and Paris are specially engaged for the occasion. Already immense preparations are in progress for the reception of the Queen at the Palace of Versailles, the Palace of Fontainebleau, the Palace of St. Cloud, the Elysée Bourbon, the Palace of the Tuileries, the Hôtel de Ville, the Louvre, the Great Exhibition at Paris, &c.

The Illustrations will include a Large Engraving of the

GRAND NIGHT FETE

AND ILLUMINATIONS IN THE GARDENS OF VERSAILLES, such as have not been given since the time of Louis XIV.

The Reception of her Majesty on her ARRIVAL in Paris, the Decorations and Triumphal Arches in the Streets of Paris, the State Visit to the Great Exhibition; splendid new and original Portraits of the Queen and Prince Albert; the Emperor and Empress of the French, the Prince of Wales, and the other younger branches of the Royal Family visiting France; will also be comprised in the Series of Illustrations.

Next week, August the 18th, will be given Splendid Views, connected with her Majesty's Arrival on the Shores of France. And, on August the 25th,

PICTURES OF THE GRAND ROYAL VISIT TO PARIS.

In the ILLUSTRATED LONDON NEWS for Sept. 1st will appear further splendid Views of the Fêtes; on Sept. 8th, completion of the Illustrations, with Views of the Queen's Return to England; and on Sept. 15th to this series of magnificent Pictures will be added the best specimens of Pictures from the Fine Arts department of the Paris Exhibition.

Persons wishing to subscribe to this series must order immediately, as the demand is sure to exceed the supply. Subscribers giving their orders to the various newsmen will be supplied in rotation as received.

ILLUSTRATED LONDON NEWS OFFICE, 198, Strand.

THE ILLUSTRATED LONDON NEWS

Publishes a Stamped Edition. The stamp must be folded outside; and this will frank the paper throughout the United Kingdom for fifteen days. Should any difficulty be found in procuring the stamped edition, it will be forwarded on application direct from the Office.

The Unstamped Edition cannot be forwarded by post except on the terms of the Treasury Minute for the Conveyance of Books and Printed Matter

Unstamped, Fivepence; Stamped, Sixpence.

TO ADVERTISERS.—All Advertisements must be sent direct to the Office, 198, Strand. No connection with any person or persons as Agents.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 11, 1855.

THE telegraphic despatches from the Black Sea and the Baltic communicate no news; but we have reason to believe that the lull in both places will be of short continuance, and that in each of them a grand blow is meditated, and ready to descend upon the Russian strongholds and their defenders. From the Baltic our private letters inform us, under date of the 29th ult., that an attack upon Sveaborg by the Allied fleets was daily expected. They communicate additional particulars, which, however, we do not feel ourselves justified in giving to the public. Should that attack be made, as we firmly believe it will, our sailors, weary of inactivity, and jealous of the glory long promised and withheld, will do their duty, we cannot doubt, as manfully, and with as brilliant success, as their illustrious predecessors in the heroic days of Nelson and his compeers, and will excite in the French, and receive from them, the impetus of a generous emulation in the common cause. From Balaclava the whole purport of the public and private communications that reach this country is to the effect that the decisive moment for the attack on the Malakoff is approaching. Let us hope that during the auspicious visit of her Majesty to Paris the news of a great victory may arrive, to give additional éclat to the festivities!

We do not consider the fact to be in itself of great importance, but it is, nevertheless, of interest, and may be of value. Spain has resolved to imitate the brave example of Piedmont, and is about to declare her adherence to the policy of Great Britain and France, and her intention to raise and convey an army of 25,000 men to the Crimea. If Spain, impoverished and distracted as she is, can do the right thing, and Austria, not so impoverished and distracted, and avowing her sympathy with the cause of the Allies, continues to hold aloof, must not Austria yield the place to Spain in the public opinion of the world, and rank below that Power in the estimation of every man of honour and spirit? Most people will think so; though possibly Mr. Gladstone, Lord John Russell, Count Buol, Prince Gortschakoff, and a few other persons who have faith in Russia and none in England and France, will be of a different opinion.

THE Parliamentary return of the number of stamps issued to the newspapers of the United Kingdom, during the half-year ending the 30th June, has just been published. As, in consequence of the repeal, during the present Session, of the compulsory Stamp-duty on newspapers, it will be the last document of the kind which can have any claim to completeness, a greater value than usual is attached to it. The following is the circulation of the daily morning and evening journals:—

MORNING PAPERS.

WEEKLY PAPERS PUBLISHED AT THREEPENCE.

News of the World	2,885,000
Lloyd's Weekly Newspaper	2,41[illegible],500
Weekly Times	1,[illegible],[illegible]03

It will be seen from the above that the ILLUSTRATED LONDON NEWS has a far larger circulation than that of any weekly journal whatsoever, even than those which are published at half its price, as it exceeds the most popular of the cheapest of them by no less than 508,151 stamps. It may also be calculated from these figures that the average amount of our circulation is upwards of 130,000 each impression; and that the whole of the sixpenny weekly newspapers, including such favourite and long-established journals as the *Weekly Dispatch*, the *Observer*, *Bell's Life*, and twelve others of considerable repute and influence, only consumed stamps during the six months to the number of 2,820,810; that is to say, the whole of these fifteen papers have amongst them a circulation less by 564,341 than that of the ILLUSTRATED LONDON NEWS. It will also appear, though the *Times* consumed the enormous number of 9,175,788 stamps in the half year, that our circulation is even larger than that of the great leviathan of the press. The *Times* has daily a circulation of about 59,000, or less than half that of the ILLUSTRATED LONDON NEWS. The combined circulation of the five morning Journals which compete with the *Times* is greatly inferior to that of our powerful contemporary, as any one may calculate for himself; but it may be permitted to us to observe that the *Morning Advertiser*, the *Daily News*, the *Morning Post*, the *Morning Chronicle*, and the *Morning Herald* consumed in the half-year only 3,280,118 stamps; or the whole five of them, published six times a week, issued less stamps by 113,000 than those made use of by our Journal. This is a proud position to occupy, and we need say no more than that no exertions on our part shall be wanting to maintain it.

THERE may not be many causes for any great amount of popular exultation just now; but the satisfaction which the country must feel in the thought that Mr. Gladstone is no longer our Chancellor of Exchequer partakes of the feeling one experiences on escaping from a danger and a shame. Englishmen are compelled to be thankful that the member for Oxford can no longer be actively mischievous. Lest there should be any mistake in the public mind as to his real views on the war, and lest those who admire his eloquence, appreciate his adroitness, and have felt thankful to him for his endeavours in days gone by to carry out a Free-trade policy, should be induced to believe his present course less unworthy than it seemed, Mr. Gladstone has deliberately re-stated his alleged convictions. The result is that by a species of political suicide—as bad as that of Lord John Russell—Mr. Gladstone has terminated abruptly a career which might have been long and honourable. He has publicly proclaimed himself unfit to be trusted, either as a statesman who takes an intelligent view of the politics of Europe, or as an Englishman who is proud of the character and reputation of his country. Henceforth Mr. Gladstone's exclusion from office must be a *sine qua non* with any Minister who deserves the confidence of the nation. It is a deplorable thing that a gifted and accomplished man, indisputably the best speaker in the House of Commons, of untarnished private character, and with numerous other advantages which ought, under other circumstances, to have retained him in the service of the State, should thus be ostracised by his own hand; but it is a good thing that he and all other men of his order should understand that no talents, no abilities, will stand an English statesman in the stead of a heart that beats with the heart of his nation.

We have said that Mr. Gladstone cannot longer be actively mischievous. Some have thought otherwise, and that his Russian speeches translated and circulated throughout the Continent are calculated to promote the interests of the Imperial master to whom he has virtually transferred his allegiance. We can hardly think this to be the case. These addresses—these "magnificent orations"—as one of the other peacemongers called them, carry their own antidote. To the thinking Continental the propositions supported by Mr. Gladstone must appear so ridiculously insufficient towards accomplishing the purpose of the Allies (and the nearer a reader is to the scene of action the more evident must this be to him), that he can attach no weight to opinions so manifestly worthless; while the pleasure of the ignorant foreigner, who may be gratified at the pro-Russian pleading of the English casuist, must be signally damaged by the patent fact that the whole soul of the British nation is so opposed to Gladstonism, that this able orator and distinguished man of business is indignantly excluded from the Government of his country. We, therefore, do not see whom Mr. Gladstone can injure: even his own reputation is now past further harm.

His speech of the 3rd instant was not only a laboured argument to show that the Austrian proposals ought to have been accepted, and the war brought to an end, but an endeavour to frighten England by magnifying the power and earnestness of her enemy, and by warning her that her ally would soon drop away from her, for the one reason, all-powerful in Mr. Gladstone's estimation, except when speaking of Russia—a financial consideration. Let us remark, however, upon the singular one-sidedness of this orator, whose pretensions to fairness of argument almost amount to an affectation. Russia—although her landowners are being impoverished, her merchants crippled, her general population distressed by our blockades, and although her resources are already failing, while those of the Allies are scarcely touched—Russia is to be vigorous, enthusiastic, persevering to the end of the chapter. On the other hand, England, with the trade of the world still in her hands, with no appreciable drain upon her means, and with her people ardent in the war—France, with her commerce equally unrestricted, with all her traditional military enthusiasm burning throughout her land, from La Manche to the Mediterranean, and with her capitalists, great and small, flinging, at the call of the Emperor, one hundred and forty-four millions sterling into the war-chest—these two prosperous nations are to be sickened and turn from the strife; while Russia, half ruined, is to march on, conquering. Such is the Gladstonian theory. Such is the nature of the bugbear which he raises to frighten the country

But, even in his zeal to serve Russia, Mr. Gladstone could not quite forget his own position; and in several portions of his speech his own soreness and discomfiture are betrayed most inartistically. The Peelites have long held the conviction that their wisdom upheld the country and the Constitution. They, to adopt the Hindostanee myth, were the tortoise upon whom stood the elephant that supported the world. The tortoise has crawled from under the elephant, and still the world stands. When the Peelites slunk away from place, they expected a toppling over of all things. They waited for this catastrophe, and have still to wait; but now, patient self-complacency has given way to angry disappointment. All things ought to have fallen, but as they have not the Peelites grow abusive. This is the key to a good deal of Mr. Gladstone's speech he is a faithful Russian, but he is also a spiteful Peelite. He will fight for Alexander, but he must do a little of Diogenes, on his own account, and, from his overturned tub, he must not only assail Lord Palmerston and Lord Clarendon for carrying on the war, but he must also castigate them for carrying on the Government without him. "He placed the undivided responsibility of the continuance of the war on the heads of the Ministry;" and, later, he censured Lord Clarendon for not showing, in his able despatches, any real desire for peace, and he expressed his own fear of a wider breach with Austria. It is scarcely worth while to reply to allegations of so transparent a character. Lord Palmerston, on a subsequent night, remarked that, if Austria did not fight on our side, he would undertake to say that she would not fight against us—an undertaking which must imply that Lord Palmerston knew how to render available certain guarantees for her neutrality. On this point it may be matter of opinion whether Austria is not already fighting against us by releasing Russian armies from the necessity of protecting the Russian frontier; and some people may desire that the guarantees hinted at were already exercising their influence in another than a pacific form; but nobody is "afraid" of a wider breach with Austria. If a quarrel with Austria were the worst thing that can be brought against Lord Palmerston's Government, Mr. Gladstone's chances of achieving its overthrow, and his own return to place, become even more than hitherto hopeless.

Neither Mr Gladstone nor James Graham, nor Mr. Cobden, with their brief tail of half-a-dozen disappointed or disaffected men, can do any mischief. When a Saint is to be made at Rome, there is an official called the "Devil's Advocate," who does his best to malign and damage the reputation of the deceased, in order that the severest scrutiny may be instituted. The sanctity of the present war, undertaken for liberty and humanity, is real, unlike that of the ornaments of Vatican mythology; and it is not amiss that here also should be advocates "on the other side."

BALLOON EXPERIMENTS.—Some very curious experiments are at present being carried on at Vincennes, which, if they succeed, will introduce into modern warfare an element as extraordinary as it is novel. An officer of Marine Artillery has discovered a plan by which he thinks he will be able to blow up the powder-magazines and other defences of Sebastopol by means of a balloon

LATEST INTELLIGENCE.

THE BALTIC FLEET.—ATTACK ON REVEL.

The Paris Correspondent of the *Times*, in his letter dated Thursday, six p.m., says.—"I am assured that letters, dated the 4th, have been received from the French Consul at one of the Baltic ports, announcing that the Allied squadrons had attacked Revel; that the attack was successful; and that considerable damage was done to the place."

THE WAR IN THE CRIMEA.

Prince Gortschakoff has addressed a blasphemous order of the day to his troops, assuring them that wherever the high ecclesiastics of their orthodox Church have given their benediction to those fighting for their country, and have uplifted in their midst the sacred image of the Mother of God, success has always attended their arms. As, therefore, his Eminence the Archbishop of Kherson and Taurida has just blessed the troops, and exhibited amongst them this miraculous representation, which had been taken from the catacombs of Kiieff, they may be sure that the protection of God is with them, and that fresh triumphs will be the result of their continued constancy and unflinching valour

Letters from Odessa affirm that the passes of the Putrid Sea have been rendered impracticable to vessels of light draught.

THE QUEEN'S VISIT TO PARIS.

(From our Special Correspondent.)

PREPARATIONS are now in active progress in various quarters of Paris for the reception of the Queen. Before the Hôtel de Ville an immense tent has been thrown out over the entrance, surmounted by the equestrian statue of Henri IV. This entrance leads to the covered court of Louis XIV., which is beautifully ornamented. Here the workmen are engaged in the construction of a staircase of honour (in the form of a horseshoe), by which her Majesty may reach the principal chambers of this magnificent official residence. It is expected that two entertainments will be here given in honour of her Majesty's visit—viz., a banquet and a ball. The square before the Hotel, which has been long encumbered with sightless heaps of building rubbish, is being cleared; and before her Majesty arrives in front of the Baron Haussman's official residence it will present a most imposing effect. The splendid suite of rooms, decorated at an enormous expense on the occasion of the marriage of the present Emperor, in 1853, and three quarters of a mile in length, leaves nothing to be desired, even by the *exigence* of French taste, to give her Majesty a welcome without parallel. Preparations are also being actively carried out at the Strasbourg Railway Station, from which point her Majesty, on her way through Paris, will pass through a series of triumphal arches, to rest on the following day (Sunday) at St. Cloud.

Since my last communication two points, at all events, appear to have been settled viz., that the Queen will arrive in Paris on the 18th inst., and that she will land in France at Boulogne, and pass forty-eight hours at this popular port, in order to be present at reviews of the Camps in its vicinity. The festival-loving inhabitants are already making preparations.

At St. Cloud it is arranged that the Queen will occupy the private apartments of the Empress, which are being arranged for the occasion, although their recent decoration left little to be desired. I hear, however, that even the masterpieces of the Louvre are to be laid under contribution to give effect to the temporary residence of the Emperor's illustrious guests.

At Versailles immense preparations are being made, for here will be the grandest of the brilliant fêtes in store for the Queen. The Hall of Mirrors is to be the ball-room; and supper will be served in the Salon des Spectacles. The illuminated part will rival the famed festivals given by the Duke of Orleans to Louis XIV. at St. Cloud. All the *bosquets* will glow with many-coloured lamps; the fountains will appear to scatter columns of liquid fire. Again, there is a rumour that a day will be spent at Fontainebleau; but up to this time no official communication has been made, as far as I can ascertain, for the reception of the Royal guests at that château. It would, however, be a pity to omit Fontainebleau from the list of places to be visited, since in the forest nature offers a splendid welcome to every comer. Then there is not a corner of the château, nor of the surrounding grounds, that would not offer interesting reminiscences to the attention of the Emperor's guests. At the Universal Exhibition it is generally believed that orders will be shortly issued to close the doors during two or three days, to enable workmen to carpet the principal avenues.

BOULOGNE, August 7.

Great preparations are being made here. The railway station is to be decorated, and two triumphal arches are to be erected upon the bridge opposite the station. On the port arrangements are to be made to receive her Majesty opposite the Custom-house. Here three squadrons of the 2nd Lancers will form a square, in the centre of which will be the general officers of the camp, and the municipal authorities of Paris. Here, too, the Emperor and Empress will wait the arrival of the Royal squadron. Along the cliffs, the troops of Honvault, &c., will be drawn up in line of battle. The Chasseurs of Vincennes, Voltigeurs of the Guard, and Grenadiers, will form the line from the point of disembarkation to the railway station. The escort will be formed by the Lancers and a squadron of Dragoons

Her Majesty will arrive on the 18th at one o'clock; and will proceed direct to the railway station (according to the latest instruction) *en route* for Paris. The royal guests, accompanied by the Emperor, will thus arrive at the Strasbourg railway station about six o'clock in the evening

At present it is not known to the authorities here whether the Queen will re-embark at this port or at Calais; but it is believed that Calais will be selected. Strange to say, however, there are but few visitors here at the present time.

THE LIMITED LIABILITIES BILL.—We have received an angry letter from Mr. Muntz, M.P., complaining of the comments we felt it our duty to make last week on his opposition to the Limited Liabilities Bill. He denies that the opposition was "organised," and it is that term which seems to have excited his ire. Had we charged him with "collusion," he would have a right to complain; but we made no such assertion or even innuendo. About ten capitalists opposed the measure, and they stood alone in its condemnation. It was a Free-trade measure, as Lord Palmerston observed. The opposition was entirely composed of Free-traders, and it is at least curious that without concert they should all have resolved to repudiate their own principles—principles the advocacy of which procured for all of them their seats in Parliament. When Mr. Muntz tells us, as he does in his letter, that none but commercial and opulent men are "able to judge of the effects of such a measure" as the Limited Liabilities Bill, he lays claim to a monopoly of wisdom which we cannot concede. As to his prophecy of injury or ruin within three years to all classes which must follow the new enactment, we are content to wait the test of time, which is always correcting the theories of men. How Mr. Muntz reconciles his vote with his opinions on currency, between which we pointed a flagrant contradiction, his letter affords no information.

THE DANUBE AND BLACK SEA CANAL. The project of Mr. Thomas Wilson for a canal from the Black Sea to the Danube—already described—is stated to have received the support of all the Powers interested, and to promise an early realisation. Mr. Wilson, after having at his own expense caused an accurate survey to be made, is associated in the undertaking with Count de Morny in Paris, and Count Breda in Vienna, and is now, it is said, endeavouring by the combined influence of France, England, and Austria, to obtain a firman from the Sultan. The canal, which would be little more than thirty miles in length, will save 258 miles of tedious and dangerous navigation, besides freeing the Danube from Russian influence, and giving extraordinary facilities for the rich grain trade and general commerce of Austria, Servia, Wallachia, and Bulgaria. The points to be connected are the Bay of Kustendje, on the Black Sea, and Rassova, on the Danube.

THE SIEGE OF SEBASTOPOL.

The contemplated assault on Sebastopol, announced for certain a week ago, is now apparently as far off as ever. Letters to the 28th ult., and telegraphic despatches to the 7th inst., have been received, but none of them contain any definite information as to what is to be done, or any explanation as to the postponement of the assault. A telegraphic despatch from General Pelissier to the Minister of War, dated the 7th of August, eleven p.m., conveys the following negative items of information:—

I have nothing of interest to communicate to you. The enemy has not undertaken anything against our trenches. Some cases of cholera have reappeared.

It must not be supposed, however, that the accounts received are at all discouraging. The check experienced by the Allied armies on the 18th of last month, instead of dispiriting, seems to have given them new strength and fresh energy. In spite of the furious firing of the Russians, the works are said to extend their grasping fingers in every direction—slowly, but irresistibly. They creep up the sides of the Malakoff and envelop the Redan more and more. Of course expectation is pitched to a high degree. Battery after battery is constructed, and trench after trench; so everybody is eagerly waiting for the decisive moment; but never, perhaps, was public rumour more at a loss for information than in the present instance. Scarcely anybody ventures to give an opinion. There are only vague ideas among the Allied troops about another assault, about working their way by saps under an overpowering fire of artillery, and other such general assertions, which no one believes, however willing he may be to hope that they may prove true.

A letter from the Turkish camp above Kamara, dated July 28, says:—

The French Camp on the Tchernaya, as well as the Turkish and Piedmontese Contingents, has for the last few days been kept on the alert, owing to news brought by a Russian deserter. According to his account, the Russians intended to attack in great force the Tchernaya line, and had prepared thirty brigades of infantry and four of artillery. Their chief object, he pretended, was to break through the Turkish line. The consequence of this report, which came from French head-quarters, was that both the Piedmontese and Turkish troops passed a sleepless night. But the night of Wednesday, as well as the following one, was passed without bringing the Russians. There was no more seen of them than usual, except yesterday, when a foraging party of theirs came down from the White, or Mackenzie, ridge, to the plain towards the bridge of Traktir, where the French have constructed a *tête-de-pont*. But they contended themselves with collecting the hay, and returned again to the heights. They were protected in this foraging expedition by the guns of the Russian batteries on the heights. When the Russian foraging party returned, the French cattle and sheep went over as usual to browse, and were again, as usual, welcomed by some shells from the Russian forts. This is all that has been seen of the Russians during the last few days. The Sardinians occupy Tchergoun as usual; the French and English cavalry, and lately a Turkish detachment, the valley of Baidar; and nowhere have any traces of the enemy been discovered.

Either the Russians have left the Crimea by sea altogether, or else, as is more probable, the threatened attack was only one of those stories with which deserters try to ingratiate themselves on their arrival. Every one of them is sure to come with some valuable information, and yet there is no army where the common run of deserters can have so little information as in the Russian army. Even officers know very little beyond what takes place in their regiments.

AMENDED RETURN OF OFFICERS WOUNDED ON THE MORNING OF 18TH OF JULY.

7th Foot, Lieut. N. D. Robinson, slightly (inserted as missing in original return). 34th Captains John Gwilt, severely; William Ward, severely; slightly; Joseph Jordan, severely, Lieutenants G. B. Harman, severely; Francis P[illegible]; R. J. J[illegible], severely

OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES KILLED AND WOUNDED FROM THE 27TH TO THE 28TH JULY, INCLUSIVE.

KILLED

July 27 7th Foot: Private John M'Carthy. 46th. Private Joshua Carter.
July 28 1st Battalion 1st Foot. Private Michael Noonan
July 28—34th Foot: Private John Huntington. 39th: Corporal William Ryan. 77th: Privates Patrick Doyle, Patrick Bryan 88th: Privates Alexander Gordon Philip Quinn
1 Battalion Rifle Brigade: Private Frederick Baker, Royal Artillery: Private Peter Bailey. Royal Sappers and Miners: Private John Miller

July 29.—1st Battalion Scots Fusilier Guards: Privates George Maxwell, Robert Lawrie
4th Foot: Private Samuel Hutchins. 20th: Lance-Corporal William Thomas. 34th: Private John Muir 47th: Private John Collins. 56th: Private John Wheeler. Royal Sappers and Miners: Private Alfred Rowlett.

July 23.—Coldstream Guards: Privates John Baldwin, John Brandon, severely; Charles M[illegible], dangerously; Edward Brewster, slightly Scots Fusilier Guards: Privates William Payne, severely. William Brown, George Trehearn Samuel Semens, s[illegible]
Foot: Sergeant Peter B[illegible] Cake, dangerously; Private Martin M'Dyhell, slightly. 4th. Lieut. James Paton, slightly. 14th: Private Michael Taylor, slightly. 17th: Privates John Meagher, dangerously; Michael M'Loughlin, slightly; John Burke, severely. [illegible]
Michael Carberry. Privates Michael Kenna, slightly; [illegible]
Privates Alexander Mill[illegible] Donald Fraser severely; [illegible]
severely. 55th: Privates John Odell, R[illegible], dangerously; A[illegible]
Private James Kennedy slightly. 77th: Lieut. Robert Patterson, slightly; [illegible]
[illegible] Private Wm. [illegible], Regular Sullivan, Isaac Langhan,
[illegible] Corporal [illegible] slightly; Pr[illegible]
[illegible] Richard Brogan, Edward Wickham, [illegible]
[illegible] severely; John Thomas Clarke, severely; [illegible]
Kelly, slightly [illegible]
Michael Bowler, [illegible] severely; Wm. Allen slightly 88th: Private [illegible]
88th: Sergeant Wm. Sparks, Privates Patrick M'Carthy, slightly; John Braden, severely; Baxter, severely. 2nd Battalion Rifle Brigade: Privates Samuel Perry, severely; [illegible]
[illegible] Long, Wm. Bennett, Wm. Walton, James Campbell, John G[illegible]
[illegible] Private Peter Dolan, slightly. Henry Perryer, severely. 42nd: Private [illegible]
[illegible] Private James Cowley, severely. 33rd [illegible]
[illegible] attery, severely. 49th: Privates George Bishery, James Hafferon, slightly; [illegible]
John Thompson severely. 77th: Private Michael Farrell, slightly; Micha[illegible]
90th: Private [illegible]
[illegible]
Richard [illegible]
Bowyer, severely
July 28.—2nd Battalion Grenadier Guards: Private George Spencer, severely. 1st Battalion Scots Fusilier Guards: Private Samuel Tipping. Alexander Shore, John Simpson, slightly; Peter Jones, dangerously; [illegible] Taylor, severely. 2nd Battalion 1st Foot: Private [illegible]
severely. Thomas Hewitt John Gallegan, slightly. 2nd Foot: Private Peter Farrell
John Kattersa. Richard Stokes, slightly [illegible] Corporal William Warren. Privates John M'Nales, Edward Mason, Samuel Rodway, Robert Galloway, severely. 34th: Privates Richard Hogan, slightly. 49th: Private Charles Fry slightly. 21st: Privates John Clay, dangerously; John Brigdston, John Wardle, severely. Thomas Hammond, Michael M'Barron
[illegible] Owen Connor, James Mallorn, Terence Boyle, slightly. 38th: Private William Wrobel, severely. 39th: Privates James Cain, John Mahoun, P[illegible]
[illegible] Lance-Corporal Jo[illegible]
[illegible]
Privates Michael Connell, slightly; William Ford, severely; Emanuel Maphy, slightly. 6[illegible]
John Grierson, dangerously; William Ford, severely; Emanuel Maphy, slightly. 6[illegible]
Privates Patrick Cannors, John Lawlin, severely, Thomas [illegible], slightly. 34th: [illegible]
Frederick, Charles Crowch Wil[illegible] Brown
77th: Privates Andrew Clark, Matthew Dunc[illegible]
severely; William M'Dobla, slightly. 2d Battalion Rifle Brigade: Privates Richard Hogan, John Mahoney, slightly. Royal Sappers and Miners: Lance-Corporal Richard Finch slightly

A SUCCESSFUL RAZZIA

A letter in the *Presse d'Orient*, a Constantinople paper, of the 30th ult., gives an interesting account of what is going on at Kertch and its neighbourhood. The writer, after stating that good accounts had been received from the different positions along that coast, gives the following description of a successful razzia in the Crimea by a small body of French troops.

The fortifications of Fort St. Paul, called in Russia Pavlofskaia, situated a short distance from Kertch, below Cape Ak-Bouroun, are terminated. We have there a small garrison, which only a few days ago a successful and profitable visit was paid to it. On the 18th two companies left for the interior. They followed at first the Kamesch-Bournou road to the ruins of an old hospital. They thence marched along the high ground, on the right, to a village of about ninety houses, called Schorubatch, at a short distance from which were the advanced post of a regiment of Cossacks, quartered at Sultanovka. From Schorubatch our troops proceeded across the plateau of Koyach, and passed through a country intersected with ravines, from which issue several small streams, uniting at some distance to empty into a fine lake, close to the sea. They there found the village of Kop-Sarai-Min, composed of about twenty-five dwellings, seated in a rather fertile country. Numerous droves of bullocks, grazing in the adjoining fields, and protected by our escort and the Tartars, having been put into requisition, made no objection to accompany our soldiers, and drove before them 800 head of horned cattle. All this occurred under the eyes of a squadron of Cossacks, who followed the column for a considerable distance. It is an extraordinary fact, that two companies of infantry should thus penetrate six leagues into the country, and execute, within a league of the Russian cantonments, so complete a razzia. We learned from the inhabitants of Schorubatch and Kop-Sarai-Min that they intended to bring their cattle to the market at Kertch, but that the Russians had forced them to collect them on one point, threatening to destroy their villages if they hesitated any communication with the Allied armies. They were delighted with our visit, which enabled them to dispose of their cattle without incurring the displeasure of the Russians. Our Commissariat bought 1,500 oxen only. We did not wish to deprive those poor people of anything but hostile to us, of their most valuable resources. [illegible] returned to them, not, however, without having been mulcked by our soldiers

THE WAR IN ASIA.

Letters from Kars of the 14th ult. contradict the report of the expedition of Schamyl against Tiflis. Between the 7th and 14th ult. frequent engagements took place between the advanced Russian posts and the Turks near Kars. On the 10th the enemy made a strong reconnaissance, and an unsuccessful attack against Karadagh. On the 11th the Russians executed an equally unsuccessful reconnaissance upon Tchakmak. On the 12th they proceeded in the direction of Erzeroum, leaving but an advanced guard within view of Kars. On the 13th the Russians approached the city with all their forces, divided into three columns, one of which formed the reserve. After endeavouring in vain to draw the Ottoman troops out of their intrenchments, by keeping constantly out of range of their guns, they returned in the evening to their camp. "Such," says the *Presse d'Orient*, "is the summary of our correspondence from the seat of war in Asia. It corrects the inaccurate accounts brought by the last letters from Trebizond."

POLAND AND A POLISH LEGION.

A public meeting (postponed from Wednesday, August 1) was held on Wednesday night, at St. Martin's-hall, in favour of the employment of a Polish Legion as the most effectual auxiliary for carrying on the war, and the restoration of Poland as the best means of securing a durable peace. The meeting, which was said to have been packed by Chartists, and which was certainly of a somewhat noisy character, was presided over by the Earl of Harrington. Among the gentlemen on the platform were—Sir R. Peel, M.P.; Captain Townshend, R.N., M.P.; Messrs. Isaac Butt, M.P.; Francis Mowatt, M.P.; W. Tite, M.P.; Colonel Salwey, General Count Zamoyski, Mr. N. F. Zaba, and Lieutenant-Colonel Nulozewski, Secretary of the Association of the Friends of Poland, &c.

The Earl of Harrington said that when Russia extended her territory to Constantinople the empire of India would be within her grasp, that the balance of power in Europe would not be safe, and that she would possess sole dominion in the Mediterranean. The safest barrier against any such consequences would be the re-establishment of the kingdom of Poland

Lord Ebrington, whose appearance was the signal for great uproar, then moved the following resolution:—

That it will afford the best security for the preservation of the balance of power in Europe, and the protection of its liberties, that Poland should be restored as a separate and independent State—a measure the necessity of which has been recognised by most of the great Conservative statesmen of Europe

He thought that on grounds of European, of English policy, and for our own interest, we ought to establish a Polish Legion, and to entertain not as a mere chimera, the idea of the restoration of Poland; and, looking to this subject in all its bearings, he felt, and wished to cause the meeting to feel, that the cause which they had met that evening to advocate was one which was supported both by justice and expediency (Applause).

Sir R. Peel, in seconding the resolution, said he believed that the best bulwark of European liberty would be the restoration of Poland; and he deeply lamented that Europe had been hitherto so careless as to view almost without remark the iniquitous act of her absorption in 1772. With regard to Austria, its alliance had been too much courted, for the experience of history proved that it was impossible to place confidence in the pacific declarations of Austria or of Prussia (Applause). It was, therefore, necessary for this country to keep its own course; not trickling to Austria nor toadying to the degraded policy of Prussia.

Mr. Dobson Collett, amid much uproar and confusion, moved the following amendment to the resolution:—

That this meeting, cordially desiring the restoration of Polish nationality, cannot forget that the destruction of that nationality was mainly owing to the perfidious conduct of Lord Palmerston from 1831 to 1846. That so long as Lord Palmerston is a servant of the Crown no proposition for the restoration of Poland can be anything but a delusion and a snare. That the truth of this resolution is proved by the fact that Lord Palmerston has carried on the war in such a manner as to avoid, as far as possible, injuring Russia, while he has proposed terms of peace which would entirely destroy the independence of Turkey.

After a great deal of confusion and uproar, Mr. Collett's resolution was put to the meeting; and, on a show of hands, declared to be carried, with only six discentient voices.

LAUNCH OF THE "MARLBOROUGH."

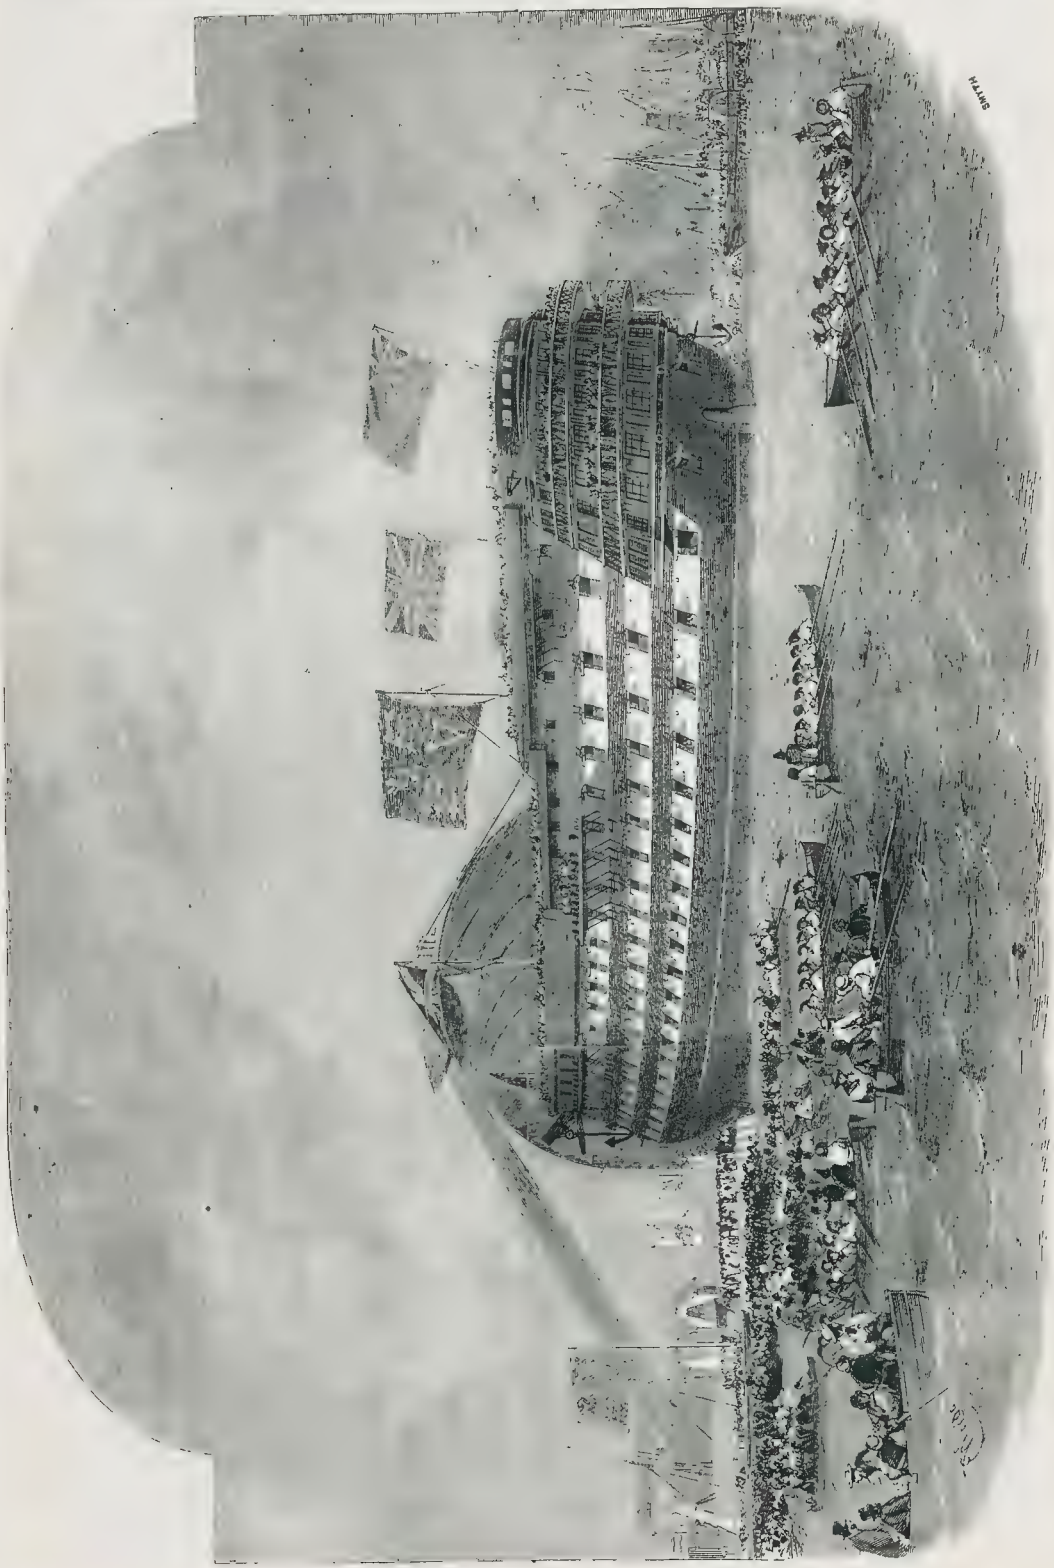
HER MAJESTY honoured her faithful liege of Portsmouth with a visit on Tuesday week, for the purpose of presiding over the launch of the leviathan three-decker the *Marlborough*. Unfortunately, her Majesty's proverbial good fortune with respect to the weather seemed to have deserted her; and the day was, in point and more than one respect, signalled by an unfortunate *contretemps*. The early portion of the day was most commonly marked with squalls and showers of rain. The arrangements for the launch were upon an extensive scale. The space around the ship was partitioned off into stalls for the members of the Government and the official, and standing-places were made in front guilty for the accommodation of thousands of other visitors. Excursion trains and steam-boats from various directions conveyed thousands of sight-seekers; added to which the port and neighbourhood were unusually well filled, owing to their contiguity to the races at Goodwood. All the hotels were occupied, and private lodgings were eagerly sought for as each train arrived, and the influx bade fair to outrun the unprecedented invasion on the review of the fleet at Spithead two years ago. Some of the Lords of the Admiralty arrived the previous night at the George Hotel, and a great number of the nobility had domiciled themselves at other lodgings, Ryde especially. A very handsome pavilion booth was erected for the Court at the port side of the stern of the ship, and a quiet and easily-accessible landing-place in connection with it, for the debarkation of the Royal cortège, consisting of a covered way, lined with the French, British, and Turkish ensigns, and leading by a flight of capacious steps to the apartments and balconies above, underneath which were affixed the Royal arms. A clear walk thence alongside the ship to the platform at the bows had been preserved, so that her Majesty could walk uninterrupted from one to the other place of observation. Gay flags and pennants, intertwined with the barriers and pillars of the ship, and the compartments allotted to the various official bodies and personages, gave a pleasing and lively effect to the arrangements. The Board of Honour was furnished by the 50th Regiment, and the ground and upper decks were kept by a detachment of the same corps and 200 men of the Royal Dockyard Brigade.

Shortly before noon Her Majesty, accompanied by the Prince Consort and the eldest of the Royal children, arrived in the *Fairy*. On seeing the Royal yacht was received with the usual honours and salutes by the ships in the offing and the harbour, and her Majesty on landing was greeted with the most enthusiastic cheers from the assembled thousands who crowded every available spot. Her Majesty, having been received by the authorities, was conducted to her temporary apartments; and the usual ceremonial observances having been duly performed, her Majesty christened the noble vessel. The launch at first proceeded most satisfactorily, but at last the ship came to a dead stop, leaving about twenty-five yards still on the slip. The most strenuous efforts were made to get the vessel off the slips—several powerful steam-tugs were pressed into the service to assist the operation; but the launch was not effected till the next morning.

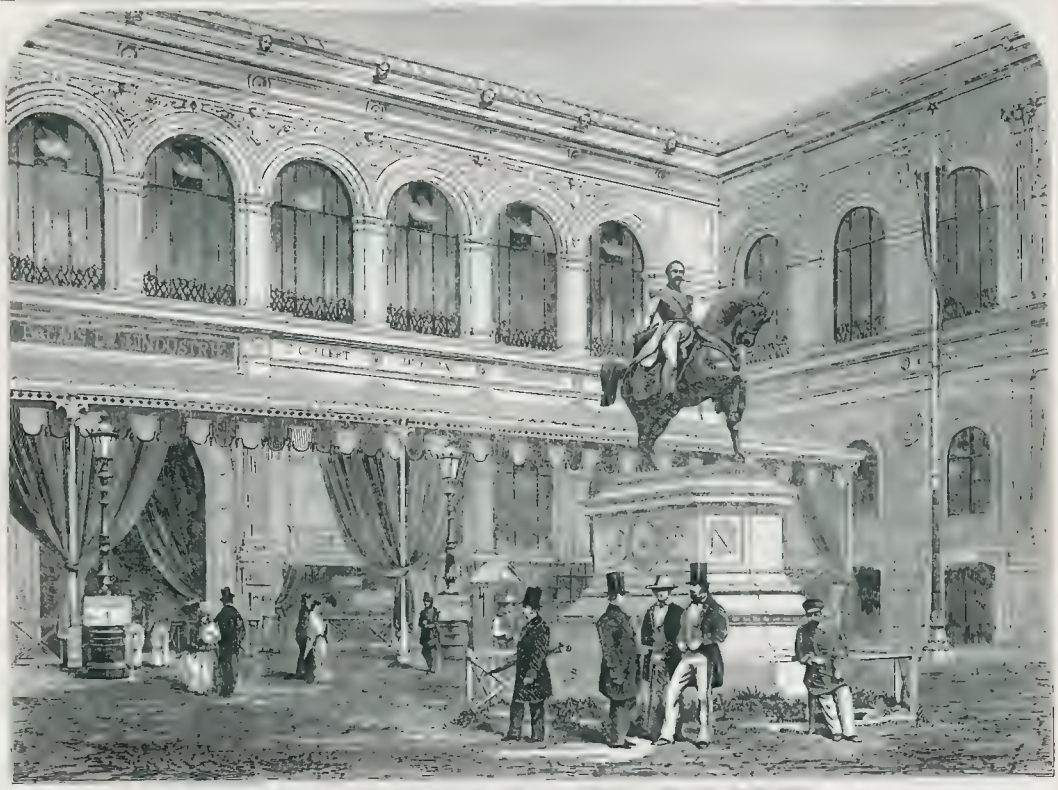
The *Marlborough* is in perfection, whether as regards her beauty of mould, or her enormous strength, equal to two three-deckers of the olden time. Her lower deck guns will be 68-pounders; her middle deck, long 32s; her main deck, long shorts; and her upper or quarterdeck and forecastle armament will be carronades of immense calibre. Every improvement of the present age has been carried out in the noble line-of-battle ship. We are told on the official weights and sizes of this colossal vessel:—Length, 240 feet 6 inches; over all, 283 feet; breadth, 61 feet 2½ inches; depth in hold, — feet 10 inches. Burden in tons, 4000. Load draught of water forward, 26 feet; aft, 26 feet. Height of taffrail above load-water line, 39 feet 10 inches; height of main-truck above load-water line, 213 feet 4 inches; weight of mainmast, 23 tons; weight of mainyard, 6 tons; length of mainyard, 111 feet, we get at anchors, 34 tons, weight of rigging, 32 tons; weight of sails (area, 33,374 square feet), 15 tons; weight of guns and carriages, 369 tons; weight of shot, 170 tons; weight of powder, 64 tons; weight of machinery, consisting of two direct acting engines, six boilers, and machinery, 600 tons; weight of water in boilers, 100 tons; power of engines and boilers, 800 horses

Our Engraving represents the *Marlborough* immediately after she had ceased launching, and this position she maintained until released on Wednesday morning.

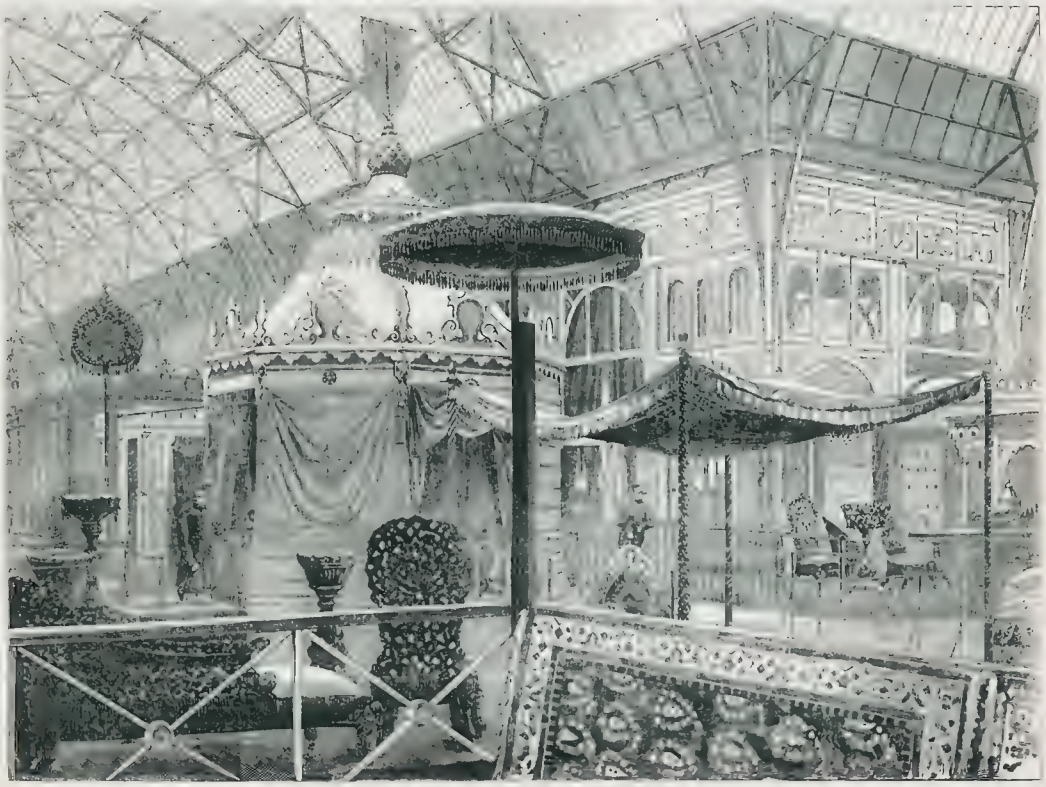
The launch has been commemorated by Mr. T. R. Williams, of Regent-street, who has taken, by command of the Queen, some stereoscopic photographs of the event, which are very successful. The operation must have been momentary, as the surf heading the waves, the water thrown from the paddle-wheels of the steamers, the rowers in the small boats about the monster ship, the puffs of steam from the tugs, the flags agitated by a stiff breeze, and even the smoke from the guns, are all rendered sharp as outline and detail.



H.M.S. MARLBOROUGH," IMMEDIATELY AFTER THE LAUNCH, AT PORTSMOUTH.—(SEE PREVIOUS PAGE.)



THE PALACE OF INDUSTRY AT PARIS—EASTERN PAVILION, AND THE STATUE OF THE EMPEROR—FROM THE PARIS



THE PALACE OF INDUSTRY AT PARIS—THE INDIAN COURT—(SEE NEXT PAGE)

THE PARIS EXHIBITION.

THE Exhibition must now be regarded as a great success it has triumphed over all the obstacles that beset it at the commencement. That these obstacles have been overcome is due in great measure to the determined will and untiring energy of Prince Napoleon, who is constant in his attendance. Any one who witnessed the inauguration, and sees what the Palais de l'Industrie now is, will easily forget or pardon the failure which marked its out-set. The Imperial Commission set energetically to work, and it is now admitted by all impartial persons that their success is complete, and that order and harmony have taken the place of chaos. Two "annexes" have been, as it were, improvised—the new one containing the most beautiful specimens of goldsmiths' work, of porcelain, of the rarest and more precious tapestry; the other, nearly half a league in length, comprises all the machinery of modern invention, and other prodigies of art and industry. Amid this panorama of treasures tapestry which imitates the most delicate touches of the pencil, and in which the flesh tints seem as if laid on by Titian himself—silks which display all that Lyons can send forth—stuffs of rich dye and exquisite workmanship—laces which the gentle breath of an infant might flutter amid all this, not the least remarkable are the objects sent over by the EAST INDIA COMPANY. Side by side with articles of furniture, richly and fantastically carved, you see a complete model of the Court of Justice of Mazulipatam—the judges seated on the benches, and the counsel pleading before them. Judging from these specimens, the museum of the Company must be rich indeed in such curiosities—the gifts of tributaries or the spoils of the vanquished. Here we see the arms of the warrior, the gorgeous stuffs of silk and gold, the transparent tissues which covered, but scarcely concealed, the limbs of the Bayaderes, the pipe of the Rajah, the tent under which the voluptuous Princes of Nepaul may have reposed, the carved Sandal-wood tables, the chairs incrusted all over with ivory, and which may have held the ransom of an Emperor, the soft and yielding divans, and couches of the deepest ebony, worked in garlands of foliage, fruits, and flowers

We have engraved upon the opposite page the Indian Court, wherein there marvels of splendour and ingenuity are assembled.

Above it is also engraved the eastern entrance to the Palace; facing which is the new equestrian statue of the Emperor of the French, upon a pedestal sculptured with martial trophies. Both illustrations have been engraved from well-executed photographs.

Prince Napoleon, on Saturday, paid his third visit of examination to the Exhibition—the department of Agriculture and Vegetable and Animal Productions being that to which his attention was especially directed. The Prince was accompanied by M. Le Play, the Commissioner General. Count de Gasparin, the President of the Classes; and several of the Foreign Commissioners. His Imperial Highness examined in detail the model of the system of irrigation exhibited in the Agricultural Gallery, and also the productions from the rice-fields of the Camargue, the wonderful fertility of which particularly struck him. The different agricultural machines, both of France and other countries, were closely examined. The agricultural produce of Algeria particularly attracted the attention of the Prince, who expressed his admiration at what he saw. The rich collection of agricultural productions of the United Kingdom also attracted the marked attention of the Prince, as did also the specimens of corn sent from Austria, particularly those from Bohemia. A fine collection of Bohemian wool in fleeces also called forth his warm admiration. The productions of the character named above of Belgium, Spain, Canada, the United States, and Egypt, were also closely examined by the Prince, who expressed his great satisfaction to the Commissioners of the different countries

It should be remembered that but three months remain before the Exhibition will be closed, and those who still delay visiting it will do well to profit by the present occasion to witness those splendid productions collected together on the same point, and united under the same roof. The latter half of the present month will unquestionably be the most brilliant, and undoubtedly the most prosperous for the Exhibition. That Paris, thronged with strangers from abroad and from the provinces at home, to witness the fêtes on the occasion of her Majesty's visit, such as it seldom has been, is certain. Those who find no pleasure in pageants and external display will find refuge and shelter and varied enjoyment, without fatigue or din, under the roof of the Great Exhibition, or in the still calmer retreats of the Palace of the Beaux Arts.

THE COURT.

His Majesty the King of Portugal, with his brother the Duke of Oporto, arrived at Southampton on Monday morning, from Ostend. His Royal Highness Prince Albert left Osborne at ten o'clock for Southampton to visit the King. His Majesty and the Duke of Oporto returned to the Solent with the Prince, and proceeded on board the Royal yacht *Victoria and Albert*, where her Majesty shortly arrived. The Royal visitors remained on board the Royal yacht in consequence of the scarlatina having lately prevailed among the Royal children. Her Majesty and the Prince remained on board to luncheon, and Prince Albert returned to dine with the King on board the yacht. The birthday of his Royal Highness Prince Alfred occurred on Monday

On Tuesday morning the Queen and the Prince again went on board the *Victoria and Albert*, to breakfast with the King of Portugal. The unfavourable state of the weather prevented her Majesty from dining with the King in the evening

On Wednesday the Royal children who had suffered from scarlatina having perfectly recovered, the King of Portugal and the Duke of Oporto landed at Cowes and proceeded to Osborne on a visit to her Majesty

On Thursday the Queen and the Prince Consort left Osborne at an early hour, crossed to Portsmouth, and travelled by the South Coast and the South-Eastern Railways to Folkestone, from whence the illustrious party proceeded on the Queen's carriage to Shorncliffe, where her Majesty reviewed the Foreign Legion encamped on that place. Her Majesty returned by the same route to Osborne in the evening

The Queen visited Haslar Hospital on Saturday. The Prince went to the Camp at Aldershott in the morning, and returning to Southampton with the Royal Majesty, whence his Royal Highness accompanied in her visit to Ilsular

The Countess of Desart has succeeded Viscountess Canning as Lady in Waiting.

HER MAJESTY has sat three times to Mr. Joseph Durham, the sculptor, for a new bust, of which three copies are to be in marble: one for the Council Hall, one for Joseph Arden, Esq., and the third for the Bodleian Library, Oxford.

NEWSPAPERS TO THE COLONIES.

(To the Editor of the ILLUSTRATED LONDON NEWS*)*

SIR,—The Post-office is about to modify its recent regulations for the transmission of newspapers to the Colonies. Stamped papers, instead of being forwarded from place to place, are to be sent without postage to their destinations (except for transit through a foreign State); but if they be not forwarded to any other part of the United Kingdom, and then sent to a Colony, they are to be subjected to a postage stamp.

It is needless to say to see a great department of the State frittering its time and energy, and puzzling the public with such petty devices for increasing the postal revenue. The recent Act is causing very great confusion and a heavy amount of additional labour in every post-office in the United Kingdom, and even fresh clerks are put on its permanent establishment. But, apart from all other considerations, the frustration and annoyance to the Colonies are, although in a diminished degree, to be continued, and the outlying portions of the British empire are still to be hampered with restrictions on the transmission of British newspapers to them, from which they have been entirely very justly exempt.

I am, sir, your very obedient servant,

London, Aug. 8, 1855. CUBACK P. ROXBY

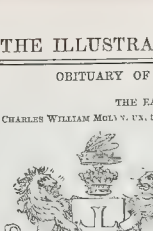
THE NEWSPAPER-STAMP AND POSTAGE.—A gentleman of Huddersfield has sended the following letter to the Secretary of the General Post-office the other day: "Sir,—Would you kindly oblige me with a reply to the following question:—Can a stamped newspaper or other printed matter be sent by letter-post, or by any other mode than the regular delivery, without the impressed stamp of the latter being duly cancelled, or in any way will the newspaper stamp under these circumstances serve as a postage? The Post-office Secretary, in reply, says—'Neither the newspaper stamp nor the impressed stamp of any matter besides the publication to which it belongs can be used.'

AMERICAN LETTERS.—The mail-bags of the *Pacific* have brought from the United States a considerable number of unpaid letters, addressed for the most part to well-to-do people in England, and be[illegible] many applications to "send one pound sterling to the above address at once." Let us[illegible] "send one pound sterling to the above address at once." Let us[illegible] their sweetening for your advantage." The envelope containing these letters bears the superscription of a New York "Office for the Settlement of Claims [illegible] the United States Government." As there is every reason to expect, this will not be the last batch of these letters, and as we feel that the people to whom they may be addressed should have the opportunity of considering whether such communications are worth the shilling which the postage stands for them.

OBITUARY OF EMINENT PERSONS.

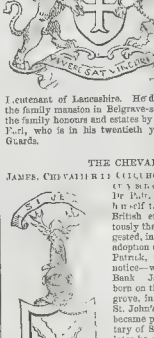
THE EARL OF SEFTON

CHARLES WILLIAM MOLYNEUX, third Earl of Sefton, and Viscount Molyneux in the Peerage of Ireland, and Baron Sefton in that of England, was the eldest son of William Philip, second Earl of Sefton, by his wife, Maria, second daughter of William, sixth Lord Craven, and was born the 10th July, 1796; and married, the 19th June, 1834, Mary Augusta, only daughter of the late Robert George Hopwood, Esq., of Hopwood-hall, Lancashire, and niece of the late Viscount Torrington, by whom his Lordship leaves a youthful family. The Earl was a Whig in politics: he was M.P. for South Lancashire from 1832 to 1835. He was also Lord-Lieutenant of Lancashire. He died, after a protracted and painful illness, at the family mansion in Belgrave-square, on the 2nd inst. He is succeeded in the family honours and estates by his eldest son, William Philip, now fourth Earl, who is in his twentieth year, and is a Lieutenant in the Grenadier Guards.



THE CHEVALIER DE COLQUHOUN

JAMES, CHEVALIER DE COLQUHOUN, whose death has just occurred, was the [illegible] Patrick, late Lord Provost of Glasgow. Dr Pat[illegible] was one of the first authors who applied himself to the development of the statistics of the British empire. He founded and [illegible] conspicuously the present system of Thames Police: and suggested, in his work on the Metropolitan Police, the adoption of Sir Robert Peel's improved system. Dr. Patrick, with his son James—the subject of this notice—was one of the founders of the present Savings Bank. James, the future Chevalier de Colquhoun, was born on the 7th June, 1780, at his father's seat, Kelvingrove, in Lanarkshire: and was entered a student of St. John's College, Cambridge, in 1797. In 1806 he became private secretary to Mr. Dundas, then Secretary of State for the War Department: three years later he received the appointment of Deputy Agent-General for the payment of Volunteers. In 1817 the Hanseatic Republic constituted him their representative in London: and the Legislatures of St. Vincent, and other West India Islands, at different times nominated him to watch over their interests. In 1827 he was appointed Consul-General in London of his Saxon Majesty, and had the charge of that sovereign's Legation during frequent and long periods. In 1846 the late Grand Duke of Oldenburg appointed him his Chargé d'Affaires in London, and he had conferred upon him the Knighthood Commandery and Star of a Commander of the first class of the Royal Saxon Orders of Civil Merit, and thus became Chevalier de Colquhoun. He had many other Continental honours, and was made a Fellow of the University of Glasgow. As Hanseatic Plenipotentiary, which he was, the Chevalier de Colquhoun signed commercial treaties with Great Britain, the Ottoman Porte, Mexico, and Liberia, and negotiated several others; he also signed a treaty as Saxon Plenipotentiary with Mexico. The Chevalier leaves a family of three sons and two daughters, the eldest of the sons, Dr. Patrick de Colquhoun, the author of an extensive work on Roman Civil Law, has also acted in his father's avocations, and signed, as Hanseatic Plenipotentiary at Constantinople and Athens, commercial treaties with the Sublime Porte and Greece.



WAR OBITUARY.

(Continued from page 116.)

BOILEAU (Lieutenant Charles Augustus Perrys), of the Rifle Brigade, who died at Malta on the 1st inst., of wounds received on the 18th of June, at the storming of the Redan, was the fourth son of the present Sir John Peter Boileau, of Jacobstone Hall, Norfolk, by his wife, the Lady Catherine Sarah, third daughter of Gilbert, first Earl of Minto. Lieut. Boileau was, at his death, but nineteen years of age

RAMSAY (Lieut.), of the 34th Regiment, who died, aged twenty, of fever, in the Crimea, before Sebastopol, on the 22nd ult., was the third son of the late John Turner Ramsay, Esq., of Tinmore, Oxon.

ROSS-LEWIN (Lieut. John Dillon), of the 30th or Cambridgeshire Regiment, commanding a company at the battle of Alma, where, after having engaged in a series of encounters for seven hours, he fell mortally wounded in the hour of victory, and, as a brother officer writes, "in the noble performance of his duty." The same writer adds: "His loss is deeply felt by his regiment, for he was beloved by all." Lieut. Ross-Lewin died on the morning of the 7th November, and in the [illegible] noon, buried, and resigned. He was, indeed, *sans peur et sans reproche*. "Late that evening," writes a kind comrade, "we, his sorrowing brother officers, laid him beside poor Captain Cassidy, whose loss we have also to deplore." Lieut. Ross-Lewin was the youngest son of the late Major Ross-Lewin, of Ross-hall, co. Clare, an officer who himself was present at eleven general actions and sieges, and received a musket-ball through the arm at the last charge at Salamanca. His uncle, Thomas Ross-Lewin (who was, during the Duke of Wellington's campaigns, a light-company officer of the 32nd), has a medal, with eight clasps, and was wounded at Saragossa, in Spain, and again at Waterloo: and Edward Ross-Lewin (Adjutant of the 9th) was killed at the siege of St. Sebastian. Lieut. Ross-Lewin's grandfather was also in the Army, being an officer of the 14th Dragoons: his great-grandfather was Harrison Ross-Lewin, Esq., of Fort Fergus, co. Clare.

VAUGHAN (Captain John Crosby), of the 38th Regiment, died [illegible] March, five, on the 16th of June, of wounds received the previous night, while [illegible] his sentries in the advanced trenches before Sebastopol. This officer entered the Army the 22nd December, 1848. He was the eldest son of the late Lieut.-Colonel Edward Vaughan, who died in command of the 98th Regiment, at the Cape of Good Hope, and grandson of the late [illegible] Vaughan, Esq., of Brynog, Cardiganshire. Captain Vaughan was in private life known and esteemed for many good and noble qualities, and as a soldier he was earnest and strict in the performance of his professional duties. His loss is to be deeply lamented

WILLS.—The will of the Right Hon. and Right Rev. Charles Lindsay, the former Bishop of [illegible], and that of the Venerable Charles Lindsay, M.A., the late Archdeacon of Kildare, have both been recently proved in London, they being respectively left in personalty within the province of Canterbury. Major William Pitcairn Campbell, Deputy-Assistant Quartermaster, 23rd Regiment, at Scutari, £7000; and the wife of Captain G. H. Dawson, Royal Engineers and Lieutenant Henry Dawson, 1st Battalion Rifle Brigade, both of Sebastopol. Francis Valentine, Esq., late of Madras, £70,000. Rev. John Beauvoir, M.A., Prebend of Lincoln, Rector of Woodhall and St. Mary Tydd, £10,000.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS. *Rectories:* The Rev. H. Mackenzie to Tydd St. Henry; Rev. B. Hinds to Drayton, Norfolk; Rev. C. J. Forshaw to Cricket Malherd, vacant; Rev. C. M. Moore to Beechamwell and St. Mary, with Boughton and St. John annexed; Rev. J. Robinson to Bessingham, Norfolk; Rev. H. Bagnall, to Goldsborough, Yorkshire; Rev. G. H. Fell to Tredington, and the county of London; Rev. A. Robert to Langley Burrell, near Chippenham; Rev. A. Williams to Up-Cerne, Dorset. The Rev. T. Hugh to Llandyllo-yn Rhos, near Conway. Rev. C. Thorp to Hilton by Penrith. Rev. W. H. Bumphrey to St. Bartholomew-the-Less, and to St. Mary Church, Devonshire; Rev. O. Jones to Ishmael's, near Carmarthen; Rev. H. Menaiken to Northbeck. *Incumbencies:* The Rev. C. Bloore to Beechamwell, near Windermere. Rev. J. Kingsley to St. Margaret's, Dunham Massey; Rev. J. G. Ho[illegible]rgworth to Coppull, near Wigan; Rev. J. R. Norman to Gamble, near Carlisle; Rev. J. Richardson, to Dalton, near Furness; and Rev. J. Gibson to Bamchland, near Gateshead; Rev. C. A. Perring to St James's Church, Whitehaven; Rev. C. J. S. Russell to St. John's District Church, Williamstown.

TUNBRIDGE WELLS. The Archbishop of Canterbury, the Bishop of Gloucester, and about forty of the clergy, attended a public meeting of the Tunbridge Wells School on Friday (last week). His Grace, as President of the Institution, having appointed the Rev. H. Williams to be head master, that gentleman addressed the meeting, and made an able address to the clergy.

IMPERIAL PARLIAMENT.

(Continued from page 153.)

HOUSE OF LORDS.—THURSDAY.

The Public-houses (Ireland) Repeal Bill; the Public Health Act (1854) Continuance and Amendment Bill; the Diseases Prevention Bill; and the Militia Pay Bill, were severally read a second time.

The following Bills were read a third time and passed—viz., The Nuisances Removal and Diseases Prevention Acts Consolidation and Amendment Bill; the Sale of Beer, &c. Bill; the Militia Ballots Suspensions Bill; the Metropolitan Buildings Bill; the Customs Laws Consolidation Bill; the Passengers' Act Amendment Bill; the Island of Tobago Loan Bill; and the Ordnance Board Bill.

LIMITED LIABILITY BILL.

On the order of the day for going into Committee upon this bill, Lord Redesdale, Lord St. Leonards, and Earl Grey severally urged the Government not to press the measure in the present Session.

Earl GRANVILLE having said it was the determination of the Government to persevere,

Lord CAMPBELL thought it would be wise of the Government to refer this bill to a Select Committee.

Earl GREY moved that the bill be referred to a Select Committee.

After a lengthened discussion upon the Leases and Sales of Settled Estates Bill in Committee the Government withdrew the measure.

NEW WRITS.

On the motion of Mr. HAYTER, the following new writs were ordered for Hertford, in the room of Hon. W. F. Cowper, who has accepted the office of President of the Board of Health. For Kilmarnock Burghs, in the room of the Hon. E. P. Bouverie, who has accepted the office of President of the Poor-law Board. For Kidderminster, in the room of Robert Lowe, Esq., who has accepted the office of Vice-President of the Board of Trade.

At the evening sitting Sir G. GREY, in reply to Mr. Kinnaird, said that no address had been sent to her Majesty from the Upper House of Convocation praying for the revival of the active powers of Convocation; but her Majesty had been advised not to accede to the prayer of the Address.

CONVEYANCE OF NEWSPAPERS ABROAD.

Mr. WILSON, in reply to questions from Mr. Hadfield and Mr Bramley Moore, in reference to the conveyance of newspapers to the Colonies, stated that the late Postmaster-General (Lord Canning) had addressed a letter to the Treasury, pointing out the inconvenience of the existing system; and that the Treasury had passed a minute by which the objections would be removed. By this minute all newspapers henceforward would be conveyed abroad, whether to the Colonies or elsewhere, without having the impressed stamp upon them; but the ordinary adhesive stamp would be sufficient.

The Lords' amendments to the Metropolis Local Management Bill were considered: some of them were agreed to, but others were objected to.

Capt. SCOBELL moved for the appointment of a Select Committee to inquire into the government of the Navy, relating to the lists of officers, patronage, promotion, and the efficiency of the service in all the grades belonging to it.

Sir C. WOOD opposed the motion, and entered into a long explanation on the subject.—The House was counted out.

HOUSE OF LORDS.—FRIDAY.

The Earl of MALMESBURY called attention to the treatment by Russia towards their prisoners taken in the Crimea, who, as it was reported, were compelled to walk 700 or 800 miles up the country, at a most inclement season of the year, in the midst of a dreadful character. He hoped that her Majesty's Government had already sent forward their solemn protest against such conduct on the part of Russia.

The following bills were read a third time and passed—viz., the Public Health (No. 2) Bill; the Lunatic Asylums (Ireland) Advances Bill; and the Navigation Works (Ireland) Bill

The following Bills were passed through Committee—viz., the Public Houses (Ireland) Bill; the Public Health Act (1854) Continuance and Amendment Bill; the Diseases Prevention Bill; the Consolidated Fund (Appropriation) Bill; the Exchequer Bills (£7,000,000) Bill; and the Militia Pay Bill.

The Crime and Outrage (Ireland) Act Continuance Bill; the Criminal Law Bill; and the Burials Bill were severally reported with amendments.

Lord MONTEAGLE, in the course of the evening, took occasion to refer to the financial state of the country in connection with the war. He said he was not an advocate for the maintenance of a war establishment in a time of peace. He admitted that it was quite necessary to make ample provision for the vigorous prosecution of the war; but he thought that the Chancellor of the Exchequer would have acted wisely had he raised the money by Exchequer Bills rather than by means of Exchequer Bonds. He considered that the remission of the Stamp-duty on newspapers was wholly uncalled-for; because, while it took nearly £.50,000 from the revenue, it conferred no benefit on the public. In reference to the Income-tax, he contended that the Government should have bound this country to the payment of one half the amount, in case Turkey should not be able to meet her engagement.

The Earl of CLARENDON briefly spoke in highly eulogistic terms of the honour and good faith of France.

Earl GRANVILLE replied to the objections made by Lord Monteagle, and justified the financial measures of the Chancellor of the Exchequer.

Earl GREY doubted very much whether Turkey would be able to repay the loan; and though he had the most perfect confidence in the honour and good faith of France, he was still of opinion that her Majesty's Government should not have guaranteed more than one half of the loan. He objected to guaranteed loans, considering them subsidies in disguise. He thought it would be unwise for Parliament to give the money outright. He feared that when peace came there would be much difficulty in adapting the naval and military establishments to a peace policy

LIMITED LIABILITY BILL.

This bill, after considerable discussion, as amended was reported.

HOUSE OF COMMONS.—FRIDAY.

The House met at half-past three o'clock.

Mr. BOWYER moved the adjournment of the House until Monday, with a view to enable him to bring under consideration the state of Italy, and to declare his sympathy with England and Rome from the charges of cruelty made against them. In the course of his observations, the hon. and learned gentleman made the assertion that the Pope was the most popular sovereign in Europe. He concluded by asking why the Italian Legion was not likely hereafter to become dangerous to the tranquillity of Italy?

Lord PALMERSTON believed that from the habits of order which discipline would communicate to the Legion they would become much better citizens than if they had never joined the Legion. The noble Lord then repudiated the defence set up by the Neapolitan and Papal Governments, and stated instances illustrative of the cruelties which they practised.

Lord HOTHAM strongly animadverted upon the abuse of the rules of the House which Mr. Bowyer, in moving for the adoption of the report, said, in his opinion they ought to go at once for Parliamentary Reform, if they wished to obtain Administrative Reform, as he considered the present tendency was not very much to respect. Lastly exceeding 100 in number. The chair was taken at one o'clock by Mr. S. Morley: and there were present, among others, Mr. Tite, M.P.; Mr. Brown, M.P., Mr. W. S. Lindsay, M.P., Mr. Hadfield, M.P., Messrs. Jacob Bell, R. W. Crawford, J. Travers, &c. A long report was read by Mr. Brown, in which the committee gave an outline of their proceedings since the organisation of the Administrative Reform Association, in moving for the adoption of the report, said, in his opinion they ought to go at once for Parliamentary Reform, if they wished to obtain Administrative Reform, as he considered the present tendency was not very much to respect. Some discussion took place regarding the adoption of the report. Lieutenant-Colonel Sleigh, of the *Telegraph* newspaper, complained of its suppression, and of the withdrawal of confidence in the committee. Mr George Thompson, editor of the *Empire*, expressed his conviction that there was a division of sentiment in the committee, and, although he gave that body credit for industry, yet he considered it was absolutely necessary to have unanimity of opinion not only as to the evils which existed, but also as to the remedy to be applied, and that remedy he believed to be nothing else than complete Parliamentary Reform. The chairman remarked that there might be difference of opinion among the committee upon political matters generally, but upon the question of Administrative Reform they were completely united. The motion for the reception of the report was then put and carried unanimously, and, after passing a vote of thanks to the chairman, the meeting broke up.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

ARCHITECTS have not had so much matter of moment for conversation since a public building was burnt down as they have had this week in the publication by Parliament of Sir Charles Barry's plans for completing—what Sir Charles is pleased to call—"that great national work, the New Palace of Westminster." Exchequer tallies and Sir Charles Barry have been the means of spending *already* one million six hundred and sixty-three thousand nine hundred and fifty-four pounds sterling upon a new building at Westminster; and now he calls upon us to entrust to him nine hundred and thirty-one thousand five hundred and fifty-seven pounds *more*, to enable him to complete his national work "in a fitting and proper manner."

Your Palladio and Vitruvius hip-and-thigh men and your wild *Fitz* and Second Pointed men are eagerly asking what is *Perpendicular* Sir Charles to give us for this further instalment. We will attempt to answer their question. He is to give us (and within four years and a half) a saddle-backed roof with flag-staff and flag on the Victoria Tower; a dwarf spire to his nearly-completed Clock Tower; a new people's gateway tower from Parliament-street to the great north entrance to Westminster-hall, and higher walls to the Great Hall of Rufus itself. These are the upper-air gifts. The lower-air additions include a new front (with a covered footway) facing St. Margaret's Church and Canning's Statue, a north front on the site of the present block of houses constituting Bridge-street, Westminster, and a statue of her Majesty. These changes compel him to throw New Palace-yard into a quadrangle, to remove the Law Courts he knows not where, and the church of St. Margaret's, Westminster, to any cheap site that can be found to interfere the least with Sir Charles' "great national building"

Critics who are not architects or builders find much to commend in Sir Charles Barry's plans. The new fronting the Law Courts and the erecting a new and uniform front to the north on the site of the Bridge-street block of houses are works absolutely necessary. The towers, moreover, must be completed. Competent authorities, however, differ about the taste and ingenuity exhibited in the newly-designed public entrance from Parliament-street. To us it appears heavy and ill-proportioned. Nor do we fall in with Sir Charles' views about the removal of St. Margaret's. When this church was built it was in keeping with the adjoining Abbey. Even now, in its churchwarden state, it materially assists to sustain the harmonious completeness of the great building under whose wing it seems to lie But Sir Charles Barry has worked to render its removal a street necessity, and has so wrought unlike an architect caring for the works of other architects, and unlike a scholar whose well-stored memory is able to invest St. Margaret's with a long and highly-interesting train of historical associations.

The historian and antiquary will ask, with the true admirer of Gothic architecture, what is to be the cost of this unnecessary removal? We can inform them from the figures of Mr. Pennethorne, whose skill in forming correct estimates is not to be doubted. To find a new site alone for St. Margaret's involves an expenditure of £45,000; and to remove the church itself a further outlay of £23,000 or a matter of £68,000 in all! Now, of this sum, which we hope and trust Parliament will never consent to entrust to Sir Charles Barry for so tasteless and profitless a labour, a fifth part of it alone would be amply sufficient to restore the Church of St Margaret's to its old keeping and character with the Abbey, which is ill.-trates historically and assists pictorially. Sir Charles must be watched in this matter. He is a bold architect who robs the Houses of Parliament of their Law Courts and their Church; sending the Law to Clare-market and the Church to Tothill-fields

Death has just removed from among us one of the best of our old landscape engravers in the line manner. Mr. W. B. Cooke, whose name is so honourably attached to many of Turner's finest engravings, died a Camberwell on the 2nd inst., at the age of seventy-seven. He was the brother of the late George Cooke—that intimable engraver in the same line of art, and the uncle of Mr. E. W. Cooke, A.R.A., whose sea calms and brisk gales have the true maritime and Vandervelde smack and relish

Diogenes, price twopence once, it was said by some, a formidable rival to *Punch*—died on Tuesday last; and, by public advertisement, and an ingenious woodcut, has announced its coming demise in these few and graceful words—"*Diogenes* surrenders his pen to *Punch*." But *Punch*, we see, is not to have the field to himself without an opposition. This day appears *Comic Times*, price only one penny.

It is not all up with poetry for the present Mr. Tennyson can still command purchasers; and Mr. Moxon, who rightly judges that book good or bad just as it sells, is busy at press with a new edition of the recently-published "Maud." The whole of the first edition (three thousand copies was insufficient for the first demand. The trade subscribed for four thousand copies, speculating, doubtless, on the run for the book from the popularity of the last publication of its author, "In Memoriam." "Maud has divided the critics: even Mr. Tennyson's own little senate of Cambridge admirers speak in a less confident tone of the thousand and one beauties of "Maud." They admit (or rather some of them admit) that "Alfred" has been trying with the public some of those trifles in versification which his friends were able to laugh him out of when he had the ear of the public to win. Now that he has gained it he has become bold, and reverts to the metrical heresies of his youth with all the confidence of a Sidney or a Southey. The several forms of verse that the English language is capable of are, we fear, too well known. We have now no more discoveries to make. We have metrical structures amply sufficient to sustain the highest flights, and to allow of the most artful arrangement of words for the sweetness of pronunciation.

Ladies are asking with interesting eagerness "Where is the Grey Friars in the last number of the 'Newcomes'?" where is the double-sense of the dear Colonel really laid?" Old and Young Cantabusians reply as eagerly, and, we will add, proudly (and properly so), "in the Charter house, where Thackeray was educated a century and a half after two of his favourite humorists—Addison and Steele." Whoever is, or is not given to the melting mood—so the talk runs *must* be moved by the concluding number of the "Newcomes."

Sculptors are complaining that the rage for perpetuating heroes in marble and bronze is on the decline. This week affords us another instance of the accuracy of the observation. The monument about to be erected to Lord Raglan will have nothing to do with the sculptor's art, with St. Paul's, or with Westminster Abbey. The admirers of the deceased soldier intend to perpetuate their sense of his public services by their private virtues by purchasing and entailing on his family a freehold estate, under the stately shadow of Raglan Castle—that castle from which the Field Marshal was proud to borrow his title in the British Peerage. This reminds us that Mr. Hallam is reported to have said that in our English antiquities we have nothing to point to of an older date than our hedges, and that Mr. Stanley has recently made the curious and suggestive discovery that a piece of land in Somersetshire, still held by the Dean and Chapter of Canterbury, was presented to that see by one of the monasters of a Becket. Few will hereafter look on those few acres with an interest may the Raglan memorial in the shape of land remain as long in the Somerset family as the Becket bit has remained with the see of Canterbury!

Auctions are nearly at an end for the season. One of interest still remains. On Tuesday next Messrs. Sotheby and Wilkinson will sell some curious brookslides and old and uncommon caricatures, the property of Mr. William Nicol, late of the Shakspeare Printing office, in Pall-mall.

MR. AND MRS. HOWARD PAUL (formerly Miss Featherstone) are performing in Dublin with marked success. They have produced a new version in rhyme of the old fairy tale "Cinderella," which is having quite a run; Mr. Howard Paul impersonating the *Prince*, and his wife the heroine, *Cinderella*.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The Consol Market on Monday was steady. The Three per Cents Reduced were 91⅛ ⅜; the Three per Cent Consols, 91 to 90⅝; the New Three per Cents, 92⅝; Bank Stock, 215 to 214; India Bonds, 28s; Exchequer Bills, 19s. pm to 24s premium; Exchequer Bonds, 100⅜; Cnnium, ⅜. On Tuesday the business transactions were very moderate. The Three per Cents Reduced marked 91⅛ ⅜, the Three per Cent Consols, 90⅝ to 91⅜; the New Three per Cents, 92⅝; and Consols for Account, 90⅝ 91. Bank Stock, 214 to 215; Long Annuities, 1860, 4 1-16; Ditto, 1885, 16 15-16. India Stock, 231. Exchequer Bills, 19s to 24s prem; Ditto, Bonds, 100⅝. Prices were well supported on Wednesday, with a steady market. Bank stock, 214; Three per Cents Reduced, 91⅛; Three per Cent Consols, 90⅝ to 91, Consols for Account, 91 to 91⅛; and New Three per Cents, 92⅝. Long Annuities, 1860, 4 1-16; Ditto, 1859, 3⅜; Ditto, 1885, 16⅞; Exchequer Bills, 19s. to 24s. premium; Ditto, Bonds, 100⅛. Since the bill for the issue of £7,000,000 Exchequer Bills has passed the Commons, the premium on the Unfunded Debt has kept remarkably firm—a strong proof that the greater portion of the debt is in "strong" hands, and that money is by no means so scarce as some of the *Bears* in Consols would lead us to imagine. On Thursday the settlement of the account was concluded. The "contango" was ⅜ and ⅛-16ths. Consols were rather flat, at 91⅛ to 90⅞ for Transfer, and 90⅝ to 91 for Account. The New Three per Cents were [illegible] and the Reduced, 91⅛ to ⅜. Exchequer Bills, 19s. to 24s. India Bonds, 23s. to 25s. prem

The interest on French Treasury bonds is fixed at 3½ per cent on bonds of three to five months' date, 4 per cent on six to eleven months', and 4½ per cent on those having twelve months to run

Most Foreign Bonds have been steady. The following are the leading quotations for the week:—Brazilian Five per Cents, 101⅛; Ditto, Small, 101⅛; Ditto, Four-and-a-Half per Cents, 94½; Ecuador Bonds, 4½; Granada Deferred, 7½; Mexican Three per Cents, [illegible]; Peruvian Four-and-a-Half per Cents, 81½; Ditto, Three per Cents, 60; Sardinian Five per Cents, 87½; Spanish Three per Cents, 37½; Ditto, New, Deferred, 13½; Spanish Six per Cents, 61½; Venezuela Four-and-a-Quarter per Cents, 31; Buenos Ayres Six per Cents, 54½; Chilian Six per Cents, 103; Portuguese Four per Cents, 44; Belgian Five-and-a-Half per Cents, 99½; Dutch Two-and-a-Half per Cents, 64½; Dutch Four per Cents, 96⅜.

Some rather extensive purchases of Joint-stock Bank shares have been made, as our quotations:—Australasia, 90; British North American, 26½; City, 62; Colonial, 21; London, 36½; London Chartered of Australia, 32; Do. New, 4; London and Westminster, 47 ex div.; National Provincial of England, 21; Oriental, 42; South Australia, 29; Union of Australia, 71 ex div. Union of London, 35. Miscellaneous Securities have ruled tolerably firm:—Australian Agricultural, 29; Canada Company's Bonds, 103; Do., Government Six per Cent Bonds, 115; Crystal Palace, 2½; Do., New Preference, 7; Electric Telegraph, 19½; General Screw Steam Shipping Company, 1½; Mexican and South American, New, 4; North British Australasian, 9; Peninsular and Oriental Steam, 97½; Ditto, New, 13½; Royal Mail Steam, 60; Scottish Australian Investment, 1¾ ex div.; South Australian Land, 7½; Canal Shares very little has been doing:—Loughborough, [illegible]; Old York Canal, 86; Regents, 14½ ex div.; Rochdale, 6; Trent and Mersey, 125; Worcester, 425; Stourbridge, [illegible]. Docks and West India Dock Shares have sold at 117½; London, 102½; [illegible]. Glue Insurance securities have realised 10s; Imperial Fire, 14½ ex bonus; Imperial Gas, 18¾ ex div and bonus; Imperial Life, 18¾ ex div and bonus; Law Life, 57.

Although the "calls" for the present month are small—£333,000—most Railway Securities have been flat, and prices have shown a tendency to give way The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS—Caledonian, 95⅞; East Lancashire, 74; Great Northern, 89½; Ditto, A Stock, 217; Ditto, B Stock, 128; Great Western, 71; Lancashire and Yorkshire, 93; London and Brighton, 91; London and North-Western, 96; Ditto Eighths, 1½; London and South-Western, 87½; Manchester, Sheffield, and Lincolnshire, 52½; Midland, 70½; Norfolk, 80½; North-Eastern, Berwick, 72⅝; Ditto, Extension, 13½; Ditto, York, 48½; North Staffordshire, 11; Scottish Central, 107; Scottish Midland, 70½; South-Eastern, 61⅜.

LINES LEASED AT FIXED RENTALS—London, Tilbury, and Southend, 11; Preston and Wyre, 44.

PREFERENCE SHARES—Caledonian, 11; Do., Seventh Cent, 105. Chester and Holyhead—Four-and-a-Half per Cent, 105½; Great Northern, 120; Ditto, Five per Cent, 113½; Great North of Scotland, 9½; Great Western Four-and-a-Half per Cent, 99½; Ditto, Four per Cent, 88; Ditto, Three per Cent, 71; Ditto Guaranteed Shares, 20; Lancashire and Yorkshire, 138; Midland Consolidated Four per Cent, 99; Ditto, West, 99; Wolverhampton, 105

FOREIGN.—Antwerp and Rotterdam, 10; Belgian Eastern Junction, 14; Dutch Rhenish, 10 ex. int.; Eastern of France, 33½; Grand Trunk of Canada, 103; Do., Second Preference, 17; Great Central of France, 14½; Great Luxembourg, 4; Luxembourg Guarantees, 5½; Great Western of Canada, 5; Lyons and Geneva, 17½; Madras, 13½; Northern of France, 37; Paris and Rouen, 49½; Royal Swedish, 17; Ditto, Obligations, 3½. West Flanders, 4.

Mining Shares have met a dull market. On Thursday, Rs waren Iron and Coal were 6½ Go at Polgooth, 2½; United Mexican, 3¾.

Friday Evening.

The business doing in the Consol-market to-day is very limited, but prices continue to be well supported. The Three per Cents, for Money, are 90⅞ ⅛; for the Account, 91 to 91⅛; the Three per Cents Reduced, 91⅛ ⅜; and the New Three per Cents, 92⅛ ⅜. Foreign Bonds and Railway Shares are flat.

THE MARKETS.

[illegible]

Irregular this Week. English wheat, 37s; barley, 40[illegible]

[illegible]

[illegible] 6 stalker ditto

[illegible] 10s; brown ditto, 42s. to 44s.; Kingston

[illegible] Yorkshire and Lincolnshire [illegible]

[illegible] 6s, 27s. to 30s.; ditto, white, 34s. to 37s.; tick beans, 30s. to 32s.; grey peas, 27s. to 43s.; maple, 30s to 42s.; white, 44s. to 46s.; potato, 36s. to 38s. per quarter. Town made flour, 60s to 70s.; Suffolk, 58s. to 62s., Stockton and Yorkshire, 52s. to 56s per sack.

Seeds. New linseed has sold at £16 to £17 per last; and new canaryy, 42s to 44s per qr. In other seeds only a moderate business is done.

Linseed, Baltic, crushing, 64s to 67s.; Mediterranean and Odessa, 63s to 65s.; hempseed, 34s to 36s per quarter; coriander, 20s to 22s. per cwt.; brown Mustard seed, 12s to 14s; white ditto, 6s to 10s per bushel. English rapeseed, new, £40 to £42 per last, unsold [illegible] £12 to £13 10s.; ditto foreign, £10 10s. to £12 5s.; rape cakes, £6 5s. to £6 10s per 1000; refuse 45s to 50s.; [illegible]

Imperial Weekly Averages. [illegible] barley, 31s 7d; oats, 20s. 11d.; rye, [illegible]; beans, 34s. 7d.; peas, 35s. 7d.

English Grain—In last week—Wheat, 53,736 barley, 7238; oats, 11,866; rye, 170; beans, 2241; peas, 1[illegible]

Flour.—We have a slightly improved demand for most kinds of tea at full prices The deliveries of sugar have been extensive.

[illegible] fair average business has been transacted in nearly all kinds of raw sugar, at [illegible] to 4s 6d quotations. Barbadoes has realised 50s. 6d. to 52s.; Demerara, [illegible]; Bonaires, 29s. to 42s.; and enclayed Manilla, 33s per cwt. [illegible] of refiners have commanded extreme rates. Refined goods are steadily [illegible] cwt. The total clearances to the 4th instant were 4,133,793 cwt., [illegible] tons.

Coffee.—The transactions in this article have been comparatively small; nevertheless, [illegible] supported. Good ord inaries is worth 48s 6d per cwt [illegible] ere parcels have changed hands at an advance of 2s per cwt [illegible]

Provisions.—All kinds of butter are in moderate supply, and fair request, at fully last week's prices. The bacon market is steady at late rates. Cheese supports former prices. In [illegible] no alteration has occurred.

Tallow.—The demand is less active, and prices are a shade lower. P.Y.C. on the spot, is 6d to 6d per cwt. Town tallow, 45s. 6d. Rough fat, [illegible]

[illegible] of oil is tolerably firm at 28s. per cwt. on the spot. In other oils very little doing. Turpentine moves off a new [illegible] spirits, at 32s. to 34s.; and rough, 27s. to 28s.

Spirits. The transactions in rum are to a moderate extent. Proof sorts are 2s 3d. to 2s 4d.; East India, 2s. 8d. to 2s. 9d. per gallon. Brandy is dull, and rather cheaper. In consequence of the [illegible] of 1851, 2s 6d to 10s. 7d.; 1850, ditto, 10s 6d. to 10s 8d.; per gallon. Malt spirit, 10s 10d

Hay and Straw. Old meadow hay, £4 0s to £5 10s; new ditto, £3 to £5 10s; old clover £4 0s to £5 15s.; new ditto, £3 5s to £5 5s; and straw, £1 5s to £1 8s per load.

Trade still

Hops (Prices). Our market is in a most depressed state, and it is difficult to quote figures accurately, but none of the growth of 1854 is say to be purchased at from £7 7s. to £11 11s. per cwt. Our accounts from the plantations are still favourable, and the duty is called £370,000.

[illegible] Wyken, 15s. [illegible]

[illegible] 25s. to [illegible]

[illegible] been brought [illegible] Surrey, 3l. 7s. to 4l. 4s.; Sussex, 3l. 3s. to 4l. 4s.; Kent, 3l. 3s. to 4l. 4s.; Farnham, 5l. 5s. to 6l. 6s.; Weald of Kent, 3l. 3s. to 4l. 4s.; Mid Kent, 3l. 3s. to 4l. 4s.; East Kent, 3l. 3s. to 4l. 4s.; per cwt.

Potatoes. [illegible] at from 4s. to 7s. per cwt.

Metropolitan Cattle Market (Friday).—The supply of beasts in the market this week has been very moderate, and the demand for prime qualities has been active. Prime sheep sold readily at extreme quotations. Heavy lambs were in request, but not clearly. Per imperial stone of 8lbs.—[illegible] which were [illegible] with calves, in which a good business was done, at about previous rates.

[illegible] and inferior beasts, 3s 10d to 4s 0d; second quality ditto [illegible] to 4s 8d; prime Scots, &c. 4s 10d to 5s 2d.; coarse calves, 4s. 2d to 4s. 8d.; prime quality ditto, 5s 0d to 5s 4d.; large hogs, 3s 6d to 3s 10d; neat small porkers 4s 0d. to 4s 6d.; lambs, 4s 6d to 5s 6d; small veal, 4s. 10d. to 5s. 6d.; prime ditto, 5s 0d. to 5s 4d.

Newgate and Leadenhall (Monday). A moderate business was transacted as follows:—Per 8lbs by the carcase—Inferior beef 3s 4d. to 3s. 8d.; middling ditto, 3s. 10d to 4s 0d; prime large ditto, 4s. 2d to 4s 4d; inferior mutton, 3s. 4d. to 3s 8d; middling ditto 3s. 10d to 4s 0d; prime ditto 4s 2d to 4s. 4d; veal, 3s. 10d. to 4s. 10d; small pork, 4s. 0d. to 4s. 6d.; lamb, 4s. 6d. to 5s. 0d.

ROBERT HERBERT.

On the 7th ult., of typhus fever, at Balaclava, Crimea, [illegible] C. F. Witham, R.M., eldest son of the late Henry C. Witham, of Higham, Suffolk, aged 24.

On the 8th ult., in the Bosphorus, Lieut. W. G. J. Dunn Gribble, R.N., Agent of Transports, [illegible] Ensign E. Sharp, 8th Regiment, Assistant-Surgeon [illegible] Assistant-Surgeon [illegible] Staff Assistant-Surgeon [illegible] Assistant-Surgeon [illegible] Assistant-Surgeon [illegible]

LAUNCH OF "LA HOGUE," THE LARGEST SHIP EVER BUILT IN SUNDERLAND.

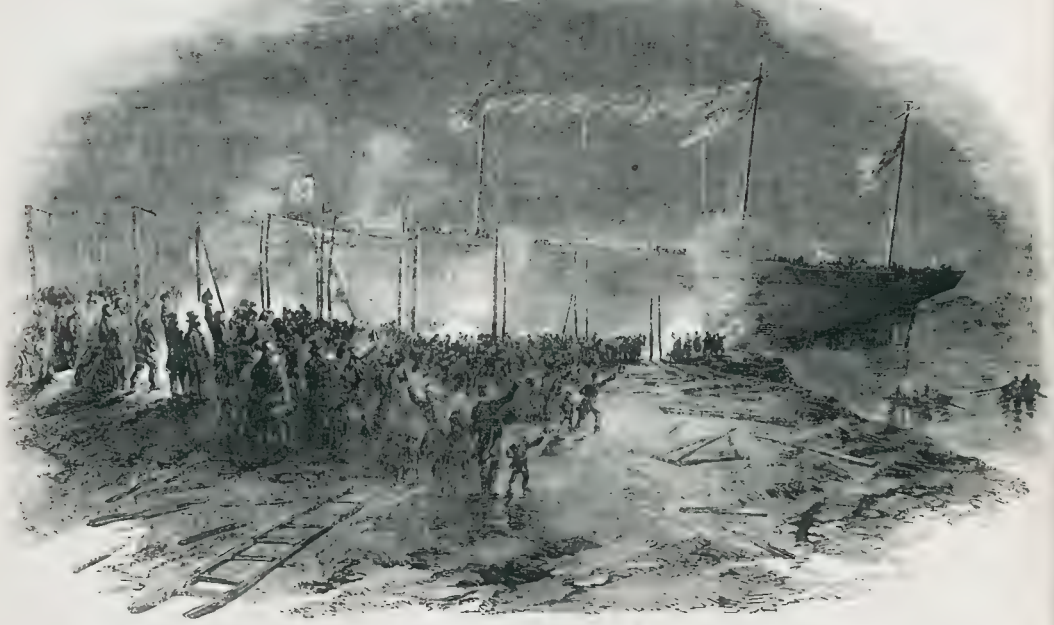
thirty degrees from the top towards the ends at the bottom on the outside, whilst those on the inside are placed in an opposite direction, so as to cross the line of trussing on the outside, and bolted through every frame timber. The system of inside trussing has been applied in several instances, but this is the first time, we believe, it has been placed upon the outside of the frame. The advantages of it will be seen at once, when we consider the application of a hoop to an ordinary cask, the outside trussing operating in a similar manner in building the whole frame of the ship as the hoop does the staves of a cask. Since this trussing was fitted to *La Hogue* it has been applied to a steamer building in America for the United States Government, and for which a patent has been applied in that country by the builder. Upwards of twenty tons of copper has been used in the bolting of *La Hogue*, and sixty tons of iron knees.

The rain fell heavily for an hour previous to the launch, but this did not prevent a number of gentlemen learned in marine craftsmanship, inspecting the huge hull which stretched from end to end of the yard; and to those not similarly engaged the music of an instrumental band ministered exquisite pleasure. Shortly after five o'clock the well-known loud and uninterrupted rattle of the carpenters' hammers announced that the last shore was about to be driven out. In a minute the rope at the bow was cut, the iron blocks fell down, out flew the remaining shore, and in a moment the towering fabric took the water as kindly as a "bird that seeketh its mother's nest," greeted with cheers from the yard, and from the hundreds of spectators who lined the opposite bank of the river.

LAUNCH OF A STEAMER BY TORCHLIGHT.

On Monday night last week the screw-steamer *Azoff*, of 800 tons burden, was launched by torchlight from the building-yard of Messrs. Bourne and Co., on the Clyde. As the tides did not rise sufficiently high during the day, the vessel had to be launched at night, and a good deal of interest was excited by an event so unusual as a night launch. The vessel entered the water beautifully and without mishap of any kind, notwithstanding the impediments arising from the darkness of the night.

The *Azoff* is the first vessel built in the Clyde under Lloyd's new rules for the construction of iron ships. She has been built under the immediate inspection of Lloyd's surveyor, will have a high class on Lloyd's books, and is admitted to be the strongest steam-vessel of her size yet built in the Clyde. She is to be propelled by an engine of 180 horses power; and, as the model of the vessel is a very fine one, a speed of eleven knots an hour is expected. The *Azoff* will carry 1000 tons of cargo, 250 tons of coal, and 8000 gallons of water in tanks. She has besides, a spacious cabin, with accommodation for forty first-class passengers. The woodwork is principally of teak.



TORCHLIGHT LAUNCH OF THE IRON SCREW-STEAMER "AZOFF," IN THE CLYDE.

ARTHUR H. HASSALL, M.D., F.L.S., &c.

If one class of men more than another deserve to stand high in the estimation of their fellow men, it is those who devote their knowledge and scientific acquirements to the amelioration of the social condition of mankind by careful watchfulness over the necessities of health and life. It is absolutely necessary that such men become enthusiasts, as well as possessed of skill and talent enough, to bring about a successful issue in any undertaking for the public good. Enthusiasm is the motive power of all hard workers; and this excellent quality the subject of the present sketch evidently possesses in a very marked degree.

Dr. Hassall was born at Teddington, in Middlesex, December, 1817. His father was Mr Thomas Hassall, of Durham, who at the outbreak of the Irish rebellion, in 1798, joined, in the double capacity of Surgeon and Captain, the

DR. HASSALL.—FROM A DAGUERREOTYPE BY MAYALL.

Durham Fencibles. Mr. Hassall's father and grandfather were also members of the medical profession—thus making four generations.

During early life Dr. Hassall did not exhibit any particular aptitude for books, but a very strong taste for the pursuits of Natural History developed itself. This, at first, was exhibited in a love for gardening, for rearing rare plants, and in making collections of natural objects of various kinds. As we shall see presently, this early taste was destined hereafter to lead to important results.

At the completion of his school education, in 1833, Dr. Hassall repaired to Ireland, took up his abode with his uncle, Sir James Murray, M.D., and entered, under his auspices, upon the study of medicine. This he pursued with great zeal, obtaining several prizes in the course of his medical studies. In 1839 he returned to England, and passed the College of Surgeons of London; and, in 1841, the Apothecaries' Hall.

It was while in Ireland and during his medical studies that the taste he had early acquired for Natural History became still more confirmed. The little leisure he could command was devoted to the study of a class of productions then not fully understood—viz., Zoophytes and Sponges, of which he made the best collection which then existed in Ireland, he also discovered several new species and genera—the results of his investigations being published from time to time in the *Annals of Natural History*. These observations and investigations are likewise recorded in Dr. Johnston's "History of the British Zoophytes and Sponges." In his preface to the former work, Dr. Johnston, remarks in referring to Dr Hassall,—"Him I claim as my pupil in Zoophytiology, and one ere long likely to surpass his master." In 1845 Dr. Hassall brought out in two volumes his "History of the British Fresh-water Algæ."

Dr. Hassall next entered with ardour upon the study of the microscopical anatomy of the human body, and brought out in 1849 his work in two volumes, and illustrated with nearly 500 figures in colours, entitled "The Microscopical Anatomy of the Human Body in Health and Disease."

Failing health compelled Dr. Hassall in 1849 to transfer his practice into other hands, and he then settled in Park-street, Grosvenor-square. It was while here that he turned his attention to the subject of the adulteration of food. He first prepared a paper upon ground coffee, in which he employed the microscope as a means of detecting adulteration. This was read to the Botanical Society of London; and was followed by an article on sugar. At this time the Editor of the *Lancet* communicated with Dr. Hassall, and engaged him to prepare a series of articles on the subject of adulteration, so as to admit of the publication of the names and addresses of the parties of whom the goods analysed were purchased.

In the fulfilment of his engagement to Mr. Wakley, Dr. Hassall has toiled at the subject of adulteration for nearly five years, and is still working at it. Dr. Hassall wrote all the Reports, with a single exception, which have appeared in the *Lancet* under the title of the Analytical Sanitary Commission; he prepared, with occasional chemical assistance, all the investigations, microscopical and chemical, and he has published the results of his labours in a separate work, under the title of "Food and its Adulterations."

As a proof of the estimation in which the labours of Dr. Hassall were held, the editor of the *Lancet* thus writes, August 19, 1854:—"In connection with these labours, we consider that the time has now come when the name of Dr. Arthur Hassall should be mentioned, on whom these inquiries have almost exclusively devolved, and to whom belongs the credit of having brought to light practices in relation to the adulteration of food of the highest importance, and of the extent and nature of which no one previously entertained any adequate conception. It is almost impossible to over-estimate the importance of these labours, either in a pecuniary or sanitary point of view, both as regards the public and the medical profession. To Dr. Hassall, then, we would say, belongs the merit of having established in this country a new and distinct department of public hygiene."

Occupied as he has been with this subject Dr. Hassall has yet found time for many other labours; thus he passed the necessary examinations to enable him to obtain the degree of Doctor of Medicine of the University of London and the license of the Royal College of Physicians.

He has likewise written a variety of papers connected with medical subjects, which are to be found in the "Transactions of the Medical Societies." Engaged in practice as a physician, he has also discharged his duties in that capacity to a metropolitan hospital.

At no period have frauds upon the public, in the shape of adulterations, been so fearlessly dealt with as at the present time, when a Committee of Inquiry by the House of Commons has been engaged day after day listening to the detailed exposure of this vile system of dishonesty, so skilfully arraigned before the bar of public opinion by the labours of Hassall and other scientific men.

We are prone to believe that the growing intelligence and inquiring spirit of the masses, with the much-increased facilities of detection so ably pointed out by Dr. Hassall, and afforded by modern science, will tend not merely to check the evil for the time being, but ultimately to suppress such dangerous dealing with the health of her Majesty's subjects.

MEYERBEER.

THE greatest dramatic musician of the age—for Rossini and Spohr, though living, belong rather to the past than the present—is Giacomo Meyerbeer. This great composer was born at Berlin in the year 1794, of a wealthy family, his father having been an eminent banker of that city. In his childhood, like many celebrated musicians, he was very precocious; in this respect, indeed, almost a second Mozart. At ten years old he was considered one of the best pianists in Berlin, and had composed many pieces, both vocal and instrumental, with no other guide than the instinct of his genius. At fifteen he placed himself under the tuition of the learned Abbé Vogler, who initiated him into the mysteries of counterpoint, and laid the foundation of that mastery of combination for which the works of Meyerbeer (his later ones especially) are distinguished. His first dramatic work, "Jephtha's Daughter," was produced at Munich when he was eighteen. He was then under the scholastic trammels of the Abbé Vogler; and his music was too stiff and elaborate to please. His next opera, "Alcimelek, or the Two Caliphs," composed for the Court Theatre at Vienna, failed from the same cause. These failures were mortifying, but salutary lessons to the young artist: he saw his error, and wisely went to Italy to study *melody*. His studies bore rich fruit; and it was the richer for being the produce of Italian boughs grafted on a German stem. Meyerbeer did not unlearn the German counterpoint of the Abbé Vogler; but he acquired the art of making it, what it ought to be, the aid and handmaid of melodious song. Thus his Italian style came to be a better style than that of the Italians themselves, who (in

MEYERBEER.—FROM A PHOTOGRAPH BY CLAUDET.

modern times at least) are shallow harmonists, and trust too much to the attractions of melody alone.

Meyerbeer's first Italian opera, "Romilda e Costanza," was produced at Padua in 1818. It was followed by "Semiramide Riconosciuta," performed at Turin in 1819, and by "Emma di Resburgo" at Venice in 1820. This last was not only received with enthusiasm throughout Italy, but was successful even in Germany.

One of Meyerbeer's early friends and fellow-students under the Abbé Vogler, was the author of the "Freischütz." Weber, who was a thorough German in his musical notions, did not approve of his friends' backsliding—his falling away from the true faith, and Italianizing his style. He used to remonstrate with him on the subject, and showed how much he was in earnest, by bringing out, as manager of the Dresden theatre, not one of Meyerbeer's successful Italian pieces, but the German opera (the Two Caliphs) which had failed at Vienna; while he wrote a critique in a musical journal, lauding this work to the skies. Their differences on this point, however, had no effect in lessening the warmth of their friendship. There is a pleasant letter from Weber to his namesake Gottfried Weber, the celebrated writer on harmony, in which he describes a visit he had received from Meyerbeer. "Last Friday," he says, "I had the joy of having Meyerbeer to spend a whole day with me. It was a truly happy day—a reminiscence of the good old times at Mannheim. We did not part till midnight. Meyerbeer is going to Trieste to produce his "Crociato." Next year he returns to Berlin, where he will perhaps write a German opera. Heaven grant it! *I have made many appeals to his conscience.*"

The "Crociato in Egitto," the opera mentioned in this letter of Weber's was preceded by another Italian Opera, "Margherita d'Anjou," which was produced at the Scala Theatre, at Milan, in 1822. It had great success; but was eclipsed by the "Crociato in Egitto"—first performed, not

THE FRENCH LOAN.—SCENE AT THE HOTEL OF THE MINISTER OF FINANCE, RUE DE RIVOLI, PARIS.—(SEE NEXT PAGE)

at Trieste, but at Venice, in 1826. It had immense success; and Meyerbeer divided the supremacy with Rossini, then in the zenith of his popularity. The "Crociato" was produced the same year at our Italian Opera-house (the King's Theatre) then under the able management of Mr. Ayrton The hero was performed by Velluti the last of a class of singers now extinct: and the two female parts were sustained by Mdlle. Garcia (afterwards the famous Malibran), then very young, and Madame Caradori Allan, one of the most charming singers then on the Italian stage. It had an immense run; and in concert-rooms and private musical circles nothing was heard but the airs and concerted pieces from the "Crociato in Egitto." At Paris, where it was soon afterwards performed, under the author's own direction, its success was equally great. This fine opera deserved its success. The drama is an interesting tale, in which European chivalry and Eastern romance are felicitously blended; the music is not only beautiful, but full of originality and power. The "Crociato," in short, is one of the noblest operas ever written for the Italian stage; but it has been thrown into the shade by Meyerbeer's own subsequent works—works in which he has struck into a new character, and scarcely left a vestige of his former self

The first of these works, we need scarcely tell our musical readers, was "Robert le Diable." For some years before its production Meyerbeer had written nothing. His marriage, and the loss of two infant children, suspended his musical labours. But there can be little doubt that during this interval his meditations on his art were gradually leading him to that total and apparently sudden change of style which astonished the world. In Scribe he found a *collaborateur* after his own heart; not only a great dramatic poet, but conversant with the means of musical effect. From that time to the present Meyerbeer has devoted his genius to the Parisian stage. "Robert le Diable" was produced at the Grand Opéra in 1831, and at the King's Theatre (in the original French) in 1832. The "Huguenots" was first performed at the Grand Opéra in 1836, and at our Royal Italian Opera, in an Italian version, in 1848. The "Prophète," originally performed at Paris in 1848, was produced here, in Italian, in 1849. The "Etoile du Nord" was brought out at the Opéra Comique last season, and our readers are aware of the splendour with which it is performed at the Royal Italian Opera. Meyerbeer composed another opera, "Le Camp de Silesie," which was never produced at Paris; and, when performed at Berlin, was not very successful; its comparative failure being ascribed to faults of the libretto. The composer has introduced several pieces from it into the "Etoile du Nord."

Meyerbeer came to London to superintend in person the production of his last opera, which was performed for the first time at the Royal Italian Opera, on Thursday, the 19th of last month. It demanded a greater amount of preparation for the Italian stage than was necessary for "Robert le Diable," the "Huguenots," or the "Prophète." Those operas required nothing more than an Italian version of the original French drama, the new words being adapted to the original music But the "Etoile du Nord" demanded a different treatment. The previous works were composed for the Grand Opéra, where the whole drama (as on the Italian stage) is thrown into a musical form; but, the "Etoile du Nord" being written for the Opéra Comique, a large portion of the dialogue is in plain prose, and simply spoken, not sung, by the actors. In order, therefore, to comply with the exigencies of the Italian stage, it was necessary to clothe the whole of the dialogue with music, and to convert those portions of it which had previously been only spoken into recitative a task which was performed by the composer himself with great care and consummate skill. We are by no means sure, however, that the change has been an improvement. Dialogue when spoken, especially when it is of a light and familiar kind, has an ease, freedom, animation, and rapidity of a light and familiar kind, has an ease, freedom, animation, and rapidity which cannot be imparted to recitative; and, as to the supposed bad effect of the transition from speech to song, we, for our part, have never been offended by it. It has been constantly in use not only on the English but on the German musical stage, and on the French stage likewise, excepting only at the grand serious opera, to which class the "Etoile du Nord" does not belong. It is in Italy only that recitative has always been deemed essential to opera. The Italian musical actors, consequently, learn to *sing*, but not to *speak*: their speech must always be song; but this is not the case with the Germans; and therefore the "Etoile du Nord" is performed in Germany in the same manner as in France. And so will it be performed on the English musical stage, if ever we have an English musical stage worthy of the name.

The "Etoile du Nord" is denominated a comic opera; and its subject is essentially comic, though mixed up with scenes and incidents of romantic interest. In the *Czar Peter* we see little of the Russian autocrat. He appears as a dockyard workman, afterwards as a rough soldier, with the jovial habits of his time and country; and it is only at the close that he assumes the Imperial purple. In like manner the future *Empress* is a simple country girl, who follows her lover, ignorant of his rank, through hardship and peril with devoted fidelity. The subordinate characters—the humble pastrycook, who becomes the Emperor's favourite, the little rustic *Prascovia*, her sweetheart *George*, and *Gritzenko*, the stolid Cossack corporal—are all highly comic, especially when the plain prose as to they do at the Opéra Comique. Mingled with this lighter matter there are grand and heroic scenes, as when *Peter*, by the majesty of his presence, brings to his feet a band of rebellious soldiers; and situations of tenderness and pathos, as when *Catherine*, whose mind has sunk under her sorrows, is restored to reason and happiness by the tender assiduities of her Imperial lover. Meyerbeer's music is equally felicitous in the comic and the serious parts. Indeed, it evinces a greater versatility than any of his previous works. It passes "from grave to gay, from lively to severe," without abruptness or incongruity; it is full of lovely and expressive melody; while in its grand combinations and masses of harmony it at least equals the "Huguenots" or the "Prophète." In point of execution it is the most arduous of all the author's works; and he has expressed his unbounded surprise at the quickness with which its difficulties were overcome by the principal singers, the orchestra, and the chorus of the Royal Italian Opera.

During the stay in London, Meyerbeer was the object of much attention in the highest and most musical circles, and gained general good-will by his courteous manners and agreeable conversation. He left London a few days ago for Spa, but is expected to be present at the Birmingham Festival—having, it is understood, undertaken to compose a great sacred work for the Festival of 1858.

THE FRENCH LOAN

THE scene represented in the accompanying spirited Sketch is one of the most striking of the kind that has been witnessed in Paris for many years. It represents the raising of the famous Loan of 750 million francs, which, as everybody knows, was voted to the French Government by the Senate and the Corps Legislatif. The people responded to the demand upon them with eagerness and enthusiasm. Money sprang as it were out of the ground. The stream of wealth flowed into the national exchequer in an inexhaustible flood. Happy should the Government be which has inspired its subjects with so much enthusiasm for its cause—so much faith in its honour—so much confidence in its power and stability!

Our Engraving represents the subscribers at the Central Caisse of the Treasury in the Rue de Rivoli. Night and day they were at their post waiting till they received a piece of paper which will entitle them to a certificate of Rente on the State. Here were to be found not only subscribers in the proper sense of the term, but persons who make it their business to purchase shares and scrip of all kinds at a low rate and sell at a profit. Many persons had come very gaily to the scene, deemed essential to success. Among the curious were now and then to be seen persons in affluent circumstances. But these formed an inconsiderable item. All day long the air resounded with murmurs of impatience, and bursts of laughter excited by the jokes of some few pleasant fellows who seemed to have undertaken there for the express purpose of keeping the people in good humour.

The raising of this Loan, all political considerations apart, presents an unanswerable argument to those who have doubted the immense resources of this country, after all her revolutions, and amid all her difficulties, for the amount for which she is indebted to foreigners is but 600,000,000f. Politically viewed, it may be fairly taken as evidence of public approbation of the Imperial Government, and of confidence in it. Making every deduction for speculation and the desire of gain, and exhausting every imaginable explanation on the ground of mere material advantages, the wonderful fact is not the less patent, that, with no great military successes to rouse the nation to enthusiasm, with anxiety for the present and uncertainty in the future, with Austria morally abandoning the cause she engaged in, and Prussia all but hostile to it, with several things to discourage, and not many to animate, the people have unhesitatingly come forward and given a second time their treasures, which are avowedly to be employed in carrying on a war which Mr. Cobden has so recently declared, on the authority of friends who have visited France, to be not merely unpopular, but odious to that people

The Finance Minister, in his Report, observes:—

One of the most remarkable characters of this extraordinary manifestation is, that an enormous displacement of capital could have been effected in so short a time, after two loans so recently contracted, in the midst of foreign complications, after the food crisis and the epidemic through which we have just passed, without causing the slightest perturbation in business, and without making any change in the quotations of securities. Contrary to what has been observed in all other loans, this one has been greeted by a rise in the price of the Rente, which from 68f. 80c., the price on the day before the Loan was issued, has risen to the present price of 69f. 80c. The financial operation which has just been accomplished, and which is probably the most surprising that has ever been effected at any period, or in any country, will enlighten those who still retained doubts of the power of France as to the extent of her resources and of her credit, and the popularity which is attached in Europe to the glorious enterprise which she is carrying on. This immense co-operation of capital, sent from all countries, furnished by people of every amount of fortune, will certainly be in the eyes of the whole world the most striking and the most irrefutable testimony of the confidence which the policy of the Emperor inspires both in France and abroad.

NATIONAL SPORTS.

THE St. Leger betting has begun to be rather more lively, but Oulston's supporters have been somewhat discouraged by his defeat at Goodwood, and do not relish his threatened tilt with Wild Dayrell at York. Lord of the Isles has gained many friends from his Goodwood Cup running, for which he was not "half prepared," and Scott's party have brought the dark and curby Grecnlus Esurient to 10 to 1. Cormac has been sold to Mr. Fedwick for 1000 guineas, and Mary Copp, Oltenitza, and Cornebus have already won more than the sum for which Lord Eglinton parted with his whole stud. Lord Exeter has announced five sires (including Stockwell, but not Midas) for sale, along with ten brood mares, seven yearlings, and thirteen foals, on the 20th inst. The show of horses at Malton last week was exceedingly good; Burgundy taking the head prize for blood-sires, and Galaor (formerly the property of the owner of Revenge) the second one. A splendid four-year-old colt by Cowl was the premier among the hunters, and was sold three times in the course of the day, the first time for 200 guineas!

The race meetings for next week are of no very interesting stamp. Wolverhampton stands for Monday, Tuesday, and Wednesday; Reading, for the day following; Plymouth, for Thursday, and Tarporley, for Thursday and Friday. Both Thursday and Friday are the days for the Northern Meeting; but there are not likely to be many horses for York, as there are not likely to be any people following the race.

Lord Sefton's death will cause no small blank in the coursing world, of which he was quite the Emperor. Under the *nom de guerre* of Mr. Bolsdale, Scavenger, Jury man, Captain Arthur, Mordaunt Dancer, &c., he has long, and was one of Harry Edwards' principal masters, he did not care about the Turf, though he occasionally had a flutter in the Liverpool Steeplechase, for which race he annually entered a steed. He was a great shooter, and kept barriers till within the last two years, but his heart was in coursing and nursing. As a driver of a four-in-hand he was not exceeded by Sir Henry Peyton, Sir Vincent Cotton, or any other member, living or dead, of that time-honoured club; and a very dark chesnut was his darling colour for a team. It is not so very long since he astonished the Liverpool public at the docks by driving a pair down one side of the landing-stage for steamers, and up the other; and, if we remember rightly, he once drove a four-in-hand into Tattersall's yard, round the red-fox compass, and out again. His greyhounds were his delight, and I set them all names commencing with an S. Skylark was one of his especial favourites, and Senate won the Waterloo Cup for him in 1847, and his lengthy son Sackcloth the same prize in 1854. The latter won seventeen out of nineteen courses in the 1853-54 season, and travelled some 260 miles to do it. He Londale never won a prize over the plains of Altcar after the Sackcloth cup-day; and John James Henderson, who owned the second dog, Larriston, on that occasion, strange to say, died just a month before him. Skirmisher, for whom, with Sackcloth, he refused £200 in their sapling days, sadly disappointed him. For some years he had suffered from a wearing illness, which was greatly aggravated by the result of the great Hopwood trial at the last Liverpool Spring Assizes. He was buried at Sefton on Thursday, and ordered in a will that neither coffin nor shell should be used in his funeral, but that his body should be simply wrapped in linen, and the amount thus saved given to the poor. He was in his sixtieth year, and his sporting tastes are said to be fully inherited by his second son.

The Royal Yacht Squadron will have quite a gala week. On Monday the members sail their yachts for the Albert Cup; on Wednesday, for the R. Y. S. Cup; and on Friday for the Queen's Cup. Monday, Tuesday, and Wednesday are also allotted the Royal Thames National Regatta, and on Tuesday the Metropolitan Regatta; while Tuesday and Friday will attract the Brampton and "fell-side folk," with divers other Cumbrians, to the quiet shores of Talkin Tarn, where of late years Lord Carlisle has generally acted as steward. *Apropos* of yachts, we may mention that the far-famed *Pearl* has been very much lengthened, and is at present lying for sale in the East India Import Docks

Cricketing does not fag as yet, though the weather has played and havoc with it. Kent and Surrey play England at Canterbury on Monday; and on Thursday the Gentlemen of Kent and Surrey play the Gentlemen of England over the same ground. Both of these are return matches. On Thursday All England pitch their wickets at Nottingham, and on the same day the United All England meet twenty-two opponents at Chichester.

"The moors, the moors, the bonnie brown moors," will not be chanted with a very cheerful chorus on Monday, as the accounts of the grouse are very sad. Thousands have been found dead from liver disease or swelled windpipe, and the Scotch gamekeepers consider that they have seldom seen so many barren birds. Partridges as well as black game are, however, favourably reported of; and a 45 lb. salmon has been landed at "bonnie Dundee."

BRIGHTON RACES.—WEDNESDAY

Bristol Plate.—Schamyl, 1. Alcyone, 2.
Third Brighton Biennial Stakes.—Escape, 1. Instructress, 2.
Brighton Stakes.—Mistap, 1. Pulteney, 2.
Marine Plate.—Scarbrough, 1. Protest, 2.
Brighton Nursery Stakes.—Lady Florence, 1. Elfrida, 2.
Corporation Plate.—Punchbox, 1. Missenden, 2

THURSDAY

Fourth Biennial Stakes.—Aleppo, 1. Ansel, 2.
Pavilion Plate.—Queen Mab, 1. William Rufus, 2.
Railway Plate.—Sackboy, 1. Thurn Rufus, 2
Brighton Cup.—Rataplan, 1. Sharavogue, 2.
Champagne Stakes.—Ormoco, 1. Rataplan, 2
Sussex Stakes.—Overreach, 1. Hagseed, 2

FRIDAY

£80 Plate.—Priestess colt, 1. Brother to Ease, 2.
Civil Stakes.—Redomeli, 1. Hermit, 2.
Cub Plate.—Eggesford, 1. Sagacious, 2.
Claret Stakes.—Anglo Saxon, 1. William Rufus, 2
£70 Plate: Bristol Maid.—Joshua, 1. The Ralph, 2.
Sweepstakes of 50 sovs.—Tyre, 1. Rip Van Winkle, 2.
£60 Plate.—Medal, 1. Guardian, 2.
£50 Plate.—Georgium Sidus, 1. Pantheon, 2
£70 Plate. William Rufus, 1.

NORTH STAFFORDSHIRE.—TUESDAY.

Ladies' Plate of 30 sovs.—Romeo, 1. Fancy Fern, 2.
Champagne Stakes.—St. Dunstan, 1. The Lunet, 2.
Tradesmen's Plate of 50 sovs.—Cherry Brandy, 1. Master Slender, 2.
North Staffordshire Handicap.—Seducer, 1. Whalebone, 2.
Newcastle Stakes.—Coalpit, 1. Syren, 2

WEDNESDAY.

Second Biennial Stakes. His Fiat walked over.
Copeland Handicap.—Lancer, 1. Kitchyer, 2.
Borough Plate.—Fanny Fern, 1.
Two-year-old Handicap.—Salmon, 1. Pera

WORCESTERSHIRE ARCHERY SOCIETY.—The first meeting of this Society for the present season took place on Wednesday last, the 8th inst., at Leigh, near Worcester, in the picturesque grounds of T. Norbury, Esq., of Sheridge. The Lady Paramount (Lady Pakington) and a numerous company of the members and their friends, were assembled. The shooting commenced at one o'clock, and did not terminate till a late hour in the afternoon, when the prizes were distributed to the successful candidates. We shall give a sketch of the archery grounds in our next week's paper, together with full particulars of the meeting.

THE GREAT WIZARD OF THE NORTH (MR. J. H. Anderson) has taken the Lyceum Theatre, and intends to commence his season on Monday, Sept. 3, being his first appearance in London since his return from America.

COSTUME OF THE SEASON.

[For our information on Dress and Fashion, we are indebted to the courtesy of MADAME (Einstein) DEVY, 73, Grosvenor-street, Grosvenor-square.]

THUS is just the season when no very decided novelty in dress can be expected. Still we may reasonably anticipate several weeks of warm weather before autumnal tints and autumnal chills warn our lady readers to bring forth their warm shawls and mantles; and accordingly we may yet gossip a little about the last summer fashions.

For dresses of barège, muslin, or plain silk, flounces are universally adopted; and the dress is always of sufficient length in the skirt to admit the support of the stiffest petticoat, and yet touch the ground. The tendency of the modern style is even verging towards the hoop of our great-grandmothers; they found the sedan-chair almost a necessary of their lives, and certainly it requires some practice and dexterity for a modern belle to get in and out of a carriage—and to ride in one, too—without damage to her toilette.

Dresses of two colours are much worn. We will describe a walking dress which will be very suitable for next month It is composed of rich black silk, with several flounces, mixed with borders of either violet colour, dark blue, or Imperial green. The corsage consists of the universally-adopted jacket, with trimmings of the same colour as the borders of the flounces. The sleeves are fully trimmed

We may observe that bretelles or braces continue to be much worn, especially by young people.

Black silk mantles are of many designs; the favourite ones, however, are those which admit of being drooped behind to show the top of the dress, and of being left open before. A very handsome black mantle is trimmed with lace a quarter of a yard deep, headed by a quilling of ribbon interspersed with beads. Another, something more matronly, has a passementerie trimming of violet colour and black, and is ornamented with fringe instead of lace. A mantle intended for *demoiselles* is little more than a black silk scarf slightly shaped for the shoulder, and at the ends, but richly embroidered with black, in the Chinese style of embroidery.

There is a pretty jacket, for demi-toilette, composed of alternate rows of black lace and narrow green ribbon on a foundation of black net. The lace and ribbon are arranged so as to form a point at the waist behind, and, passing over the shoulders, they descend in the same manner before. Three rows of lace and three of ribbon put on in a slight wave form the basque, and the sleeves are made with puffings, the trimmings of which of course correspond with the remainder of the jacket.

Bonnets are still small, but are so shaped and contrived as not to leave the face so much exposed as they have done. Fancy straws, mixed with silk and ribbon, are much worn. There is a charming bonnet composed of fancy straw, blue silk and blonde, with a bunch of blue flowers on each side, and another bunch behind just above the curtain. The trimming next the face is extremely simple, consisting only of white blonde and delicate flowers similar to those on the outside. The strings are of blue sarcenet ribbon edged with black velvet

Another very pretty bonnet is composed of bands of white chip, alternating with a transparency of tulle. This arrangement takes from the heaviness and hardness of outline of which render the chip bonnet so trying to most faces. This bonnet is trimmed with green corn grass and water lilies.

A more matronly bonnet is of white crape and blonde, with a trimming of ivy and white roses.

A very charming evening dress is composed of pink tulle over pink silk. It has three flat flounces of pink tulle edged with white blonde, and ornamented with narrow pink satin ribbon, the upper flounce reaching about half way up the skirt, and the flounces being held down at intervals by pointed puffings of tulle. The upper part of the skirt is of pink tulle, looped up with wild roses and lilies of the valley. The corsage is *à la greque*, and ornamented with narrow pink satin ribbon and white blonde. A peak behind, where the corsage laces, hanging sleeves fall over short ones.

Among other very handsome brocaded silks one of white taffeta d'Italie is particularly to be noticed. It is composed of a double skirt, each skirt being embossed with columns of shaded green flowers, gradually diminishing towards the waist, and edged with quite a novel fringe, composed of white and green shaded feathers.

There is no very recent change in caps and head-dresses. Everything is worn quite at the back of the head, and the hair continues to be rolled as heretofore. A mixture of blonde and ribbon seems greatly in favour, narrow ribbon being often edged with blonde; and the mixture of black and white blonde still prevails. Feathers are much worn, even by young ladies; one feather drooping on each side of the head. Yet nothing is more simply pretty for youthful belles than bows of rich ribbon with long streamers of blonde. Flowers are also often intermixed with the blonde and ribbon.

Possibly the autumn may produce some novelties in *lingerie*; at present we need only remark that the under-sleeves are large and richly embroidered, closed at the wrist for morning wear, and that the collars, though of a full size, are not worn unbecomingly large.

COMMERCIAL INTERCOURSE BETWEEN CANADA AND FRANCE.—Steps are being taken in Canada to extend the commercial intercourse of the province with France, the mother country of a considerable portion of the population; and the visit of M. de Belvèze, captain of the frigate *Impératrice*, of the Imperial French Marine, has been taken advantage of at Montreal and Quebec to bring the subject prominently forward. The visit of the French officer has for its object at the commencing of trade relations between Canada and France He has been for a couple of years in the Gulf of St. Lawrence, and has busied himself in collecting various information in relation to its trade. It was stated at a recent meeting that it would be both desirable and advantageous to supply M. de Belvèze with public documents that would afford him information relative to the trade and resources of Canada. It was in consequence of a previous report of this officer that he was sent on his present mission by the Emperor, who is also sensible of the generous grant of the Canadian Legislature for the widows and orphans of the Allied army. The total exports from Canada in 1854 were £12,237. To Great Britain there were £3,716,178, and to foreign countries £8,520,613. Canada might do a large direct trade with France, but the present tariff is of a nature to shut it out. To impose a duty of 1s. 6d. per gallon on light French wines, for instance, is to prohibit their importation; but if these fiscal restrictions were removed, there can be no doubt that a large direct trade would immediately spring up.

THE LATE DISTURBANCES AND CALAMITOUS LOSS OF LIFE IN WEST AFRICA.

(From a Correspondent.)

IT happens, concurrently with the arrival of her Majesty's steamer *Pluto* from the west coast of Africa, with additional and more circumstantial particulars of the late massacre at Malagbes, that we are enabled, this week, to present to our readers a truthful sketch and description of that devoted town, as it appeared from opposite the landing-place in the Mellacourie River, previous to the redoubtable exploit of the Sierra Leone officials on the 23rd and 24th May last, and which has brought so much discredit upon the English Government and the English name

Our Government, our philanthropists, and our religious societies have no correct idea, or care little, what is, or ought to be, going on on this coast, and so erroneous are our general notions respecting it and its people, that we derive still greater satisfaction from being also enabled on this occasion to introduce faithful portraits and descriptions of the two native chiefs of Malagbes, who have as yet been dragged before the public in this country only in the light of some outlandish, rum-drinking savages. It is, moreover, a remarkable circumstance that even our most recent maps give us no correct clue to the whereabout of these scenes of popular commotion and bloodshed, although it appears that the Mellicourie River empties itself into the Atlantic within a distance of only forty miles to the northward of Sierra Leone. This river, for some distance, forms the southern boundary of the Morlah country, and, in ascending it, Malagbes is

AMUSEMENTS, &c.

COVENT GARDEN.—The ROYAL ITALIAN OPERA COMPANY at REDUCED PRICES, for THREE NIGHTS ONLY.—MONDAY, August 27th, 1855, Verdi's New Grand Opera IL TROVATORE, to be followed by an Act of LUCIA DI LAMMERMOOR. WEDNESDAY, August 29th, 1855, Rossini's Grand Opera of IL BARBIERE DI SIVIGLIA, and an Act of MA-RIANELLO. FRIDAY, August 31st, 1855, Mozart's Grand Opera IL DON GIOVANNI. Private Boxes, Stalls (to all), Boxes, 31s. Two, and Two-and-a-half Guineas; Pit, 8s. 6d.; Amphitheatre Stalls, 5s. and 3s.; Amphitheatre, 2s. Tickets for Boxes, Stalls, or Pit, to be had at the Box-office of the Theatre; of Messrs. Cramer, Beale, and Co.; and of the principal Librarians and Musicsellers.

THEATRE ROYAL HAYMARKET.—The SPANISH DANCERS in two new Ballets every evening, Monday, Tuesday, and Wednesday. The Secret Agent, also, the country of Court Favour; in which Miss Blanche Fane will make her first appearance in London. Thursday, Friday, and Saturday, Marco Bozzaris, Court Favour, and every evening. Only a Halfpenny.

ROYAL PRINCESS' THEATRE.—Monday and during the week will be presented HENRY THE EIGHTH, preceded by the new Farce, entitled HOW STOUT YOU'RE GETTING.

ROYAL PRINCESS' THEATRE.—Mr. HARLEY respectfully informs the public that his BENEFIT is fixed for MONDAY, AUGUST 20th, when will be repre-sented A GAME of ROMPS; to be succeeded by King Henry VIII.; Cardinal Wolsey, Mr. C. Kean; Queen Katharine, Mrs. C. Kean. To conclude with the Farce of [illegible]. Mr Ferdinand Stanley, Mr Harley, Mr Buckstone, Mr Roberts, Mr Compton, Mr Meadows, Mr Rogers, Mr Cullenford, Mr Franks, Mr Gordon, Mr Wilkinson, Mr Bennett, Mr Lyon, Mr Hemmings

BAMBA MAMI LAHAI, KING OF MALAGHEA.

(*Continued from page* 174.)

reached at a distance of about thirty miles, situated on its left bank; but, owing to the elevation of the plateau on which it was built, and the luxuriance of surrounding vegetation, only a small portion of it was seen from the anchorage, with the two buildings near the landing-place which formed a French "factory," or warehouse, for European goods. Fortunately, at the time the merchandise they contained amounted in value to only about £2000; the whole of which, with the building, was deliberately destroyed not by the natives, but by the Sierra Leone people. Malaghea was a free proprietary town, containing about 6000 inhabitants. It was of considerable extent, although inferior to Fouricariah, the capital, and to some other principal towns within the neighbouring territories of confederated chiefs. A wall extended around it, and also on either side of its numerous irregular streets, from which ingress was effected through square or round towers into irregularly-formed walled yards or inclosures, each containing the several houses of a family. The houses were generally very commodious, well constructed, and, in most instances, extremely clean, and neatly ornamented by carved figures, something after the Egyptian style, whilst their high conical roofs, very thickly thatched with a fine grass, secured an agreeable coolness within the walls, beyond which they extended several feet, to form, and afford shade to, the outer piazzas. Within the town were several mosques, from which it may be inferred that the people are Mahometans; and there were also schools and some religious institutions. There is an excellent race-course outside the walls, flanked on both sides by forest trees; and the country in the neighbourhood is extremely picturesque.

BAMBA MAMI LAHAI,

the most sagacious and distinguished chief of the Morah people, although (owing to a rigid adherence to hereditary succession) not their King, is about fifty years of age, with a countenance extremely prepossessing and indicative of that superior intelligence which is known (although not as it appears by the Sierra Leone Government) to exercise a powerful, and, to a great extent, a controlling influence in the councils of numerous independent Chiefs whose territories in one direction stretch from the coast into the far interior, and in another, lie in the immediate neighbourhood of Sierra Leone, and extend even far to the southward of it. Easy and affable in his demeanour; simple in his habits; manifesting, at all times, a parental kindness to his people; rigid without a tincture of fanaticism, in the observance of his religious duties in the faith of Mahomet; he cannot, if he would, by his calm and impassive countenance, conceal from any attentive observer of human nature, the workings of a mind of no ordinary stamp among West African chieftains; whilst the respect and homage of his compatriots and allies attest the wisdom of a policy which, for some years past, has included the promotion of "legitimate traffic" with Europeans; the encouragement of agriculture; the extension of his religious faith amongst Pagan tribes; and, among his highest aspirations, a friendly alliance with the British Government. He appears in our Sketch at a moment of domestic seclusion, in a simple undress, but not in the undress we commonly assign to Africans, the white bandeau round his cap being the only mark of distinction, and which is worn only by "learned men." He speaks English indifferently, but he is a good Arabic scholar, and writes it beautifully, although in the more popular languages, Soosoo and Mandingo, he may perhaps be most fluent. The loose white robe, or "shirt," extending below the knees over closely plaited short small-clothes, is as much the garb of ease in such a climate as the dressing-gown of an European, although it is generally worn of coarser materials, most frequently of blue calico, among the inferior natives. Etiquette, however, among the chiefs, requires something more, and they adopt an outer

MAHOMADOO TUREY, MINISTER OF THE KING OF MALAGHEA.

robe over the white "shirt," of the same construction but of superior materials, and of a pattern which caprice may suggest, except on particular occasions, when, scarlet, purple, green, and other coloured velvet, either plain or figured, denotes their particular families. Scarlet is that of Bamba Mami Lahai, Chief of Malaghea, and who, as chief also of the Morah forces, may occasionally be seen with English jack-boots and spurs, sword, pistols, and spear, mounted upon a gaily-caparisoned charger. By the last accounts we learn that, anticipating another attack, he had 13,000 men under arms within a few days after the British expedition retreated; and a general league, offensive and defensive, is now established among the numerous chieftains. His Minister,

MAHOMADOO TUREY,

although not, perhaps, of the same intellectual standard as his master, is, nevertheless, an intelligent and clever man. He is about six feet in height, well-proportioned, with more regular features, and a countenance approaching nearer to the European than Lahai's. Early in life he was sent to England, and on his route spent some time at Newfoundland. On reaching London he remained some years under the protection of a gentleman connected with one of the most

PART OF THE MANDINGO TOWN OF MALAGHEA, ON THE MELLICOURIE RIVER, WEST COAST OF AFRICA.

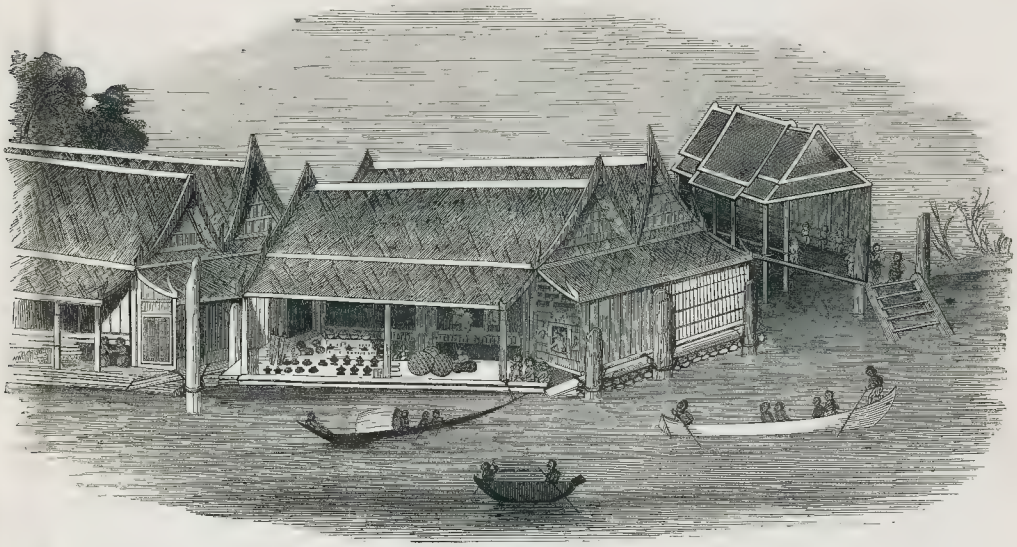
eminent mercantile firms in the City, and acquired a knowledge of the English language and a respect for the English character. He also reads and writes Arabic, and speaks two or three of the popular languages in this part of Africa. He is far more scrupulous in matters of dress and etiquette than the distinguished chief whom he serves, and whose policy it is his great aim to promote. Not less rigid in the observances of his religion, he, in common with the Morah people, abjures rum and all intoxicating drinks; neither is the smoking of tobacco practised among them.

GOLD MEDAL PRESENTED TO CAPTIN CADELL.

IN the ILLUSTRATED LONDON NEWS for April 22, 1854, we gave an interesting summary from a Parliamentary Blue-book, recently published, of the recent navigation of the Murray River, in South Australia, by Captain Francis Cadell, at whose private risk, and by whose individual exertions, principally, the opening of that important river to commerce has been accomplished. Lieutenant-Governor Sir Henry Young, in announcing to the Legislative Council, in October, 1853, the arrival of the *Gooloo*, of the first river-borne wool, the produce of the vast basin of the Murray, stated that Captain Cadell's voyage on the Murray reached to 150 miles beyond Swan-hill, a distance of about 1450 miles from the sea; and was also extended to sixty miles up the Wakool, an important branch of the Murray. Within a few days from the above date an address was presented from the Legislative Council to the Lieutenant-Governor, requesting his Excellency to cause three gold medals to be executed in commemoration of the opening up of the steam navigation and commerce of the Murray: one medal to be presented to the Lieutenant-Governor, whose personal exertions promoted the great enterprise, and in whose administration it originated; the second medal to be conferred on Captain Francis Cadell, who completed the first commercial voyage, as owner and commander of the *Lady Augusta* steamer and *Eureka* barge, with a cargo of Murray wool; and the third medal to be deposited with the records of the Legislature of South Australia. This request has been complied with; and the three medals have been executed at her Majesty's Mint by Mr. Leonard C. Wyon, from gold the produce of South Australia; and we now engrave this interesting tribute to exploration and enterprise. To Captain Cadell has also been presented a gold candelabrum — engraved in the ILLUSTRATED LONDON NEWS of Feb. 24th last. We are happy to learn that the Legislative Council has voted the sum of £4000 to Captain Cadell, on condition that within eighteen months he employs two additional steamers on the Murray and Darling rivers: this Captain Cadell has undertaken to do; and arrangements have been made for the requisite number of steamers and barges.

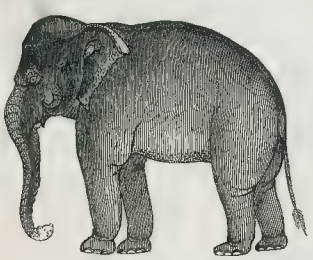
GOLD MEDAL PRESENTED TO CAPTAIN FRANCIS CADELL, THE AUSTRALIAN EXPLORER.

SKETCHES IN SIAM.



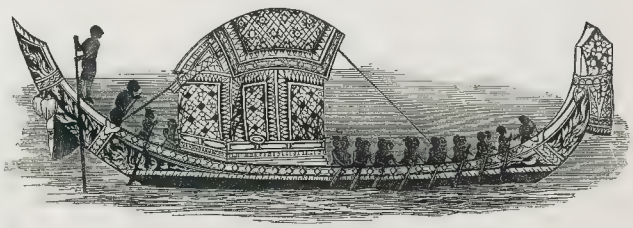
SIAMESE FLOATING HOUSE, ON THE RIVER MENAM.

THE peaceful victory just won in the far East by Sir John Bowring, who succeeded, contrary to all expectation, in negotiating a most favourable treaty with the not unimportant Kingdom of Siam, has failed, amid the surrounding din of war and the conflicting struggles of political parties, to attract the degree of attention which it deserved. We are, therefore, induced to give publicity to the following particulars, collected from the Eastern prints, and other sources of information; considering that a successful diplomacy, which, triumphing over the cherished prejudices of centuries, subdues without bloodshed, in a few brief weeks a whole nation to new and liberal views, and thus throws open to our trade and enterprise a broad and fertile region, hitherto all but secluded from the Western commercial world, should be deemed worthy no small meed of praise and public notice.



SIAMESE WHITE ELEPHANT.

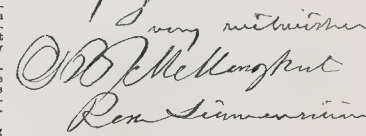
True, by the old treaty, which Colonel Burney negotiated for us in 1826, the English were admitted to commercial intercourse with Siam; but, under such disadvantageous terms, that for some eleven years past a British vessel has seldom gone to Siam to trade. The measurement duty, allowed by that treaty, which amounted even after its reduction of one-third, at the commencement of the present reign, to about £800 for an ordinary ship, was, in effect, prohibitive; besides which, a monopoly of the chief products of the country by the Government or its officers had sprung up, privileged nobles interested themselves in trade, the export of rice and teakwood was forbidden, the productive industry of the country was stifled by internal regulations which violated every principle of political economy, and increasing distrust of English power and supremacy in the East was felt; in fact Siam was fast settling down into the narrow exclusive policy pursued by her sister kingdoms—Burmah and Cochin-China.



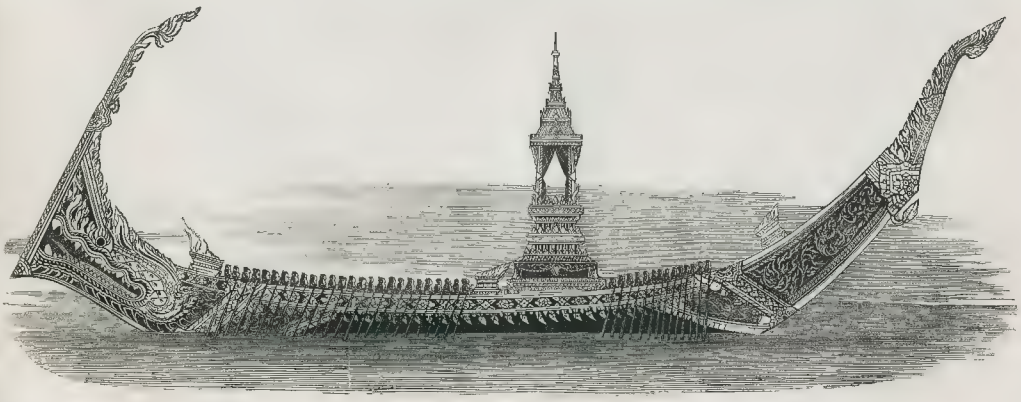
SIAMESE STATE BARGE.

Most opportune, therefore, was the visit; and, when the obstacles it had to encounter are considered, most wonderful was the success of the late Embassy. None were more surprised at its result than the merchants of Singapore, and the few foreign residents of Bangkok, those who best knew the seemingly insurmountable difficulties in its way.

Her Majesty's Plenipotentiary enjoyed the advantage of having long been a correspondent of the King of Siam, and on his arrival was received with great cordiality as an old friend as well as with the respect due to the Court he represented. Elegant State barges and a numerous escort were provided to bring him and his suite to the capital; and, instead of the chain or boom being stretched across the river to prevent the steamer following him, as had been done under the former reign, at the time of Sir James Brooke's visit, the *Rattler* was allowed to proceed up the river to Bangkok, where no armed steamer had ever been before, and to take her position in front of the residence of the Embassy. Favoured with a private audience by his Majesty he secured the early appointment of the Royal



SIAMESE WRITING.



BARGE OF THE KING OF SIAM.

Commissioners with whom he was to treat, prominent among whom were his Royal Highness Krom Ruang Wong Sa Tiradh Sniddh, a half brother of the King and one of the Chief Councillors of State, and his Excellency the Phi Kalahom, or Prime Minister.

In conference with these Commissioners all the points of the proposed new treaty were brought forward, and agreed to or rejected; Sir John, by his tact and steady firmness, carrying every point he deemed essential till in seven days—an instance of dispatch without parallel in the history of Siam—all was concluded and the treaty ready for signing

We extract the following from the *Straits Times and Singapore Journal of Commerce*:—

There were four State meetings—three with the first King, and one with the second King, on which occasion the display of costly jewellery, &c., was made, when not too closely scrutinized, an effect as gorgeous as it was novel—wassachus to convey the European visitors into the regions of Eastern romance, and to enable them to realise the pictures of the "Arabian Nights"—visions of "barbaric pomp and gold" which seem not to belong to real history. The first formal reception took place in one of the magnificent temples of Siam, whose pagoda is 300 feet high, and dazzles the eye with the many-coloured adornings of glass and metal which reflect the sunbeams from a myriad spires. Hither the King had come in his magnificent State barge to worship Buddha; and here, in the presence of an immense multitude of people, and of hundreds of prostrate princes and nobles, and in the midst of the most ostentatious accompaniments of royalty, the King sat on a raised throne and publicly received the Brit ish Minister. But the principal reception took place, after the settlement of the treaty, in the Great Hall of Audience within the Palace, which we will proceed to describe.

A flotilla of State barges conveyed the Plenipotentiary and suite, numbering eighteen gentlemen with the naval officers included, to the landing-place, and thence they were carried in chairs through lines of troops and elephants, the former extending from the water-side to the inner enclosure of the Palace—a distance of several hundred yards—to a building where they waited for a short time until their arrival was announced. At this spot the previous Embassies had been required to submit to various humiliating observances, such as the surrender of swords, the removal of shoes or boots; but these were now omitted. The Plenipotentiary had already made it known that, although decorous jency's duty to his own Sovereign equally forbade the adoption of any derogatory form; and the King—in the exercise of that good sense which has often enabled him to rise above local prejudices, and to take liberal views on manners and customs—admitted the reasonableness of Sir John's arguments, and thus prevented trouble arising out of mere questions of etiquette. When summoned, therefore, to the Audience-Hall, the Plenipotentiary and the officers proceeded there on foot without laying aside any portion of their dress: they passed the double gates which guard the inner enclosure of the palace, passed a spacious court, and entering a noble corridor, found themselves in the presence of Royalty, and spectators of a scene as peculiar as it was splendid. The King sat on his throne at the opposite end of the hall to that by which the Embassy had entered. Up to within twenty or thirty feet of the throne the floor was covered with Persian, Manilla, Cochina, and other carpets, of the magnificently, and all showily, attired. An open space, a few feet in width, remained vacant in the middle of the prostrate Court, along which the Plenipotentiary advanced to a cushion placed about thirty feet from the throne, and on a line with the position occupied by the highest of the nobles. After bowing three times Sir John Bowring took his seat: Mr. Consul Parkes being on his right, Mr. J. C. Bowring (private secretary to his Excellency) on his left, and Captains Kean and Meriah and the other officers immediately behind the Plenipotentiary. The elevation of the King's seat was about fifteen feet from the floor. Sir John delivered a speech laudatory of his Majesty's reign and the wisdom shown by him in respect of to the negotiations so happily concluded. His Majesty's reply, reviewed the previous Embassies, and expressed a hope that the present treaty would enable the two countries to know much more of each other than they had hitherto done. Some conversation followed on less important subjects; and the audience having lasted about three-quarters of an hour, the King rose and withdrew—and a curtain drawn at the same moment excluded from the throne from sight. The Plenipotentiary and party then retired, but a former was immediately summoned to a private audience which the King, after which they were conducted to visit several of the temples near the Palace, and also to see the new white elephant—the capture of which, after the decease of the last one, had afforded the King great satisfaction.

The ceremonies of the audience with the second King were identical with those observed towards the first. The audience-hall and throne of the former are not so large, or so profusely decorated, as those of his Royal brother, and the number of prostrate courtiers may have been smaller; but the order, cleanliness, and excellent arrangements of the occasion elicited great admiration; and the same terms of approval are applicable to the appearance of the second King's troops, of which there must have been two thousand men on the ground, with some superbly-caparisoned horses and elephants, and a park of artillery. Sir John Bowring spent the evening in the second King, alluded very justly to this Prince's love of western science, in which he has made considerable advancement.

Both Kings have sent handsome presents and letters written on plates of gold to the Queen, the delivery of which was also attended with much pomp and circumstance. The Plenipotentiary and suite attended at the Palace of the first King to receive them, or rather to see them delivered into the hands of high officers who were appointed to take charge of the Embassy's steamer *Rattler*: and to join in the grand procession that was formed for this purpose. The letters and presents were carried upon thrones to the State boat, those used by the Kings themselves being employed to carry the letters and presents as far as Paknam. The elegance and splendour of the barges or galleys can scarcely be exceeded: they are upwards of 100 feet in length, are intended to represent a dragon, or some sea-monster; they are gilt from stem to stern, both of which rise to a great height out of the water, and a seat or throne, covered with a canopy of most symmetrical proportions, is placed in the middle of each boat. The first King's barge is richer in its decorations than that of the second King. The other State barges are of almost equal size; but crimson paint, picked out with gilt or other colouring in relief, take the place of gold, with which the Royal barges are emblazoned. Each barge carries from forty to eighty rowers, all of whom are dressed in scarlet.

But, without dwelling longer on these State exhibitions, which would well merit a more careful and detailed description we will employ our remaining space in glancing briefly at the results of Sir John Bowring's Embassy, and the nature of the treaty we understand he has concluded, apparently to the great satisfaction of the merchants of Singapore, by whom it has been so long desired

It has been agreed, it seems, that the restrictions and impediments which had nearly completed the destruction of foreign trade by which we mean European trade shall be removed from the 6th April, 1855, on which day the new treaty comes into effect. The old farms and monopolies, with the exception of the opium farm, are from that date to be abolished, and also the measurement duties—an import and export tariff taking the place of the latter. The treaty also provides that produce from the interior, on its arrival at the port of shipment shall pay but one tax or duty, and it is easy to see what a stimulus this will give to production. In some instances the duty will be on exportation, in others on its transit through the interior. The import tariff, we are informed, is the same as that in force with Singapore and other British ports. Rice may be exported, but the Siamese Government reserves to itself the right of prohibiting, in time of scarcity, the exportation of salt, rice, and salt fish. The import duty is to be three per cent on the market value of the goods, payable in money or in kind at the option of the importer. British subjects will have liberty to rent or purchase houses and lands anywhere within a distance that can be reached within twenty-four hours from Bangkok. A fleet pulling boat may accomplish forty or sixty miles within the above-mentioned space of time. With a few miles of Bangkok, however, a residence of ten years is the condition of holding lands in fee. With proper passports travellers may proceed into the country beyond the above-mentioned limits. Siamese may be employed by British subjects in any capacity, and British subjects will be allowed to build ships in the Menam, if they can find it convenient to do so; but as the Siamese Government is apprehensive—though probably unnecessarily so—of their supplies of teak running short, permission to build must, in each instance, be obtained. Perhaps the most important of all is the appointment of a Consul, under whose sole jurisdiction British subjects will hace eforward be placed, and an opportunity will be afforded of remedying any imperfections that may be found in the treaty, its rules and arrangements, by the closing clause which provides for its revision, at the desire of either party, after the lapse of ten years.

We should be doing an injustice, however, to the present enlightened ruler of Siam, and his Royal brother the second King—who, though inferior to the first King, holds a regal position in the country—if we omitted to invite attention to their splendid attainments, which, when viewed in conjunction with the friendly and liberal feeling they evince towards the Nations of the West, entitle them to a most creditable and prominent position among the Princes of the East. The first King, who enjoys the long name of Somdet Phra Paramandt Maha Mongkut, is now in his fifty-first year, and early sought to satisfy his spirit of learning and research by studying profoundly the sacred literature of his own country, and the still more classical Sanscrit. His curiosity then prompted him to acquire, under the tuition of some Roman Catholic missionaries, a knowledge of Latin; but he subsequently pursued with greater industry the study of English, in which he was assiduously assisted by the American missionaries resident in Siam. In the latter study he progressed sufficiently to express his ideas, both in speaking and writing, with fluency and facility; and he then turned his knowledge to good account by using it as a means of acquiring an insight into European science—astronomy in particular, and succeeded so far as to be able to calculate lunar and solar eclipses, latitudes and longitudes, &c. He has also a high appreciation of European improvements, has collected various astronomical and philosophical instruments, keeps a printing and a lithographic press constantly employed in his palace, and has lately ordered from America a steam-engine of twenty-horse power.

Nor can the attainments of the second King—who can also speak, read, and write English, and who has made himself master of the elements of navigation—be regarded in a less remarkable light. All his information is of an eminently practical cast, and he renders himself particularly pleasing towards Europeans by his easy, affable, and refined manners. His good taste is exemplified in his private palace, lately constructed by himself, on the model of a European house; round the rooms of which are arranged engravings, bookcases filled with foreign books, cabinets of arms, sextants, and chronometers, and several statues of his own modelling—prominent among which appears one of her Majesty Queen Victoria. An excellent laboratory and a workshop on the ground-floor of his palace bespeak his attachment to both science and art.

We trust that with this one, at least, of the many countries of the East with whom we have been brought in contact, intercourse may always remain of the peaceful nature which a faithful adherence to this new treaty would not fail to secure, and that the interesting potentates with whom it has been negotiated may never have cause to regret their adoption of a liberal and friendly policy.

The Illustrations represent a Siamese floating-house, of which thousands are to be seen at Bangkok, moored along the river Menam; two State boats—that with the lofty canopy being a representation of one of the Royal barges, the other being of the style employed by the nobles. The representation of the white elephant is taken from a sketch made under the direction of the King himself. It is well known that these albinos of the race are considered sacred by the Siamese, are treated with the attributes of Royalty, and the form of one of them emblazoned on a red ground constitutes the standard of the nation.

MUSIC.

THE only noticeable occurrence during the present week at the Royal Italian Opera has been the performance of Rossini's "Otello" on Tuesday evening—produced, apparently, with the view of bringing forward Mr. and Madame Viardot, who have had little to do during the season, some opportunity for display before the theatre closes. As usual when this opera is given, there was an indifferent house, and the performance—though Tamberlik and Viardot were occasionally applauded with considerable warmth—went off heavily. With an English audience, indeed, it cannot well be otherwise, for it is not easy to sit with patience to witness the ridiculous way in which an Italian portaster lets in the most of the most pathetic of all the tragedies of Shakspeare, depriving it of plot, character, and interest, and, in truth, turning it into a vapid piece of burlesque. Rossini, to his credit be it spoken, had taste enough to despise this libretto, and to accept it with reluctance; but the Neapolitan playwright was a noble Marquis and a fashionable *dilettante*; and the composer was too much a man of the world to allow his judgment to interfere with his interest. There are fine things in the music; but it bears unequivocal marks of haste and carelessness. The style is prolix, the phrases having evidently been written down as they came uppermost, without any endeavour to give them strength by means of condensation. The movements, consequently, are spun out and rendered tedious by endless repetitions and passages of mere *remplissage*. The music, when finely performed, will give minutes of delight; but these are dearly purchased by hours of *ennui*. The part of *Otello* has probably never been better performed than by Tamberlik. He has the high, heroic aspect and bearing of Shakspeare's own Othello; and there are two scenes—when *Otello* listens with agony and fury to the black calumnies of *Iago* and when, with murder in his heart, he enters the chamber of his sleeping wife—in which Tamberlik rises to the tragic power of Shakspeare himself. On Tuesday night his voice was more than usually tremulous, and lacked sustained strength. It appeared to be husbanding its powers for the sake of those tremendous bursts, on the highest notes of the scale, by which, in scenes of intense passion, he so electrifies the whole audience. Madame Viardot's *Desdemona* has been deeply studied, and is full of art. She lacks, however, one thing which is essential to consummate art—the art of concealing art. Madame Viardot, both as an actress and a singer, is too obviously an endeavourer: so incessantly to throw meaning into every look and gesture, that her acting has an air of exaggeration: and, in singing, she is so anxious to be original, that she too often changes the composer's text by new readings, variations, and embellishments. What we have done is done with the skill of a thorough artist; but this artistic skill is sometimes made apparent as in the little ballad "Assisa al piè d'un salice," in the final scene, where the utmost plainness and simplicity would be far more touching. These, we apprehend, are the faults of Madame Viardot's performance of this character—faults more easily described than the many beauties for which it is distinguished. Graziani's fine baritone voice was heard to great advantage in the part of *Iago*, and those of *Rodrigo* and *Elmiro* were exceedingly well sung by Lucchesi and Tagliafico.

The "Etoile du Nord" has continued to be so successful that it has been twice repeated this week—on Monday and Thursday, which last was the closing night of the season.

The English operatic performances at DRURY LANE continue to draw full houses. They have consisted of Balfe's "Bohemian Girl" and Wallace's "Maritana;" both of which are got up with no inconsiderable splendour, and are, on the whole, very respectably performed. In both of them the principal singers are the same: namely, Miss Lucy Escott, Mr. Corri, Mr. Hamilton Braham, and Mr. Elliot Galer. Mr. Smith's *entrepot* deserves the success it has met with.

THE THEATRES.

ST. JAMES'S.—Mdlle. Rachel has extended the number of her performances. On Monday she acted the part of *Madame de Blossac*, in Madame Girardin's comedy of "Lady Tartuffe;" and on Wednesday repeated *Adrienne Lecouvreur*. On both occasions the house was overflowing.

DRURY LANE.—On Thursday Mdlle. Rachel appeared in one scene of Racine's Scriptural tragedy, "Athalie." The occasion was a benefit on behalf of the French Charitable Association. The portion of "Athalie" selected was from the second act of the drama; which embraces the vision of *Athalie* and the interlocutory of *Joas*. The vaudeville of "Le Dépit Amoureux" was also performed by the French company, under the direction of M. Raphael Felix. The success of Rachel on these occasions has been indeed triumphant. As a tragic artist she is unrivalled—such is the subtlety, the force, the variety of her talents. Her action, which is always abundant, is so modulated, that its immense diversity forms a series of harmonic relations in perpetual change, and ever mutable significance. Their style of histrionic display operates as it were magically on the spectator, and involves him in a vortex of enthusiasm from which he cannot escape. Our native acting is poor in comparison and it is a spur to the ambition of our own artists, that we have always welcomed Rachel, and we now bid her adieu, not only with feelings of admiration, but of gratitude.

SADLER'S WELLS.—The Olympic Company, under the direction of Mr. Wigan, has migrated hither for a short period. "Tit for Tat," "The First Night," and "The Wandering Minstrel," have been the pieces for the week. The pit has been respectably attended; and on Tuesday, when we were present, the applause was loud and frequent. Mr. Robson appeared to be an especial favourite, and his humour provoked excessive laughter. The inhabitants of Islington have reason to be delighted with this diversion.

ADELPHI.—"The Writing on the Wall" was revived on Monday. Mr. Wright, in *Trotter*, was highly amusing.

THE SCANDINAVIAN KINGDOMS.—A correspondent of the *Times*, writing from Copenhagen, strongly urges on the English Government the advisability of showing sympathy for the political struggles and national feelings of the people of the Scandinavian States. "Taking the three Scandinavian States together, it may be safely affirmed that the national spirit is strongly and decidedly anti-Russian. Luckily, the people of the North possess other elements of strength, which are to the spirit of nationality what a healthy *physique* is to the soul. They are not effete or falling into decrepitude, but hardy, industrious, and progressive. They are more numerous and more wealthy than they were half a century ago, and they have had full experience of the evils that spring from division. In Denmark the national party is engaged in a struggle—likely to be final and decisive—to retain the popular constitution against the pressure put on the Government by Germany. In Sweden and Norway the question of a Scandinavian 'unity' is being agitated with increased energy."

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

BEFORE SEBASTOPOL: July 26.

ON Sunday last four squadrons, of the 11th, 4th, 8th, and 17th, were ordered to Baidar, under the command of Colonel Peel, of the 11th. The cavalry brigade of General D'Allouville, which had been quartered for some time at Baidar, had been moved forward five miles up the vale in a northerly direction, to protect the foragers from two Russian regiments of cavalry which are in force there. Here was an opportunity of visiting Baidar and the celebrated pass of Phoros, which I thought it interesting to seize. I have already described the passes which lead from Kamara to Varnoutka, where the Turks had formed so picturesque an encampment. Since their departure Varnoutka, with its groves of trees, has lost one of the scenes of its temporary beauty, and there is not a single relieving point of white in the deep green masses of its woods, or the dun colour of its sunburnt fields. The morning chosen for my visit to Baidar were into a hot and hazy noon; and the sun, darting perpendicularly down on the gorges of the defile leading into Varnoutka, raised a filmy mist impregnated with unpleasant miasma. The roads were lined with carcases of oxen and horses, many of which, exposed to great heat, were tainting the air and startling our horses; whilst others, with heaving sides and bloodshot eyes, were lolling their tongues in the agonies of death. Upwards of 200 head of cattle thus lined the road to Baidar, where we ascertained that the beasts, sent up in droves by the Commissariat, usually arrived decimated, and sometimes reduced to inconsiderable numbers. The cause of this it may be well to state, for it involves one of the vices of our contract system. The beasts imported for the consumption of the army are contracted for to be delivered at certain ports in the Black Sea, where they are shipped on board of steamers. Whether it arises from the nature of the contract, as I believe, or from neglect, which is possible, the cattle landed at Balaclava are all so meagre and thin that very few of them are strong enough to support driving fifteen miles, as far as Baidar. I leave you to judge if meat from such poor animals has the nutriment or taste which is necessary to make it healthy and palatable to hungry soldiers.

The valley of Baidar, after one emerges from the confined portion of it in which Varnoutka lies, struck me as one of the most beautiful woodlands I had seen since leaving England. If you can suppose the vale of Llangollen expanded to five times its area you may conceive the breadth of this landscape. The finest old wooded undulation in the hills of Flintshire or Shropshire will not contain more picturesque trees for guard or colour; whilst at Baidar there is the additional feature of a varied herbage which casts rich tints of many colours into the underwood. Clusters of wild vines hang from large ash-trees, &c., which overshadow the road; the tall foxglove throws out leaves and flowers, whilst it sheds its seeds around; and the red berries of the deadly night shade vie in brilliancy with many others of similar hue depending from graceful shrubberies. In the midst of all this fly gaudy birds of various kinds—deep blue and yellow prevailing; and high up in the clouds eagles in pairs soar over the plain, and watch us miniature beings plodding along the dry and powdery roads.

Passing by the Kiosque of which some time since I sent you a Sketch, we missed the familiar faces and costumes of the Turks, in whose stead a small picket of Cuirassiers was standing by, no doubt on the watch to prevent the destruction of the little palace—a precaution not unnecessary, as we watched the long files of ox-carts, led by Tartars, and escorted by the brave but somewhat unceremonious Zouaves. One pleasant feature in the landscape was the occasional passage along the road of a Tartar family returning home after a forced absence, caused by fears of ill-treatment from our soldiers. The men led the heavy buffalo waggons, whilst the children ran about the road or sat on the summit of the family goods; and the women, closely veiled in long strips of camlet, shrunk away from our gaze, seeking protection behind the wheels of their lumbering vehicle.

In the plain, which we soon reached, we found how busy the foragers had been. Large masses of excellent hay covered the ground; and as we approached Baidar the Tartars were busy burying some of the dead cattle that lined the road.

A few broken towers a little way on marked the spot where the 10th Hussars had been encamped; and on a gentle eminence behind them lay the village of Baidar, of which we could now plainly distinguish the hollow tiled roofs and two minarets. The street, for Baidar can boast but of one, was filled with Tartar men, women, and children, sitting or reclining, talking and selling. They were tall and well made, more powerful in build, apparently, than those of Eupatoria. Their women sometimes gilded like spectres out of the high palisades round their hovels, by the sides of which crept the broad leaves of the pumpkin and vegetable marrow, surrounding small patches of luxuriant tobacco. Inside these gardens again were courtyards filled with haycocks, where mares with their young brood were driven round, in the approved Eastern fashion, over sheaves of barley to tread out the grain.

BEFORE SEBASTOPOL, July 27.

Whatever may be the result of the final, and I cannot but believe near approaching, assault, there are symptoms of a determination that we shall not be caught unprepared for the following winter; and, in addition to the magazines of forage and provision which are found everywhere, a continuous transport of planks and beams for huts has taken place for the last week, which will enable all the soldiers to get comfortably housed. Huts of every description are daily rising in Balaclava, which will be filled with stores, and economise the expense hitherto attending the use of store-ships in harbour. It will be scarcely credited at home that even at this moment there are numerous ships at Balaclava and Kamiesch exclusively devoted to the preservation of stores. The question was asked a few days since by some of the authorities as to what might be the cost of erecting a shed capable of storing the same tonnage as a ship of 1000 tons; the answer was £180. There are ships of large size, such as the *Bucephalus*, the *Walmer Castle*, the *Baroquay d'Hilliers*, the *Earl of Shaftesbury*, the *Star of the South*, the *Sir George Pollock*, the *Gertrude*, the *Arabia*, of an aggregate tonnage of 7000 tons, acting as store-ships, many of them having been in this species of service since October last, without moving either from Kamiesch or Balaclava. These ships receive payment at the rate of £1 per ton per month, and their services as store ships represent a yearly expense to the country of £83,000. A total expenditure in the first instance of £2000 would have paid for the erection of sheds to contain all that has been stored in these ships. Besides this, a considerable amount of labour would have been spared, which is daily expended in the transport from the carrying-ship to the store-ship of goods of every sort; an operation which, in addition to the expense it involves, is productive of great confusion; vast quantities of goods perishing either from being forgotten in damp places, or allowed to become covered over by goods less perishable than themselves. Three days ago a vacant house in Balaclava was cleared of the rubbish and lumber that filled it; and beneath heaps of dirt, old wood, and stones, were found stores of harnesses, blue canteens, boots and shoes, nagers, and tools of various kinds, nearly the whole of them rotten or rusted, and the remainder eaten by vermin. We may hope, now that General Filder is gone, and energetic men, as are Mr. Drake and Sir George Maclean, succeed, we shall not have a repetition of these disorders. As regards the harbour of Balaclava, much remains to be desired in the management of it, as well as of the quays and roads, but when Admiral Fremantle—who is arrived, and is confined by the goat recovers, some thing may, perhaps, be done.

BEFORE SEBASTOPOL, July 28

The night has been spent in heavy bombardment against the enemy, who continues to annoy our working parties. Notwithstanding all, how-

ever, it is obvious to the most undisciplined eye that we are making considerable progress, and the guns now open from the front intrenched works, the Greenhill and Gordon's being almost abandoned. Telegraphs to communicate with shipping are now ready on culminating points of the Camp.

We have had a few distressing incidents in Camp since I last wrote. A Serdinian soldier, worried by a few of ours, who, I fear, were not sober, drew his hanger and killed one of them. Three Russian women, who had lived long near Kadikoi, were brutally treated and murdered by some Turks, who carried cruelty so far as to cut off the cheeks of their victims. There has been a pitched battle, too, between the Coast of Bala lava and the all-insufficient men of the Land Transport Corps.

P.S.—I add a word to say that every preparation is made for a renewal of the assault, and yesterday all the field hospitals were cleared of sick of every kind, in view of the projected attack.

OFFICIAL DESPATCHES.

DESPATCHES FROM GENERAL SIMPSON.

War Department, Aug. 6

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship by General Simpson, commanding her Majesty's forces in the East:—

Before Sebastopol, July 24

My Lord,—I have the honour to enclose the weekly return from Dr. Hall of the state of the sick. Your Lordship will read with satisfaction the improved condition of the health of the army. I had entertained fears, from the very great heat of the last few days, that cholera would have assumed a more severe form; but such has fortunately not been the case.

I have nothing to relate of importance respecting the siege. On the night of the 22nd the enemy opened a very heavy fire of musketry from the parapets of the Malakoff and adjacent works, but they did not attempt an attack. They opened a similar fire in the direction of the right on the left of the French. I have every reason to believe they were apprehensive of an attack on the part of our allies, and for this reason opened the fire above described, which did no damage to either the works or soldiers.

The troops in the Baidar Valley have not altered their position from the date of the last time I had the honour to address you.

I return a list of the casualties to the 22nd instant.

I have, &c., JAMES SIMPSON

The Lord Panmure, &c. Lieut.-General Commanding

Before Sebastopol, July 24.

Sir,—In transmitting the enclosed weekly state of sick to the 21st inst., I have much pleasure in being able to inform you that the health of the army has continued to improve. There has been a striking decrease in the number of admissions into the hospital, and a considerable diminution in the mortality.

The number of casualties admitted from the trenches during the present week has been greater than it was last; but the deaths have been fewer, which shows that the generality of wounds received must have been of a less serious character. I have, &c. J. HALL,

To Lieutenant-General Sir Inspector-General of Hospitals

Commanding-in-Chief

NON-COMMISSIONED OFFICERS, AND PRIVATES, KILLED, AND WOUNDED, FROM THE 20TH TO THE 22ND JULY, 1855, INCLUSIVE.

[illegible]

July 20th, Private Thomas Carroll, 1st Battalion Rifle Brigade; Private James Gogwell, 2nd Battalion Rifle Brigade.

WOUNDED

July 20th, Detachment of Coldstream Guard[illegible]ghtly. 21st, Private James Darmody, [illegible]. Private Thomas Lee, [illegible]. Private Patrick Mahony, slightly. 22nd, Private Thomas Mahony, slightly; Private Daniel Sullivan, slightly; Private Thomas Mahony, dangerously; Private Daniel Mahony, slightly; Private John Mahony, slightly; Private Patrick Mahony, slightly; Private James Mahony, dangerously; John Williams, slightly; Private Daniel Sullivan, slightly; Private John Mahony, slightly; Private Patrick Mahony, slightly; Private James Mahony, slightly; Private Daniel Mahony, slightly; Private Thomas Mahony, slightly; Private Patrick Mahony, slightly; Private James Mahony, slightly; Private Daniel Mahony, slightly; Private John Mahony, slightly; Private Patrick

LAUNCH OF "THE ARAXES" AT BRISTOL.

eighty and ninety were assembled, under the command of Captain and Adjutant Moore.

Having formed into three divisions, the members (preceded by the subscription band) marched to the New-road. Here the whole battalion contested for six prizes (presented by the Torquay Company). Three iron targets, on rafts, had been moored in the bay, at five hundred yards from the sea-wall, at which five rounds per man were fired; and Colonel Bentham was appointed the umpire. The first round was not particularly accurate—several gentlemen who are recognised as crack shots in private practice not being so exact in their aims as on ordinary occasions. The subsequent rounds were very closely fired; and several competent judges (naval and military officers) who were present unanimously declared that it would have been impossible for the men in any boat to have escaped destruction by the fire. Finally, twelve of the best shots were told off; the contest then became exceedingly interesting and exciting. The shots were most accurate, and repeatedly elicited the loud approbation of the spectators. The divisions were then formed in line, and extended in skirmishing order. Fire was opened upon a floating target at 800 yards distance; and although we are not aware whether it was actually struck, the balls pitched in very close proximity to the mark even at that great distance, and the thick torrent of shot which fell around it converted the sea into a sheet of foam. Nearer marks were afterwards indiscriminately fired at, with an effect showing at once the power of this formidable weapon and the practised skill of the marksmen. On the bugle signal to "cease fire" the divisions closed and marched to the Torre Abbey grounds.

Refreshments were then served in the spacious marquee, after which the sham-fight commenced. Two companies were formed, and an advanced guard was thrown out from the left, which proceeded up the centre of the field, on the north-east of Torre Abbey. It was suddenly received by a smart fire from an unseen foe in a rifle-pit, surrounding a masked battery of nine guns. The main body, covered by skirmishers, then advanced in line, and (the skirmishers being withdrawn) commenced file-firing. At this moment the guns of the redoubt were unmasked and opened fire, and the line retired by files from the right of divisions, covered by the skirmishers. Having retired under cover, firing ceased on both sides, and the Rifles took up a new position. The direct approach to the redoubt being impracticable, a few skirmishers were detached to the left; and the main body, still under cover, proceeded to the wood on the right. A central division (commanded by Captain Pearson) formed in skirmishing order, flanking the redoubt, whilst Company No. 1 (led by Captain Rodway) passing in its rear, occupied ground in a field behind the redoubt. Skirmishers were then thrown from the centre division, under cover of whose fire Company No 1. formed a column of attack and charged across the ditch on the north side into the redoubt, the detached parties at first thrown out, but afterwards recalled, entering simultaneously on the west. The red flag on the ensign staff of the redoubt was lowered, and the union-jack hoisted in its stead, amidst three hearty cheers for the Queen; the band appropriately playing the National Anthem. The excitement which the whole of this excellently planned scheme created it would be difficult to describe. The skill and rapidity with which the manœuvres were performed elicited the universal and enthusiastic approbation of the thousands of spectators who crowded the adjacent grounds. To complete the success of the arrangements, not a single "casualty," we are happy to say, occurred. The corps having re-formed, after a few parade movements, were marched back through the town to the place of rendezvous, where the prizes were distributed to the successful competitors, and the members dismissed. The proceedings of the day were altogether most satisfactory.

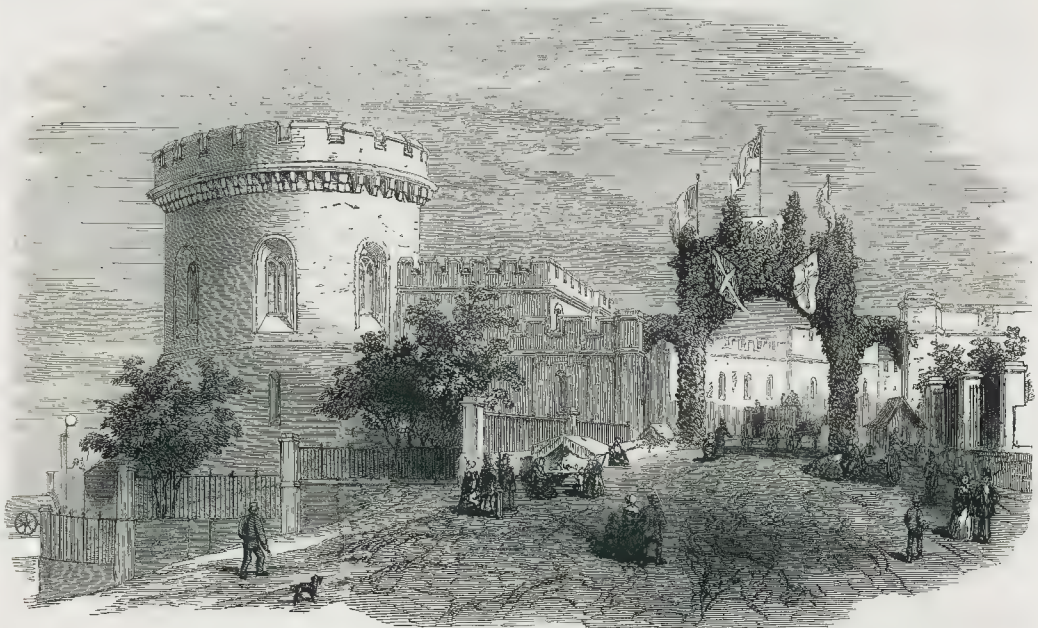
LAUNCH OF THE "ARAXES."

THIS fine vessel was launched on the 7th ult., from the Clifton Marine Engine and Iron Shipbuilding Works of Messrs. Stothert and Fripp, Bristol. She is the third of this class built by Messrs. Stothert and Co., for Messrs. James Moss and Co., Liverpool, and is intended for the Mediterranean trade.

The *Araxes* is 1272 tons, builder's measurement, length between perpendiculars, 230 ft.; length over all, 275 ft.; breadth of beam, 32 ft. 9½ in.; depth of hold, 21 ft. 4 in.; length of poop deck, 62 ft. She is built in the most substantial manner, and is fitted with all the latest improvements. She has a spacious saloon and ladies' cabin, captain's and chief officers' cabins; steward's pantry; six state-rooms opening into the saloon, each having two sleeping-berths, a sofa, and all fittings of the best description; at the stern a smoking room opening into saloon, fitted with sofas and every convenience requisite for the comfort of passengers. A deck-house is fitted amidships for the accommodation of engineers and subaltern officers. The topgallant forecastle is fitted with berths for the crew, carpenters, boatswains; also storerooms. Underneath are further storerooms, and tanks to hold about 5000 gallons of water. She will carry, besides engines and boiler, coal, &c., about 1100 tons of cargo. Her engines, manufactured by Messrs. Stothert and Co., are of 250-horse power collectively, vibrating cylinders, placed vertically underneath the shaft, and making sixty revolutions per minute. Her anticipated speed will be about eleven knots.

GRAND FIELD-DAY OF THE RIFLE CORPS, AT TORQUAY.

MEETING OF THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND, AT CARLISLE.



THE COURT-HOUSES, CARLISLE, AND TRIUMPHAL ARCH.

The seventeenth annual meeting of this Society, which was held in Carlisle this year, commenced on Thursday, the 19th ult.; but the great influx of visitors did not begin till the following Wednesday. The preparations made for the occasion were of the usual description.

On entering Carlisle by any of the railway stations, the visitor's attention was attracted by triumphal arches of evergreens and flowers thrown across the roads in honour of the meeting of the Agricultural Society; and a number of the houses were appropriately decorated with flags, wreaths, and evergreens, in great profusion.

The dinner took place on Thursday, the 26th ult.—W. Miles, Esq., as President for the year, in the chair: supported by the Mayor of Carlisle (Robert Ferguson, Esq.), the Duke of Cleveland, Viscount Dillon, Lord Berners, Lord Wynford, Colonel Lowther, M.P., W. Marshall, Esq., M.P.; Baron Rocasoli, of Tuscany; Sir J. Heron Maxwell, Sir John Maxwell, the Very Rev. the Dean of Carlisle, M. De la Trehonnais, of Paris; the Hon. C. Howard, M.P., Colonel Rushout, M.P., Mr. F. J. Dixon, Mr. Nathorn, Mr. G. H. Head, Mr. E. W. Hasell, Mr. Buller, Chairman of the Bath and Exeter Railway Company; Mr. W. Woods, Chairman of the Newcastle and Carlisle Railway Company; Mr. G. W. Hartley, Chairman of the Maryport Railway Company; Archdeacon Sandford, Professor Way, and Professor Simonds. The vice-chair was filled by Colonel Challoner; and near him were Mr. Frewen, M.P.; Mr. Child, M.P.; Mr. Kendall, M.P.; Rev. H. Lowther, Mr. C. Stewart, Captain Ball, Mr. Van Bosch, of Rotterdam; Mr. J. Nanson, Town Clerk of Carlisle, and Mr. George Smith. There were also present Sir James Graham, Bart., M.P.; Hon. Mr. Coke, Sir John Ogilvy, Bart.; Sir P. Montague, Bart.; Sir Stafford H. Northcote, Bart., M.P.; Sir T. Sebright, Bart.; Sir Pierce Morton, Sir Alexander Macdonald, Major Saltmond, Mr. Dyke Acland, Mr. Thompson, Mr. Howard, of Greystoke, Mr. Howard, of Corby, Mr. Leopold Cust, Mr. Meredith, Mr. Wren Hoskins, Mr. Mechi, Mr. Jonas Webb, Mr. Fisher Hobbs, Mr. Brandreth Gibbs, Mr. Aitcheson, and a host of eminent agriculturists from far and near, whom, in the crowded state of the room it was impossible to identify.

The competition this year in the three most prominent and most favourite breeds of cattle was numerically about an average one. A more splendid show of Short-horns we believe we never saw—so uniformly good (with one or two exceptions only), and denoting not only all that beauty of colour, form, and feature which all so much admire and love to see, but those better and more substantial qualities—a large, rotund, proportionate frame, evidencing a tendency or capacity to produce plenty of good lean flesh, and of the primest quality, as well as to lay on, as they do, such enormous quantities of fat. This is as it should be: who can dine from off fat meat! We are glad to notice such a feature at this meeting. We think more attention is given to the breeding of animals of heavier frame, and denoting a tendency or propensity to produce good lean flesh, than heretofore. For the public good, we beg most earnestly still closer attention to this principle in breeding, in every class.

The Hereford classes are in average number; we think, also, in average quality. We have never seen a much better Hereford bull than Lord Berwick's; and many other animals in these classes possess extraordinary merit. If they do not equal the Short-horns as a breed, of cattle,

(*Continued on page* 188.)

MEETING OF THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND, AT CARLISLE.—GENERAL VIEW.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS—SATURDAY, AUG. 4.

The Exchequer Bills (£7,000,000) Bill, the Consolidated Fund (Appropriation) Bill, and the Militia Pay Bill were severally read a second time, and ordered to be committed on Monday.

The Public Health Act (1851) Continuance and Amendment Bill, and the Dwellings for Labouring Classes Bill, were read a third time and passed.

The Report on the Diseases Prevention Bill was received, and the bill was ordered to be read a third time on Monday.

The Burials Bill was passed through Committee, and the report was ordered to be received on Monday.

HOUSE OF LORDS. MONDAY.

THE ROYAL MESSAGE.

The Queen's message with respect to the maintenance of the war was considered and responded to in the affirmative without remark.

SALE OF BEER BILL.

The Marquis of CLANRICARDE moved the suspension of their Lordships' Standing Orders, that the Sale of Beer Bill might be proceeded with as a measure of urgency.

Some discussion ensued, followed by a division, which affirmed the motion by a majority of 25 to 16.

The bill was then read a second time.

TURKISH LOAN BILL.

On the order of the day for going into Committee on the Turkish Loan Bill,

Lord ST. LEONARDS, after commenting at some length on the negotiations at Vienna, referred to the Turkish treaty, and said it appeared to him that from the uncertainty of the translation of the treaty the Queen was legally and severally liable for the whole of the loan, while the Emperor of France was only jointly liable

After some observations from the Earl of CLARENDON and the LORD CHANCELLOR, the bill passed through Committee

HOUSE OF COMMONS. MONDAY.

CRIMINAL JUSTICE BILL.

On the order of the day for the third reading of the Criminal Justice Bill,

Mr. T. CHAMBERS denounced the bill as the worst that ever received the sanction of the Legislature, being unconstitutional in principle, and a still further encroachment on the system of trial by jury.

The ATTORNEY-GENERAL defended the bill, which would be extremely beneficial to the accused parties, by saving them from long imprisonment before trial; and he denied that it was at all unconstitutional, as no one could be brought within its operation without his own consent.

After some discussion the bill was read a third time.

ROYAL SOCIETY.

Lord PALMERSTON stated that it was the intention of the Government to grant a sum out of the Civil Contingency Grant for the use of the Royal Society; and next Session he would place for the like purpose a sum of £1000 on the Civil Service Estimates.

The Noble Lord also stated that it was the intention to proceed with the Cambridge University Bill during the present Session.

THE AUSTRIANS IN ITALY.

Lord J. RUSSELL gave notice of his intention to call the attention of the House to the state of Italy, and the occupation of her territory by foreign troops.

CHARITABLE TRUSTS BILL.

On the order of the day for the House going into Committee on the Charitable Trusts Bill,

The ATTORNEY-GENERAL pointed out the necessity for the changes proposed by the bill, and said it was imperative that the powers of the Commissioners should be extended, in order to enable them to exercise a proper control over the management of charities, the Commissioners he said, were cut off by public opinion from the exercise of powers proposed to be conferred on them might safely be committed to.

Mr. BRIGHT moved, as an amendment, that the bill be committed the day three months. He did not object to extending the powers of the Commissioners, but he did object to give them such enormous powers as were proposed by the bill to be conferred. The board at present was inspecting and removing one, but this bill proposed to give them absolute power and control. To such a change the House ought not to consent at this period of the Session

Sir W. JOLLIFFE seconded the amendment, and urged the impossibility of giving adequate consideration to a measure of such importance in the very last week of the Session.

Mr. MICHELL was of opinion that the bill did not go sufficiently far.

Mr. A. PELLATT thought the House ought to pause before granting the extraordinary powers which the bill would confer upon the Commissioners

Sir G. GREY defended the measure from the objections urged against it. Mr. Evans thought such powers should only be conferred on the Commissioners as part of a well-considered scheme, one condition of which should be that their administrative functions should be exercised in public. He was strongly recommended that the bill should be abandoned for the present session

The SOLICITOR GENERAL said, that however near they might be to the end of the Session they should not be in the mood of the time in order to pass a bill of such importance; and he reminded those who raised objections to it that every one of its provisions were recommended by a Select Committee of the House.

After some discussion, in which Mr. Henley, Lord Galway, Sir W. Heathcote, and Mr. Malins took part,

The ATTORNEY GENERAL said that if it was resolved to contest the bill clause by clause, he must be content to take as much or it as he could get; and, although very reluctantly, he must in that case give up the judicial portion of the bill.

After some observations from Mr WIGRAM and Lord PALMERSTON, the House went into Committee on the bill, and the discussion of its details occupied the remainder of the evening.

HOUSE OF LORDS.—TUESDAY.

LIMITED LIABILITY BILL.

Lord STANLEY of ALDERLEY moved the suspension of the Standing Orders, for the purpose of allowing the Limited Liability Bill to pass during the present Session.

A preliminary discussion, turning chiefly upon the question of urgency, but in which the merits of the bill itself were collaterally touched upon, was prosecuted at considerable length: Lord Redesdale advocating a contingent observance of the Standing Orders, in which he was followed by Lord Lyveden, Lord Somerhill, and Montague; while the Marquis of Clanricarde, Earl Granville, and the Lord Chancellor insisted on the expediency of going on with the bill.

On a division the motion for suspending the Standing Orders was carried by 38 contents to 14 non-contents—24.

The discussion was then renewed upon the motion for the second reading of the bill, whose principle Lord STANLEY of ALDERLEY explained and defended at some length

Some other Peers having spoken, the bill was read a second time.

The Sale of Beer Bill went through Committee.

The Turkish Loan Bill was read a third time and passed.

The Ordnance Board Bill was read a second time.

HOUSE OF COMMONS.—TUESDAY.

PROSPECTS OF THE WAR.—CONDITION OF ITALY.

In the early sitting of the House, on the motion for the third reading of the Consolidated Fund (Appropriation) Bill,

Lord J. RUSSELL said there never was a Government charged with a greater amount or responsibility than that which attached to the present Ministry. The immense draught upon the finances of the country was a most important subject for consideration, and the prospects of the war called for the most serious attention. There could be no doubt but our navy was in a most efficient condition; but the enemy was not disposed to try our strength on salt water. In the Baltic we had nothing very considerable had been effected: while in the Black Sea matters were a threatening aspect; and so far as related to the invasion of the Asiatic frontier of Turkey, no sufficient force had been sent to repel the enemy. These points afforded no prospect of peace; and the most look to the large army in the Crimea for any chance of a solution of the difficulty. There, however, Russia was preparing a large armed force, and without putting blame to any one, it became matter of serious consideration whether our object could be effected without immediate and expensive preparations for the next campaign.

With regard to the propositions for peace (said the noble Lord) I will say a few words; not, however, intending thereby to revive the discussion of the other evening, or to say anything with reference to the correspondence or to Prince Gortschakoff's despatch, or any other scheme by which the preponderance of Russia in the Black Sea may be accomplished, but with the view simply of speaking as to my own opinion, founded upon my having taught acquaintance in the course of my noble friend at the head of foreign affairs, who thought that the despatches containing the account of my proceedings at Vienna ought not to be produced, because it would not be for advantage to the public service, still I cannot but wish that the despatches were produced, and that Parliament and the public were able to see the despatches containing the account of my proceedings at Vienna—to see in those despatches, without my speaking or in any sense, what I have done. But with respect to the [illegible] because it will be observed that the Turkish Ambassador at Vienna—one of the most intelligent persons I ever met with, and well acquainted with Europe—pubon and the interests of his own country—was perfectly satisfied with the terms proposed by Austria. But admitting that the terms proposed were not considered to offer a sufficient security, and that the war is to be carried on, not for the security of Turkey, but for the maintenance of the military and naval reputation of France and Great Britain, then the position of the country and of France is very much changed. No doubt we may continue the war without Turkey doing anything; but I do not think it can be as an ally to Turkey, but we must resort to subsidies, and to a large amount, to enable Turkey to meet the expenses of the contest. That appears to me to be the inevitable result. If the Turkish Government be of opinion at any future time that sufficient terms are offered, then, I say, with regard to the Emperor of the French, who has proved himself not only a faithful ally, but a most prudent and just ally, I should be disposed to place the utmost confidence in his opinion with regard to any negotiations for peace. If such an opportunity should arise, I hope, on the other hand, that while Government will refuse to accept any terms they do not think sufficient for their purpose, on the other hand I hope they will not continue the war a moment longer after those purposes are attained for which it was commenced.

He now came to the observations of which he had given a notice of motion on the state of Italy. The King of Sardinia had sent to the Crimea one of the best troops that Europe could boast of, and he must expect in return some moral support of France and England to cause he had much at heart viz., the general improvement of Italy, and that some check should be given to the oppressions carried on by the Governments of the Papal States and the Kingdom of Naples. The latter State for the best men had been sacrificed, and the representations of the British Government had failed to procure the slightest clemency. In Tuscany, also, a sort of religious persecution prevailed which is unknown in any civilised Government. All this occurred while one part of the territory of the Church was occupied by an Austrian army, and the capital itself by the troops of France. There could, therefore, be nothing like independence on the part of the Papal Government, for it must be dependent upon the one army or the other. Rome had now been occupied by the French troops for five years, and yet there was no more appearance now of the Pope being able to govern his dominions than when that occupation first took place. There was no prospect, therefore, that the Pope could be induced to adopt some other mode of Government than that against which his people revolted. Was it not possible that England, France, and Austria should devise some mode of Government to meet the wishes, and which by its adoption, might enable the Pope to have some share of independence in his own dominions? There was, unhappily, no immediate prospect of peace, and therefore it called the attention of the Government to the point, with a view to see if the influence of England could not be employed to place the states of Italy upon a sounder footing.

Mr. WILKINSON said there was no doubt but that the sympathies of this country were with Italy, Hungary, and Poland, but he could not see the utility of bringing the subject forward at the present moment. He understood the noble Lord came back from Vienna entertaining the opinion that the propositions of Austria ought to be assented to, but that he had changed that opinion on a conference with his colleagues in the Cabinet. Now, however, he appeared to be of opinion that the propositions should have been accepted.

Lord J. RUSSELL said he did not think that the propositions of Austria could be now accepted. He did not think it right to say at the present moment what terms could be accepted.

Lord PALMERSTON said it was quite natural his noble friend should seek to possess the House with his views on the important topics he had alluded to, but it was the duty of the Government to the House to say that the Government was deeply impressed with the gravity of the responsibility which was flung upon it by the present state of affairs. The noble Lord then proceeded to animadvert on the speech of Mr Gladstone, who, himself a party to the war, had changed his opinion, and now sought to describe it as unnecessary, impolitic, and unjust; and said he believed the sentiments of the right hon. gentleman had no echo throughout the country.

GOVERNMENT RELIES ON THE PEOPLE.

There must, indeed, be grave reasons which could induce a man who was so far a party to the measures of the Government utterly to change his opinion as to declare this war unnecessary, unjust, and impolitic—to set before the country all the unspeakable disasters with which they and it apply him, and to magnify and exaggerate the force of the enemy and the difficulties of our own position (Loud cheers). Sir, I am not such a man as that (Hear, hear, and cheers). The hon. member my colleague in the Government (Mr. Gladstone) (Hear hear); and, therefore, in answer to my noble friend—to whom nothing that I have just said in the slightest degree applies I have to state that her Majesty's Government, fully conscious of the great importance of this contest—fully conscious of the immense exertions which may be necessary to bring it to a successful termination—are prepared to take upon themselves the responsibility of continuing the contest, and will not be afraid, when Parliament meets again, to render an account of the manner in which that responsibility has been discharged (Hear). We are conscious also of the grave responsibility we incur in proposing to say that they had given to us throughout the exertions which we have felt it our duty to make. Whatever may be the opinions of some few members within these walls—I do not believe I can say within the walls of this House, but within the walls of the House, because I do not think the opinions we have heard here have any echo as all out of doors (Cheers) I am satisfied that the great majority of the House, as proved by the vote they have given, will support us in the faithful representation of the part of the country, and that the confidence of the House and the support of Parliament, whenever the Government, whether in the conduct of the present war or in the preparations which we are now engaged, may perform the [illegible] to the best of their ability, and in accordance with the determined will of the people.

THE MINISTERIAL POLICY.

My noble friend has made some remarks upon the operations of the war and in reference to the terms on which peace might be obtained. I say that the Government should enter into any explanations either upon one head or upon the other. It would be most unfitting, and would obviously tend to defeat the policy of the country, if we were to enter into a discussion of what we thought might be accomplished in the prosecution of the war, and what would be the terms of peace upon which we thought the contest might be terminated with safety to the country. That is a line of conduct which I am sure Parliament is dependent upon circumstances that may arise in the prosecution of the war, and it is unnecessary to state to any man that to announce our intentions would be to lay the ground for defeat. The country must depend upon the circumstances under which negotiations may be begun, and upon the spirit which either party in the war may have obtained at the moment when negotiations are commenced (Hear, hear).

THE SULTAN AND THE AUSTRIAN PROPOSALS

There is, however, one point to which my noble friend adverted which calls for some remark. I refer to the opinion which he seems to have entertained that the Turkish Government had no objection to accept the Austrian proposals, but that their opin on was overborne by a contrary decision upon the part of the Governments of England and France. My noble friend must know far better than I can what was the opinion of the Turkish representative at Vienna upon that matter. I can only say that I have no reason whatever to believe or suppose that the Turkish Government differed in opinion from the Governments of England and France as to the necessity of not accepting the terms on which my noble friend refers (Hear, hear). No doubt, if the Turkish Government when the Turkish Government might imperatively think that certain terms were consistent with their future security, and were terms which a considerable weight when the Governments of England and France had to be called upon to discuss the conditions of peace [illegible] which fell from the hon. member for Leeds (Mr. Gibson) I am not prepared to say that the objects for which the war was undertaken were not as important to depend solely upon the decision of the Turkish Government (Hear). The war was undertaken, not only for the purpose of securing, as the hon. gentleman man well observed, as a means to an end. No doubt the protection of Turkey, as a question affecting the balance of power in Europe, was an object for which it was the duty of the other Powers to contend; but beyond that the protection of Turkey lies the still greater question of the grasping ambition of Russia—an ambition which no man has more forcibly or more fully explained than my noble friend himself—and the extinction of those principles of political and commercial liberty upon which the independent existence of the kingdoms of Europe was mainly depend (Hear, hear). Therefore I am not prepared to say that it ought to rest with the Government of Turkey to decide what are the conditions which it would be consistent with the future security and the permanent peace of Europe to accept; but I am quite sure that England and France have as great, and perhaps a greater, interest in that question than the Government of Turkey itself (Hear, hear). Their enlightened views on the subject of European policy are more likely to be right than even the views of the Turkish Government, but there is no reason to suppose that any difference of opinion is likely to occur (Hear, hear). I can only say that, up to the present moment, there has been none, and I trust that it may continue, a perfect unanimity and concord between the Governments of England, France, and Turkey (Hear).

THE FRENCH ALLIANCE

In mentioning the Government to-night I must express my entire concurrence in the remarks of my noble friend as to the perfect sincerity, the cordial friendship, and the entire unity of opinion which prevail between the Governments of England and France (Cheers). Indeed, upon the great question the two Governments may be said to form but one Cabinet, some of the members of which are sitting in London and some in Paris. There is a perfect unity of opinion and a perfect unity of purpose, and I cannot but anticipate that the entire union which exists between the two countries must in the end accomplish the great objects for which they have united (Hear, hear).

With respect to Italy, he was happy to say that Sardinia presented one bright spot amidst the general gloom. The Government deprecated any discussions which would cast a shade of coldness over the relations of this country with [illegible] and Austria on the other. The occupation of Rome had been beneficial, but the French force there had been greatly reduced, and Austria had withdrawn her troops from Tuscany. The Austrian troops recently sent to Italy were for the purpose of replacing others who were entitled to return home, so that the Austrian troops were not increased in that country.

THE AUSTRIAN ALLIANCE—CONDITION OF ITALY.

I am unable to say whether there has been any augmentation of the number of troops in Austria or not, but I believe that the aggregate number of men [illegible] the terms [illegible] no notion which may prevail that Austria is changing her policy with regard to the Allies, and is preparing for a course of action in Italy incompatible with her relations with England and France, is utterly unfounded. Whether Austria, at a future time, prompted by a regard for her own interests, may or may not find herself in a condition to take the field in conjunction with England and France, of one thing I am perfectly satisfied—that we shall not see Austria take the field against England and France, and in concert with Russia. My noble friend has said he thinks her Majesty's Government ought to take advantage of any circumstances which may from time to time arise, with the view of endeavouring either through the Governments of France and Austria, or without them, according to the state of the case—to ameliorate the condition of that fine country which he has so well and so justly described. It must be painful to every man to see a great people—for I must call the Italians a great people (Hear, hear)—endowed by nature with the highest qualities (Cheers), capable of becoming, as they were in former times, models in everything that ennobles and dignifies human nature, degraded by the accidental circumstances of their political condition from passing a career which would enable them as a great nation in the estimation of the world. It must, therefore, be the object of every British statesman—as it was, upon a former occasion, the object of my right hon. friend the member for the University of Oxford—not only to alleviate the pressure which now [illegible] but to open to them a nobler career, and one more congenial with the high qualities with which they have been endowed by nature. My noble friend must be aware how difficult it is to alter a state of things which has existed for many years; but I can assure him and the House that her Majesty's Government are animated by the same feelings which he has expressed, and that they will avail themselves of any fair and proper opportunity which may present itself with the view of improving the condition of the Italian people.

In conclusion, he assured the House that the attention of the Government would be sedulously directed to the topics introduced by his noble friend, and he hoped that when Parliament should meet again it would be in no reason to complain that Government had been lax in its duties, either in their speeches, or in the vigorous prosecution of the war.

Mr. HENLEY said that nobody would be more pleased than himself to hear a satisfactory account of the state of the negotiations or of the war when Parliament should meet again. With respect to the state of Italy, he could see no good from bringing forward the question at present. It was only throwing a firebrand into the midst of that which might lead to much evil. He much doubted if any one of the parties at Vienna had gone there with the remotest hope or intention of making peace, and he thought the country had no reason to complain that Government had been lax in its duties, either in their speeches, or in the vigorous prosecution of the war.

The bill was then read a third time and passed.

The other orders of the day were disposed of, and the House adjourned at half-past one o'clock.

CONSTITUTIONS FOR VICTORIA AND NEW SOUTH WALES.

In the evening, in answer to Mr. Kennedy,

Sir W. MOLESWORTH stated that the Acts by which representative constitutions were established in the colonies of Victoria and New South Wales had been dispatched from this country [illegible]

HOSPITALS IN THE EAST.

Mr. STAFFORD, in moving for a number of [illegible] connected with the military hospitals at Scutari, Therapia, and other places in the East, took occasion to refer to his comments on the general sanitary arrangements of the army in the Crimea, and remarked that the complaint touching the neglect and insufficiency which he contended were still manifest in various branches of the medical service.

Mr F. FLEETWOOD PELLY defended the skill and [illegible] hospitals and medical departments generally, declaring that all the causes of complaint had been long since removed and remedied. It was still his hope that he might soon be enabled to report that before the end of the year but if not, and another winter campaign was found necessary, every provision would be abundantly made for the army, whether in health or sickness

The motion, with certain modifications, was then agreed to, and some portion of the required papers ordered to be produced, in continuation of former returns on the same subject.

THE INDIAN BUDGET.

Mr. V. SMITH made the annual statement of Indian finances from which it appeared that the revenue for 1854-55 over the expenditure was £421,227, being £200,000 less than had been estimated by Sir D. Wood in his statement of last year. From the state of the revenue and the increase of the expenditure they must reckon upon a deficiency of £3,000,000 for the year 1854-55, and to meet this it had been proposed to lay a tax on salt, which, however, would not be listened to, and they had made a deficiency would interrupt the serious consideration of the Indian Government. The great item in the expenditure was, of course, the army. He believed no one would propose to reduce the army of India [illegible] something to say that they had an army in India of 230,000, upon which recruiting failed in this country, they could rely, and that it only [illegible] a cavalry, the irregular horse, which could be got for 30 rupees a month (Laughter). Therefore, it would not be wise, therefore, to reduce the Indian army. The expenditure for public works was not made as it was needed, and for that reason [illegible] could be postponed. The Directors and Board of Control were not insensible to the necessity for economy, and in a despatch sent on June 27, 1855, a revision of salaries was recommended. Lord Panmure had sanctioned [illegible] expenditure from £3,150,134 to £3,317,167 in two years; but no such reduction could now be made. [illegible] the chief part of that reduction had been in the expenditure of the army. Every expenditure public utility [illegible] was lost, but as profitably invested. He came now to [illegible] the brilliant prospects of India. The most perfect tranquillity and prosperity prevailed throughout India at present. The Governor-General had entered into a treaty with Ava; and a treaty—a very valuable one—had been entered into with Cabul. By the latter treaty the western frontier would be secured. With regard to the Persian influences in every part of the East. By the report of the Commissioner of that country, it was gratifying to know that in the countries bordering on Khiva so far from the Russian army being [illegible] it had been reduced by the war in Europe, and was unusually weak and inactive. It was absurd to suppose that the war against Russian Europe was confined from any fear of her aggression in the East. The Indian navy was in a state of so great improvement that his right hon. friend might now be able to withdraw British vessels of war from the seas. Besides the roads and canals at present in progress, the electric telegraph had been established, and many hundreds of miles of railway [illegible] These and many other improvements must cost large sum, and he observed if more attention had been paid at first to centralisation or companies and uniformity of action, some expense would have been saved. But it was too late to think now. Last year the telegraph had been completed mainly through the exertions of Dr. Sandfield and a gentleman had submitted by another gentleman for the establishment of the electric telegraph between this country by way of Egypt. His right hon. friend had not been able to prodeed with the bill which he had promised on civil and criminal procedure, but he had been able to introduce a bill for the establishment of High Courts, instead of an itinerant judge in the straw settlements. He must not omit the question of justice at police, and above all, the commission as to torture (Hear, hear). This was a painful topic, but it was impossible to deny that in the Madras presidency a practice of administering torture for the purpose of compelling payment of taxes or extorting confessions of guilt existed. The object of the only commission was that no European appeared to have been personally implicated in the inflicting of such tortures. No doubt the European officials knew nearly as much of the proceedings as the natives, and had been brought to light, and had passed an Act for the purpose; and he (Mr. V. Smith) assured the House that it should not be allowed to sleep in peace, but should be carefully and thoroughly sifted (Hear). With regard to the great question of Administrative Reform it had actually been carried out by an Act of Parliament in 1853, enforcing a system of competition in the appointments to the Indian service. In conclusion he spoke of the selection of Lord Canning as most fortunate. The power of the Governor-General was nearly absolute; but his noble friend was not a man to be led astray by any notions of conquest. His noble friend would rather endeavour to develop the resources of India, and would recollect that the illustrious name he bore was associated with personal liberty and with the principles and institutions of a free people (Cheers).

Mr BAGOT analysed the recent operation which had taken place with regard to the Indian debt, and carefully considered the question of interest, followed so speedily by the issue of a new loan, was altogether curious and indefensible The Indian Government, he believed, had practically received the public and declined its tendering. After pursuing at much length his comments upon the financial position of the Indian Government, Mr Bright concluded by moving as an amendment the following resolution:—

That, in the opinion of this House, with a view to bring the state of the finances of India more clearly before Parliament [illegible] that the Board of Control for the affairs of India should consider the practicability of making up the annual accounts of the revenue of India on the 30th day of October, instead of on the 30th day of April, and of laying before Parliament, during the month of March in each year, a complete statement of the receipts and expenditure of the Indian Treasury during the preceding, with an estimate of the anticipated receipts and expenditure for the current year

That this House is farther of opinion that, in order to afford a fair opportunity for a consideration of the statement on Indian finance, now annually submitted to the House by the President of the Board of Control, it is desirable that in future that annual statement should be made at such a period of the Session as shall permit of its receiving the attention which its importance demands.

An animated discussion occurred as to the existence in India of the

practice of torture in the collection of the revenue, in which Sir J. W. Hogg, Mr. J. G. Phillimore, Mr. Otway, Mr. Henley, Sir C. Wood, Mr. Whitside, Mr Mangles, Mr. Danby Seymour, and Mr. J. W. Scully, took part: after which the resolutions of Mr. Bright, with some slight alterations, were agreed to.

HOUSE OF COMMONS.—WEDNESDAY.

The Burials Bill, with several amendments, was read a third time and passed; also the Criminal Justice Bill, with several amendments, was read a third time and passed.

Several other bills were advanced a stage.

COUNTRY NEWS.

RESIGNATION OF MR. M. T. BAINES, PRESIDENT OF THE POOR-LAW BOARD.—The *Leeds Mercury* of Saturday last contains the following address to the electors of the borough of Leeds, signed by Mr. M. T. Baines, and dated Poor-law Board, Whitehall, August 3, 1855:—"Gentlemen, It is a subject on which every one intentitled to learn directly from myself the reasons which, after grave consideration, I have thought it right to take. The recent state of my health has forced upon me the conviction that I can no longer hope to perform, in a manner satisfactory to my own mind, the laborious and responsible duties of President of the Poor-law Board, coupled as they are with those other numerous and important duties which necessarily devolve upon the Parliamentary representative of a borough like Leeds. Under this conviction, I have thought that right to place the resignation of my office in the hands of the Prime Minister, and I now retain it only till the end of the present Session. My most grateful thanks are due to you for past indulgence; and I entertain a confident hope that I may be able, when unconnected with office, to devote myself with increased zeal and assiduity to my duties as your representative in the House of Commons."

TRIBUTE TO THE MEMORY OF ROBERT NICOLL.—The *Perthshire Advertiser* gives an account of a festival in honour of the memory of Robert Nicoll, held on his native Ordie braes. The party, amounting to about a hundred, assembled in a beautiful sequestered dell on Ordie braes, and within two hundred yards of the spot where the poet first saw the light of day. Mr. T. Richardson, an old friend of the poet, discharged the office of chairman. After the usual loyal and patriotic toasts, the chairman proposed, in a few appropriate remarks, the health of the poet's parents, Robert and Grace Nicoll, and concluded by presenting them with a handsomely-bound copy of their son's poems, with the following inscription:—"This copy of Nicoll's poems was presented to the parents of the poet by a few of the admirers of the author's genius.—July ——." "Thou hast left no son, but the song will preserve thy name." The poet's father briefly acknowledged the toast and presentation.

PROJECTED ORGANISATION OF CHAMBERS OF COMMERCE.—During last week deputations of merchants from Bristol, Bradford, Worcester, the Potteries, &c., met in conference in Birmingham, for the purpose of considering the propriety of establishing an agency in London, through which all the proceedings of provincial Chambers of Commerce relating to bills before Parliament shall be more effectually directed. At present the desultory and isolated efforts of local bodies acting independently of each other are admitted to be very ineffective; and it is thought that if an office or agency were established in London to watch and report upon all measures and information relating to the interests of trade and commerce, great good might be effected and much injurious legislation obviated. The deputations present, after considerable conversation, approved the proposal (which originated in Bristol), and they were desired to confer with the members of their respective Chambers of Commerce at another meeting upon the subject.

A SHORT-TIME MOVEMENT IN THE COUNTRY.—A public meeting of the ploughmen of Couper-Angus district was held in the Strathmore Hall last Saturday evening, for the purpose of considering the propriety of entering themselves into an association having for its object the abridgement of their hours of labour. The witness of the evening did not damp the ardour of the ploughboys, for it was computed that upwards of 300 of them were present. Mr. David Stewart was called to the chair, and briefly stated some of the injurious effects of long-protracted and exhaustive labour upon the mental and physical constitution of man. The wishes of the men are as follows: Rise, in summer, by five o'clock; yoke at six, take half an hour to groom the horses, another half hour to breakfast; yoke at six, and loose a quarter before eleven o'clock; yoke again at one o'clock, and loose a quarter before six, grooming the horses in the evening. In winter, rise in time to have the horses ready to go out by early daylight; one hour in the middle of the day for dinner; yoke again, and leave off at the usual task of the evening. Have horse-supping done, if possible, by seven o'clock, so as to afford time for attending classes, lectures, meetings, and other means of improvement. To further these objects a committee was formed, officers chosen, and money collected to defray necessary expenses. Another meeting was held in the Strathmore-hall, when a gentleman from Alyth delivered an address in favour of the movement.

DECREASE OF PAUPERISM.—It is a pleasing circumstance that, notwithstanding the high price of provisions, pauperism has to a great extent decreased throughout the whole of South Wales, and there is a gradual decrease in the amount of crime. The various judicial courts just held were not heavy, and in the various union-houses there are scarcely any able-bodied poor. This is partly owing to the demand for labour, arising from the extra state of the staple productions of the districts, and new works now opened and about to be opened. Were it not for the high rate of provisions the rates would be much lower.

EMIGRATION OF LATTER-DAY SAINTS FROM LIVERPOOL.—One of the twelve apostles of the Mormons, who resides in Liverpool, publishes a newspaper entitled *The Millennial Star*, containing a variety of intelligence relative to the voyages and doings of the Latter-day Saints. From the last number of the work, dated from the 7th Nov. 1854, to the 26th April, 1855, amounted to 3626 persons. Of this number the passage-money of 1127 was paid by an emigration fund, 491 were sent for by their friends in Utah; and 373 paid their passages. There emigrants consisted of 2231 English, 401 Scotch, 257 Welsh, 24 Irish, 7 French, 40 Danes, 71 Swedes, 54 Norwegians, 15 Swiss, 15 Italians, 15 Germans, and 1 Prussian. The reports say that most of the emigrants have lately proceeded to Philadelphia and New York, instead of the old route via New Orleans and St. Louis, and that the new route has been found far better than the old one. In another part of the *Star* it is stated that 1600 Saints were present at the Manchester conference on the 24th ult., when eighty baptisms were reported. In Liverpool, at the conference on the 17th July, the baptisms were thirty-seven, and the Saints were reported to be in debt for chapel accommodation.

WARNING TO SEA-SIDE VISITORS. Two young ladies, named Miss Lamplough and Miss Oxley, went to walk on the sands at Bridlington Quay on Wednesday week. After they had been together for some time the latter went to get a drink at a chalybeate spring of water which issued from the cliff opposite Hilderthorpe, and the former returned to town, as she thought rain was about to fall. Miss Oxley said she would follow her in a short time, but Miss Lamplough reached home and her companion never joined her. Alarm was excited, search was made, and it was found that the unfortunate young lady had been crushed to death by the fall of a portion of the cliff, weighing about thirty tons.

MURDER IN DEVONSHIRE.—A revolting murder was committed at Mortham, a village in the north of Devon, last week. A man named Robert Hancock, a labourer, being jealous of his wife, struck her with a hammer several times, and afterwards cut her throat. He was apprehended on Thursday week, and on Friday a coroner's inquest was held, when Hancock was committed on a charge of wilful murder.

THE ROCHDALE MURDER.—Jonathan Heywood, who is suspected to have murdered Margaret Jones on the 21st ult., was arrested on the 3rd inst., in the neighbourhood of Bacup. He had been wandering about, and enduring great misery, since the time of his absconding.

TERRIFIC GUNPOWDER EXPLOSION.—A few days ago the safety fuse manufactory of Messrs. Hawke and Co., of Gwennap, in Cornwall, was completely destroyed by a gunpowder explosion. There were ten women employed in the manufactory, two of whom were engaged in binding lengths of fuse called "rods," when one of these broke, and friction being caused by the powder, some loose powder was ignited, which communicated with 100 lb. weight of gunpowder, and a terrific explosion was the result. Two of the women were killed, and all the others more or less injured. One of the young women killed was to have been married in a few days.

REMARKABLE WILL CAUSE.—A gentleman named Witter, lately dwelling in Chester, leaving property to the amount of £17,000 to Mr. S. J. Roberts, solicitor, Chester—also strong ill-from his own relatives, who were in needy circumstances. His sister, Mrs. Cray, accordingly disputed the will, which had been drawn up a short time before Mr. Witter's death by Mr. S. J. Roberts; and in the course of the proceedings which she instituted in the Ecclesiastical Court it turned out that a proof will had been made by the deceased some months before. In which the bulk of the property was devised to Mrs. Cray, she then sought to obtain possession of the landed property (and so invalidate the second will), which was situate at Chicen, near Mold, and was occupied by the defendant. Last week an offer of a private settlement was made by the plaintiff, with which Mr. Roberts at once closed, and he is to give up £8000, one-half of the property, the plaintiff consenting to forego all further proceedings.

THE BOOK-BUYER.—(No. I.)

I AM a buyer of books, for my own amusement and instruction. I have a library reasonably large, and, of course, increasing every day. The late Mr. Heber, who had four houses to hold his library—two in London, one in Shropshire, and the fourth in Paris—would have laughed at the extent. The late Mr. Thomas Rodd (most intelligent of booksellers) would have called it "a handful." Mr. Panizzi would smile at its general appearance, so little does it show of Roger Payne or Kalthoeber. While the members of the Philobiblon Society would find much to repay a careful examination of its shelves; and Messrs. Sotheby and Wilkinson, matter for a ten days' sale, and materials for an attractive advertisement.

I like to dally in the past, and to live well up in the present. I do not care for a variety of editions of the same author; but I must have the best. I have sought that it shall not be said of me what was said of Douglas, who collected every edition of Horace—

> Horace he has by various hands,
> But not one Horace that he understands.

In forming my collection my difficulty is to tell what new books I should obtain. What public critics am I so follow in making my selection?—the *Quarterly* or the *Edinburgh*—*Blackwood* or *Fraser*—the *Examiner* or *Spectator*—the *Athenæum* or *Literary Gazette*? I look at all—am influenced by all; but am more frequently determined in my choice by a peep into the book itself—sometimes at my club—oftener at my bookseller's.

The experience that I have gained in this way may, it is thought, prove useful to other purchasers, and generally entertaining to the public. It has been pointed out to me (what, indeed, I had myself observed) that it is too much the custom of critics to crowd their columns with notices only of the books sent to them. This practice serves only to mislead. There are many books well meriting a hereafter that are never sent to the established critics.

In this age of increasing desire to rush into print, and when so very many books are published that Mr. Panizzi finds a difficulty in lodging the past and the present in the British Museum, the great question for the collector is, "What books shall I buy?" There are hand-books to tell him of a plan "by which a saving of at least one-half may be effected in the purchase of modern books, and in other matters connected with authorship;" but there is really no one paper which tells him "what books to buy." To say of a book that you must read it, is not saying so much in its favour as when you are emphatically told to "buy it."

It may be safely assumed that every work produces at least one work that the collector should purchase. In this belief we start the "Book-Buyer," and find the "Book of the Week," in a little green-covered volume of verse which, after a slight inspection of its worth, Mr. Moxon has given us in exchange for five shillings. This little volume is entitled "Maud, and other Poems, by Alfred Tennyson, D.C.L., Poet Laureate."

If you are in love with poetry by all means buy this volume. In spite of its many defects it is the work of a true-born poet, of a man who thinks for himself, and has an eye exquisitely alive to rural nature. The volume consists of about a hundred and fifty pages, of which one hundred are dedicated to the story of "Maud," and the remaining fifty to seven small poems, of which two, at least—the "Ode on the Death of the Duke of Wellington" and "The Charge of the Light Brigade"—have been previously published. We see them, however, in a new dress, and with some omissions and alterations, that show how ready Mr. Tennyson is to profit by sensible criticism.

Mr. Tennyson might have designated "Maud" by the same descriptive title he attached to his "Princess;" for most assuredly "Maud" is a "Medley." It is a poem of strong Carlyleisms and gentle touches of female loveliness; of strong emotions and imperfect sympathies, written in a variety of wild and effective measures—awakening contempt in one place—admiration in another, with here and there a laugh (by no means intended by the poet), but more frequently a feeling of satisfaction for many pages of true poetry. The story is that of the love of a nameless motherless, and penniless man (by whom the story, such as it is, is told)—for a motherless girl, the daughter of a rich millionaire, who owns, by recent purchase, an old manorial hall, with picturesque gable ends, and is ever in London to meet on increasing his wealth. The millionaire has two children—a girl (Maud) and a brother, who is thus contemptuously introduced to us:—

> That dandy despot, he,
> That jewell'd mass of millinery,
> That on'd and curl'd Assyrian Bull,
> Smelling of musk and of insolence,
> Her brother, from whom I keep aloof.

This "ponderous Squire," as he is elsewhere called, passes by the name of "the Sultan." The Sultan has a friend, "a babe-faced Lord"—

> A Lord, a Captain, a padded shape,
> A bought commission, a waxen face,
> A rabbit mouth that smiles over nothing—

to whom the Sultan designs his sister to be married. But Maud is in love with the "nameless and the poor," and the allusions to their stolen meetings are among the most beautiful passages in the whole poem. The hero and minstrel still keeps aloof from the brother; and at a grand "political dinner and ball" which the Sultan gives the poet is "bored" and tired. He finds his way, however, to the garden, and is there encountered by the enraged brother, receives the lie and the blow, and returns both. The brother is killed by the nameless lover of Maud; and the reader is taken to the end of the poem through cells of madness, and all the agonies of despair, horror, and fear.

Of story, it will be seen, there is indeed but little. The jewel is of small value, but the setting is a masterpiece of art. It is told in every variety of metre—from the high and wild, down to the prattling or namby-pamby. Beauties abound, but they are difficult of extraction. They suffer by being torn from the adjoining portions. I will try, however, and extract what will lose the least in the operation:—

> In a waxeful doze I sorrow
> For the hand, the lips, the eyes,
> For the meeting of the morrow—
> The delight of low repose.
> * * * *
> Dead! long dead
> Long dead!
> And my heart is a handful of dust,
> And the wheels go over my head,
> And my bones are shaken with pain,
> For into a shallow grave they are thrust,
> Only a yard beneath the street,
> And the hoofs of the horses beat, beat,
> The hoofs of the horses beat,
> Beat into my scalp and brain,
> With never an end to the stream of passing feet,
> Driving, hurrying, marrying, burying,
> Clamour and rumble, and ringing and clatter;
> And here beneath it is all as bad,
> For I thought the dead had peace, but it is not so;
> To have to grin in the grave is not well!
> But up and down and to and fro,
> Ever about me the dead men go;
> And then to hear a dead man chatter
> Is enough to drive one mad.

Here and there we are reminded of sentiments much better expressed by other poets. Thus, speaking of Maud:—

> I know the way she went
> Home with her maiden posy,
> For her feet have touch'd the meadows,
> And left the daisies rosy.

What says Ben Jonson?—

> Here she was wont to go! and here! and here!
> Just where those daisies, pinks, and violets grow;
> The world may find the spring by following her,
> For other print her airy steps ne'er left.
> Her treading would not bend a blade of grass,
> Or shake the downy blow-ball from his stalk!
> But like the soft west wind she shot along,
> And where she went the flowers took thickest root,
> As she had sowed them with her odorous foot,

And thus again of Maud:—

> Now I thought she was kind,
> Only because she was cold.

Reminding us most pleasantly of Shenstone:—

> So sweetly she bade me adieu,
> I thought that she bade me return.

But Mr. Tennyson is too often original and excellent to suffer by such accidental and superior resemblances.

I am inclined to think that the best return for my five shillings is the second poem in this charming little volume. This is "The Brook, an Idyl," in which, surrounded with a fair quantity of poetic conceits, is this exquisite piece of genuine poetry, reminding us of William Browne, and the very best of our pastoral writers:—

THE BROOK

> I come from haunts of coot and hern,
> I make a sudden sally,
> And sparkle out among the fern,
> To bicker down a valley.
>
> By thirty hills I hurry down,
> Or slip between the ridges,
> By twenty Thorps, a little town,
> And half a hundred bridges.
>
> Till last by Philip's farm I flow
> To join the brimming river,
> For men may come, and men may go,
> But I go on for ever.
>
> I chatter over stony ways,
> In little sharps and trebles,
> I bubble into eddying bays,
> I babble on the pebbles.
>
> With many a curve, my banks I fret,
> By many a field and fallow,
> And many a fairy foreland set
> With willow-weed and mallow.
>
> I chatter, chatter as I flow
> To join the brimming river,
> For men may come, and men may go,
> But I go on for ever.
>
> I wind about, and in and out,
> With here a blossom sailing,
> And here and there a lusty trout,
> And here and there a grayling.
>
> And here and there a foamy flake
> Upon me, as I travel;
> With many a silvery water-break
> Above the golden gravel.
>
> And draw them all along, and flow
> To join the brimming river,
> For men may come, and men may go,
> But I go on for ever.
>
> I steal by lawns and grassy plots,
> I slide by hazel covert,
> I move the sweet forget-me-nots
> That grow for happy lovers.
>
> I slip, I slide, I gloom, I glance,
> Among my skimming swallows;
> I make the netted sunbeam dance
> Against my sandy shallows.
>
> I murmur under moon and stars
> In brambly wildernesses.
> I linger by my shingly bars,
> I loiter round my cresses
>
> And out again I curve and flow,
> To join the brimming river,
> For men may come and men may go,
> But I go on for ever.

This is true poetry, and not less so is a picture in the same poem equally drawn from nature, and which I do not remember to have seen described before. The poet is speaking of a herd of deer:—

> In copse and fern
> Twinkled the innumerable ear and tail.

What a sweet picture is presented in a few words in

> Clasp'd hands and that petitionary grace
> Of sweet seventeen.

"The Daisy, written at Edinburgh" is a book of halting-places in Italy put into verse, with very little about the daisy, and that little neither appropriate nor well said. The poem is moreover disfigured by new coined or uselessly-recovered words, such as "niched shapes," "colonnaded aisles," and "stated pinnacles." I cannot, however, regret my purchase, indeed, I am proud of my acquisition, and proud in feeling that we have still among us our Poet Laureate.

NOVEL, OR STRANGE.

(From the first number of the "Comic Times.")

A large flight of lobsters passed over Birmingham on Tuesday, on their yearly migration to the Moors. One shot at Leamington measured nearly an imperial pint, and has been added to the fine geological collection of Mr. Brown, of that city.

It is not generally known that, by a recent postal regulation, tea-creams can be sent from London to any part of the kingdom for one stamp. They must be enclosed in paper-bags, open at each end, and addressed to the collector of taxes for the district—without which none can be distributed.

The artificial cultivation of anchovies is extensively practised at Islington. They require a high light soil. This is dressed with a compost of sprat and bole Armenian, and they come up after heavy rains, in pods, each containing a fish. They may be decoyed from them in ginger-wine, when they turn blue, and being dried and powdered, form the substance known as emery.

The remains of Belgrave-square has been purchased by M. Franconi, for a sewer, in which he proposes to add extensive virtuel works, a hospital for dumbogo, a Young Man's Evening Association for conversations on chronology, and an elaborate model of Sark, to which, at present, all eyes are directed.

Large reinforcements for the Crimea continue to arrive at Melbourne, from Cork, and are dispatched, with all possible speed, to San Francisco and Wabash.

The most interesting object in the Paris Exhibition at present, is a machine for opening sardine boxes. It consists of a steam-engine of 300-horse power, working on two revolving flauges with vertical shafts, at a graduated pressure of 9 1-10ths in seven minutes—not bad work. The cylinder, which is rose of 3 inches, penetrates at the rate of eleven inches in the mile, and, being self-feeding, requires no more attention than every ten minutes putting the crank out of gear with an eccentric beam, which a child can control with a spoke-shave. Some of these have been already set up at Holmsley, where the consumption of sardines is enormous, from the frequent recurrence of Ash Wednesday in that district, owing to its substratum of clay on the primitive sandstone. It is said to answer admirably, and the spirited speculator is enabled to apply the waste power to polishing common bricks, with fig-dust and ferro-sesquicyanuret of the cyanide of potassium, until they cannot be told from cubes of cornelian.

Mr. Lewis, of the Lady, passed by Watford, on Tuesday, on his way to Tring. He was expected to return the next day.

THERE are some smart fellows in the Crimea. We asked our Special Correspondent to give us his opinion of the climate and the country, and he wrote us word that he liked the out-and-out country very well, but that he found the *Rus(s)* in *urbe* quite intolerable.

EVERY DAY we receive proofs of the wisdom of our ancestors. A Monsieur Dupraz has contrived to extract alcohol from sawdust—one hundred pounds of the latter yielding five pounds of the former. This being the case, we can believe that the oaks of Dodona may have spoken to some purpose, and that the groves of Mona were to the Druids what the Shades of Thames-street are to us. When Mr. J. B. Gough hears this, will he not deny scorns to his pegs?

IT is not generally known that Dr. Mann has dedicated his work, on the "Philosophy of Reproduction," to Mr. Harrison Ainsworth, as a small return to that zealous author for the skill which he has displayed in reducing the theory to practice.

OUR contemporaries are very fond of treating us with the talk of the Clubs, and with Glenmaya from the Clubs. If we may judge from the specimens thus presented to us, the Clubs are not trumps; and we wish the Gleaner would change its hands, and give us the talk of the Heads, for rumour says there is some genius about the Harts, and we should like to be better acquainted. As for the Spades, we consider it *infra dig.* to think of them, for they have done nothing worthy of note since the days of Sir Cloudesley Shovel; and we could derive no amusement from the Diamonds, for they have more than one face for their friends, and they are gloomy fellows, and are always writing upon panes.

ATTEMPT TO CHANGE A FASHION.—The ladies are at present wearing a broad, flapping, slouched hat of brown chip, which overshadows their features like a huge parasol. Respecting this umbrageous covering—only occasionally seen in town, but very common in the country, and particularly at the sea-side—the opinions of the gentlemen are exceedingly various: some wisely regard them for their utility, others consider them as graceful and becoming, and many declare them decidedly ugly. An energetic individual, who in his own circle has exhausted alike his authority and his eloquence in the vain attempt to induce the ladies to abandon their own fancies and adopt his, finding the will of the gentle beings entirely too powerful for him, has essayed an experiment, in the hope of attaining by stratagem what he has failed to effect by argument. He has bought up all the hats of the description alluded to that could be purchased at Southport on market-day, and has distributed them among the humble damsels of the district, with a request that they will wear them on all occasions while pursuing their ordinary avocations. The damsels, one and all, delighted with the most perfect affection, and have fulfilled his wishes to the letter, for females of all classes love to be in the fashion. The servants, donkey-drivers, and fish-girls of Southport, the town rustic, and the ruddy milkmaid, at this moment all wear the round hat; but whether the stratagem will have the desired result is still "in the bosoms of the Fates." The ladies, so far, have only laughed good-humouredly at the artifice; and, as the sex generally makes a point of having their own way, we feel assured that the strategist will "take nothing by his motion." *Liverpool Daily Post.*

The heat and drought in Southern Russia have been so intense that no one expects more than very moderate crops; and the price of corn has been considerably raised in consequence, both at Taganrog and Odessa.

POPULAR AMUSEMENTS OF PARIS.

EXTERIOR OF A CHEAP WINE-SHOP.

SHOOTING AT PLASTER CASTS.

PARIS is at this moment the great *focus* of attraction, and before the end of next week will be visited by many thousands of Englishmen, anxious to be spectators of the brilliant reception which the French have determined to give the Queen of Great Britain and her illustrious Consort and family. A few words at this time in reference to some of the sights, for which the gayest of all gay capitals is most remarkable, will not be unwelcome to our readers, especially to such of them as may be drawn next week within the charmed circle of these Regal and Imperial festivities.

SKITTLES AT THE BARRIER.

BALL AT THE BARRIER.

PARISIAN BOWLING-ALLEY.

Those who visit Paris for the first time and who are at once impressed with the number and variety of its places of amusement, would be astonished if they happened to make a tour on the exterior boulevard to find that at each successive barrier are fresh *restaurants*, fresh balls, and fresh pretexts for amusement of every kind, from pea-shooting and skittles, to the assassination (in effigy) of some of the most eminent men this century has produced. For skittles, bowls, and athletic exercises in general, the French have but little taste, but they have a passion for shooting at plaster casts of the Emperor of Russia, Prince Menschikoff, and even their own Louis Philippe, the Count de Chambord, Thiers, Guizot, and in short any man whose effigy the Government will allow them to use as a target.

Of course the great attraction at the barriers is the cheapness of the wine, on which no *octroi* duties have been levied. This is generally of infamous quality, and, from its violet colour, is spoken of familiarly by the Parisian *ouvrier* as *petit bleu*. In hopes of gaining an undue proportion of this *petit bleu*, the frequenter of the barriers devotes himself to the practice of pitch-and-toss, and sometimes gives himself up to the still more difficult art of making a blind, but at the same successful, attack upon a wooden head of gigantic and asinine appearance, to miss which is to have to pay for *petit bleu* all round. The amusements at the Parisian *cafés*, such as billiards and dominoes, are seldom found at the barriers—the latter scarcely ever, which, in our opinion, says a great deal for the sense of those who frequent them, as the avoidance of the domino may be looked upon as the beginning of wisdom.

The booths and travelling theatres which are seen at most of the principal barriers differ in no important respect from those of the Champs Elysées, which have been already described in this Journal. The actors are always French, and are always represented as being English, Spanish, Italian, or Chinese. The company of human actors is sometimes advantageously replaced by a "marine calf" or an "intelligent seal."

THE ORDEAL OF THE BLIND.

The plentifulness and cheapness of provisions at the barriers procured some years since for the collection of *restaurants* and wine-shops at the Barrière du Maine the title of California. At the time of this name being with so much propriety bestowed, a mutton-chop at St. Francisco cost about half-a-crown, and no wine could be obtained under two or three pounds a bottle! The title of California was, however, found so attractive, that the *restaurants* of Belleville and Mont Parnasse lost no time in adopting it in their turn.

Although it can be demonstrated by the most simple statistics that the meat sold outside the barriers cost as much, within two sous per pound, as that sold in the city itself, and although there is not a difference of more than a penny per quart between the price of the far-famed barrier wine and that of the *ordinaire* of the metropolitan wine-shops, it is taken for granted by Parisians that a dinner at the barriers is a peculiarly economical affair. The duty levied by the *octroi* authorities in meat and wine is not, however, an *ad valorem* duty; so that pigs' trotters and *vin ordinaire* are charged as much for entry as *filet de bœuf* and Romanée-Conti; and, accordingly, only those who can content themselves with rather inferior food, and very inferior drink, should think of dining at the barriers at all, for it is only on inferior articles of diet that a diminution in price is observable. The student of national characteristics of course dines at the barriers in order to have an opportunity of observing the manners and customs of "the people." But whenever he does so, he certainly sacrifices his digestion to the love of acquiring information. We must make an exception to this rule in favour of the excellent *restaurant* of the *père Lathuile* outside the Barrière Clichy. This establishment is patronised by the rich *dilettanti* in cheap dining-places, who are so delighted when they find Lafitte at six francs and a half a bottle, instead of seven francs, that they at once take two bottles of it instead of one; and who, because the charges generally are about ten per cent less at the Barrière Clichy than at Very's, think themselves justified in ordering a hundred per cent more in the way of dishes and wine than

THE PARISIAN CALIFORNIA.

they would otherwise have ever thought of doing. The Père Lathuile owes his celebrity not only to the merits of his *cuisine* and cellar, which are undeniable, but also to the fact of his house having been made the headquarters of the Generals who defended Paris against the Allies in 1814. This defence forms the subject of an admirable picture by Horace Vernet, and those who are familiar with it will remember that the *restaurant* of the Père Lathuile plays an important part in it.

As a contrast to the *restaurant Lathuile*, we may mention the celebrated one dedicated, in the characteristic orthography of the barriers, *à l'essai de la fourchette* (i. e. to the chance of the fork). An enormous tank is filled with soup, in which pieces of meat and vegetables, of various dimensions, are contained. The payment of two centimes entitles you to a "ticket for soup," which at the same time gives you the privilege of plunging a fork of gigantic proportions to the very bottom of the tank, when any thing that attaches itself to the prongs of the fork becomes your property. Several hundred, one or two potatoes, and occasionally the head of a duck, have in this manner been skilfully obtained: and it is asserted that many persons have dined almost entirely, and occasionally, indeed, half a dozen times in succession, upon the contents of a single tank, however, as it has rendered us, without in any manner vouching for its accuracy.

The Lively Barrier of Mont Parnasse, which is but two steps from the cemetery of the same name—thus reminding us of the proximity of the capitol to the Tarpeian rock is the one at which extraordinarily active efforts to be carried to its highest pitch. Accordingly it is there that the most celebrated of the barrier balls are held. These balls (in) differ from those of a higher class in two respects: firstly, that the dancers are generally "*gens peu bottes*"—that is to say that "retribuive" half-pence are collected from the dancers to pay for the orchestra, gas, &c.; and, secondly, that the ladies generally wear caps, while the gentlemen usually make their appearance in their *casquett*. No *ouvrière* would think of wearing a bonnet unless her *toilette* generally were of an elevated description; and no *ouvrier* would dream of wearing a hat unless perhaps on the day of his marriage. The cap is the natural antithesis to the hat, which the *ouvrier* affects to despise, and which he pretends to think is never paid for by the "aristo" who wears it. Hence the celebrated *refrain*:—

Nous avons payé nos coiquettes.
Et vous n'avez pas payé vos chapeaux.

The following description of the dancing at these balls is by Heine, and appears in one of the celebrated letters which he addressed from Paris to the *Allgemein Zeitung*:—

The lower orders, whatever pleasure they may take in aping the manners of fashionable society, have, after all, one advantage, which is, to give themselves up to the utmost style of dancing—of dancing only in appearance—which [illegible]. The dancing of the lower classes has still its reality, though unfortunately it [illegible] only of too loose a description. I hardly know how to express the strong, [illegible] of me whenever I observe the dancing of the people at [illegible] amusement, above all, in Carnival time. There are [illegible] masks forms the accompaniment of dances which all border more or less on the *cancan*. I hear the question put to me, "What is the *cancan*?" cried Jeanne. I am wanted to give the *longlevang Gazette* a definition of the *cancan*! Well, let it be so. The *cancan* is a dance which is never executed in polite society, but only in localities of doubtful respectability, where the gentlemen wear dancers and the lady by whom it is danced, and where [illegible] summoned [illegible] by the police and known to the door. I do not know whether this definition sufficiently explains a thing which it is somewhat difficult to define, but after all it is not necessary that people in Germany should understand in what the *cancan* of the public balls in Paris really consists. [illegible] and Vestris used to say that a great dancer must be a virtuoso [illegible]; will be understood from my definition that the virtue recommended to the Vestris is not always precisely my figure in the execution of the dance, since the French people, even when dancing, are incommoded by the armed intervention of the State. . . . The constant participation of the police in the pleasures of the people is a singular abuse, and foreigners are always astonished when they remark at the public balls several pds. à cgnste of Municipal Guards by the side of each quadrille, and watching with a careful and censorious eye over the morality of the dancers. It is almost inconceivable how the people can preserve their mirthful gaiety and their rude infatuation for dancing beneath such a disgraceful inspection. But French society comes in most especial symbols of the [illegible] and thus it is confined in a strait waistcoat: and although the severest of police may prevent the *cancan* from being danced with and cynicism, the dancers of the *bastringues* conture, nevertheless, to express [illegible] prohibited ideas by means of all sorts of ironical *entrechats*, by the most amusing gestures of exaggerated decency. In my opinion public morality of a great deal by Government controlling the dancing of the people with so much [illegible] attention: forbidden dances, the most, and the refined and dirty [illegible] expedients which are employed for the sake of eluding the choregraph [illegible] The surveillance of the popular amusements character-esses in fact the [illegible] of things in France, and shows what excess the [illegible] exceeded in conquering their liberty. I repeat that I am always overcome with an inexpressible sadness when I see the people dancing in the places of amusement in Paris; and in this, above all, during the Carnival, when the wild masquerading carries the public life in a very extremity which makes me shudder. I was almost seized with horror in assisting latterly at one of the splendid night fêtes which are given at the Opéra Comique, where the whirlpool of the Carnival rages with a fury and magnificence which are unknown at the modest balls of the Grand Opéra. There Beelzebub presides over the orchestra, and produces a deafening music which tears our ears, while the piercing light of the gas dazzles us, and tortures our eyes, like the flames of eternity. There is the Lesc Valley of which the saged has related to us such fearful legends, there dance the sorceresses in all their bewitchment, as on the mountain of the Brocken, during the Walpurgis-night, and more than one of them is pretty, and in all her perversity cannot entirely throw off the grace natural to these French enchantresses. But when the trumpets at last announce the last galop, the terrible round, then the satanic hubbub reaches the climax of its madness, one fancies that the casing of the ball-room is about to open, and that suddenly, through the ceiling of the roof, the whole of the infernal assembly will take its flight in abominable pairs of twos, pitchforks, large wooden spoons, or upon goats with human faces, or upon men with goats' faces, and other devices of witchcraft, shrieking, yelling, vociferating the consecrated words "*Oben hinaus nirgends aus*" Then is the dangerous moment when the stranger from the other side of the Rhine, who understands nothing of magic, might get lost in the fatal whirlpool, if by chance he did not recollect the old German prayer of his grandmother, which must be recited in a low voice when beautiful French witches threaten to drag you into eternal perdition.

Instead of reciting the prayer of his grandmother—a kind of process, by-the-by, which is being rendered familiar to all Europe by *Catherine's* frequent introduction of the maternal prayer in the "Etoile du Nord"—we should advise the youthful and inexperienced stranger, in default of praying at home, to remember the prosaic contained in a pious German hymn of the Middle Ages, which tells us, in the first place, that "dancing is [illegible]. When you see any one dancing," adds the song writer, "think of the bleeding head of John the Baptist in the platter, and the infernal temptation will have no power over your soul."

With regard to the kind of dancing alluded to by Heine, and to which he appears to attach too symbolic an import, we must confess that we have always contented ourselves with looking upon its grotesque side, and whatever evil there may be, morally speaking, in paying but an infinitesimal amount of attention to decorum, the evil is considerably lessened by the evidently comic intention with which the questionable dancing of the Parisian balls is executed—by the zest for this comic intention to which we attach so much importance, "hunt-the-slipper," the game of "forfeits," and the whole list of so-called *jeux innocents* would be in the last degree improper. That the comic intention of the Parisian dancer is not always realised is doubtless unfortunately but, in such a case, instead of accusing the incapable executant of cold-blooded immorality, we feel inclined to lay the blame at the foot of his professor or Terpsichorean gaiety; for the art of dancing in society with unbecoming liveliness is an accomplishment which the juvenile aspirant by property qualified masters in six lessons. The solemn expression of countenance which is preserved by the dancer in the midst of his telegraphic attitudes and frog-like movements, excites the surprise of the foreigner, and frequently leads him to form the opinion that such gentlemen is serious in his eccentricity. Serious eccentricity is, however, nothing less than madness; whereas many of the persons who are in the habit of dancing at the public balls of Paris are quite as near sanity as the rest of mankind. The fact is at present imparted to the spectators of the countenance and the grotesque movements of the body is intended to produce a mirthful effect—the principle, however, being generally observed, as the French tragic writers observed the unities, without any one inquiring much into the reasonableness of doing so.

The orgies of the Carnival balls now no longer exist, except in the works of Balzac and Gavarni—in which everything is living—and in the recollection of the young men of 1830, who have eaten Borel's dinners at the Rocher de Cancale, fought the battles of Victor Hugo at the Théâtre Français, and carried Musard in triumph at the balls of the Opera. At present the Rocher de Cancale is unknown; Victor Hugo, less fortunate than his verses, which can never be excluded from France, is in exile, and Musard, after becoming the Mayor of a suburban village, where the inhabitants, if they had attempted one of his *galopades*, would infallibly have broken their legs, has been succeeded by an only son who, whatever else he may inherit, will never possess an atom of his father's talent.

The most magnificent dancing entertainments now given in and near Paris are decidedly those of the public gardens, and among these the Ball of Asnières is entitled to the first place. The *al fresco* balls possess three distinct advantages over those of the Opera: they are nothing of the detestable Salle Valentine and Salle Ste. Cécile). As it is impossible to fill the gardens with the sound, your ears are safe; as it is impossible to fill them with light, your eyes are safe; and as it is difficult to fill them with human beings, your lungs are comparatively safe—in any case far safer than at the Opera where the odour of the gas and the exhalations of three thousand individuals in a confined space are sufficient to produce asphyxia with persons who have not been made thoroughly ball-proof. Accordingly, Asnières is now considered the most fashionable of all the Parisian balls, that is to say, it is considered so by persons who consider it fashionable to go to such places at all. The beauty of the garden of Asnières, and its proximity to the Seine, which at Asnières is so charming a stream, and which although it connects in a slight manner the largest city on the Continent with the sea, has the advantage of being unnavigable, except for pleasure-boats; the merits of the *friture*, which has given celebrity to the Asnières *restaurants*, to say nothing of the excellence of the inevitable *omelette au rhum*, which has certainly not retrenched from their fame; the splendour and depth of the Asnières swimming-bath; and, above all, the rapidity with which the little suburb can be reached at all reasonable (and many unreasonable) hours of the day and night, combine to render it one of the most frequented places in the environs of Paris.

Frederic Soulié divided the Parisian *restaurants* into two great classes those where people went to dine, and those where people went to feast. The Trois Frères Provençaux and the large dining-places in the barriers to which we have called attention above would equally belong to the latter class. In the same category we must place the *restaurants* of Asnières, which are much esteemed by the Parisian excursionist—In the first place, because they are expensive; and in the second, because they can supply, at a few moments' notice, any number of fried gudgeons.

The comparatively high prices charged at the Asnières *restaurants* are explained by the fact of their being almost entirely without customers during the winter months—a privation for which the proprietors are obliged to console themselves by making the most of those who present themselves during the summer. The excursionist is, therefore, in error when he asserts that they are dear because they are good, and equally distant from the truth when he imagines, if he does not say so, that they are unusually good because they are dear.

We have nothing to say against the gudgeons, which have always been fresh and generally delicious when we have been brought into contact with them. The gudgeon is the Parisian fish *par excellence*, and holds a position to which the dramatic author, the ballad and vaud-sprung cel—the only other fish of metropolitan origin—can never hope to attain. Equally in demand among the most fashionable of the *cenotiers* who navigate the Seine in the direction of Meudon and Asnières, and the lowest of the *chiffonniers* who prowl about the precincts of the *halles*, the gudgeon is at once the whitebait and the whelk of Parisian society. It makes its appearance, like *pallida mors*, at the huts of the poor and the castles of the rich; and we are astonished that the Parisians, who are so proud of their unrivalled river, with its three different kinds of fish, have never adopted it as the emblem of Equality—in which case we would suggest that the eel, on account of the difficulty which is experienced in holding it, should be taken as the symbol of Liberty, and the dull-spring e

INDIAN FINANCE AND INDIAN GOVERNMENT.

On Tuesday evening the President of the Board of Control submitted to the House of Commons the customary annual statement of his department. There is a deficiency in the revenue, always a subject of regret, but this is more than compensated by the activity displayed in the improvements of public works, especially railroads and telegraphs. We are at peace with all our neighbours, and no present danger is apprehended from the further progress of Russia on the frontiers of our Indian empire. It is also satisfactory to state that Administrative Reform has really commenced in the appointment of the civil servants of the Company, and been carried out in a wise and honest spirit. Such are the main facts embodied in the speech of Mr. Vernon Smith, and we shall now proceed to the details

The financial accounts submitted to the House of Commons relate to the years 1852-53; but a promise was given that in the next Session they will be made up to April, 1855. They are divided into four heads, embracing the Presidencies of Calcutta, Madras, and Bombay, and the Government of the North-Western Provinces. The aggregate revenues are put down at £20,351,278; the aggregate charges amount to £18,273,503: thus showing a surplus of £3,183,716. But from this a large deduction must be made—first for the interest of the Indian debt, which abstracts £2,011,071; secondly, for the charges defrayed in England, which figure for £2,431,198; both included swell up to £4,720,495, leaving the net surplus of receive over expenditure only £191,457

In comparing the actual results of 1852-53 with the estimate for 1854-55, the latter exhibits a deficiency of £3,564,775, made up of two items, which must be carefully separated. The real deficiency, obtained from contrasting the decrease with the increase of revenue in 1854-55, is only £226,245, but the net increase of expenditure in that period over the expenditure in 1852-53 amounts to £2,863,530—which, as we shall presently see, is an investment in public works, from which it is only fair to conclude that future benefit will be derived adequate to the immediate outlay. Thus viewed, the financial statement ought not to cause alarm, as the real deficit is under a quarter of a million, mainly caused by the civil war in China, which has diminished the consumption of opium. In 1852-53 there was an increase on that article of £700,000, but in 1854-55 there is a decrease of £448,000. In the excise-duty on salt there has been an increase of £144,727 and Mr. Vernon Smith expressed a hope that the land revenue would be improved by the adoption of superior modes of culture.

The great item of increased outlay in British India is the payment of the troops. The native army is put down at £918,986; her Majesty's troops figure for £46,203; transport of troops and stores, £51,698; furlough and retired military pay, £62,418. There is an increase for the Indian navy of £30,646, and for furlough and retired marine pay, £3807; the same standard for her Majesty's troops going to India figure for £7210. Comparing, then, 1852-53 with 1854-55, the naval and military expenditure of the latter period has exceeded that of the former by £1,089,439. The army in India amounts to 320,000 men, and it appears that many of the officers have volunteered for service in the Crimea.

The public works are next to be considered, on which an increased expenditure has been bestowed. The subject will be better understood by comparing past negligence with recent activity. In a minute signed by Lord Dalhousie on the 26th April, 1854, it appears that there was an absolute necessity for 3227 miles of main lines of communication. At that time from seventy to ninety miles were finished and installed; there was a good fair-weather road with bridges over small streams for 774; a bad road without any bridge for 138, and for the remaining 1926 miles there was either no road at all or nothing deserving a better name than a footpath. Since the date of that minute a very great change has been effected. Mr. Vernon Smith made the following statement:—

That the East India Railway was sanctioned as far as Delhi, and contracted for as far as Allahabad, 590 miles, and was to be completed by the end of the year 1858; it was opened as far as Ranegrunge, fifty-six miles from the Calcutta and Delhi line, near Burdwan, and distant from Calcutta 125 miles; the works on the line from Calcutta to Rajmahal, on the Ganges, were in a very forward state as far as the More River, a distance of sixty miles from the Ranegrunge and Burdwan Junction. The Great Indian Peninsula Railway was sanctioned to Sharapore; it was opened to Callian, thirty-five miles from Bombay; and contracted for and ready for opening as far as Wassindree, about twelve miles beyond Callian. The South-Eastern extension, which was to diverge from Callian, was sanctioned to Poonah, eighty-five miles; and contracted for to Campooli, at the foot of the Bhore Ghaut. No part of the Madras Railway was yet opened, but the line from Madras, which was to diverge to the north-west of Bellary, in the direction of Bombay, was surveyed and partly set out; the line in Madras to the south-west was in as much as the whole extent to Beypore, on the western coast of Madras, it was difficult to ascertain the precise state of the works, as they were in course of construction by the railway engineers themselves; but Major Peirs expected that the line to the western coast would be open for traffic by the close of the present year. The first part of the works on the line towards Bombay was also in a forward state. The Beypore Railway was sanctioned from the harbour of Kurrachee to the Indus, at or near to Tatrick, a distance of 110 miles. The Baroda and Central India Railway was sanctioned from Surat to Borodo, and thence to Ahmedabad, a distance of 103 miles.

This statement is highly gratifying. In this immense territory railways are the most powerful auxiliaries to production, as they bring markets within reach of the most distant points; while in the transport of troops, without fatigue, to any position menaced by an enemy, their value is incalculable. But not only have railways been commenced on a grand scale; a line of telegraphs has been completed, extending over 3500 miles, at a cost of only £30 per mile, by the aid of which the Governor-General, whether resident at Calcutta or elsewhere, can almost instantaneously receive intelligence from the extremities of the empire.

British India is at peace, nor is it likely to be disturbed. Our relations with the King of Ava are satisfactory. We have concluded an advantageous treaty with Cabul. A friendly spirit prevails at Nepaul. Every thing is tranquil at Oude. Russia has failed to weaken British influence in Persia. We are on excellent terms with the Khan of Khiva, who is aware that the resources of Russia are greatly weakened.

It has long been suspected that torture was employed in British India, though contradicted by official authority. Mr. Vernon Smith, however, more candid and truthful than his predecessor, confessed that this most infamous practice prevailed in the Presidency of Madras, when it was resorted to by creditors to enforce the payment of rent, and he was not prepared to say that all the European officials were free from blame. He expressed his horror of this cruelty, and pledged himself that it should be completely abolished.

The next subject touched upon was Administrative Reform. By the Act of 1853 the Civil Service of India had been thrown open to public competition amongst all British born subjects, and an examination of candidates took place in last May. There were 113 candidates. The proceedings were thus described:—

They drew lots for a number by which each should distinguish his papers: and by that number only were they known to the examiners. Of those candidates, there came from Cambridge University, 32; Oxford, 19; London, 6; King's College, 2; Harrow School, 1; other schools, 13; Trinity College, Dublin, 14; Queen's College, Cork, 5; Queen's College, Galway, 2; other Irish schools, 2; Scotch Universities and Colleges, 12; other Scotch schools, 3; and two more educated abroad. The examinations lasted twelve days. The numbers of the successful candidates were—from Oxford, 8; Cambridge, 6; London University, 2; King's College, London, 1; Queen's College, Cork, 1; Queen's College, Galway, 1; Edinburgh University, 1; making a total of 20. The highest of the candidates obtained 2254 marks, and the London University claimed him as an *alumnus*. The lowest of the successful candidates had 1120. The three best English scholars had been elected, the seven best classical scholars; the two best in modern foreign languages: the best in natural science; and two of the best in moral science (three were equal); but not the best nor the second best in mathematics.

It was further stated that a system of national education for the natives of India is to be enforced. The whole educational department in each Presidency is to be under one head, the Director of Public Instruction, with about six Inspectors under him: and a Committee has been appointed to found universities, on a uniform plan, at Calcutta, Madras, and Bombay. Looking, then, at the whole statement of Indian affairs, we recognise marked symptoms of progress, and earnestly hope that there may be no relaxation in the new system so auspiciously commenced.

CHESS.

TO CORRESPONDENTS.

they are at least next in public favour to them; and now and then we see single specimens of the breed almost unequalled in size and quality. As a breed, they are perhaps second to none in arriving at a profitable maturity under disadvantageous pasturage. They seem well adapted for sweet pasturage, of moderate quality, upon which they thrive faster than the Short-horns; but in their thrifty growth under all circumstances they are inferior to them. They possess great beauty of colour and frame, and are exceedingly good graziers and milkers. We hope they will be long perpetuated and improved.

The Devon classes are much under the usual average, twenty-three animals only being shown, whereas the average of the past nine years is fifty-one. Neither are there many animals of great merit amongst them. They possess qualities undeniably great; every ounce of flesh appears adapted for roasting, small in proportions, perfect in symmetry, and admirably adapted for fatting on inferior pasturage: but, much as we admire their frame and beauty, we cannot think them a profitable breed. We should, however, be sorry to miss them. Why they should have as much money allotted to them in prizes as the Short-horn classes is a problem yet to be solved, and that deserves the serious consideration of the Council.

The chief strength of the Sheep show was with the Leicesters, Cheviots, and Black-faced Mountaineers—to all of which the breeders on and over the Border very largely contributed. The entry of Shearling Lambs was very large, while it was almost as remarkable for uniform excellence. Our Scotch friends appear now to depend less and less on a large coarse sheep, and proportionately more on purity of breed. Compared with the other Long-wools or Cotswolds, of which there was but a short show, the Leicester has a very refined look, and from what could be gathered the comparison was altogether in his favour. There is still no denying that the Cotswolds are extraordinary sheep, the size of some of them being really "prodigious." The entries here were mostly from their own head-quarters in Gloucestershire.

In the Cheviots and Mountain Sheep, the north was unquestionably better represented than in any other of those classes in which breeders from those districts might have been expected to distinguish themselves. As special prizes, both sorts were eminently successful—the black-faced twisted-horned mountain sheep, giving a local character to the meeting, that should have been further carried out by a better display of the rough-coated Highland cattle. Nothing can be more different than these two varieties of sheep, while to the eye of the stranger, the Cheviot looks by far the more useful of the two. Still, for a hard life, there is said to be nothing like a mountain flock.

The Southdowns gave way to the Leicesters, and the show of them was consequently but a small one. They included, however, many of our best breeders—the Duke of Richmond, Lord Walsingham, Lord Chichester, Mr. Rigden, and Mr. Lugar. Mr. Jonas Webb's entries were not sent; but his sheep were becomingly represented by Mr. Rigden, who took three out of the four prizes for rams with sheep bred directly from the Babraham flock. In the ewes, Mr. Lugar had a pen of five very beautiful and nicely-matched, which deservedly held the head place in their class, being well backed by two good selections from Lord Walsingham's, though by no means of so high a caste as the first-prize pen.

The Pigs were chiefly remarkable for the immense size which some of them

MR. T. C. BORTHWICK'S PEN OF EWES (CLASS 3, NO. 636), PRIZE OF £10.

had attained, and the absurd state in which they were exhibited. The judges disqualified some from being entered in wrong classes, and others, by the aid of Professor Simonds, for being over age. Had the weather been fine, and the sun's rays anything as strong as we have had them during this month, some of the unhappy brutes could not have lived through the week. As it was, one or two had to be physicked as they lay—stand they hardly could; and if the fat pigs of the Smithfield week can be fatter than these, then perhaps we may allow that, in this particular section of the show, one is a breeder's and the other a butcher's. At present we confess we cannot mark the distinction. This department of the yard was not quite on a par with the excellence to be found in others; though of the two classes, large and small breeds, the small pigs, both of the black and of the white sorts, were much to be preferred.

A very ragged as well as a very limited Poultry show, to be commended only for a few good Dorkings, completes our synopsis of the Live Stock catalogue. The time of year is said to be against this new feature. It is very certain that, so far, the poultry exhibition has not been worthy of the Society.

From a cause very easily explained the Implement yard was not numerically so well filled as usual. We are inclined, however, to regard this as anything but a falling off. The northern part of the kingdom is not famous for agricultural implement makers. Beyond the Busbys and Crosskills of Yorkshire, there is scarcely a firm of any very high repute in this particular branch of mechanics. This will itself go far to account for a comparatively small show. But this is not all. There was a day, and not a distant one either, when the implement department of the Royal Agricultural Shows was crowded with inventions, nor half of which were half perfected. The evil arising from this was manifest enough. At present we have not, may-be, so much to labour through, but almost every piece of machinery has now an established character and a recognised use. Manufacturers are gradually declining unprofitable collision with each other, and directing their energies more to the improvement of such machinery as they find they excel in. Thus—the Ransomes, the Howards, and Busbys are known for their ploughs; the Hornsbys, Taxfords, and Clayton and Shuttleworth, as famous for their steam-engines. Crosskill has his carts and his clod-crushers, Garrett his drills and his dressers; while the two London firms, Messrs. Dray, and Burgess and Key, with Crosskill, here again, are still approaching nearer and nearer to the realisation of a reaping machine.

This was essentially the character of the Carlisle Implement Exhibition. With one grand exception there was no novelty, but everyone was found to be still further perfecting what he had already been distinguished for. This was particularly the case with the steam-engines, in the order of merit for which some very remarkable changes occurred. The saving in coal is the first-prize steam-engine is regarded as something extraordinary, and the performance created a very general sensation. It is but right to add that the award was unanimously agreed to, while the achievement must have the effect of calling forth all the energies of other firms who have so far, perhaps, been but too well satisfied with what they had attained to.

Of almost equal importance, and unquestionably of more attraction to the agriculturist himself, are the trials of the ploughs and the reaping machines. In the former of these the struggle was, as usual, between the Ransomes and the Howards, for both of which Mr. Ransome was declared successful; Howard's lighter plough receiving a high commendation. The ploughs of

MR GEORGE ROBINSON'S PEN OF SHEARLING EWES (CLASS 3, NO. 530), PRIZE OF £5.

MR. GEORGE ROBINSON'S SHEARLING RAM (CLASS 1, NO. 517), PRIZE OF £17.

MR. GEORGE ROBINSON'S SHEARLING RAM (CLASS 1, NO. 537), PRIZE OF £7.

both these firms were beautifully turned out, the competition in the light or general purpose plough very close, and the awards in this class one of the few that was at all canvassed. After but a part of experiment [illegible] further trial of the reapers has been postponed until the [illegible] have been selected to meet again [illegible] Mr. [illegible] neighbourhood of Bristol. These are Cross [illegible] and Key's McCormick, and Palmer's—a Scotch [illegible] Dray's, and Burgess and Key's have all been much improved, the two latter, particularly in the delivery and the raise, reaching to the next adjoining stripped to lie between them. Dray, from his past successes, being a favourite

ON SOME REMARKABLE EXAMPLES OF IRREGULAR GROWTH IN THE OYSTER.

As the Oyster is peculiarly circumstanced, and has the attention of thousands annually devoted to it, it will, it is hoped, not be considered out of place to *touch* upon it, which leads the precedence of all its choice fish relatives as a delicacy, a few observations on its [illegible] Its history may not be inappropriate. Without entering into any abstruse scientific details, a few words seem necessary before we advert to the points upon which we would more particularly comment; and as examples of which we have sketched a few illustrations from nature

The Oyster—or rather the molossel mollusk, or "fish," of the Oyster (*Ostrea edulis*)—is, as we know, protected by two strong shelly valves [illegible] opposite sides under one. The upper valve is flat, thinner than the other, and marked on its surface by so orably regular crescentic lines, or scales like *strie*, the results of its progressive growth. The under valve is convex externally, concave internally, [illegible] face is rugose, with bold transverse [illegible] growth, and longitudinal ridges and intervening furrows. The [illegible] is much stouter than the flat shell, and in old oysters often very thick and [illegible] from the addition of layer after layer of calcareous deposit. Both shells are lined with nacre (or mother-of-pearl, that in the convex shell being thick, and covering a bed of granular matter, resembling dense chalk. We are now alluding to ordinary oysters, and not to deformed "natives," of which both shells are almost diaphanous [illegible] The two [illegible] joined together at their apex, by means of a cartilage, or elastic ligament or spring, the tendency of which is to open the valves, but in the living oyster this expansive force is counteracted by a powerful fibrous muscle, stretching from valve to valve, and around which the [illegible] mollusk, with its mantle and delicate fringed gills (branchial membrance) is collected. When this muscle, from death, relaxes, the valves spontaneously open. But because we see (as is often the case) these valves apart, we are not therefore to conclude that the oyster is dead, for it habitually opens them to take in water, for the purpose of respiration, and with that water, the nutriment on which it subsists; quickly and strongly will it close them, if the experiment be tried but this power of closure is nothing to that exerted by the great clam (*Tridacna gigas*) upon the huge massive valves (a compressing power like that of the vice), betwixt which the arm of a man would be fractured, and not can but crushed asunder

It is by means of the large under shell that the oyster becomes affixed to rocks, to stones, to accidental objects, as broken earthenware, and to all other shells, whether of its own species, or of others, which may afford it a basis of support.

These observations are rather applicable to the oyster in its natural state than to this bivalve animal in the process [illegible] as it were, where it lies free and unattached, and where it multiplies. At the same time it would appear that the oyster, after being excluded by the parent, commences existence in an affixed condition, though it may ultimately become free. Oysters in this early stage being very minute—in fact, animalcules—are collectively termed *spat;* and with this spat, or spawn, we have seen fragments of pottery, old oyster-shells, stones, and even strips of rag multitudinously covered. The breeding season of the oyster continues from May or the beginning of June to the close of July; and during these months the mollusk is unfit for the table, and is said to be sick, or in milk If previous to the breeding season—viz., in March or April—the oyster be examined, an organ which may be termed the double ovary or egg receptacle, will be found replete with a milky fluid. Under a microscope this fluid appears to teem with minute eggs or animalcule embryos of a whitish colour. In June these embryos have attained to their proper size for exclusion, and have become invested with a tiny pellucid or filmy shell. They now pass down a tube or duct, and issue to the gill chamber, and between the folds of the mantle, where the brood lodges for some time, involved in a viscid slime, serving as food to these animalcules, the transparent shells of which are continually opening and shutting at regular intervals. From this lengthened lodgment which reminds us of the kangaroo and the kangaroo for the reception of its helpless naked young, the animalcules are gradually extruded, and by the end of July none will be found to remain

Thus cast out by myriads into the circumambient water, and spreading abroad, the shell-clad little creatures become attached or glued to whatever objects are capable of affording them a resting-place. In the first instance this attachment would seem to be affected by means of the viscid slime with which they are covered; but, as they grow and age, the husk soon begins to increase, adding to its shell by deposits of lime mixed with a glutinous secretion, a stronger and more intimate union takes place between the shell and the extraneous object, to the superficies of which it adapts itself, its figure being thereby accordingly modified, unless it becomes at an early period drowned or free.

Of this modification of shape, according to circumstances, the *Chama*, and the spiny oyster of Amorera (*Spondylus Americanus*), are examples. Shells of both are before us, brilliantly exhibiting the results of this position. Mr. Broderip (Trans. Zool. Soc., 1834), on describing several new species of Chama, says —

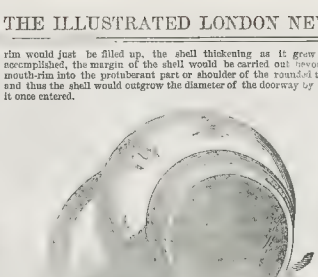
The shells are attached by their external surface to submarine bodies, such as corals, rocks, and shells; and have been observed at depths ranging from spouts near the surface to seventeen fathoms. These shells appear to be subject to every change of shape, and often of colour, that the accidents of their position may bring upon them. Their shape is usually determined by the body to which they are attached; the development of the foliated lamellæ which form their general characteristic is affected by their situation; and their colour most probably by the food, or by their greater or less exposure to light

Unlike the oyster, it is sometimes by one valve and sometimes by the opposite, that the species of *Chama* are attached. In the spiny oyster before us, the attachment, between the lower valve and the coral on which it was fixed, occupies almost the whole of the exterior surface; and this part is destitute of spines, with which the upper valve is profusely covered. In instances where the attachment is less extensive, the unattached portions of the lower valves are, in like manner, spine-clad. The adherence is effected by means of foliations or lamellæ. It is by another, to the branches of corals that these spiny oysters are affixed, and to which they accommodate themselves

The foregoing observations will lead to a clear understanding of the specimens which we give an accurate delineation.

Nos. 1 and 2 present us with an ancient Chinese teapot, destitute of the spout, but perforated with three orifices somewhat larger each than a crowquill, at the spot from which the spout originally projected. At some time or other, in this teapot, sunk to the bottom of the sea, an oyster took up its abode; it might have entered and fixed itself while in its *spat* condition, or have been washed in at a subsequent period. Be this as it may, in it the animal lived and grew, and became a prisoner; deriving its subsistence from the water which entered through the small orifices. No. 1 shows the mouth of the teapot, tightly and closely plugged up, by the *lower* or *convex* valve, which, in the position of the teapot as represented, appears uppermost, but which was probably not the case, as the vessel rolled about at the bottom of the water

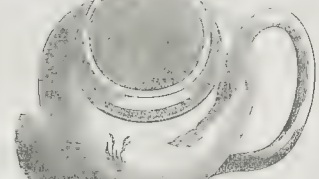
The portion of the valve seen rises abruptly from a lower flat margin extending disc-like or ring-like, within the vessel, to its swollen circumference, or nearly so; hence the impossibility of escape. This visible portion we have from an elevated mound, fitting the mouth like a bung, and closely stopping it. Its surface is transversely marked with strie, the results of growth, and with longitudinal ridges and furrows. A portion of this surface has been purposely broken away, and we there see that it consists of many layers of lime, placed one upon another, to the thickness of half an inch; the whole appearing as if the animal, clothed in a shell of thick putty or liquid plaster of Paris, had tried to force its way out by pressing outwards, and thereby converted its shell into a plug, so as to block itself in, the putty or plaster becoming hardened. We know that such was not the process: we are speaking merely of the appearance. The process was gradual, and growth and adaptation of form kept pace with each other. But as at once the oyster became introduced into its china palace, so it might have emerged, or been extricated by the action of the waves or by other accidental causes, but it was not so. Another strange thing is its situation in the vessel; why should it not have rested at the bottom of the teapot, or, supposing the vessel to be lying on its side, to have rested there, as on a bed not unaptly fitted to the natural convexity of the lower valve. We must presume that for a long period the vessel lay undisturbed with the mouth downwards, and applied to a flat surface, then the natural position of the shell would be as we find it, and the mouth-rim would just be filled up, the shell thickening as it grew; this accomplished, the margin of the shell would be carried out beyond the mouth-rim into the protuberant part or shoulder of the rounded teapot, and thus the shell would outgrow the diameter of the doorway by which it once entered.



OYSTER-SHELL IN MOUTH OF TEAPOT.

The shell does not appear to have been really attached to the rim, as shells are to stones and to each other, but merely to have fitted as a stopper, so that when its margin was broken, and forcible entrance between the valves effected, it fell from its position into the body of the vessel, and therefore requires adjustment to restore it to its former place.

No. 2 shows the oyster lying in the exterior part of the vessel, on its convex shell, with the flat valve uppermost. The convex shell exceeds the other in size, and its protuberance, or stopper, is tolerably well accommodated in the concavity of the vessel's shoulder. The flat shell is striated

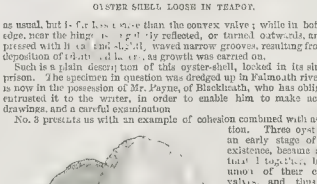


OYSTER SHELL LOOSE IN TEAPOT.

as usual, but is far less [illegible] than the convex valve; while in both, the edge, near the hinge [illegible] regularly reflected, or turned outwards, and impressed with [illegible] shell, waved narrow grooves, resulting from the deposition of [illegible] as growth was carried on.

Such is a plain description of this oyster-shell, locked in its singular prison. The specimen in question was dredged up in Falmouth river, and is now in the possession of Mr. Payne, of Blackheath, who has obligingly entrusted it to the writer, in order to enable him to make accurate drawings and a careful examination

No. 3 presents us with an example of cohesion combined with adaptation. Three oysters at an early stage of their existence, become singularly [illegible] together, by the umbo of their convex valves, and thus they grow, accumulating themselves to each other, with a certain degree of distortion a distortion which, with the ruggedness of the surface of each, and with the crop of moorn-shells (*Balani*) fixed thereon, contributes to produce a singular and not unpicturesque effect. When this specimen came to our hands, the oysters were living, and the valves were opened by the knife, for the ordinary purpose.



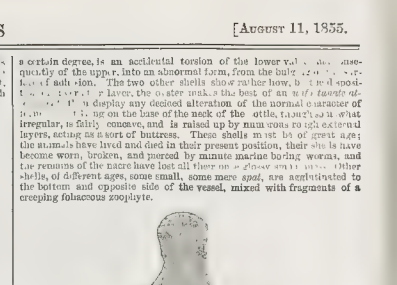
THREE LOWER OYSTER-VALVES UNITED.

It is a curious circumstance that fossil oyster-shells have been discovered, the form and aspect of which have been modified in an extraordinary manner by the object to which they had attached themselves, and which impressed them with its own characters. In the *Annals and Magazine of Natural History* for March, 1855, an account is given by Mr. Busk of the valve of an oyster-shell, resembling a combination between an oyster and a pholas (one of the rock and timber boring shells, so destructive to the labours of man). He is induced to believe that the oyster had encased the pholas, or, at least, that in its valve the pholas is enveloped On this communication Professor J. S. Henslow, in a subsequent paper (April, 1855), makes the following comments:—

I suspect that such is not the case, and that Mr. Busk has the genuine shell (one valve) of an oyster only. A specimen of a fossil oyster which I prepared for the Ipswich Museum a few weeks ago, seems to explain Mr. Busk's puzzle This shell (probably a detetal relic from the Suffolk drift) had attached itself by the lower convex valve to an ammonite, and as it grew had taken in a very complete manner the impression of its whorls But the curious result has been that the upper valve will have not in contact with the ammonite, has become partially modelled to represent it. Thus, the two valves together have the double impression of the ammonite, in intaglio below, and in cameo above. I suspect from this that Mr. Busk's oyster had grown with the lower valve (which he does not possess) attached to the outer convex surface of a pholas, and that the upper valve (the one in question) has in consequence been partially modelled after it. We must suppose in these cases that the mollusk accommodates itself to whatever curvature is impressed on the lower valve, and then the materials secreted for the upper valve will necessarily follow the contour thus given to the animal. It may be worth while to search for oysters attached to shells and rugged stones, to see whether traces more or less distinct of this sort of impress be not more frequently given to the upper valves than we have suspected.

That the impress is given more or less decidedly we can ourselves affirm; not, however, in all cases, but in many. Unfortunately we have lost the upper valves of our tri-conjunct specimen; but, in other examples which we have seen attached to stones, where a transverse bend has necessarily taken place in the lower valve, a similar bend (only convex instead of concave—i.e., cameo and intaglio) has occurred in the upper, but with less decision. Even in one of the shells before us an irregular elevation makes the lower valve almost flat; and we well remember that the upper valve of that shell was so much more than usually elevated as to appear like the under one. It strikes us that, where by a strong impress of the lower valve the mollusk partakes of that impress, the upper valve, in its degree, must be accordingly modified

In confirmation of these views we may here refer to No. 4, the representation of an old-fashioned champagne-bottle, from the wreck of the *Royal George* The vessel, which is very depressed and globosely expanded, presents us in this sketch with four oyster-shells, or lower valves—all of which are modified by the configuration of the vessel The two more immediately in front, instead of being concave internally, are convex, as are calculated by the globose figure of the body to which they adhere; so that, as the muscular impressions show, as well as the fractured nacreous surface, the oyster, instead of sinking into a bed, must have been elevated, or perched up, and consequently covered by an arched or vaulted valve, instead of by a flat valve—the order of things being reversed. Here, then, to a certain degree, is an accidental torsion of the lower valve, and consequently of the upper, into an abnormal form, from the bulge [illegible] of habitation. The two other shells show rather how, by [illegible] position [illegible] layer, the oyster makes the best of an [illegible] At all events it display any decided alteration of the normal character of [illegible] ing on the base of the neck of the bottle, [illegible] what irregular, is fairly concave, and is raised up by numerous right external layers, acting as a sort of buttress. These shells must be of great age; the animals have lived and died in their present position, their shells have become worn, broken, and pierced by minute marine boring worms, and the remains of the nacre have lost all their [illegible] glossy appearance. Other shells, of different ages, some small, some mere *spat*, are agglutinated to the bottom and opposite side of the vessel, mixed with fragments of a creeping foliaceous zoophyte.



BOTTLE INCRUSTED WITH OYSTER-SHELLS, FROM THE WRECK OF "THE ROYAL GEORGE"

The bottle is very dense, heavy, and opaque; it has lost all its transparency, if it ever had any, and the surface seems to have been acted upon by the saline water during long years of immersion Except at the top of the neck, which is rather glossy as far as the sealing-wax coating extended, and of which a small red portion is yet remaining, the bottle seems as if it were made of a dull olive black stone (basaltic lava), and when struck emits a low muffled wooden sound, resembling that given out by an iron-wood mortar. This interesting specimen is in the possession of Mr. Payne, of Blackheath, to whom we are indebted for permission to take our Sketch

The growth of the oyster, both as respects the mollusk and the shell, is tolerably rapid, especially in favourable localities: in about six months the shell, from a diameter of two or three lines, will have increased to that of a shilling; and at the end of a year it equals that of half-a-crown. But it is not until the close of the second or third year that the oyster is in perfection for the table. At this period the magnitude of the shell varies greatly, being comparatively small, and indicative in such oysters as have been transplanted from natural into artificial beds, when about six months old large and coarse, in such as have not been so treated, especially along certain parts of the coast. With regard to the natural duration of life of the oyster nothing is very decidedly ascertained. Some have estimated it at ten years; certain it is that oysters, presumed from the [illegible] density, and ruggedness of the shells, to be aged, are usually poor, [illegible] and unfit for the table

Natural beds of oysters are found not only along different parts of our own coast, but that also of the adjacent continent, and from these are derived their ample supplies for the market. The Romans, ever attentive to the luxuries of the table, build the British oysters in great esteem, and after their conquest of our island, introduced the plan of forming artificial beds. It is from such beds, adapted for fattening these molluscs, and so improving their flavour and delicacy, that modern London is supplied in such abundance. Oysters thus improved are known under the term of "natives," and sell at a much higher rate than those dredged up from the natural beds and sent at once into the market. The breeding and fattening of oysters for the London market forms a considerable branch of business. It is principally carried on in Essex and Kent; the rivers Crouch, Blackwater, and Colne being the chief localities in the former; and the channel of the Swale contiguous to Milton in the latter. The oysters of them are not, however, brought immediately to town, but are deposited for a while in beds or layings, in the adjoining creeks, where they are fed and fattened for the market. The exclusive of the oysters bred in Essex and Kent, vast numbers brought from Jersey Pool, and other places along the coast, are fattened in the beds. The export of oysters from Jersey is very considerable, amounting on an average to 208 023 bushels a year, of which a large portion comes to London.—*M'Culloch's Statistics.*

These breeding places, which are natural beds in favourable localities, being to owners, constitute property, are protected by laws, and, like farms or garden-grounds, are leased out to parties who make the breeding and fattening of oysters a business. There are, however, unprotected beds on parts of the coast where no peculiar right exists, and from which all persons may draw a supply. But as no one is especially interested in their preservation, and as they are left to the mercy of fishermen, who dredge them even during the breeding months, these beds soon cease to be productive, and are, moreover, thinned by the brood being carried away and transferred to protected beds—as much to the detriment of the one as to the increase of the other

I raden the beds in the rivers and creeks of Essex, Kent, Hampshire, and Dorsetshire, others, both in England, Wales, and Scotland, are held in high repute. Of the Scottish beds those in the Frith of Forth and Musselburgh Bay may be noticed; and, in Ireland, those of Carlingford in the county of Louth. In France the oysters of Brittany are much esteemed; as are those of Dieppe, Cancalle (a town near St. Malo), and some other places. It is from these parts of the coast that Paris chiefly derives its supply; but Holland and Germany are extensively supplied from England—large quantities being exported from the Crouch, and from Rochester, Colchester, &c

The consumption of oysters in London alone during the season is immense; and when we remember that from London barrels of these delicacies, to an enormous extent, are sent to country dealers, even in towns, independently of what they procure elsewhere, we shall fall in our endeavours to form a correct estimate of the number of packs landed from the boats at Billingsgate Market, and thence dispersed in every direction. How can such a vast supply be kept up, it may be asked, year after year—a supply always equal to the demand of the metropolis and the adjacent towns? Solely from the fact that the fertility of the oyster is such as to counterbalance loss by proportionate increase to replace the myriads removed by fresh myriads, to be succeeded in turn by others.

Here our observations close. As to the mode in which oysters are taken little need be said. They are dredged up by means of nets of a peculiar construction, drawn from [illegible] or rather oyster coats upon the beds below. The boats, purposely constructed, are from fifteen to perhaps twenty feet in length, with a mast and sail; each boat, constituting part of a little fleet, works with two dredging-nets, and the weight of a single net averages about eighteen pounds. Hence, as it is drawn slowly over the ground, its iron rim, or mouth, acts as a shovel, and scrapes the oysters into a strong firm net. This dredge is from time to time hauled up, emptied of its contents, again let down, and dragged over the bed as before. Thus, hour after hour, till the cargo is complete, is the process carried on. The oysters are next either transferred to feeding beds, or sent direct to London

How we have seen a fleet of oyster-boats at work in some of our bays or estuaries, in Welshpool Bay for example, will not need to tell that the spectacle is one of great interest. The vessels are in motion, tacking to and fro over the fishing-ground, and intersecting each other's course; their white sails now gleaming in the sun, now darkened by a strong shade, and now again suddenly catching the light. Let the surface of the water be ruffled by a freshening breeze, the sky clear, with an early morning or evening sun throwing the effects of its autumnal radiance on the outline of the distant landscape, and the picture is complete.

THE QUEEN IN PARIS.

This day, according to previous arrangement, her Majesty the Queen of Great Britain will make her triumphal entry into the city of Paris. The annals of modern times offer no event so remarkable;—few more important. The splendour of the ceremonial itself, the international courtesy and friendship of which it is the visible sign, and the influence that it cannot fail to exercise over the whole current of contemporary history, combine to exalt the visit, both in the imagination and the judgment of all who shall see or hear of it. It is not only Queen Victoria who visits Napoleon III.; it is England which visits France. It is two great nations—the greatest, the most powerful, the most civilised, and the most generous in the world—who meet by their highest representatives within the city of Paris, and testify, to friends as well as to foes, how cordial is their alliance, how well founded is their mutual esteem, and how enduring are the bonds of policy, of justice, and of friendship, that unite them now, and that shall unite them more firmly hereafter. The traditionary glories of the Field of the Cloth of Gold fade into insignificance compared with the material, no less than with the moral, splendour of the occasion. It stands, and will stand, alone in history. Though by no means the first proof of the sincerity of the Anglo-French alliance, as the glorious fields of Alma and of Inkerman, as the destruction of Bomarsund, and, later still, of Sveaborg—as all the brave blood that has been shed in the Crimea or the Baltic—and as all the hardships endured in the camp or in the trenches during the long nights of a winter before the beleaguered fortress of the Czar, or in the cheerless seclusion of the hospital, can bear abundant witness—the British Queen's presence in the French capital is the most graceful as well as the most magnificent recognition of the pre-existing fact that the British and French nations have not only learned to respect but to love each other. This mutual respect was acquired in warfare, happily at an end between them: their love grew in peace, and promises to be as durable as their national existence.

The interchange of these high courtesies has not been arbitrarily fixed. There has been nothing forced or prearranged about it. All has been spontaneous, natural, and timely. The Emperor of the French did not linger at the tardy heels of Victory to pay his visit to England. He came in the midst of the mighty struggle in which both nations are involved, to receive at the hands—and we may add, from the hearts of Englishmen—the solemn approval of the alliance, which it is his highest glory to have been the only Sovereign of France who had either the sagacity, the courage, or the good fortune to accomplish. In like manner, Queen Victoria did not wait for victory, either in the Crimea or in the Baltic, to return the visit. In the very heat of the conflict—while the guns are still booming at Sebastopol, and while, at the eleventh hour, the fire of the Allied fleets was opened against Sveaborg, and before the news arrived of the pregnant triumph achieved in the destruction of that fortress—she resolved to take advantage of the prorogation of Parliament at its ordinary period, and of her own autumnal holiday, to proceed with her illustrious Consort and children to the dominions of her friend and neighbour, in order that she might thereby testify to the French that the amity of the nations is not one of parchments and protocols—but of hearts. Victory is welcome on its own account; but France and England did not require the triumph which their arms have achieved at Sveaborg to increase their mutual good-will. Victory will not diminish their friendship; but ultimate defeat, if such a consummation be possible, which we believe it is not, will add to its intensity, and inspire them both to make new sacrifices and new exertions, and to put forth a strength to which all their past efforts—mighty as they have been—will be but as dust in the balance.

Let the world look on. To the impatient people of England and France—who think every day lost that does not provide them with a triumph of greater or lesser import—events may seem slow. Yet they are on the march, and do not lag. All battles are not fought on the battle-field. The time is ripening, and will bear its fruit at the appointed hour. Statesmen, as most people now recognise, have been timid when they ought to have been bold; they have dreaded the beginnings of war, lest its continuings should prove too stupendous for their management; they have seen little beyond the necessity of setting a limit to the encroachments of Russia, but they have either not seen, or have determined to ignore, some of the most available agencies by which the great work might be accomplished. But time is unfolding the great page before them, that they may read it as they run. And the longer the war lasts, the more obvious will it appear that those who are not with us are against us, and that, if Governments be not our allies, the people may. It is not only the Sovereigns of Europe, but the nations subject to their rule, who will behold through the press the grand spectacle which Paris is about to offer. Both of them will draw their inferences and conclusions. Both will see that the Anglo-French alliance is not a mere paction of diplomacy between an Emperor and a Queen, but a union that has deeper roots, in the judgment and the affections of two great nations; that it is founded on community of interest and sentiment; and that it will, in due season, be powerful enough to give the law to Europe. They will, perhaps, ask themselves (and it will be the better for some of these Sovereigns, if their reflections take that course) whether the holy alliance of nations may not extend itself beyond the limits of these two? and whether, as distinguished from their Governments, the

THE QUEEN'S VISIT TO PARIS.—HER MAJESTY'S APARTMENTS, PALACE OF ST. CLOUD.

Germans, the Italians, the Hungarians, and the Poles, may not have their yearnings and their longings to make part of the brotherhood of civilised States? Statesmen have, for the most part, postponed all consideration of this question for fear of its consequences; but to the popular instinct in every part of Europe the idea, present from the first, has never been lost sight of. If, at the present hour, it force itself into greater prominency, or if there be any mischief near or remote lurking underneath its involutions, it cannot be said that the rulers of France or England have gone out of their way to kindle or foment it. Austria, if she had been worthy to call herself a great Power, might have put an end to the war a twelvemonth ago, and postponed for an indefinite period the, to her, ugly question of the Nationalities. Look at it as we will, the settlement of these matters, and the consequent rearrangement of the map of Europe, is a formidable, and may be a sanguinary and protracted, task. But the guilt of Russia has extended to her accomplices. The original sin of the war, that lay with the Czar Nicholas, has been transferred in great part to the heads of the twin Governments of Austria and Prussia. They had it in their power to secure peace to Europe; but had neither the sense, nor the courage, nor the honesty to carry out their fine words by brave deeds. On them will fall the punishment sooner or later—a punishment unconsolable by the reflection that they did not deserve it. When the Nationalities move—if move they must—it is these Powers who, perhaps even more than Russia, will be the sufferers.

One word on the more personal aspect of her Majesty's visit. Hitherto she has been the only lady in her dominions who, having the means and the desire to see the beauties of the gayest and most lovely city in Europe, has been prevented by circumstances from gratifying her curiosity. The Queen, like other less exalted tourists, has now the opportunity of reading a new page in the book of life, and of adding a more splendid experience to those with which travel has already enriched her mind. That she may be alike instructed and gratified by all that she sees; that she may learn from the example of Paris some of the remediable evils of her own great but less gorgeous capital; and that in all respects her visit may hold in her private memory as brilliant a place as it seems certain to hold in the history of both nations, are the wishes that are formed for her by all classes of her people. Certain we are that not merely her own subjects, but those of her Imperial host, will cordially and even affectionately entertain them.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

DECIDEDLY, notwithstanding the *entente cordiale*, Paris is at present not only invaded, but occupied, by the English, who have nearly put to flight the inhabitants. The theatres, the restaurants, the cafés, the boulevards, the promenades, swarm with our compatriots; lodgings become unattainable; hotels—*Ah ben oui!* as the peasants say when you propose something quite beyond all expectation of achievement. "English spoken" appears conspicuously inscribed in all the shop-windows—for which, in but too many instances, English cheated might, with propriety, be substituted. Not only do the *Britishers* arrive from their native land, but all those scattered over the Continent seem to have given each other rendezvous for this period in Paris; and the railroads from every quarter daily furnish a fresh contingent. Certainly her Majesty will find herself well surrounded with her loyal subjects wherever she appears.

In all the other preparations made to do honour to the Royal guest, the Emperor has selected from the public galleries—the Louvre included—some of the finest specimens of the old masters to decorate St. Cloud during her Majesty's residence there. For the apartments of Prince Albert a collection of hunting subjects has been chosen by his Imperial Majesty. For the fête at Versailles fifteen thousand invitations have been issued.

Abd-el-Kader has demanded and obtained permission to visit Paris on the occasion of the Queen's visit.

No doubt exists of the position of the Empress. So much care is requisite to preserve her against all fatigue and excitement, that it is almost certain she will be prevented from appearing at any of the fêtes in preparation, and will only be able to see the Queen in private; perfect repose being considered essential to her well-being.

Notwithstanding the active and constant efforts that have been made to prepare for representation before the Queen the opera of the "Santa Chiara," it seems that the event is materially impossible. In general, the time requisite to prepare the *mise en scène*, &c., for a work of this sort is six months, and here but as many weeks were accorded. As might have been foreseen, therefore, the question has had to be relinquished; but the work has, by the efforts that have already been made, progressed so far, that it is expected to appear before September is far advanced.

All the Corps d'Etat are to be presented to her Majesty during her stay. So numerous have been the demands for entrance by favour to the grand representation to be given at the Opera, that the only, and certainly the fairest, means of meeting the difficulty has been found to throw open the house to the paying public. Thus all who are able and willing to purchase the enjoyment have equal chances of obtaining it; and the sum collected is to be applied to the charitable purpose of adding to the fund for the aid of the families of those of both armies who have fallen in the Crimea.

The Prince Adalbert of Bavaria is now in Paris, where he preserves a strict incognito. He is accompanied by MM. de Thann, de Kœln, and other personages. The Prince, in order to examine into all that he wishes to see, without breaking upon his privacy, has obtained a circular from the Minister of Foreign Affairs to all the Ministerial departments and the heads of the public establishments, to enable him to visit everything in detail under the conditions he desires.

Mdme. Ristori having been induced to appear in French parts in certain private *salons*, it is said that fresh efforts are being made to induce her to accept an engagement at the Théâtre Français.

The Boulevard de l'Impératrice requiring the destruction of the old *barrière* of the Bois de Boulogne, it has been decided that a new one shall be constructed at the Porte de Longchamps. The works for this are already in progress, and various improvements are to be introduced.

The *saison des eaux* is at its height, and Dieppe, Hâvre, Joinville, Etretat, Vichy, &c., are as crowded with Parisiennes Paris is with foreigners. It is curious to see how, in these places, the French mania for gaiety show, amusement, and dress, displays itself. It is generally supposed that people going to watering places have *some* desire—it may be more, it may be less—to obtain quiet, health, and retirement, to rusticate a little. Well, carry such notions to a French watering-place—you go into the streets; there you behold flounces sweeping the particularly dirty streets of dirty villages: lace shawls serving as protections against sharp sea breezes (for all the northern coast, where most of these places are, is extremely cold); fly-away bonnets, precisely like those you have just left figuring in the bois de Boulogne. In the evening sounds of music get your ears. You inquire the cause. It is the *salon*—every night, Sundays included, people go to the *salon*. They hear concerts, they play, they dance, they dress, they get up fierce feuds and bitter rivalries; and, having thus spent a month or six weeks of greater movement, and stir, and fatigue, and excitement, than in Paris, they return thither, persuaded that they have derived infinite benefit from the sea and the country, or wondering they have not done so.

KING BOMBA AND HIS SLAVES.

An inspector of police, called Gioberti, who, with a prudent horror of the name, has changed it to Ghiberti, lately ordered a bookbinder in Naples to execute for him the following device to stick in the bottom of his hat: "Costanza e Fedeltà al nostro Augusto unico Signore e Padrone Assoluto Ferdinando"—beneath the royal arms two hands clasped, two swords crossed, and a laurel. The man said that he had not the proper instruments for the completion of the work, and that, if many copies were wanted, he must entrust the execution of them to a lithographist, which was done. This person having finished one as a specimen, then, in pursuance of existing regulations, asked permission of the authorities to proceed with his work. Without such a permission not a man in Naples would dare to print or publish a word. This cautious step was, therefore, a necessary act of obedience; but it cost the ill-fated artist his liberty: he was arrested and imprisoned for several days, and afterwards reproachfully set at liberty, because "he did not understand that some things were to be done from an impulse of devotion, and not with the usual forms of permission." The persecution now going on is, however, not confined to a class—it is sufficiently general—for even one of the highest functionaries of the kingdom has been compromised lately by a mistake—no less a person than the Procurator-General of the Grand Court of Accounts, Signor Troisi, officer of the Legion of Honour. He was visiting lately a married daughter at Avellino, and before leaving thought it the right thing to call on the Intendant of the Province. Most unfortunately he had in his case a card as Peer of the Parliament of 1848, and yet more unfortunately he left this card. Astonished at the incident, the zealous Intendant sent it to the Director of Police, who laid it before the King in Council. Troisi was therefore placed in a most awkward position, and the house of his son-in-law in Avellino has been subjected to a most rigorous investigation.

Even the military, who four or five years since had completely the upper hand, are now under the police, and incidents occur every day which could not have taken place in 1848 or 1849. When that authority was exercised justly and temperately this might be considered a sign of social progress; but when, as in the present case, it is a "pestilence that walketh in darkness," its all-absorbing and tremendous power is naturally a subject of dread. The feeling which exists between the military and civil authorities may be inferred from the following incident:—An officer, having been insulted by a policeman, corrected him with the flat of his sword. Shirro laid his complaint before his superior. "Had you your dagger by your side?" was the first question. "Yes." "And why was it not used?" He was then driven from the presence with reproaches, and turned out of his situation. This took place at Caserta, and the officer was a Captain in the Engineers.

All the recent severities, playing the part as usual, both of cause and effect, may be traced, in some degree, to the discovery of two pamphlets, both supposed to have been printed in Naples one entitled "Napoli senza Legge," and the other "Cinque anni di Assassini," both of them most violent philippics against the Government. The arrests have, therefore, been very numerous, and bitter feelings have been awakened. It is said that on the 26th ult. no less than fifty-three arrests were made.

THE OVERLAND MAIL.

The latest dates from Bombay are, July 11: from Calcutta, July 4.

The North-West Provinces are destitute of any news of importance; and Calcutta and Madras are equally barren. The Governor General is still at Nilgherries. It is said that he will return to Calcutta in November, and take his departure for England at the beginning of next year, on the arrival of his successor.

There has been another engagement between the Nepaulese and Thibetans, which has again terminated in favour of the former; the loss of the latter was considerable.

The most important event which the Bombay papers announce is the commercial treaty which has just been concluded by Sir John Bowring with Siam. Thus, one by one, the nations to the eastward of Hindostan—China, Japan, Pegu, and Siam—are brought within the pale of civilised intercourse, and thrown open to commercial enterprises, which will be beneficial alike to them and to the European family.

The following paragraph in a Scinde paper is very important, if true:—

It seems to be at last settled that a force is to leave this country for Egypt next cold season. What its intimate destination may be no one appears to know. It is said that it will be composed with a due regard to the claims of each presidency, but that the Bombay troops will predominate, from the fact of their being so much nearer the scene of expected operations than those of the other presidencies. It is pretty certain that the following will be something like the programme:—One troop Bengal Horse Artillery, three troops Bombay Horse Artillery, her Majesty's 14th Light Dragoons, two regiments of Scinde Horse, one regiment Bengal Light Cavalry, two regiments of Bengal Irregular Cavalry, two regiments of Punjaub Cavalry, one regiment of Hyderabad Cavalry, four regiments of Native Bengal Infantry, three regiments of Madras Infantry, one regiment of Bombay Infantry, and two regiments of Sikh Corps.

It is further stated that an officer from each regiment is to be left behind for recruiting purposes. This duty will of course devolve on a Captain in the Regular Corps, and on the second in command of Irregulars. It is also stated that extra officers will be attached to the Irregular Corps.

AMERICA

The mail steam-ship *Canada*, which left Halifax on the 3rd inst., arrived at Liverpool on Sunday forenoon. The political news is not of much interest. General Cushing has written a letter to the *Washington Union* on the subject of the Vienna Conference, in which he is severe on France and England, and complimentary to Russia. President Pierce has removed Governor Reed, of Kansas, for maladministration.

Intelligence from Santa Fé, New Mexico, states that Colonel Fontleroy had defeated the Utah Indians and killed forty of the savages. Business was very dull and money scarce. From Utah territory a week's later advices had been received. The Mormons in the vicinity of the great Salt Lake were anticipating a famine. All the crops were being devoured by insects, and flour was very scarce at the price of six dollars per 100 lb. Governor Young, who has commenced as lecturer among the Mormons, advises his brethren to take short excursions throughout the country with their families. This Mormon has no less than ninety wives, and a corresponding family of sons and daughters.

The Rivas (Nicaragua) correspondent of the *New York Herald*, writing on the 14th July, gives a detailed account of the defeat, rout, and retreat of the Walker expeditionary band, after an exciting contest with the Government forces.

THE LIMITED LIABILITIES BILL.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Umberslade, Warwickshire, 14th August, 1855.

SIR,—It would have been far more fair if you had inserted my last letter, and allowed the public to judge of it themselves, than to comment upon it incorrectly. When did I say that *commercial men of large capital* were only competent to understand the Limited Liability Bill? What I did say was, "that as the commercial men in the House of Commons were generally men of opulence, and they only were competent to understand the matter, it appeared to be an opposition from capital." Then you say the eight or ten opponents to the measure were capitalists: you mean the speakers; but forty voted against it: and if you will examine the list of them you will find many commercial men of very long standing who are not strictly capitalists. I deny altogether that it is a Free-trade measure. The only freedom in the matter is to allow the companies freely to rob the public; and it is as completely separated with my views and opinions on the currency—which, however, I cannot find your previous notice of in your former article. As regards the results, there is no doubt that we shall all know them in time—as every one knows who held the last trump when the cards are out; but it is the duty of those who can see beyond their noses to endeavour to prevent future mischief. I am, however, glad to see that the Lords' amendments have taken the stand out of the measure, so that the mischief it would have done is so limited that the Act will be nearly a dead letter.

Yours faithfully,

G. F. MUNTZ.

SIR CHARLES EASTLAKE'S PRIZE.—The £50 prize offered by Sir Charles Eastlake, P.R.A., for the best painting by a local artist, was decided on Saturday last, by Mr. E. M. Ward, R.A., in favour of a picture by Mr. W. T. Roden, of Birmingham, called "Christ Healing the Man Sick with Palsy." There were twenty-two competitors, all of considerable standing.

SUDDEN DEATH.—A very remarkable instance of sudden death happened last Saturday morning, at Kensington. Mr. Hoof, who resided at Madeley House, was suddenly attacked with apoplexy, and expired, and the shock had such an effect upon his wife as to cause her death almost immediately afterwards. Mr. and Mrs. Hoof were in their usual good health on the previous evening.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

BEFORE SEBASTOPOL, Aug. 4, 1855.

THE Woronzoff road, passing through our camps, reaches the brow of the hills overlooking Sebastopol at a place called by our own soldiers the picket house, and by the French *la ruine des Anglais*. The latter is, perhaps, the fitter appellation for the place, which was a farmhouse, pulled down at the commencement of the siege by our engineers, who used its beams and joists for platforms. The ruin, too, is constantly occupied by English soldiers, who stop spectators and loungers from proceeding towards the trenches. The Woronzoff road follows the slope of the hills towards Sebastopol, and, passing by Gordon's Battery, is lost after a mile or a mile and half in the ground occupied by the enemy. At the extreme limit where we have been able to penetrate a small stockade of wooden stakes and a barrier of *chevaux de frise* were erected, and a picket was placed there to watch the ground. If the Russians were stopped by this obstacle, the English also were not without impediments to further progress in the direction of the town; and a Russian picket watched them at a distance of forty or fifty yards from the English. There is no lack of stories in Camp of pipes and tobacco exchanged at this point between the soldiers on each side. However this may be, the Russians conceived a desire to destroy our *chevaux de frise* on Thursday night, and they attacked it with a large force at ten o'clock. The artillery fire at that moment was slack; so that the sudden explosion of musketry at the bottom of the Woronzoff broke upon the ears of all with more than usual violence. Indeed—whether it was owing to the silence, or to a certain atmospheric phenomenon—the words of command of the enemy were distinctly audible in Gordon's Battery. On came the Russians in large numbers, with a terrific yell, and a volley which laid low some of the picket. The order, "Reserves to the front!" resounded that instant through Gordon's; and parties of the 7th and 77th bounded out with a "Hurrah" louder and deeper than that of the enemy. The Russians, in the meanwhile, had been doing their work in style; they had torn down part of the stockade, and were carrying off large numbers of our *chevaux de frise* for their own use, when they were assailed, and their further progress put an end to by a spirited charge which drove them back into their lines with some loss. On one side I hear that fourteen men were killed and wounded.

This incident is almost the only one noticeable this week, during which the operations of the siege have been much delayed by thunder storms. From Tuesday to Thursday rain poured down in heavy torrents, which swept down the tents of the soldiers, and transferred many of them into duckponds. A new battery commenced by the Naval Brigade was seriously injured by it, and generally the trenches were in a most dirty and unpleasant state. Notwithstanding all this, however, the works of the advance continue to be pushed with unremitting activity, and our engineers may be seen burrowing on the side of the hill, within 120 yards of the Redan. The work was so far advanced in that direction last night that there were small pieces of ordnance there firing into the embrasures of the great Russian work, and annoying the enemy considerably. The French were to be seen on their side cutting their way slowly on towards the Malakoff, under the fire of guns from the Redan. All that can be done, however, by the chronicler this week is to report progress.

The storm, which impeded work at the front, was useful at Balaclava in showing that the arrangements made there were as yet imperfect, and unsuited to resist the attacks of bad weather. The streets were flooded with water, which settled on the roads, banked up as they are by the erection of new quays, and working parties of muleteers made their way through mountains of mud and foul stenches to their several wharves.

The materials forming the embankments of the quays sank down, and settled into the harbour, shaking the foundations of the *piers*. In the midst of all this Sir George Maclean took possession of his new office, and every commissariat-office office was in a state of hubbub and confusion. General Filder, who left Balaclava in the *Lion* (her spacious cabins he insisted on having all to himself), appeared to all to be succeeded by a very energetic man, apparently determined to see and know everything, and the men appointed under him seemed to second his views. It was a favourable opportunity for the Duke of Newcastle, who had recently arrived in the *Ottawa*, to become practically acquainted with the state of affairs, and compare it with what it had been at the time when his Lordship held office in England. Since the return of the clear weather the Duke has proceeded to the front, where he will become practically cognisant of the wants and necessities of our men

The news from the Camp this week is very meagre. The only incident of importance was the Russian sortie, of which a good account is given by our own Correspondent, and in the following despatch from General Simpson:

War Department, August 16, 1855.

Lord Panmure has this day received a despatch, of which the following is a copy, addressed to his Lordship by General Simpson, Commanding-her Majesty's forces in the East

Before Sebastopol, August 4, 1855

My Lord,—I have the honour to acquaint your Lordship that on the night of the 2nd instant, between ten and eleven o'clock, the enemy made a sortie in considerable force by the Woronzoff-road. The strength of the enemy is computed to be about 2000. Their object was to destroy a heavy iron chevaux de frize, made across the Woronzoff-road, between our right and left attacks, and being further supported by heavy columns in rear, to take advantage of such circumstances as might present themselves.

They came on with loud cheers and bugling, and were received with great gallantry by our advanced picket, under the command of Lieutenant R. E. Carr, of the 39th Regiment, with 30 men, firing at the same time upon the enemy, to the main body, under the command of Captain Leckie, 39th Regiment.

A heavy and well-directed fire was opened upon the enemy by the party under Captain Leckie on the Woronzoff-road, as also by the guard of the trenches on the right of the fourth parallel, under the command of Captain Boyle of the 89th Regiment, and Captain Turner of the 1st Royals, which, in about ten minutes, caused the enemy to retire from an attack which, if it had not been so well met, might have been a serious affair

The enemy left four men killed, and some wounded were carried away. We had only one man slightly wounded in this affair.

I have the honour to transmit the returns of casualties from the 30th July to the 2nd August

I have the satisfaction of informing your Lordship of the return to this army of Captain Montagu, of the Royal Engineers, from being a prisoner of war. He expresses himself highly grateful for the kindness with which he was treated by the Russians during his captivity.

It is with deep regret that I have to communicate to your Lordship that Lieutenant-General Sir R. England, G.C.B., has been compelled, upon the recommendation of a Medical Board, to return to England. Sir R. England is the last of the general officers who left the United Kingdom in command of a division; he has remained at his post throughout the trying lasts of Bulgaria and the severities and hardships of the winter campaign in the Crimea; and great credit is due to this officer for the constancy and untiring zeal he has contributed in carrying out arduous and difficult duties on all occasions.

I have, &c., JAMES SIMPSON,

The Lord Panmure, &c., &c. General Commanding

Other letters from the seat of war give further particulars about the siege operations which are being carried on without intermission. The French work has now come to be within 100 or 115 yards of the enemy's position, which is as far as the engineers can go

The report of an intended Russian attack on the Tchernaya is said to have had some foundation. The first news about it was brought by a deserter from Sebastopol, and his report has been corroborated by other deserters. General Liders had made all his arrangements for the attack, but an order, which arrived at the last moment, countermanded the expedition until the arrival of General Paniutin, who is expected with the corps of observation of Bessarabia, amounting to 70,000 men (on paper).

DESTRUCTION OF SVEABORG.

After long waiting, a blow has been struck in the Gulf of Finland which will reverberate from St Petersburg to Moscow. The second naval fortress in those waters, and the third in the Russian empire, has been destroyed by the Allied fleets. May not the destruction of Sveaborg be the forerunner of the fall of Cronstadt—not this year, perhaps, but next? For although there is no deep water, as at Sveaborg, yet the success of the fleet goes far to prove that shallows need be no insurmountable obstacle to that immense flotilla of gun-boats now building for 1856.

The Allied fleet, consisting of seventeen English men-of-war, fifteen gun boats, and sixteen mortar vessels; two French men of-war, six gun-boats, and five mortar-vessels, left Nargen on the 6th of August, and anchored the same night among the islands, about five miles from Sveaborg. The shores were thronged with people, who saw the magnificent and powerful ships come onward to their destination. The particulars of the operations by which the great result was obtained have not yet been received, but it appears to have been a part of the programme that the gun-boats and mortar-vessels should open the bombardment at 2500 yards; and as some of the islands lie at that distance from the innermost verge of the forts, we presume that a portion of them, at least, took up their position behind these natural barricades, somewhat on the flank of the main defences. The citadel of the fortress is Wargön, which the Russians state was "almost entirely bombproof." It is behind this that the Swedes constructed the spacious docks and basins of the place, and it is within the fort of Wargön that the body of the founder, Marshal Ehrenswärd, is entombed. Since last year the enemy had strengthened the casemated granite batteries by earthworks at various points; but Sveaborg was already a mass of walls and guns, and little remained to be done, except to secure the flanking positions on the larger islands and the main.

The following telegraphic message from Admiral Dundas was received at the Admiralty at a late hour on Tuesday night:—

Off Sveaborg, Aug. 11.

Sveaborg was attacked by the mortars and gun-boats of the Allied squadrons on the morning of the 9th inst. The firing ceased early this morning. Heavy explosions and very destructive fires were produced in a few hours. Nearly all the principal buildings on Voegon, and many more on Swarts, including those of the arsenals and dockyards, are burnt. Few casualties have occurred, and no lives lost in the Allied fleets.

The following despatch, dated "Dantzic, August 14," was posted up at the Paris Bourse on Tuesday evening:—

ADMIRAL PENAUD TO THE MINISTER OF MARINE.

On board the *Tourville*, Aug. 11, 1855.

The bombardment of Sveaborg by the Allied squadrons has been attended with complete success. An immense conflagration, which lasted for forty-five hours, has destroyed nearly all the storehouses and magazines of the Arsenal, which is a complete ruin. Various powder-magazines and stores of projectiles blew up. The enemy has received a terrible blow, and suffers an enormous loss. Our loss is insignificant in men, and nothing whatever in matériel. The crews are in a state of enthusiasm.

Private despatches speak of the destruction of the dockyards, the town, the earthworks, the batteries; and it is very satisfactory to find that this great exploit has cost an "insignificant" loss of life, and no loss whatever of matériel.

The destruction of Sveaborg is the crowning result of our operations on the south coast of Finland. Captain Yelverton and Captain Vansittart had already destroyed all the forts between Wiborg and Helsingfors—Fredrickshamn, Kotka, and Swartholm. Although the military results of this naval campaign, terminating with a victory, are not very important, yet we must not overlook their moral and political effect upon Germany and the Scandinavian States. We have now given a strong indication that there is nothing Russian in the Gulf of Finland that our armaments cannot reach; and, even if the fall of Cronstadt should be postponed to next year, the nation will feel pretty well assured that the doom of that robber's den is now sealed.

The fortress of Sveaborg is built on granite isles, about a mile in advance of Helsingfors, the Russian capital of Finland, as Abo was formerly its Swedish capital. The isles in question, eight in number, are mere rocks, connected together by a strong fortification; and in the centre is situated the port where the Russian flotilla is placed. The largest of the rocks is that called Gustavus' Sword, on which is built the residence of the Governor, with a sort of garden, formed of mould brought from the mainland; and a vast cistern, in which is heaped together a large quantity of snow in winter, to furnish water to the garrison. Sveaborg has been called the Gibraltar of the North; it would seem, however, not with so much justice as was formerly thought, since the bombardment shows it to be anything but impregnable.

[We shall give several illustrations of the destruction of Sveaborg, from sketches taken on the spot by our Artist, Mr. Carmichael.]

THE WHITE SEA.

The *Moniteur* publishes the following report, addressed by Capt Guilbert, commanding the French frigate *Olympidre*, in the White Sea, and dated June 28th:—

I have the honour to inform you that on the 15th I arrived before the Bar of Archangel, where I effected my junction with the English division. The White Sea became this year free from ice before the end of May, and several neutral vessels, taking advantage of the open navigation, repaired to Archangel, and some even took in cargo and left the port before the arrival of the English. We thought it our duty to address the consuls, authorising the others to withdraw, either in ballast or with those portions of their cargo which they already had taken on board before the first notification of the blockade. I have reason to believe that all have now left: they are, for the most part, Norwegians, Americans, and from Bremen, the latter of considerable tonnage. All were loaded with corn and flour. The Danish ship *Chase*, in favour of which I last year granted permission to return to Archangel, during the blockade, on account of serious damage, has now left under safe conduct.

The steamers *Petrel* and *Cygne* did not rejoin me until the 23rd, having been delayed by bad weather on the voyage from Hammerfest.

THEATRE DES ZOUAVES, BEFORE SEBASTOPOL.

(From our Artist and Special Correspondent.)

There are few amusements in which soldiers encamped as ours are before Sebastopol can indulge. The officers themselves are unable to find any means of whiling away time in the intervals of labour. Some horse-racing and a few dog-hunts were tried, but these sports were necessarily abandoned at the onset of the tremendous heats which render motion in the daytime all but impossible. In every pursuit, however, where a will exists, a way may be found; and in the cool evenings our soldiers may be seen engaged in one of two or three games which are now the favourites of the Camp. One of them is a species of bowling with small cannon-balls, in which the object of the players seems to be who shall soonest fill nine small holes sunk in the earth at various points of a large square. Another game is that of skittles, in which few can indulge, because there are but few skittles in Camp. In the trenches a popular amusement is for the men to erect mimic batteries of earth against each other. Miniature mortar-beds are erected, and minié rifle-balls, from which the iron cups have been extracted, having touch-holes drilled in them, serve to keep up a fire of small stones, which batter very prettily the enemy's works. All these amusements are, however, thrown into the shade by the amateur theatricals played every Sunday evening in the camp of the Zouaves, by a few clever actors of the various regiments. After two or three of the first nights, it was noticed with regret that the theatre was closed. *Relâche*, as the French say, not *pour cause d'indisposition*, but *pour cause de mort*. The acting of the amateurs ceased for a time, their services having been required on other scenes, where they performed more heroic feats. Yet see how contagious is the pursuit of pleasure! The first batch of actors had no sooner been thus painfully deprived of all future pleasures than others, equal in ardour and almost as much so in skill, took their place, and the performances resumed their accustomed routine, diversified now and then by the volunteer song of some English *lustig*, whose voice quavered out a doleful or a merry ditty, as the case might be, unmindful of the stern rigours of Lord Grovesnor's Act, whose terrors were about that time threatening the London public. Nor were the English unrepresented in the audience; and as actors had been found amongst our ranks, so likewise were numerous auditors, who listened, with the decorous and serious attention peculiar to Britons, to the queer jokes perpetrated by the comic Zouaves.

The theatre, which is not far from the mill near Inkerman—with which I am confident all your readers are well acquainted—consists of a large canvas cloth, originally intended as a cover for forage, and elaborately marked "Subsistances Militaires." This canvas is stretched over a slight but ingenious wooden framework. A screen, on which is written "Entrée du Théâtre," is guarded by Zouaves, who keep away the press from a pretty vivandière holding in her hand a hat into which the audience drop their contributions as they enter. No fixed price is paid for admission, but each gives of his wealth what he can; knowing that, however little his gift may be, it is acceptable to the poor prisoners made by the Russians before Sebastopol. The passage into this theatre, as I entered it last Sunday, in a dark moonless night, was very striking.—The audience had already taken their seats upon earthen elevations or ridges left by the pick which had scooped out the parallel ditches in which their feet rested. The whole of the area on which these seats were formed was sunk below the surrounding plain, and a wall of stones inclosed the whole, on which crowds of soldiers, too poor and too numerous to enter, were assembled. A few broad paper lanterns, stuck on the ends of poles, lighted up in dusky outlines the forms of the spectators, whilst the footlights threw out in bold relief the forms of the Zouaves who played in the orchestra. The drop, a matchless piece of scene-painting, represented a gigantic eagle with outspread wings, in a space closed in by curtains of the colour and appearance of camp blankets; on his left a melancholy and nude lady was seated on a bundle of sticks, playing on a lyre; whilst on the right sat a pensive Roman warrior, like Marius, turning his back upon the ruins of Sebastopol.

A grotesque *chansonette* commenced the entertainment, and by the time the curtain rose upon "Le Bal des Sauvages"—a play, of which the first act bore the title of "La Boutique du Père Blavet"—the whole of the inner space forming the pit was filled with officers of all nations, commissioned and non commissioned, most of them smoking short clay pipes, lighted by extracting the candles from the paper lanterns about them. Jokes of a somewhat gross tendency were flying about the pit as the audience contemplated the buxom charms of *Mademoiselle Camomille*, a sergeant of Zouaves, and the sprightly daughter of an herboriste. The lear intended for bewitching smile, the voice toned down to a would-be feminine key, were inexhaustible subjects of laughter and merriment; whilst the somewhat coarse and open allusions of the actors were met with demonstrations of unfeigned gratification and pleasure. Besides these, however, there were not a few allusions to present circumstances; and the "gag" of some of the performers was almost as sprightly as that of Wright, at the Adelphi, when he indulges in sly jokes which diligent readers seek for in vain in the published play. Roars of laughter greeted the bamboozled father of the virtuous *Camomille* when, discovering that lady at supper with three *paillasses*, after a masked ball, he rushes angle-handed on the ravishers, crying out—"Ah! vous voulez faire passer le Danube à ma fille. Eh bien: vous allons commencer notre petite guerre d'Orient." An amusing by-play was that of a moustachioed German perpetually thrusting in his ear and always backing out at critical moments.

ZOUAVE PLAY-BILL.

The acting was very good, and the pleasure it afforded was enhanced by the details of a background, consisting of brilliant flashes and sharp explosions, which told us that whilst we were enjoying ourselves in one place, the duty of our armies was not neglected, and the enemy was still pressing us as of old. The audience were one and all too much accustomed to these sounds to pay much attention to them; but, just as the sallies of the actors caused most merriment, our ears were greeted with such a terrific outburst of flashes and explosions that the performance suddenly came to a stand-still. The curtain dropped as the audience almost by enchantment disappeared. The soldiers glided away like ghosts from the sides of the outer wall of the theatre. Officers, emerging from the pit, sought their horses, which impatient men were itching to let go, and all was momentary tumult and confusion. The roar of artillery, the crash of shells of all dimensions, the din of human voices, and a supernatural light which seemed to start into the air at the nearest point, and run like lightning from end to end of the hostile lines, greeted us as we made our way towards Cathcart's-hill, where the best view was known to exist. From this point were visible, in greater detail, the mass and variety on both sides. Human forms it was impossible to distinguish, but the dark sky was alive with fiery balls, whilst the broad flash of the 13-inch, the scintillation of exploding shells, and the sharp-pointed flame of rifles, proclaimed a busy and numerous force on both sides. It did not seem, however, that the chief firing was outside the works of either party. So close are the hostile positions that they blaze at each other from their several fortifications, and death was dealt round more by explosive projectiles than by direct fire. The cause of this terrific outburst was a large French working party exposed to view on the sides of the Malakoff. At first it was annoyed by bullets and small shells, five or six of which, fired from a large mortar, are ignited together, and form what is called a *bouquet*; then the works of the Mamelon took up their part, and gradually the whole line was engaged in the murderous fire I have described. The effect was to stop the works for the night; the trenches in the advance being untenable till two in the morning, when the firing ceased. You may judge from this to what interruptions our engineers are now subject, and how long and difficult it is to build strong works in such dangerous proximity to the enemy.

I enclose you the lithographed play-bill issued by the Zouaves on this occasion, which will no doubt amuse your readers.

TERRIFIC EXPLOSION AT NAPLES.

(From our own Correspondent.)

The whole of the Quartigie del Mercato, in Naples, on the 13th ult., was alarmed by a fearful accident, of which the accompanying representation conveys as accurate an idea as recollection will enable the artist to furnish. It was shortly before mid-day when a terrible explosion was heard to proceed from the interior of Castello Nuovo, from its architecture and history one of the most interesting buildings in the capital. The alarm was communicated to the whole neighbourhood. Every one in the streets fled. In the Largo del Castello, La Posta, Marina, the Forio, the shops

"THEATRE DES ZOUAVES," IN THE FRENCH CAMP, BEFORE SEBASTOPOL.—(SEE PRECEDING PAGE.)

were immediately closed, as though the disorders of 1848 were about to be renewed. The fact is that clouds of smoke were seen rising up from the interior of the Castle, and floating over the adjacent streets, whilst with them were intermixed hats, caps, and clothes, stones and timber. The noise of the explosion was as that of thunder. Some thought that an earthquake had taken place, others that Vesuvius had broken out, and many that it was the first blow of a revolution. The accident took place in the rooms used by the Government for the manufacture of percussion-caps; but how it is impossible to ascertain, as most of those who were spectators are either dead or not expected to live; and those who are aware of any antecedent circumstances which threatened danger dare not speak of them. It is a wonder and a mercy that the accident was so limited in its extent, as in the vaults of the Castle an immense quantity of English powder was kept, which had been purchased by the Sicilians in England during the last revolution. As it was, that part of the Castle buildings was blown into the air, and a considerable number of lives lost—various statements give the number from fourteen to thirty; whilst very many are in the hospital in a hopeless state. On seeing the workmen employed about the Castle rushing by hundreds out of the gates, the sentinels closed them, ran to arms, and pointed the cannon, as in preparation for the worst. The ground for a considerable space around the neighbourhood was covered with percussion-caps, whilst children have been annoying the sober with the eternal popping of damaged fireworks which were manufactured in the Castle for Royal fêtes, and which were sold for a small sum. The King came over the following morning; and, immediately visiting the spot, with his usual activity urged on the excavations for the relief of the sufferers. Some were found without their heads, others without arms or legs. Some were so blackened as to be beyond power of recognition, and many were fractured and destroyed by the falling of timber, stones, and furniture of the upper apartments. One young man was found, half dead, two days after the accident, jammed between two planks: his arms were free, but his body was immovable. For some time they supported him by passing a sponge to his mouth dipped in water attached to the end of a long cane. After some time he was drawn out and taken to the hospital. It appears that some time since his Majesty pointed out some defects in the machinery, as he did in the large granary before it fell four or five years ago; in the dry dock also; and more recently in a building called the Maddaloni—in all which cases, through inattention to the Royal commands, accidents took place, involving the loss of considerable amount of life and property.

EXPLOSION AT CASTEL NUOVO, NAPLES.

CAPTAIN DISNEY'S WAR PROJECTILE EXPERIMENTS, IN THE GROUNDS OF MULGRAVE HOUSE, FULHAM.

CAPTAIN DISNEY'S WAR PROJECTILE.

A number of experiments have been made during the last few weeks in the neighbourhood of Chelsea Hospital, and, more recently, at Lord Ranelagh's residence, Fulham, for the purpose of testing the merits of a new war projectile, the invention of Captain Disney. From the accounts given it appears that the new destructive missile is a reproduction of the celebrated Greek fire, by which materials the most difficult to ignite under ordinary circumstances are readily consumed. It is said to be admirably adapted for use as a hand-grenade, as well as in other modes; and Captain Disney states that the chemical preparation which he employs, if the risk of carrying it out ready made is objected to, can be easily manufactured at the seat of war. Captain Disney also exhibited at Ranelagh a shell for causing temporary blindness among troops brought within its influence. Of course, the company present, which included the Duke of Wellington and a number of officers, took the precaution of keeping at a safe distance from so formidable a projectile at the moment of its explosion, although the inventor stated that he had prepared the charge in a very mild form, so as to avoid any awkward consequence to the company assembled. After the fumes of the explosion had somewhat dispersed, Lord Ranelagh passed through them without any injury to his optics. Other gentlemen who went up to the shell after it had exploded experienced some irritation in the nostrils, which some of them compared to the effects produced by Lundy Foot snuff.

TONG CASTLE, SALOP.

NOOKS AND CORNERS OF OLD ENGLAND.

TONG CASTLE, SALOP.

Although the present edifice of Tong Castle belongs but by name, and the character of its architecture, to "Salopia antiqua" (the date of its erection being scarcely a century since), the site is one of great antiquarian interest. It lies in the district occupied by the Saxon chiefs, which they wrested from the inland Britons after nearly a century and a half of contests. Tradition points to the original castle of Tong as the residence of Hengist the Saxon; and, after having been owned and occupied by the Pembridges, Vernons, Pierrepoints, and other families, the greater part was pulled down in 1764, when the present castle was erected on the site. It is a stately pile, of mixed Gothic and Moorish architecture, with an abundance of turrets, pinnacles, and domes, and is wholly built of stone. The castle stands in a rich and

REVIEW OF THE FOREIGN LEGION BY HER MAJESTY, AT SHORNCLIFFE.—(SEE NEXT PAGE.

well-timbered park, in the finest portion of the estate, a domain of some 2936 acres, in the finest part of the county of Salop. The pleasure-grounds and shrubberies, lakes, and cascades, contribute to the picturesque beauty of the estate, which is of great seclusion and beauty, and lies about twenty-one miles south-east of Shrewsbury, and ten miles east from Wolverhampton and Bridgnorth. Within the ring of the park, and about 600 yards from the castle, at the village of Tong, is an ancient collegiate church, formerly belonging to the Abbey of Shrewsbury, purchased by Isabel, widow of Sir Fulke Pembridge, in the early part of the fifteenth century, who rebuilt it, and made it a collegiate for a warden, four fellows, two clerks and choristers; to which was added an hospital for thirteen poor persons. The church has a peal of six bells, besides "the Great Bell of Tong," and it is rich in monuments to the Pembrokes, and Skeffingtons, the Vernons, the Stanleys, Herrenpoints, Willoughbys, and other distinguished families. In the church, also, is "the Golden Chapel," erected by Sir Henry Vernon, in 1515, and now used as the family pew of Tong Castle. Near the church is a group of picturesque ruins, the remains of the old hospital, already mentioned. The entire property will be submitted for sale early in the ensuing month.

REVIEW OF THE FOREIGN LEGION BY HER MAJESTY.

THE troops recently enlisted into the English service in Germany and Switzerland, and who have for some time past been encamped on Shorncliffe Downs, near Folkestone, were reviewed on Thursday week by her Majesty, who, for this purpose, besides travelling a considerable distance by sea and land carriage, made a journey of upwards of 200 miles by railway. The inhabitants of Folkestone, duly sensible of the honour conferred upon them by her Majesty's visit, devoted their best energies for several days previous to beautifying the old town, and making as loyal an exhibition as the brevity of the preparations would allow. The fleet of the South-Eastern Railway Company stationed in the harbour were gaily dressed out, and the stores of the company were freely lent to the inhabitants to aid in the display. The Pavilion Hotel was decorated from end to end with handsome flags, and at the turn into the Undercliff road a triumphal arch of some pretensions, composed of evergreens, spanned the thoroughfare. The quiet little village of Sandgate, which has been lately roused into most unusual action by the Camp in its vicinity, was not behindhand in offering a welcome to the Sovereign. Triumphal arches spanned its only street, and every house displayed the loyalty of its owner by exhibiting flags or evergreens.

Her Majesty and the Prince Consort, who had left Osborne at eight o'clock, arrived at the Folkestone Harbour Station about half-past twelve. The journey from Portsmouth had been performed over the Brighton and South Coast Railway as far as Hastings, and thence, viâ Ashford, over the South-Eastern Railway, to Folkestone. The Queen, who was met at the confines of the Camp by the officers of the Staff, drove first to the flag-staff, where her Majesty was received by a general salute, the bands of each regiment playing the National Anthem. After remaining for a few moments, her Majesty, accompanied by the Duke of Cambridge, Viscount Hardinge, and the members of the Staff, drove along the whole line, minutely inspecting each regiment as she passed. Returning to the flag-staff, her Majesty and the Prince alighted from the Royal carriage, while the troops marched past. The first regiment to pass the saluting-point was the German Light Infantry, which was in turn followed by the Rifle Battalion—the Swiss bringing up the rear

After all the troops had marched past, her Majesty desired that the commanding officers of brigades and regiments should be presented to her, a ceremony which was duly gone through to the evident satisfaction of the whole of the Staff. Her Majesty conversed in German with several of the officers, and complimented them very graciously on the efficient state of their regiments

Her Majesty afterwards proceeded to the officers' mess-room, where an elegant luncheon had been provided by Mr. Breach, the famous host of the Pavilion Hotel. Her Majesty honoured Mr. Breach by inspecting his kitchen arrangements, and subsequently partook of luncheon; the principal officers of the Staff being invited to sit at the Royal table. The Queen arrived at Folkestone at half past three o'clock, and, re-entering the South-Eastern train, her journey over that line as far as Hastings, under conduct of Captain Barlow, General Manager. The South Coast Company took her Majesty forward to Portsmouth, where the Royal party arrived safely at half-past six o'clock.

The following general order has been issued from the Horse Guards, dated August 10:

The General Commanding-in-Chief has received the Queen's commands to express to Colonel Hans Sulzberger, and the officers and men of the British Swiss Legion, the high satisfaction with which her Majesty, in passing down their line yesterday, witnessed the soldier like appearance of this trained body of men, ready for any service. The characteristic courage and fidelity of Swiss soldiers will ensure for the Legion, on joining her Majesty's forces in the East, a cordial welcome from their comrades of the British Army to which brave men are ever entitled. The general order will be communicated to the Swiss Legion by Colonel Ainlock, Inspector-General.

OXFORD, WORCESTER, AND WOLVERHAMPTON RAILWAY.

OPENING OF THE CHIPPING NORTON BRANCH.

THE opening of this short branch, four miles and a half in length, took place August 10th. The principle on which it has been constructed, and the small cost per mile, merit special notice. A dinner was given at the Town-hall in celebration of the completion. About 120 persons sat down at table; the Mayor presiding. The cost of the line, which does not present any engineering difficulties, has been £26,000, including stations. One half of this amount has been subscribed by the inhabitants of Chipping Norton, and the other by Sir Morton Peto, Bart., who contracted the line. The feeling of the town was an enthusiastic one on the occasion The whole of the shops were closed; flags were pendant from various parts of the town; the church bells rang a merry peal; a very good brass band was stationed at the Town hall, and occasionally played some inspiriting march or national melody, and, altogether, the example set by this "independent" little place is one that not only does it infinite credit, but will, we trust, be followed by hundreds of towns situated within short distances from through lines of railway.

At the dinner the Mayor (Mr. Bliss) was supported by Sir Morton Peto, Mr. Parson (the Deputy-Chairman of the Oxford, Worcester, and Wolverhampton Railway), Mr. Fowler (the engineer of that line), Mr. Lewis, Mr. Busby, and Mr. Johnson (directors), Mr. Wilkins (the Deputy Mayor), the Mayors of Banbury and Stratford, &c. A very excellent dinner having been disposed of, a considerable number of ladies, including Lady Peto and the Lady Mayoress, entered the room, and were escorted to some elegantly fitted-up and raised seats. The usual loyal toasts were proposed and enthusiastically responded to. "The Army and Navy" followed, as well as that of "The County Members."

Mr. Wilkins, the Deputy Mayor, in an appropriate address, presented a very handsome silver salver and bread-basket to the Mayor, as a testimonial from the (the Mayor's) fellow-townsmen, neighbours, and friends, of their estimation of his private and public character, and particularly with respect to the invaluable services he had rendered in carrying the Chipping Norton branch line to a successful completion.

The Mayor, having returned thanks, proposed "The Health of the Directors of the Oxford, Worcester, and Wolverhampton Railway, and Success to the Chipping Norton Branch" (Cheers); and, with the toast he would connect the name of Mr. John Parson, the deputy chairman (Cheers). Mr. Parson had rendered essential service to the people of Chipping Norton in his endeavours to induce the promoters of the branch, and was therefore specially entitled to their thanks.

Sir Morton Peto, whose health had been given with all the honours, took the opportunity, in returning thanks, of giving a short narrative of the circumstances attending his connection with the Chipping Norton line, which, as he observed, was a pattern which the promoters of our branch lines ought to follow. The days were past when landowners could obtain exorbitante prices from railways for land (Hear, hear); the days were gone when the promoters of lines were content to buy off the opposition of landholders by giving to them a amount or accommodation works they required, with also a most heavy price for their land. He was a warm admirer of the late Sir Robert Peel in many respects, but that distinguished man never did or wrong in lending his influence to attend to Lord Dalhousie's Conservative principle in the extension of the railway system of this country (Loud cheers). If this country had spent £200,000,000 in railways that might have been constructed for £100,000,000, it was scarcely necessary for him to say that £100,000,000 had been lost to the country. Branch lines in this country were considered what were termed "small fry," and not "codlers," to main lines. Why? Because they had been projected to protect traffic or to annoy a neighbour, rather than with a view of developing the traffic of the districts through which they were constructed. And he might here express his conviction that if Mr. Langston and the landowners in this locality had not acted with the most liberal spirit, the probability was that instead of £90 0, the line would have cost from £25,000 to £26,000 per mile (Hear, hear) He thought that the principle on which this line had been constructed was one calculated to benefit the country through which branch lines passed; that it would give profit to the promoters and to the parent lines with which they were connected, and that such principle of construction would very important and productive the great good to our common country (Loud cheers).

CALENDAR FOR THE WEEK.

SUNDAY, August 19.—11th Sunday after Trinity.
MONDAY, 20.—Robert Bloomfield died, 1823.
TUESDAY, 21.—Blackcock shooting begins
WEDNESDAY, 22.—Warren Hastings died, 1818.
THURSDAY, 23.—American War commenced, 1775.
FRIDAY, 24.—St. Bartholomew.
SATURDAY, 25.—David Hume died, 1776. Herschel died, 1822.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING AUGUST 11, 1855.

LIST OF ENGRAVINGS

IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

Her Majesty's Visit to Paris:
The New Steam-yacht "Victoria and Albert" . . page 224
Her Majesty's Apartments, Palace of St. Cloud . 194
The Orangery at St. Cloud 208
The Fountains of St. Cloud 209
The Gardens of the Tuileries . 213
Scene on the Boulevards des Italiens 217
Views in the Baltic
Admiral Dundas Surveying the South Entrance to Cronstadt 221
Plan of the Trip to the Tolbookin Lighthouses 221
The "Belleisle" Hospital-ship Taking Provisions on Board . 220
Théâtre des Zouaves, in the French Camp, before Sebastopol 197
Zouave Playbill 195
Napoleon Relics: Hat and Handkerchief of the Emperor Napoleon I., in the Louvre at Paris 205
Sèvres Plate, painted with a Scene from the Battle of Marengo, for the Emperor Napoleon I. 205
Tomb of Napoleon II., in the Imperial Vault, in the Church of the Capuchins at Vienna 205
Laying the Guns of a Battery without Exposing the Men to the Shot of the Enemy 210
Fountain of the Sultan Valide at Scutari 212
Portrait of the late Lieut.-Colonel Vico 212
Lady Redcliffe Visiting the Wounded in the Hospital at Scutari 212
Donkey Race in Alexandria 213
Street in Alexandria by Night 214
Explosion at Castel Nuovo, Naples 195
Captain Disney's War-projectile Experiments, in the Grounds of Mulgrave-house, Fulham 197
Review of the Foreign Legion, by her Majesty, at Shorncliffe 197
Meeting of Henry VIII. and Francis I., at Ardres—The Field of the Cloth of Gold 200-201
The Royal Thames Regatta Prize Plate 204
Fete of the Worcester Archery Society, at Sheridge Court, near Worcester 224
Waterspout at Oxford (3 cuts) 222

THE QUEEN'S VISIT TO PARIS.

THE ILLUSTRATED LONDON NEWS

for August 25, September 1, and following week, will contain

MAGNIFICENT ENGRAVINGS of every EVENT of INTEREST connected with

HER MAJESTY'S VISIT

TO THE

EMPEROR OF THE FRENCH.

The Public Reception, Ceremonies, and Fêtes, will be faithfully illustrated by Artists of both nations, and no pains or expense will be spared in recording this great event. The SERIES of ILLUSTRATIONS will include—

The Arrival and Reception of her Majesty at Boulogne.
Arrival of the Queen at the Palace of St. Cloud.
Grand Staircase at St. Cloud.
Performance in the Palace Theatre.
The Royal Salon, State Bed, and Bureau.
Arrival of her Majesty at the Tuileries.
View of Paris, and Garden Front of the Tuileries.
New Portraits of the Emperor and Empress of the French, and of her Majesty and Prince Albert.
The Imperial Cent Gardes.
The Imperial Guides.
Grand Reception in the Streets of Paris. Procession on the Boulevards.
Grand Review in the Champ de Mars.
The Imperial and Royal Cortège passing the Madeleine.
Visit to the Universal Exhibition.
Visit to the Beaux Arts, with Specimens of the Pictures.
Portraits of Prince Napoleon, M. de Romville, and the Count de Morny.
Concert of the Conservatoire de Musique.
Reception of the Corps Diplomatique.
Visit to the Grand Opera.
Visit to the Picture Galleries of the Louvre.
Grand Ball at the Hôtel de Ville
Visit to to the Opéra Comique.
Drive in the Forest of St. Germains
Departure of her Majesty for England, &c., &c.

Persons wishing to subscribe to this series must order immediately, as the demand is sure to exceed the supply. Subscribers giving their orders to the various newsmen will be supplied in rotation as received.

ILLUSTRATED LONDON NEWS OFFICE, 198, Strand.

BOMBARDMENT OF SVEABORG. Our Artist, Mr. J. W. Carmichael, who was present during the above action, will forward us Sketches of the same, which we shall engrave as early as practicable.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 18, 1855.

AS we announced last week, upon the faith of our private letters from the Baltic, the British and French fleets have attacked the fortress of Sveaborg; and, as we ventured to predict—on the faith of the spirit, zeal, and gallantry of the officers and men of the united Navies—the attack was signally successful. In far less time than could have been reasonably anticipated the fortress was destroyed; and, what adds to the splendour of the victory, without detracting from its value in any respect, it appears to have been unattended with the loss of a single life to the assailants. Sveaborg no longer exists as a fortress; and Helsingfors stands helpless at our mercy. Thus the achievement which last year appeared to Sir Charles Napier too formidable to attempt with the ships and the men at his disposal has this year proved of easy accomplishment to Admiral Dundas and his brave companions. It is possible that Sir Charles Napier was right in 1854, and that he had for his purpose neither proper ships nor properly-disciplined crews. If this be the correct state of the case, it shows that the interval has been well employed, and that no time has been lost in the Baltic since the deficiency was made manifest. But, if Sir Charles Napier were wrong in his estimate of the means at his disposal, what account shall he render to his country or his conscience? Success in 1854 would not only have been more glorious than it is in 1855, but would have been accompanied by the additional loss to the Russians of eight ships of the line, which, pending Sir Charles Napier's inactivity, succeeded in making their escape to the securer fortress of Cronstadt. On this point, however, even if Sir Charles were to blame, which we by no means allege, it would be ungenerous at this moment to dwell. It is sufficient for the country to know that opportune victory has rewarded the energy and skill of its champions. The destruction of Bomarsund was no mean blow to the power of Russia; that of Sveaborg is greater still; that of Cronstadt, for which the public appetite is whetted by the last news from the Baltic, will be greatest of all. Not even the overthrow of Sebastopol itself would transcend it in importance; for, with Cronstadt annihilated, there would be nothing to stop the Allies from taking possession of St. Petersburg. This is perhaps too much to hope for, during the short interval that yet remains before the commencement of the Baltic winter; but in every case the country will be satisfied with what has been done, especially on reflection that not only by battle, but by blockade, the enemy is beaten and humiliated; and that, as a naval and maritime power, Russia is annihilated by the mere presence of our squadrons in the Baltic and the Black Sea, and that neither her hostile fleets nor her peaceful merchant-vessels dare to show themselves in any sea or ocean of the globe, with the sole exception of the landlocked Caspian.

From Sebastopol there is nothing new; but it is evident that a decisive movement, first against the Malakoff, and next against the town, cannot be far distant. It was not by accident, but by design, that the last great attack was made on the anniversary of the Battle of Waterloo. Neither will it be by accident if the next attack should happen to be made on the 15th of this month. That day is the fête of Napoleon—a day which the French Army would be but too happy to render more memorable than it is by a deed of glory, and in which the British, we are equally confident, would be quite as happy to aid them.

PARLIAMENT has once more separated, leaving us, this time, in the midst of a double crisis of the utmost interest. From the Baltic and from the Black Sea tidings of bloodshed and of triumph are hourly expected, but Ministers know full well the impossibility of detaining our representatives, at such a period of the year, to receive any news, however important or disastrous; and the gentlemen of England are released. Except as a matter of good taste, not to say dignity, there is not the least objection to the prorogation at this time. Parliament can render no aid or counsel, let the expected tidings be what they may; and the coincidence is only worth remark because common minds may, in their ignorance, consider that the instant selected by England for striking two tremendous blows, with each arm of her force, was scarcely that at which her senators should hurry away to their amusements.

The work of legislation has been but a small part of the occupation of our legislators since Parliament reassembled in December, 1854. Somewhere about 120 Acts have been added to the Statute-book, but very few of these have a public, and still fewer a general, interest. The Limited Liabilities Act, against which capitalists in one House and retired lawyers in another, gave earnest but impotent battle, is the most important measure of the Session, and the only one the value of which will be traceable on a large scale. The opposition to it has, during its passage through the Houses, been based upon certain plausible but transparent grounds; and as the measure, though valuable, will require amendment, it may not be unobstructive, hereafter, to watch the change in the tactics of its selfish opponents, when their theory of "danger to the humble speculator," and to the "moral tone of commercial relations," shall have been exploded. The Criminal Proceedings Act for expediting justice in the case of felonies excited the animosity of some of the lawyers; and we regret to see that Mr. Justice Platt, in addressing his charge at Liverpool to the Grand Jury, thought it worth while to utter sonorous absurdity as to "our glorious laws not allowing a fellow-being to be convicted unless the opinions of two classes of the community were given upon his innocence or guilt." Is it possible that Judges cannot see that our glorious laws, by the aid of our contaminating system of imprisonment, increase criminality; and that, instead of vaunting their glory, an enlightened administrator of the laws would best serve his country by pointing out their defects? In addition to these measures, there has been one for facilitating proceedings on bills of exchange, and one for abolishing, formally, a mass of restrictions on freedom of religious worship—restrictions long since abrogated practically, but which it was well to expunge from our statutes. It should be added that the fanaticism of certain ultra-Sabbatarians has reacted during this Session in a way they little expected; for their introduction of a new restrictive measure, tending to interfere with the domestic comforts and right of free opinion of the humbler classes, produced an excitement which not only swept away the proposed infliction, but induced Parliament to repair, rather summarily, the blunder of last Session in regard to Sunday refreshment

The metropolis—the City, for the present, excepted—will be a great gainer by the Act for its local management, which takes the general care of the draining, lighting, paving, and cleansing of London out of the hands of the parochial authorities, and vests it in municipal officers, chosen by the people. The working of this plan of reform will probably decide the fate of the City Corporation, respited until next year. With this Act one of the metropolitan representatives (Sir Benjamin Hall) has to be credited; and it is satisfactory to record this, because, taken as a body, the metropolitan members are by no means regarded as up to the standard which should characterise men selected by so remarkable a constituency. And, while a species of constitution has thus been granted to London, the colonies of Victoria and of New South Wales have been similarly favoured, though the prognostications of those who are well acquainted with each place do not augur very successful results from the experiments.

Upon the subject of the Newspaper Stamp Act we have had so many opportunities of remarking, that it is not necessary for us to do more, here, than to record it as one of the achievements of the Session 1854-5. With this item, the list of public Acts of interest terminates. It is not either pleasant or profitable to recollect that we ought to have had Educational measures, Ecclesiastical Courts reform, a settlement of the Church-rate question, a Health bill, and a Marriage Law reform, to say nothing of the Irish Landlord and Tenant question, and that on all these subjects abortive attempts at legislation have been made, and finally abandoned.

So much for the Parliament, regarded as law-makers, whose function it will be probably considered has been very inadequately discharged this Session. We may next look at its proceedings in

another light. When the Session began the Coalition Ministry was in office, with Lord Palmerston in a subordinate position. It ends with nearly all the prominent members of that Ministry driven from office, and with Lord Palmerston at the head of affairs. Of the various fights and treasons which have marked the history of the Ministerial changes, enough and to spare has been said, as they went on. Some names which stood high have been irretrievably blackened during this time. Lord John Russell, untrue to his colleagues in the early year, and untrue to his country at a later date, has sullied, past redress, a name which had been associated with worthy achievement in other days; and Mr. Gladstone—fanatic in theory, and revengeful in practice—has chosen to be a valuable friend of Russia in order to be a harmless enemy of Palmerston. Sir James Graham, too, has performed the difficult feat of diminishing the remnant of faith which the nation had in him; and, by his mischievously-intended flight from office, by his Russian advocacy, and by his unbesitating endeavour to crush Mr. Layard by a charge at once unchivalrous and cruel, has filled up the measure of his disgrace. Of the Duke of Newcastle we need say little: his exit from office was well made, and it has only just come out that a little bit of pathos which intended to imply that his paternal as well as his Ministerial heart was in the ranks of the ruined army was only a little oratorical artifice. Mr. Sidney Herbert and Mr. Cardwell may be remitted to the oblivion to which their late chief, the Earl of Aberdeen, has been expeditiously consigned. Parliament, listening, applauding, jeering, voting, shouting, has been active enough throughout all these changes, and can hardly be accused of having meted out aught but substantial justice.

Finally, Parliament has had to deal with the grand question of the day—the War; and whatever shortcomings and misconduct may be charged against Government as a whole, or against individual statesmen, it cannot be said that the Parliament of England has been slack in its duty as regards a vigorous prosecution of the war. It has, throughout, spoken the sentiments of the people; it has been ready with its assurances of support to the Crown; it has not only refused no demand of Ministers, but, while voting with alacrity every supply required, there have been expressions of regret that even more was not to be done. Although the knot of peacemongers contains men who were prime favourites as orators—two of them confessedly the best speakers in the House—all their eloquence and talent exerted on the wrong side had no weight with the Commons, and the Minister has been constantly urged to renewed efforts against the foe of liberty and humanity. The war has disturbed the proceedings in Parliament as it has disturbed society everywhere, and many of the disgraces and failures of the year are due to this perturbing element. But, as regards the earnest and determined prosecution of the great struggle, Parliament has done its duty, and, on the whole, if it breaks up at rather a strange time, and with an apparent carelessness of the great events of the hour, it may be excused in consideration of the unfaltering aid it has given to the Government and to the Crown whenever its assistance was asked or its presence could be useful.

OBITUARY OF EMINENT PERSONS.

THE DUKE OF SOMERSET.

Edward Adolphus St Maur, Kt., eleventh Duke of Somerset, and Baron Seymour of Hache, in the Peerage of England, and a Baronet, was the eldest son of Webb, the seventh Duke, by his wife, Anne Maria, only daughter and heir of John Bonnell, Esq., of Stanton Harcourt, in the county of Oxford. He was born the 24th Feb., 1775. He married twice: first, the 24th June, 1801 the Lady Charlotte Herbert, daughter of the late and sister of the present Earl of Pembroke, which lady died on the 16th of June, 1807; and secondly, the 28th July, 1808, Margaret, eldest daughter of the late Sir Archibald Stewart, Bart. By his first marriage his Grace leaves three sons and four daughters: the sons are Edward Adolphus Lord Seymour, M.P. (now Duke of Somerset), Archibald, and Algernon. The daughters are Charlotte, wife of William Blount, Esq., of Orleton, Herefordshire; Jane, Emma Maria, wife of William Tollemache, Esq.; and Henrietta Maria. Edmund, eleventh Duke of Somerset, was only seventeen years of age when he succeeded to the Dukedom. His Grace was a man of science and literature; he was the author of several learned treatises. He was for some years President of the Royal Institution, Vice-President of the University College, London, and one of the Royal Society (having been elected a Fellow in 1797), a member of the Royal Asiatic Society, a Fellow of the Society of Antiquaries, and of the Linnean Society, and a D.C.L. The noble Duke was a Knight of the Garter, and Vice-Admiral of the coast of Somersetshire. His Grace died on the 15th inst., at the family mansion in Park-lane. He is succeeded in his honours by his eldest son, Lord Seymour, M.P., who was born in 1804, and married, the 10th of June, 1830, Jane Georgiana, youngest daughter of Thomas Sheridan, Esq., and granddaughter of the Right Hon. Richard Brinsley Sheridan, by whom he has a numerous family.

GENERAL PEPE.

General Pepe died on the 8th of August. After a long illness, in the neighbourhood of Turin. His name is well known to the readers of Italian history, for the last half-century; as, from 1799 to 1849, he had been actively engaged in every political movement of importance in Italy. General Pepe was born in Calabria, 1783, and in 1799 he sided with the French party in the Neapolitan kingdom, for which he was condemned to death; but his sentence was commuted to exile, on account of his youth. When Joachim Murat became King of Naples, Pepe entered the Neapolitan army and accompanied the contingent sent to Spain. In 1815 he fought under Murat for the independence of Italy, and continued in the Neapolitan service after the restoration of the Bourbons. In 1820 and 1821 he was the leader of the revolutionary party, for which he was again exiled, and remained in France and in Piedmont until 1848. During this period he became acquainted with many of the most eminent men in both these countries, and was an intimate friend of the late Joseph Hume. In 1848 he returned to Naples, and was appointed Commander-in-Chief of the army sent to Central Italy, to assist the Austrians by the Constitutional Government. At Bologna Pepe received orders to return, which he refused to obey; but resigned the command of the army and repaired to Venice, when he was made Commandant, which command he held until the surrender of that city in 1849. With that event ended his long and chequered military career. From Vienna the General went to Paris, and continued to reside there until the coup d'état, when he settled in Piedmont, where his death occurred.

Wills. The will of the Right Hon. Lady Arabella Ramsden, of Castle-hill Tadcaster, and Upper Brook-street, Belgrave-square, was proved under £70,000 personalty within the province of Canterbury. Major-General Sir John Campbell, Bart. (of Stonefield), £18,000.—Rear-Admiral Edward Boxer (at Balaclava), £15,000.—Richard Tyne, straw-hat manufacturer, London and Herne-hill, £100,000. Miss Catherine M'Murine, Plymouth, £2,000. Miss Susannah Bray, Queen-square, Bath, £20,000; and has left to the Boys' Asylum for Bath, Monmouth-street Society, the United Hospital and Dispensary Hospital at Bath, £50 to each; and the like legacy to the Society for Promoting Christian Knowledge, Conversion of the Jews, Royal Humane Society, and the Society for Preventing Cruelty to Animals.

Clerical Appointments and Preferments.—*Rectories:* The Rev. A. Anderson to Oare, Somerset; Rev. C. W. Davis to Brean, Somerset; Rev. J. Foster to Holy Trinity Church, Dorchester. Rev. T. H. Hounsom to Winterbourne, Zelstone, Dorset; Rev. A. Williams to Up-Cerne, Dorset; Rev. John Robinson to Bowers. *Vicarages:* The Venerable R. M. Master to Leyland, Lancashire; Rev. F. Odd to Tattenhall, Cheshire; Rev. H. J. Wilkinson to Hooton Pagnell, near Doncaster; Rev. John Farr to Gillingham, St. Mary and All Saints, and Wiston and Withall, annexed, in Norfolk. *Incumbencies:* The Rev. J. Lodge to Skerton, Lancaster; Rev. C. A. Perring to St. James's Church, Whitehaven; Rev. W. Shillette to Ashmarth.

PROGRAMME OF THE ROYAL VISIT TO FRANCE.

The following is the programme of the arrangements:—

Saturday, Aug. 18.

Progress through Paris and arrival at St. Cloud, as already announced in the *Moniteur*.

Sunday, 19.

Rest.
At Six—Dinner *en famille*.
At Half-past Nine—Concert of the Conservatoire de Musique (sacred music).

Monday, 20.

At Nine—Breakfast at St. Cloud.
At Half past Ten—Start in carriages for Paris.
At Eleven—Visit to the Exposition of Fine Arts.
At Two—Lunch at the Elysee.
At Half-past Two—Reception of the Corps Diplomatique.
At Three—Visit to the Sainte Chapelle and drive on the Boulevards.
At Half-past Five—Return to St. Cloud.
At Six—Rest
At Eight Dinner of sixty covers.
At Nine—Theatricals of St. Cloud. Representation of the Théâtre Français.

Tuesday, 21.

At Nine Breakfast at St. Cloud.
At Half-past Ten—Start for Versailles.
At Two—Lunch at Trianon.
At Half-past Three—Return to St. Cloud.
At Half-past Four—Rest.
At Half-past Six—Dinner *en famille*
At Half-past Seven—Start from St. Cloud.
At Eight—Visit to the Grand Opera.

Wednesday, 22.

Breakfast at St Cloud.
At Half past Ten—Start for Paris.
At Eleven—Visit to the Universal Exhibition.
At Two—Lunch at the Tuileries.
At Half-past Four—Return to St. Cloud.
At Five—Rest.
At Eight—Dinner of sixty covers at St. Cloud.
At Nine—Theatricals at St. Cloud, by the *artistes* of the Théâtre du Gymnase ("Le Fils de Famille").

Thursday, 23.

At Nine—Breakfast at St. Cloud
At Half-past Ten—Visit of Prince Albert (alone) to the Exhibition.
At Half-past One—The Queen to start for Paris.
At Two—Lunch at the Tuileries
At Half-past Two—Visit to the Picture Galleries of the Louvre.
At Five—Rest.
At Seven Dinner *en famille* at the Tuileries.
At Nine—Grand ball at the Hôtel de Ville.

Friday, 24.

At Two—Breakfast at St. Cloud.
At Eleven—Start for Paris.
At Half-past Eleven Grand Review in the Champ de Mars.
At Two—Lunch at the Ecole Militaire.
At Half-past Two—Visit to the Hôtel des Invalides.
At Half-past Three—Visit to the Universal Exhibition.
At Half past Five—Rest.
At Seven—Dinner *en famille* at the Tuileries.
At Half past Eight Visit to the Opéra Comique (Auber's "Haidée").

Saturday, 25.

At Nine—Breakfast at St. Cloud.
At Eleven—Start for St. Germains and drive in the forest.
At Three—Return to St. Cloud
At Four—Rest
At Seven—Dinner *en famille*.

Sunday, 26.

Rest.

Monday, 27.

Departure for England.

[Note of the Editor of the "Illustrated London News."—It will be seen by an announcement in another portion of our Journal that we have made arrangements for the complete illustration of every public ceremonial in the above programme; and that from week to week we shall continue to publish Engravings of all the most magnificent and remarkable scenes and episodes in her Majesty's Visit to the French capital.]

THE COURT.

This morning (Saturday), at daybreak, her Majesty was to leave Osborne in the Royal yacht *Victoria and Albert*, for Boulogne, en route to Paris, to pay her promised visit to the Emperor and Empress of the French. We believe we are correct in stating that her Majesty has looked forward to this pleasant interchange of courtesy with her Imperial ally and his consort with feelings of the liveliest anticipation. Before this sheet is dry the Sovereign of Great Britain, for the first time for two hundred years, will be quietly settled down in the beautiful Palace of St. Cloud, after an unexampled ovation from the Parisians on her arrival in their beautiful city.

Returning to the incidents of the past week, the Privy Council held on Monday stands first in order and importance. At the Council the Royal Speech for closing the present Session of Parliament was arranged and approved. Mr. Robert Lowe, Mr. William Monsell, the Hon. William Cowper, and Rear-Admiral the Hon. M. F. Berkeley, were, by her Majesty's command, sworn members of her Majesty's Most Hon. Privy Council, and took their seats at the board. Viscount Palmerston, Earl Granville, Viscount Canning, and Sir George Grey had audiences of the Queen. Mr. Justice Willes was presented to the Queen by Sir George Grey, Secretary of State for the Home Department, and received the honour of knighthood.

On Tuesday Prince Albert, accompanied by the Prince of Wales and Prince Alfred, embarked in the *Victoria and Albert*, and proceeded to Portland to inspect the progress of the Breakwater now constructing there. The Queen and the other members of the Royal family honoured the Cowes Regatta with their presence during the afternoon.

Yesterday se'nnight the Queen and the Prince gave their annual fête to the labourers and workpeople employed on the Osborne estate, to the seamen and marines of the Royal yacht, and the Coastguard and Trinity-house men stationed at Cowes. The detachment from Parkhurst doing duty at East Cowes was also present. Dinner was provided for about 600 persons, in tents erected near the house, at three o'clock the whole of the party invited walked in procession, preceded by the bands of the Royal Marines and 50th Regiment to the spot where the tents, and passed between the tables at which the party was seated. Dinner being finished, her Majesty, his Royal Highness Prince Albert, with the Prince of Wales, Prince Alfred, Prince Arthur, and Prince Leopold, the Princess Royal, Princess Helena, Princess Louisa, and the Duchess of Kent took their places in a marquee, to witness the rural sports, which were carried on with great spirit till past seven o'clock, when her Majesty and the Royal family retired, the bands playing "God save the Queen."

General Post-Office.—Amended Regulations in regard to the transmission of Newspapers to British Colonies and Foreign Countries. Hereafter, it will not be necessary that newspapers sent abroad, whether to the British colonies or to foreign countries, should bear the impressed stamp (the old newspaper-stamp); but, as at present, a postage of 1d. must be prepaid (either by means of a postage label or in money) on every newspaper sent to a British colony, with additional postage (according to the table in Instructions No. 45), when the newspaper passes through a foreign country. The postage on newspapers to foreign countries remains the same as given in Instructions No 45, but, as already stated, it is no longer necessary that the newspaper should bear the impressed stamp. In future the impressed stamp will be required only in cases of repeated transmission of the same newspaper in this country, though it will of course be available also for single transmission in this country. In the transmission of newspapers abroad (whether to the Colonies or foreign countries), the use of the impressed stamp will entirely cease; it will neither be required nor will it count as postage, as it will be presumed that where it is employed it has already served for the transmission of the newspaper in the United Kingdom. From these regulations it will necessarily follow—1st. That every newspaper going abroad must hereafter have the postage to which it is liable represented by adhesive postage-stamps, or paid in money; 2nd That a newspaper, whether published with or without the impressed stamp, will be placed in the same position for transmission abroad; 3rd. That the impressed stamp will hereafter apply only to transmission and retransmission within the United Kingdom.—Rowland Hill, Secretary.

LATEST INTELLIGENCE.

RE-OPENING OF THE FIRE ON SEBASTOPOL.

War Department.

Lord Panmure has received the following intelligence from General Simpson, dated

Crimea, Aug. 16.

General Pelissier and I have decided on opening fire from the English and French batteries at dawn to-morrow morning.

GREAT BATTLE IN THE CRIMEA.

War Department, 17th Aug.

The following important telegraphs have been received by Lord Panmure.—

Varna, Aug 16th, 1.30 p.m.

The Russians attacked the position on the Tchernaya this morning at daylight in great force. The action lasted about three hours, but they were completely repulsed by the French and Sardinians. Further particulars will be sent.

Varna, 7.30 p.m.

The Russian attack of the morning was under the command of General Liprandi, with from 50,000 to 60,000 men. Their loss is estimated between 4000 and 5000. About 400 prisoners have been taken. The loss on the side of the Allies is very small.

THE BOMBARDMENT OF SVEABORG.

The *Vulture* arrived with mails at Dantzic on the evening of the 16th:—

The Allied squadrons returned to Nargen from Sveaborg on the 13th. The success at Sveaborg is fully confirmed. No ships have been seriously injured. The casualties on the English side are—killed, none; two officers and about thirty men wounded. The French loss is equally trifling.

Telegraphic intelligence, which reached Paris yesterday (Friday), says that the extent of damage done by the bombardment at Sveaborg is more than was at first anticipated. The town is nearly destroyed. The fleet is preparing for fresh operations.

Advices from Konigsberg state that when the attack on Sveaborg began, the Grand Duke Constantine, immediately informed by telegraph of the event, demanded leave to go out and attack the reduced fleet before Cronstadt. The Emperor refused.

NATIONAL SPORTS.

The ensuing week will be a great one at York, and its racing fête may be said to begin on Tuesday, not at Knavesmire, but at Fairfield Paddocks, where about forty yearlings—principally by the Flying Dutchman and Chanticleer—will come under Mr. Tattersall's hammer. The Chanticleer stock have done but little this season in comparison with last; but his celebrated companion has made so auspicious a beginning with Mary Copp, Fly-by-night, and Eglantine, that the prices of his yearlings are likely to range very high.

The race-list at York is of a very promising character, and there will be eight or nine events run off each day. Habena is the name of greatest renown in the Oaks on Wednesday; and Ellermire, Treachery, Bianca, Lady Fatton, Capucine, Bessie, and Basika, are also in it—most of them, like her, with 4 lb. penalties. Marchioness, with her 7 lb. extra, is hardly likely to go for it. Fly-by-night is pretty certain to run for the Convivial Stakes, and will be more at home, if the present weather lasts, than he was in the mud at Goodwood, though Aleppo, Alastor, and the Ellerdale colt, with several others, will do their best against him. Kingstown seems to have the Biennial stakes to himself, unless Cerebus is brought out, as his other 139 opponents have but little chance with him over two miles. Mr. Osbaldeston will, however, it is said, run Rifleman, about whom only 100 to 7 is obtainable for the St. Leger, as he is not thought to have done sufficient work for some time past. On Thursday the great feature of the day will be the Four Handicap, for which several horses, including Hospodar, have been backed already; but it is very uncertain whether the Ebor St. Leger will bring about the much-wished-for contest between Oulston and Wild Dayrell. We doubt very much whether the latter will come to York; and Faudango will be saved for the Great Yorkshire Stakes next day. The Filly Sapling Stakes is a very open race; and Zeta, Warlock, Brother to Orinoco, Sister to Broughton, &c., are among those likely to meet in the Prince of Wales Stakes. The Eglinton Stakes has a strong entry of thirty-five, among whom are Jack Sheppard and the Ellerdale colt; and the County Plate will also bring out a good field, though hardly of the same quality as last year. Friday Eglantine should not be far off winning the Aske Produce Stakes, and the Great Yorkshire Stakes looks as if it would fall at last to the lot of Lord Zetland, by the aid by his faithful jockey "Job" and Fandango. Nettle is, we believe, hardly recovered from her Oaks accident; but Corcubus, Habena, Courtney, Ellermire, Marchioness, Blooming Heather, and Grecolus are all in it, though we should fancy that some two or three of them at least will be saved for Doncaster. The seven animals in the Colt Sapling are nearly all "dark," and, as Dramatist and Vandermeulin are not likely to go, Van Galen will be in the front rank for the Gimcrack Stakes. Lord Derby's 3rd Sov. Plate has a large entry; and if Hospodar, 7 st. 7 lb., can only get a light-weight jockey capable of holding him, he ought to be very forward, as the distance is only one mile and a half. The sale at Burleigh park is fixed for Saturday, in order to catch the sporting men on their return south; and several of Womersley yearlings, of Sir Tatton Sykes's breeding, along with divers other blood stock, will be sold in York during the three days. The other race-meetings of the week comprise Heaton Norris and Barnsley, on Monday; Great Yarmouth, on Monday and Tuesday; Swansea, on Wednesday, and Paisley and Canterbury, on Thursday and Friday.

The Cricketers' list for the week comprises a return match between Kent and Sussex, at Brighton on Monday, and a match on Thursday at Gravesend, between the Gentlemen Players of those two counties. All England appear at Dudley on Monday, and at Leicester on Thursday; and the latter day will be devoted by the United All England to playing fifteen of the South Essex players at Upton park.

The Swesborg triumph will, no doubt, instil fresh vigour into the arms of rowers and yachtsmen for the remainder of the season; and certainly they show no symptoms of flagging in their sport as yet, though the third cruisers generally begin to think of coming to shore as the St. Leger day approaches. Be that as it may, the Limehouse and Poplar Regatta is on the list for Monday; the Royal Weymouth one for Monday and Tuesday; the Royal Northern Yacht-club (at Dunoon) and the Kirkcaldy Club Regattas, for Wednesday; the Wapping Regatta, third and fourth heats, for Thursday; the Paignton and R. N. Y. C. Regatta again for Friday; and the Glasgow Annual Regatta, for Saturday.

READING RACES—TUESDAY.

Borough Plate.—Gen. Jo, 1. Pretty Girl, 2.
Berkshire Stakes. Imogene, 1. Brother to Grey Tommy, 2.
Basingstoke-and-pake Stakes.—Scharryl, 1. Nonsette, 2.
Abbey Stakes.—Fair Geraldine, 1. Flyaway, 2
Ladies' Plate. Hannah of Venison, 1. Curious, 2
Berkshire Hunt Stakes.—Phœbus, 1. Midnelsmas Maid, 2.

WEDNESDAY.

Innkeepers' Stakes.—Lucy Lockit, 1. Octavia, 2.
Forbury Stakes.—Curious, 1. Cardiff Lass, 2
Handicap Plate. Bright Phœbus, 1. Tourmens, 2.
Reading Stakes.—Flyaway, 1. British Remedy, 2.
Caversham Stakes.—Helena, 1. Bright Phœbus, 2.
Scurry Stakes.—Firebrand walked over.

WOLVERHAMPTON RACES—TUESDAY

Fatshull Handicap.—Speed the Plough, 1. Kidsupper, 2.
Chillington Stakes.—Stork, 1. Tiny, 2.
Cleveland Cup.—Sanoboxx walked over.
Borough Members' Plate.—Romeo, 1. Harriott, 2.
Free Handicap.—Bobgill, 1. Fanny Fern, 2

WEDNESDAY.

Stewards' Plate.—Prince's Mixture, 1. Lady of the Lodge, 2.
Foal Stakes.—His Piper, 1. Betty Baylock, 2.
Hobyeats Stakes. Little Brownie, 1. Speed the Plough, 2.
Thea re Stakes.—Yeatick, 1. Questionable, 2.
Wrottesley Stakes.—Stark, 1. Colt (dam by Tulip), 2.
Innkeepers' Plate.—Questionable, 1. Man-of-War, 2.

MEETING OF HENRY VIII. AND FRANCIS I. NEAR ARDRES.—THE

OF THE CLOTH OF GOLD.—FROM A PAINTING BY JOHN GILBERT. (SEE NEXT PAGE.)

INTERVIEW OF HENRY VIII. AND FRANCIS I. AT ARDRES THE FIELD OF THE CLOTH OF GOLD.

ALTHOUGH the present visit of a Sovereign of England to a Sovereign of France in his capital has no parallel in the annals of the two nations, the popular recollection is carried to an event of coincident magnificence, if not longer, namely, the meeting of Henry VIII. and Francis I., in the valley of Ardres which, from the splendour of the event, procured the place of interview the name of the *Field of the Cloth of Gold*. This joyous meeting of the two great monarchs of England and France took place in 1520, in the valley of Ardres. Henry, with his Queen, and the whole Court, passed the sea from Dover to Calais, and thence proceeded to Guisnes, a small town near the frontier. Francis, attended in like manner, came to Ardres, a few miles distant, and the two monarchs met for the first time, on horseback, at a place situated between these two towns, but still within the English pale; Wolsey, to whom both Sovereigns had entrusted the regulation of the ceremonial, having contrived this circumstance in order to honour his master. The following picture of the magnificent scene is from the chroniclers own account:-

Then the King of England shewed himself to some deale forward in bewty and personage, the most goodliest Prince yt ever reigned over the realme of Englande: his grace was apparelled in a garment of cloth of silver of Damaske, ritched with cloth of golde, so thicke as might be, the garment was large, and plited verie thicke, and enriched of very good taste, of suche shape and making yt was marvellous to behold. The coate wch which his grace road vpo, was trapped in a marueilous vesture of a new deuised fassion, the trappe was of fine golde, in bullon, curiously wrought, pounced, and set with a moche worke of Romaine figures. Attending on the King's grace of Englande was the maister of his horse, by name Sir Henry Guylford, leading the kyng's spare horse, the which horse was trapped in a mantelet broad and back place, all of fine golde in wches of devise with tasselles on endel pendants, the saddell was of the same suite and worke, so was the headstall and raynes. After followed IX henxmen, ryding on coursers of Naples, the same young gentlemen were appareled in rich cloth of tissue, the coursers in hardesse of marueilous fassion, ended in fine golde in bullon, and all the same horse harnesses were set full of trembling spangles that were large and fayre. The Lord Marques Dorset bare the kyng's sworde of estate before the kyng's grace; the Lorde Cardinall did his attendance. Then ap bleve the true perre, sagbuts, clarions, and all other maistels on both sides, and the kynges descended downe towards the bottom of the valley of Andern, to sight of both the nations on horseback, met and embraced the two kynges each other. Then the two kynges alighted, and after embraced with benyne and courteous manor echo to other, with sweete and goodly wordes of greeting: and after fewe wordes, there two noble kynges went together into a riche tent of cloth of golde, that there was set on the grounde for such purpose, thus arme in arme went the French King, Frances, the First, of Frances, and Henry the Eyght, King of Englande, and of Frances together, passing with communication.

Then followed interchanges of friendship between the two Sovereigns and the gorgeous tournament: but the point chosen by the Artist, in the accompanying picture, is the first meeting of the two great monarchs.

THE QUEEN'S VISIT TO PARIS.

(From our Special Correspondent)

THROUGH the kindness of his Majesty the Emperor—who has graciously thrown open all the private apartments of the Tuileries, St. Cloud, Versailles, and the Trianon for our inspection—your Special Correspondent, aided by your Artists, is enabled to present to your readers authentic and exclusive details on the important visit which, by the time these lines see the light, will be in course of inauguration. To the details which I sent to you last week I may now add some important points; and, first of all, of the preparations in the streets. These promise to be on the grandest scale. As I informed you last week, the National Guard will form the line along the Boulevards, and it is intended to have the way kept from the railway-station through Paris to St. Cloud, no less than 17,000 troops have been called to Paris in addition to the ordinary garrison under arms. Altogether, in the course of her splendid progress through this capital, her Majesty will probably see 50,000 men under arms. On the Boulevard du Strasbourg, which leads from the railway terminus to *the* Boulevards, already red columns, rising to an immense height, and destined to bear banners and garlands, have been raised. The inhabitants have been invited to aid, by their subscriptions, the wish of the local authorities to decorate the long line of Boulevards from one extremity to the other.

At St. Cloud the preparations for the reception of the English Court have been carried on with remarkable activity. I have spent two days of this week in the château inspecting—under the obliging auspices of the Governor, Colonel Thierry—the theatre, of which your artist has made a sketch, and where Ristori is to exhibit her passionate tragedy; and the splendid suite of private apartments destined to receive our Queen and Court. These rooms occupy the wing of the château which was fitted up for a Queen whose unhappy fate, whose sacred misfortunes, will stand in wondrous contrast with the happy reign of the Royal lady now about to occupy them. On entering these apartments from the private staircase, beautifully decorated with bas reliefs of the time of Louis XV., the visitor turns to the left, and reaches the antechamber to Prince Albert's private apartments. This antechamber is a beautiful room, the walls of which are of various rich marbles tastefully intermingled. Advancing from this room, the visitor enters the Prince's salon, a beautifully furnished apartment, the walls of which are enriched by splendid paintings. Upon the mantelpiece I noticed a beautiful clock by Gille Pâné, the design of which, finely executed, is supported by a massive bronze bull. Beyond the Prince's salon is his bed-room, hung with rich Lyons silk, worth a hundred francs per mètre. Here, as in the rest of the private apartments, Faustin Besson, the painter of the private rooms of the Empress, has been busy filling in the panels with some of his sprightly and tasteful sketches. Beyond the Prince's bed-room is his dressing-room. It is fitted up with light green hangings, which pleasantly harmonise with the white walls, relieved by the beautiful gilt wood-carvings, executed when this same room was the boudoir of poor Marie Antoinette. Beyond the Prince's dressing-room, and forming an angle of the château, is the Queen's state bed-room. The walls of this beautiful apartment are white and gold—the gold work being upon exquisitely manipulated wood-carvings. Here the state bed is, of course, the principal object. Your artist can do more in the way of description of this wonderful piece of furniture than any words. I may, however, state that the skeleton of the bed is in white and gold, the outer curtains being of rich pale green silk, and the inner curtains pink, covered with muslin. The Royal initials and arms are worked into the decorations with excellent effect. The furniture is of green and gold.

Beyond the state bed-room, and between it and the Queen's boudoir, is a bain-room, hung with pink watered silk, covered with lace or muslin. Beyond the bain-room is the Queen's boudoir, the walls of which resemble those of the state bed-room and the Prince's dressing-room, and belong, as I have already remarked, to the time of Louis XVI. The hangings, of blue, are exquisitely tasteful; and here are two cabinets, recently finished, which are masterpieces of the modern art-workmanship of Paris. Here are, also, some splendid vases. Beyond the boudoir is her Majesty's study, a fine apartment, ornamented with pictures by Terburg, &c., in which is placed the wonderful bureau manufactured by Reisener in 1769 for Louis XVI. Your artist has sketched it. It is richly ornamented in marqueterie: it includes a number of secret drawers; and amid its massive ornaments there is, for the convenience of the writer, a desk. Beyond the study is the Queen's salon, the conspicuous ornament of which is a fine Correggio. Amid the ornaments of the walls little clocks and barometers, &c., are let in. The furniture is covered with the richest Beauvais tapestry. The walls are white, ornamented with the richest gilt carvings. The mantelpiece is supported by bronze Egyptian figures, and the curtains are of white watered silk, trimmed with red and gold fringe. Beyond her Majesty's private drawing-room are the apartments of the ladies and gentlemen in attendance. These rooms are splendidly furnished, and enriched with choice specimens of Rubens, Vandyke, Andrea del Sarto, Domenichino, Lebrun, Boucher, &c. These rooms close the splendid suite of private apartments prepared, under the daily personal superintendence of the Empress, for her Majesty the Queen. All that the wealth of the Louvre, the skill of modern art, the power of the loom, the improvements and ameliorations of science, could furnish towards the elaboration of a residence, perfect in every particular, may be said to be present here. Every minor point has been studied to the utmost by the Imperial host; in proof of which I may mention the fact, that when I was at the château on the 11th ult. Her Majesty had left for Paris, in order to purchase a picture at the Universal Exhibition, fit to be a companion picture to one already placed. From the windows of these splendid rooms a beautiful view of immense extent is obtained, with the richly flowered private gardens underneath, for a foreground. Hence also the Queen may see, at the summit of the slope, the lighthouse built by the first Napoleon, which used to be lighted whenever he slept at the château.

The state apartments of the château have been already described. I may, add, however, that in the great dining-room Marie Antoinette, worked in Gobelins tapestry, is suspended opposite a figure of the Emperor, the subject being the Peace of Amiens.

I may inform your readers, on authority, that the wonderful fête of Versailles will not take place before Saturday the 26th instant. At Versailles the preparations are being carried on most vigorously. The Salle des Glaces is being hung with chandeliers; platforms for orchestras are being raised in its four corners; and the theatre is in the hands of the Opera decorators, to be prepared for the supper, which is to be served at a number of tables, each table receiving twelve persons. Here dressing-rooms for the Imperial host and hostess and the Royal guests are being fitted up. At the Trianon, also, there are a few preparations; for on Tuesday next, at twelve o'clock, the Queen will reach the beautiful gardens associated with the name of Marie Antoinette, and wander here past the poor Queen's abandoned boudoir, to the Swiss cottage on the borders of the lake, where the illustrious party will breakfast. The illuminations before the front of the Palace will include a beautiful representation of Windsor Castle, and the fireworks—to be arranged on a grand scale—are to be beyond the lake, at the extremity of the Salle des Glaces, whence they will be observed by the French and English Courts.

At the Embassy, the room usually used for Divine service is being arranged for the reception of the Court. It is also said that the Elysée will be visited by her Majesty once or twice in the course of her stay in Paris, but only for luncheon. It is believed that the reception of the diplomatic corps, &c., will take place in the Salle des Marechaux at the Tuileries. Up to the present time no official notice of the day on which her Majesty will visit the Library appears to have been given; although people still seem to believe that two days' notice must be given to prepare for the reception of the illustrious guests.

On all sides it is believed that a most enthusiastic reception awaits her Majesty in the capital of her great ally.

BILLY BARLOW'S TRIP TO PARIS.

(From the New Number of the "Comic Times.")

Ladies and Gentlemen, how do you do?
My appearance on print, you will say, is quite new;
But the fact is, I should have been there long ago
The wish wants a few writers like Billy Barlow
Oh, dear! Raggedy, oh!
There was Dickens, Curly, *now* there's Billy Barlow.

The Emperor Napoleon remark'd t'other day,
"My Great Exhibition here, somehow, don't pay;
How the deuce shall I manage to make it 's go!" "
Says the Empress, "Send over for Billy Barlow."
Oh, dear! Raggedy, oh!
"Here, the telegraph—quick" for young Billy Barlow."

So I packed my portmanteau, and off I soon set;
At the station I met lots of low touters I met.
And they cried out "Dieppe and Newhaven!" but "No!"
Says I "D'ye mind Calais for Billy Barlow"
Oh, dear! Raggedy, oh!
Time is money to statesmen like Billy Barlow.

Oh! the sea was rough, and the passage was long;
And the vessel kept behind precisely wrong.
"Is there danger!" folks cried. Said the captain, "Why, no!
With a seaman on board like Lieutenant Barlow!"
Oh, dear! Raggedy, oh!
A young Lord Tom Noddy to Billy Barlow.

We landed at Calais. "Your passport!" says they.
"Ain't you one?" I cried. They'd have washed me away;
But a swell, a big epaulettes'd out "Hallo!
Laissez passer, mais oui, Monsieur Guillaume Barlow."
Oh, dear! A nice sort of go
That'd has been if they'd meddled with Billy Barlow

I strolled round the town: the young fishwomen there
Were attracted, of course, by my manners and air.
"Did I step to flirtation!" you ask me. Oh, no!
I consider'd the feelings of Mrs. Barlow.
Oh, dear! Raggedy, oh.
Gainst syrens quite proof is Ulysses Barlow!

To a café I went, on the quiet, to dine:
But I'd scarce my sac down to my oysters and wine,
When I heard a tall footsteps come to and fro,
And some voices were asking for Monsieur Barlow.
Oh, dear! Raggedy, oh!
Deputations were waiting on William Barlow.

I was walk'd off to dine with the Prefect and Maire;
Then the people would have me come out in the air;
Such a reception as I made, on the balcony—oh!
"Vivent les Anglais"—especially Billy Barlow."
Oh, dear! It's a pleasure to know
The alliance was strengthened by Billy Barlow.

Off to Paris I went, by the half-past eight train;
As the crowd cheered me onward, folks asked "C'est la reine?
La belle reine Anna?" The answer was "No;
'Tis the first of her subjects—Lord William Barlow."
Oh, dear! some respect peace to show
This is not Lord John Russell, but Billy Barlow!

Flags and garlands were hung (in my honour, of course)
O'er the line; on the cars boys cheered themselves hoarse;
For refreshment, a money I ordered them oh!
It was, "Pies for the train, Monsieur Barlow!"
Oh, dear the Château Margaux
And the Roussillon opened for Billy Barlow!

At the breaking of day we to Paris drew near
As the lugs age was looked at by critics severe.
When I offered my own, says the Douanier "No!
You're the Emperor's visitor—Monsieur Barlow."
Oh, dear! Raggedy, oh!
"Pass the bundle and toothbrush of William Barlow."

So I walked into town to find somewhere to sleep,
But the lodgings they offered were nasty and cheap:
I could meet with none over ten guineas or so
For the night—while I had my own seat Billy Barlow!
Oh, dear! anything low
Is distasteful extremely to Billy Barlow.

I preferred a short walk in the Champs Elysées—
All prepared for a grand illumination display—
There I noticed the names, for the firework show,
Of Victoria and Albert, and Billy Barlow.
Oh, dear! may the French never know
What it is to want England—and Billy Barlow!

Soon I dropp'd off to sleep 'neath a popular tree,
But was roused by the words "On ne dort pas ici."
'Twas a rough man in blue, who, 'tswould seem, didn't know
What was due to the person of Billy Barlow!
Oh, dear! Raggedy, oh!
They have just called the case on of Billy Barlow.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 16

Month and Day.	Thermometer. Corrected Reading of Barometer at 9 A.M.	Highest Reading.	Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Inches.

" 13	30·218	69·7	49·0	57·2	— 4·2	85	N.W.	0.00
" 14	30·171	70·2	45·8	57·2	— 3·8	90	CALM.	0.00
" 15	30·230	71·9	48·8	62·4	+ 1·2	85	N.W.	0.00
" 16	30·254	77·5	53·1	64·3	+ 2·2	84	N.W.	0.00

Note—The sign — denotes below the average and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied but little during the week—the lowest reading being 30·02 in., on the 11th; and the highest, 30·26 in., on the 16th. The mean for the week, at the height of 82 feet above the level of the sea, was 30·175 inches

The mean temperature of the week was 60·6°—being 0·8° below the average.

The range of temperature during the week was 32·2°.

The mean daily range of temperature during the week was 22·2°.

The Weather during the week was fine; but the sky was cloudy throughout till the 16th, when it was almost cloudless

Lewisham, Aug. 17, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1585 children were registered in London: of these, 833 were boys and 752 were girls. In the previous week the numbers were 1598 and 1538 respectively. The number of deaths during the week was 993, of which 492 were males and 501 females: showing that the public health still continues satisfactorily, being better than is usual at this season of the year. From diarrhœa 146 deaths are recorded, and 5 from cholera. The deaths from diarrhœa are not, however, more than the estimated average.

MESSRS. STRAHAN, PAUL, AND COMPANY.—The defendants in this case were brought up on Wednesday last, at Westminster, for the tenth time, on the charge preferred against them by Dr. Griffith. In the absence of Mr. Bodkin, who is presiding at the Westminster Sessions for Serjeant Adams, Mr. Humphreys, another barrister, attended for the prosecution; Mr. Lewis, of Ely-place, and Mr. Holt, of Charing-cross, attended as solicitors for the defendants. Mr. Augustus Samuel Withey was examined for the purpose of supplying another link in the chain of evidence against the prisoners. That having been done, Mr. Humphreys proposed that the case should be formally remanded, as before, with the understanding that no additional evidence would be offered until September, when an absent witness was expected in England. The prisoners were then remanded with that understanding. Mr. Holt, the solicitor of Mr. Bates, said he had now the satisfaction of tendering bail for his client, and of adding, that the formal notice had been kindly waived by the solicitor for the prosecution, owing to the undoubted stability of the parties. The names handed in were Mr. James Anderton, of 70, Bridge-street, Blackfriars, and Mr. W. Bates (the father of the prisoner), a merchant of Liverpool, residing at No. 1, Cambridge-square, London-street. Several formal questions having been put to those gentlemen, and answered satisfactorily, they were bound over, each in £500, as sureties for the prisoner. Mr. O'Brien, the magistrate's clerk, inquired the residence of Mr. Bates, for the purpose of taking his personal recognizances? The Prisoner. My residence! Well, just now, it would be rather a puzzle to say. Mr. O'Brien: I mean your late residence. The Prisoner: Oh! 41, Norfolk-street, Strand. The final business being then completed, Mr. Bates was set at liberty, and left the court with his friends.

A WARLIKE PEACE MEETING AT ST. MARTIN'S-HALL. A public meeting was held at St. Martin's-hall, Long-acre, on Wednesday evening, "to take opinion of the public upon the momentous question of peace or war." Mr. John Hamilton, editor of an unofficial Peace-at-any-price paper, having been called to the chair on account of previous arrangement, proceeded to state his opinions upon the war in a long rhapsodical speech, continually interrupted by tempests of mingled laughter, hisses, and cheers. After characterising the present contest as one of the most reckless ever carried on by any nation, and branding it as an atheistical war, he concluded by advising the people of England to refuse to supply to their Government those materials of war which were only used for their own destruction. Mr. Bronterre O'Brien, who came forward amidst great uproar, attacked the Newspaper press of the metropolis, from the strongly protectionist to further continuance. This was followed by another interval of confusion, which was ultimately so far subdued as to let a Mr. Harris speak, who declared himself the enemy of war under any circumstances. In reconciling the resolution, he said, if it were unanimously adopted, it would have an electrifying effect throughout the country—the Government would be turned out, and universal peace prevail (Tremendous laughter, hissing, and cheers). The latter portion of the resolution was strongly supported by a small band on the platform, behind Mr. Newman, consisting of Mr. George Thompson, ex-M.P. for the Tower Hamlets, Peace-at-any-price lecturer, and proprietor of the Hyde Russian peace organ, and several of his friends. An amendment was moved by Mr. Horace St. John, pledging the meeting to support any honest Government that will prosecute the war "to an honourable and victorious termination." A stormy discussion followed. Mr. W. Wake, of the *Newspaper*, who warmly opposed the amendment, excited considerable surprise by characterising the bombardment of Sveaborg as the crowning proof of Ministerial treachery, because it was calculated to do more harm to the Finns, our friends, than to the Russians, our enemies—an announcement which was met by a storm of ridicule and disapprobation. Mr. Samuel Boyd contended that the wishes and sacrifices of Russia could not possibly be better promoted than by stopping the war unconditionally (Loud cheers). He loved peace; but peace, in the present state of Europe, meant fighting and conquering Russia (Cheers and laughter). When the meeting was nearly tired out, Mr. George Thompson spoke in favour of the resolution, taking care to say nothing in favour of absolute peace doctrines. The amendment was put amidst much confusion, few people being able to hear what was said; consequently few voted for it. The resolution was then put, when about 200, or at most 220, hands were held up in favour of it, out of 2000 persons who were present. The meeting thus broke up about eleven o'clock

SERIOUS ACCIDENT TO THE MILITARY AT CREMORNE. On Monday night Cremorne-gardens were the scene of a grand fête in aid of the Wellington College, established for the children of our soldiers who may fall during the war. The charge of admission was raised from 1s. to 2s. 6d., notwithstanding which the assemblage was much more numerous than upon ordinary occasions. Extensive preparations had been made to give due eclat to the proceedings: the programme, in addition to the attractions ordinarily held out, including the attendance of no less than six regimental bands, together with that of 500 soldiers, and three ascending trains, to take part in the "Attack on the Mamelon Vert, and Capture of the Redan Pits"—a feat arranged to commence at nine o'clock, and anxiously anticipated by the hundreds of ladies and gentlemen who had paid an extra two shillings for reserved seats, or one shilling for reserved standing-places. It was, however, nearly ten before the orders in command gave the signal of attack. Sebastopol itself was very well represented by a huge panoramic painting, extending, perhaps, forty yards, the Mamelon being separately represented in advance, with real trenches, protected by fascines and sandbags in front of all, and well lined with soldiers of the "red, white, and blue." The "battering-trains," it must be confessed, were very modest pretensions, for it was seldom that anything louder than the sharp crack of the rifle was to be distinguished in the *mêlée*, although the 500 soldiers were no doubt present upon the ground, and sufficiently impressed with the gravity of events in which they were called upon to take part, resolved to conquer, if fate so willed it, or perish in the attempt. The attack was well managed, and the effect was occasionally very striking; but, just as the Mamelon was supposed to be captured, the stage erected for the advance gave way beneath the weight of the soldiery, many of whom were precipitated to the ground a distance of twelve or fifteen feet, and in the fall a sergeant of the Grenadiers sustained a compound fracture of the leg; another man was taken up in senseless from internal injury; a third had a bayonet run through his cheek; and, in addition to these injuries, there were many dislocations, sprains, and contusions, the greater part of the vast company of spectators being all the while ignorant of the occurrence of any such catastrophe. Every exertion was made to assist the injured by direction of the officers in charge, and by twelve o'clock about twenty-five men had been conveyed, in cabs or on stretchers, to the military hospital in Rochester-row, Westminster, where several surgeons residing in the neighbourhood hastened to give their assistance to the resident medical officer.

MUSIC.

THE ROYAL ITALIAN OPERA closed for the season on Saturday last, when the "Etoile du Nord" was performed for the ninth time, for the benefit of Mr. Harris, the able and respectable stage-manager. The season, though very barren of remarkable incidents, has been satisfactory to the public, and understood to have been profitable to the management. This, indeed, may be inferred from the manner in which the theatre has been attended, for we do not remember ever to have seen so unbroken a succession of full houses. To explain this, it has been said that, there having been a great diminution of bals, concerts, and parties in private houses, people have resorted for amusement to places of public entertainment. This may or may not be the reason; but the fact is, that not only the Opera, but public places generally, have thriven this season. The season has been shorter than usual—from the 12th of April to the 11th of August; and the production of novelty has also been unusually small. The programme of the season promised little, but all that was promised has been performed; and the public, by their reception of the pieces brought forward, showed that they did not desire more. The season began with Rossini's "Il Conte Ory," in which a great deal of pretty music is thrown away on a worthless drama. With the help of Gardoni's fine singing, it supported several performances. Mdlle. Jenny Ney then appeared in "Fidelio," making her début on the night of the state visit, when her merits were overlooked in the midst of the excitement caused by the presence of the Emperor and Empress of the French. But when she appeared a few nights afterwards, in the "Trovatore," the public became aware of the extent of her powers as a tragedian and a singer. The triumphant success of this opera, which was also supported by Madame Vardot and Signor Graziani (the new baritone), was arrested by the long and severe illness of Mdlle. Ney, who, as soon as she recovered, was recalled to her native country. Signor Graziani, who had previously made his début in "Ernani," turned out an admirable performer, possessed of a beautiful voice, a highly cultivated style, a handsome person, and respectable talents as an actor. It is understood that he, as well as Mdlle Ney, are to will be, included in the engagements of next season. They were the only new performers of note promised in Mr. Gye's prospectus. The only new piece promised besides the "Trovatore" was the "Etoile du Nord," which was first performed on the 14th of June; its production and success must be fresh in the memory of our musical readers. A work of such difficulty demanded long preparation; and, besides, the period before it appeared was fully and advantageously employed. The manager had been enabled to obtain one more star in the services of Gardoni, whose name was not mentioned in the programme of the season. He appeared on the 24th of May, in "La Favorita;" and, notwithstanding her formal leave-taking of last year, was received with acclamations. She was at first announced for a limited number of nights; but she continued to perform her most favourite characters down to the 28th July, when she appeared in the "Huguenots," and once more took her leave—but, this time, only for the season—so we may reckon pretty confidently on seeing and hearing her next year. Mario constantly appeared along with her, singing better than he had done for several years. These were the few *events* of the season. It was filled up by repetitions of some of the stock pieces of the theatre; most of which were admirably performed; the company being strong beyond a precedent—so strong, indeed, that the manager seemed to labour under the *embarras des richesses*, and was at a loss how to find employment for his performers. Gardoni, in particular, though one of the most attractive singers on the stage, had nothing to do during the greatest part of the season. Madame Viardot has appeared little, and not always to the best advantage: neither *Rosina* nor *Desdemona* was favourable to her; but her performance of the gipsy, *Amneris*, in the "Trovatore," was full of originality and power; and her *Fidès*, in the "Prophète," is still the finest on the stage. Another singer, very insufficiently employed, has been Madame Rudersdorff. In the "Etoile du Nord," she has delighted every body by the charms of her person, the beauty of her voice, her brilliant taste and delicate execution, and her grace and animation as an actress. Mdlle. Marai has proved herself, throughout the season, a most valuable *seconda donna*. In such parts as *Adalgisa*, in "Norma," *Mercedes*, in "Fidelio," *Berthe*, in "Le Prophète," she has never been surpassed; and her *Prascovia*, the little country girl, in the "Etoile du Nord," gave a charm to the whole opera. Of Tamberlik, Formès, and Lablache, it is unnecessary to say anything. Their labours have essentially constituted the success of the season. The orchestra, under its admirable chef, Costa, is as magnificent as ever; and the various operas, generally speaking, have been got up with the care and splendour which have always distinguished this theatre. The ballet no longer holds the prominent part it once did in the entertainment of opera-houses, either here or elsewhere. We have no longer dramas with regular plot and incidents, and every passion and feeling expressed by movement and gesture. Dancing is confined to little divertissements generally incidental to the opera. Of the brilliant constellation which used to rise nightly in the Haymarket, Cerito only remains. She has been dancing all the season, and dances very charmingly. But there is something melancholy in seeing her—

> Like the last rose of summer blooming alone.
> Her lovely companions all wither'd and gone.

We regret the decay of the ballet. It was once raised too high. But it was a beautiful entertainment, and does not deserve the neglect into which it has fallen.

THE Committee of the Birmingham Festival are making their preparations with their usual activity. On Monday last, at the Hanover-square Rooms, there was a full rehearsal of Costa's new oratorio, "Eli," which he has just completed for the approaching meeting. The principal singers engaged to take part in it, namely, Madame Castellan, Madame Viardot, Mr. Sims Reeves, Herr Formès, and Mr. Weiss, were present; and there was a full muster of the London members of the orchestra and chorus, Mr. Costa himself conducting. The subject and incidents of this oratorio are contained in the first four chapters of the Book of Samuel: the poem being from the pen of Mr. Bartholomew, who has produced a sacred drama full of grandeur, beauty, and pathos. The music is worthy of the subject. It is highly original—combining the graceful, flowing melody of the Italian school with the force, depth, and solidity of the great German masters. We have no hesitation in saying that this oratorio will take its place among the greatest works of its class that have appeared since the days of Handel.

THE THEATRES, &c.

HAYMARKET.—Mr. Planché's two-act drama of "Court Favour" was revived on Monday, to give an opportunity to a new *débutante*—Miss Blanche Fane—who appeared in the interesting character of *Lucy Ashton*. The piece belongs to the class of light comedy, and presents a pleasing intrigue, in which the heroine gains from the *Earl of Allemarle* an office and handsome salary for her humble lover by pretending at first to favour the addresses of the licentious nobleman. Miss Fane played the part with care and finish, and much variety of expression. In character scenes she failed, perhaps, to sustain the situation from a deficiency of physical vigour, but the moral purpose and determination were evident to the end. This young lady has apparently studied in the French school of acting; and it is one which is remarkably well calculated to bring to perfection the style of stage-art for which she is best fitted. She should be careful to select *rôles* for her future appearances in which delicacy, grace, and prettiness are required rather than force and passion. She will in such parts find a wide range for the exercise of her talents; and the modern stage is somewhat wanting in an appropriate representative of her class. With such undoubted qualifications Miss Fane will do well to consume at once her position as a vaudeville heroine and we entertain no doubt that in such a case of her complete success she will be materially debarred with her efforts, and she well merited the ovation awarded to her on the occasion.

MR. BELTON, late of the Princess' Theatre, took his departure this week for America, having been engaged for the Boston Theatre by Mr. Barry. This young and ambitious actor has for the last few years run a difficult and upward path with great credit; his talents for the juvenile heroes of the drama are not to be doubted, and we trust that his success in that new country will not be delayed.

LYCEUM THEATRE.—Mr. Anderson, better known, perhaps, as the "Great Wizard of the North," has taken this theatre for a considerable term, and opens it on the 2nd of September His entertainment is entirely novel in plan; and, if carried out with his usual skill and success, will afford some singular exemplifications not only of the ordinary arts of conjuring, but of those extraordinary arts by which too many have been bamboozled, both in Europe and America, under the name of "Spirit rapping." The theatre under "The Wizard's" management is to be called, it appears, the "Psychomantheum."

HARVEST PROSPECTS.

A FEW scattered fields of corn were reaped ten days ago—a kind of rehearsal for a great performance; but on Monday, which was a bright and glorious day for England, the real work of reaping began almost universally. It was the day after the beginning of the harvest moon, and her lady ship ushered in fine weather. The farmers had faith in the augury, and thousands of sickles were on that day played against millions of acres of corn. The work for gathering in the bread of the nation was most auspiciously begun. Stalwart men, accompanied by nut-brown women to bind up the sheaves, entered by thousands on the great and noble task that will supply bread for the next year to many millions of people.

Monday, too, was the commencement of the grouse season. Scores or hundreds of gentlemen started from their shooting-boxes; fought their way laboriously over the heather; and at night returned fatigued, themselves and their servants loaded with game, to enjoy a good dinner, and talk over their exploits. In the labours both of reapers and sportsmen the public take a great interest; but in an inverse ratio, we are afraid, to their utility.

This year there is a wonderful breadth of wheat on the ground, and a great demand for labour. Nooks and corners that have been lying waste from the beginning of the world have lately been inclosed and drained, and are now bearing rich harvests. The exertions of the agriculturists, of which we have latterly heard so much; their new and costly manures, brought from the farthest ends of the earth, or combined by all the skill of the chemist; their increased care of stock; their many instruments for pulverising and clearing the land, and making it bear only wholesome food, have not been without their rewards, and the largest crop of corn last year that ever was grown in England, with a crop now on the ground almost or quite as large, and a cheerful prospect of its being equally well harvested, are the fruits of their exertions. Fine weather is ripening it all at once; but fortunately we have plenty of hands to gather it in. In Spain, it is said, the harvest is very abundant, as it happily is in most of the other countries of the Continent; but in Spain the labourers are few, and the cholera is now prostrating their strength. In Russia, too, we are informed that the peasants are carried off in large numbers from the estates, which in many cases are left without hands effectually to till them. No help can be got from townspeople, none from men in other occupations, for all belong to masters, and are tied to spots. In times of emergency the spare population of our towns overflows on the country; labourers move about from place to place; mowers come from the north to the hayfields of Middlesex and Herts, and return to reap the corn of Northampton and Leicester. The hop districts, in which the harvest does not begin for a month, have draughted off many of their stout hands to reap the cornfields of Eastern Kent and Western Sussex. Our labourers are free to choose their place of toil; rails convey them cheaply from one end of the country to another; by their freedom and diffusion their services are made more available; the manly strength of the nation is applied in the most advantageous manner, and all its resources are silently and wonderfully increased. With, as we believe, a very great harvest on the ground—with means far more abundant of gathering it in, and preserving every grain, than is possessed by other nations—our prospects at home are bright and cheering.

Even before the harvest is secured, trade, which has been comparatively stagnant with the United States and Australia, is reviving, and, with a good harvest enriching all and stimulating enterprise, it will be rapidly extended. Last year the crops of the United States were extremely short. They had less cotton to sell us and much less wheat than usual; they could, therefore, buy less from us, and the trade with the United States was much curtailed. This year their crops are said to be very abundant, and a large portion of them will add to our means of subsistence. In Canada, also, where the growth of wheat has increased very fast, and is now very large, the crops are excellent. In both these countries large tracts of land are continually enclosed from the forests and gradually turned into cornfields. In Canada, in 1853, 802,616 acres of public lands were sold—nearly three times as much as any previous year since 1847. In the United States, in 1854, 5,130,000 acres were sold, promising us and the whole trading world which shares in the abundance of that free country large future supplies of food. Even Spain is fast increasing her productions, and under the stimulus of our free-trade markets is every year producing more, and sending us more wheat and flour. We look, therefore, for a plentiful supply in the present year and great abundance hereafter. The spirit of industrious man seems everywhere rousing into increased activity, and is preparing a happier future for society.

We cannot tell our readers to expect immediate and great cheapness. The corn-markets are falling, but we require a few weeks' fine weather to secure our crops. It is certain, too, that the potatoes are, to a slight degree, affected by disease, but not so much as last year, when the crop was excellent. Some persons, too, dwell much on fields of wheat beaten down and destroyed, and on disease in the wheat. At this period there are always many sinister reports of this kind: we have personally visited a large part of the southern portion of the kingdom and found very little corn laid, and none anywhere blighted. We adopt, therefore, without hesitation, the more favourable reports. Everybody admits that the quantity of land sown with wheat is far greater than ever; and most of the reports represent the crops on the ground as excellent in England, Ireland, and Scotland. This is consistent with our experience. At the same time we know that stocks are short, that a considerable period must elapse before the whole crop is secured, and a longer period before we can be quite certain of the supplies we can command from abroad. Such circumstances will delay the fall in price; it will not probably be great and rapid, but it will come. There is, we believe, an abundance on the earth, and the consumers will obtain it at an easy rate.

DEATH OF PATRICK PARK, ESQ., THE SCULPTOR.

WE regret to announce the death of Patrick Park, Esq., the distinguished sculptor, which took place somewhat suddenly on Thursday last, at Warrington, whither he had proceeded from Manchester on professional business.

Mr. Park was in his forty-fifth year, and has left a widow and family to lament their irreparable loss. Mr. Park was a native of Glasgow, and having, at a very early age, manifested a love of the branch of art in which he afterwards excelled, was sent to Rome, where he studied under Thorwaldsen. His genius was decidedly bold, energetic, and masculine. He delighted in portraying the athletic and heroic, rather than the soft and gentle, and has left behind him many works which the ancient Greeks and Romans would have held in the highest esteem; but for which, we fear, there was not sufficient encouragement in England. But it was for his portrait-busts that Mr. Park was best known. He idealised, refined, and ennobled the countenances of his sitters, without ever losing sight of fidelity and truth to nature; a rare art, in which it may be safely alleged he was a master, surpassed by none of his contemporaries or predecessors—not even excepting Chantrey. Those who have seen his admirable bust of the late Sir Charles James Napier, of Sir Harry Smith, of Alison the historian, and of Napoleon III., will recognise the justice of this faint eulogium—to do more justice to which we might cite, if necessary, scores, if not hundreds, of other portraitures of persons more or less distinguished. We believe that Mr. Park's last exhibited works of this class were the busts of Mr. Layard, M.P., and H.R.H. the Duke of Cambridge, lately on view at Messrs. Colnaghi's, in Pall-mall.

THE Duke of Cornwall's exhibition, granted to the Government School of Mines by the Prince of Wales, has this year been awarded to M. Charles Gould, a son of the eminent conchologist.

ROYAL THAMES NATIONAL REGATTA.

THIS regatta, the object of which is to offer rewards and prizes for perfection in rowing to men of every grade, whether gentlemen, tradesmen, or watermen, in order that its universal character may accord with its name came off with complete success on Monday, Tuesday, and Wednesday last, and the additional attraction of fine weather gave increased interest to some of the finest and best-contested races ever seen on the Thames. It was "Queen's weather;" and it is not a little singular that, when it was originally decided that this regatta should come off in July, her Majesty had not then conferred her patronage on it. When this was done the committee felt it their duty to add to its attractiveness as much as possible; and in order that a goodly list of entries might append on so important an occasion, as the first regatta so honoured, it was put off till August, in order to give time for more crews to be got together. The three days originally fixed on in July turned out "soakers;" the three in August just as fine—so that the Londoners have not only to thank her Majesty for her patronage to this undertaking, in the successful development of which their zeal is as much at stake, but for the large amount of sport afforded, and the fine weather that enabled them to enjoy it. The general character of the regatta has been amply sustained, as far as the quality and quantity of the racing is concerned; but, if something more of the show was added to the attraction, so as to put before the public as a national undertaking, it must be borne in mind that this is only the second year of its existence, and that the fun is here solely raised by private subscription obtained through the exertions of a few private gentlemen—and it is a fact that ought to be known that, from many of the sources from which money should naturally be expected to come, such as the conveyance companies to the course, and which make a large profit out of the Regatta, it is withheld. The South-Western Railway Company refused this season any contribution whatever, though the greater part of the visitors to Putney passed down their line, and special trains were obliged to be laid on to accommodate the increased traffic. Two only of all the large Steam-boat Companies, those servants belong to the establishment, have given a donation, while a somewhat advantaged by the traffic up and down the river that such an event creates, subscribed the sum of five pounds each towards the funds. These exceptions were the Citizen and Iron Steam-boat Companies; which latter company liberally placed a steamer at the use of the committee for the subscribers to view the racing from, and on which the plate was tastefully displayed—a boat of her Majesty, as patron of the regatta, surmounting the Royal anchor of the Prince of Wales, as a sailor, immediately underneath. The band in attendance was that from Cremorne Gardens, lent by Mr. Simpson.

The elegant plate which was competed for was manufactured by Messrs. Edkins, of Salisbury-square. The top piece of the group in the centre is the Gentlemen Scullers' Prize, a glass claret jug with silver ornamental handle and fittings; and immediately under this is the Grand Gold Challenge Cup for gentlemen's eight-oared boats. On the right and left of the Scullers' Prize are the Tradesman's Eight-oared Challenge Cup, and the Four-oared ditto, rather smaller; and immediately under this last are the tankards, the Gig race Prize. Under the Grand Gold Challenge Cup is the Clifford Challenge Cup (or rather we should say the claret-jug); and on either side of this are the Presentation Four-oars, given with the various Challenge Cups, the winner in every race for a Challenge Cup having a small cup for himself, which is his property; whereas the Challenge Cup belongs to the Club, and must be returned to the committee at the end of the season for competition again on the next. At the extreme right, on a line with the Clifford Jug, the Gentlemen's (Junior) Four-oared Presentation Tankards are placed; and to the right and left, a little above the oars and badge, which are placed immediately in front, are the Gentlemen's Presentation Pair-oared Cups. Almost in a line with these are the cups for the Gentlemen's Four-oared Race, and the Junior Pair-oared Race. The coat is of the finest scarlet cloth, made by Messrs. Nicoll, of Regent-street and Cornhill, and lined with scarlet silk throughout and quilted. The letters "T. R. T. & R."—Royal Thames National Regatta" being embroidered with silver on the collar, and the seams covered with silver lace. The badge on the coat was made by Messrs. Sarl and Sons, and represents old London-bridge, with St. Paul's in the background, and shipping in the front.

The Regatta concluded on Wednesday, when the assemblage was much more numerous than on previous days. The Lord Mayor and Lady Mayoress, with a select party of friends, arrived in the course of the day. The races on the Wednesday were four in number, viz. the Royal Prize of £10 in cash; a four-oared race, for tradesmen, for the Challenge Cup and Presentation Tankard; a scullers' race, for gentlemen, a pair-oared race, open to the world (final heat). The last-named contest was looked forward to with much interest. Winship and Searle, the Elswick crew, Wood and Auti of the Manchester, with W. Pocock and H. Clasper, and Lay and Bain, Wandsworth men, being pitted against each other, caused the betting to assume some interest. The Manchester was in favour at the start; the Elswick crew, however, gained favour. In the start was splendid: the Elswick crew took the lead, and maintained it up to the Willows, closely pressed by the Manchester men, the London men tailing off. The Elswick crew in first, the Manchester men being beaten. In the evening the various prizes were presented to the winners by the Lord Mayor, at Cremorne-gardens.

WORCESTERSHIRE ARCHERY SOCIETY.

THE first field-day of this society for the present season took place (as we briefly announced in our last Number) on Wednesday, the 8th inst., at Sheridge Court, the residence of T. Norbury, Esq., in the picturesque parish of Leigh, near Worcester. The weather in the early part of the morning was unfavourable; but towards twelve o'clock it cleared up, and remained fine for the remainder of the day, although the neighbourhood was visited by heavy storms. Lady Pakington was the Lady Paramount, and discharged the duties of her office greatly to the satisfaction of all present. Four ends of targets were pitched for the members, and one end for the strangers. The distance was sixty yards; the number of arrows twelve dozen. The following is a list of the shooters:—

Ladies: Miss and Miss M. Bearcroft, Miss Beamish, Miss Berkeley (Cotheridge), Miss Berkeley (Spetchley), Miss Blount, Mrs. Davison, Miss H. L. Moses Roland, Miss and Miss E. Norbury, Miss Temple, Mrs. Walcot.

Gentlemen: Rev. T. Bearcroft, Sir E. Blount, Bt., Wm. Blount, Esq., Beamish, Esq., Rev. J. Cooke, Colonel Clowes, Rev. J. R. Davison, Hon. and Rev. G. Gifford, E. Isaac, Esq., J. S. Isaac, Esq., J. W. Isaac, Esq., Rev. G. R. Prescott, Rev. C. J. Sale, Rev. W. Temple, M. E. Vale, Esq., Rev. W. R. Villers, Rev. J. Walcot, Rev. J. Webster.

The following ladies and gentlemen had rings excluded:—

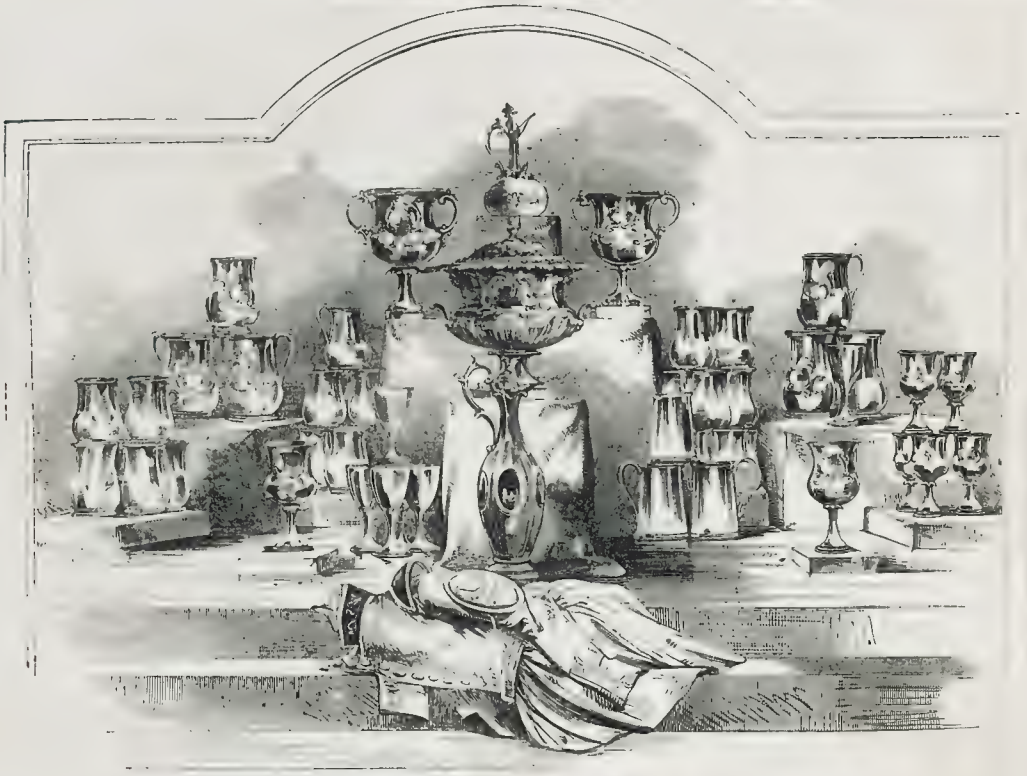
Mrs. Davison, 2; Colonel Clowes, 2; Miss M. Bearcroft, 1; Rev. J. R. Davison, 1; Rev. J. Walcot, 1.

Hopkins's Quadrille Band played at intervals throughout the day. At three o'clock the shooting was agreeably broken in upon by an adjournment to the dinner tent, where an excellent repast was provided by Mr. Hambler, of Worcester. Mr. Norbury presided; and, after the usual loyal toasts had been duly honoured, Sir E. Blount proposed the "Health of the Lady Paramount." Sir J. S. Pakington returned thanks, and gave the "Health of the Host and Hostess," whose courteous attentions to their guests had contributed to make the first meeting of the season most agreeable, as well as successful. Mr. Norbury having duly responded to the toast, the tent was shortly deserted, and the shooting resumed. It did not terminate until after seven o'clock, when the lists were made up, and the prizes awarded by the Lady Paramount. The Ladies' Challenge Prize was given to Mrs. Davison (hits 120, score 619); the Gentlemen's to Colonel Clowes (hits 124, score 574). Mrs. Davison and Colonel Clowes also gained the First Lady's and First Gentleman's Prizes (hits 60 and 74, scores 390 and 464). The Second Lady's Prize was awarded to Mrs. Walcot (hits 72, score 307), the second Gentleman's Prize to the Rev. T. Bearcroft (65 and 320). The prizes for the best hits in the gold were given to Miss Hill and the Rev. J. Walcot. The visitors' prizes were awarded to Miss Berkeley (Cotheridge), hits 40, score 166, and the Rev. O. K. Prescott, 96 and 448.

The sports and pleasures of the day were agreeably terminated by a ball.

The costume of the lady members of the Worcestershire Archery Society is remarkable for its picturesque elegance. It consists of a white felt ("wide-awake") hat, bound round with dark green velvet, the white crown encircled by a green velvet band, from the bow of which droops a green and white ostrich feather. The jacket is of green silk, on which is worn the member's badge, and the skirt is of white muslin. These, with the usual archery equipments, make up a very charming costume. The introduction of the felt hat, in place of the large white chip hat, is due to the refined taste of Lady Georgiana Lygon.

Our Illustration (from a sketch by Cuthbert Bede) shows the picturesque and park-like scenery of Sheridge, enlivened by the groups of archers and their friends. This peaceful "tented field" is shut in with groups of noble trees, gradually opening out to the distance, where "Malvern's lonely height"—from which, according to Macaulay, "twelve fair counties" may be seen—terminates the landscape with a broken line of hills. The chief part of the hills seen in the Sketch is the North Hill.



THE ROYAL THAMES REGATTA PRIZE PLATE.—(SEE PRECEDING PAGE.)

FETE OF THE WORCESTERSHIRE ARCHERY SOCIETY, AT SHERRIDGE COURT, NEAR WORCESTER.—(SEE PRECEDING PAGE.)

NAPOLEON RELICS.

The present page bears three illustrations of the dynasty of Napoleon. As memorabilia of conquest and captivity, two of these "curiosities" are suggestive from their association with passages in the life of Napoleon I.—one commemorating the "gale of his glory," the other recalling the circumstance of the close of his memorable life. "The Marengo Plate," the first of these relics, was formerly in the possession of the late Mr. Thomas Windus, F.S.A.: it is an excellent specimen of Sèvres China, painted with a scene from the ever-memorable battle of Marengo, at which Bonaparte commanded the French army against the Austrians, and by the victorious result of which he became master of Italy, thus wonderfully consolidating his power, and increasing his influence on the opinion of the French. Mr. Windus used to relate that at the capitulation of Paris, in 1814, the above plate was taken from a boudoir in the Palace of St. Cloud, by a British officer, from whom Mr. Windus obtained the piece of porcelain in the following year. It remained in Mr. Windus's possession, in his museum at Stamford-hill, until his death, in the present year, when his son, Lieutenant Windus, upon the dispersion of the collection, proposed to present the relic to the present Emperor of the French. For this purpose Lieutenant Windus visited Paris in May last, when the Emperor notified through the Grand Marshal his willingness to accept the plate. His Imperial Majesty, it is well known, takes great interest in collecting accredited souvenirs of his uncle; in consequence of which the offers of presents became so numerous that in order to stay their influx it became necessary to issue a notification in the *Moniteur*. An exception was, however, made for the Marengo Plate, which has accordingly been added to the Imperial cabinet. Lieutenant Windus had previously taken the plate to the manufactory at Sèvres to be identified: here the officials stated that, by the mark upon the plate, it was made about the year 1807, and was painted by their most eminent artist at that period. They expressed their surprise at the extreme beauty of the border, adding that such elaborate designs are not now executed; that there is no duplicate of this plate; and that it must have been made by express order. It is inclosed in a case which bears the Imperial insignia. As a memorial of the transaction, Lieutenant Windus has had the plate beautifully photographed; and a painting in oil has been made of it by Mr Andrews, late painter to the Czar Nicholas, in the Palace of St. Petersburg.

We have seen how the plate recals Napoleon in the flush of victory. The next group of relics is associated with the close of the victor's earthly career. In the Musée des Souverains, recently collected in the Louvre at Paris, is an entire hall devoted to memorials of the Napoleon family. It is one of the most attractive collections of the Curiosities of Paris, and thither thousands of sightseers flock, preferring these relics of imperial greatness to the far-famed treasures of art which are assembled in the same Palace. Among these relics is the coat which Napoleon wore at Marengo—purple, embroidered throughout with olive-leaves in dead gold. Here, also, is the sword which Napoleon wore as Consul; and here are several articles of his toilet—his little writing-desk, his *redingote gris*, his coronation shoes, gloves, and many other articles of personal interest, which are ably described by a writer in No 251 of *Household Words*. Among the most interesting and significant articles in the Museum are three hats "black, rusted, devoid of splendour, ludicrous almost," says the writer of quiet humour we have just referred to. Two of these hats are

HAT AND HANDKERCHIEF OF THE EMPEROR NAPOLEON I., IN THE LOUVRE, AT PARIS.

"cocked," and were worn by the Emperor in his campaigns. The third hat is altogether of a different order. It is a round hat, with the brim turned up at the sides. It was worn by the illustrious captive throughout his residence at Longwood, St. Helena. It is of beaver, but is worn out at the back: the brim is broken in two places, and has been rudely mended with needle and silk: the lining is of silk, of hazel colour, quite faded, and stuffed with cotton. The hat is placed upon a cushion, and in front of it is a little yellow cambric pocket-handkerchief, embroidered with the initial "N," surmounted by the Imperial crown. This handkerchief, which was taken off Napoleon's bed after his death, he held in his hand at the moment when he breathed his last sigh, and with it he wiped away the last drops of perspiration that bathed his brows. It was preserved by M. Pierron, *maître d'hotel* to the Emperor, who presented it to the museum with the hat just described. In front of the cushion are two inscriptions describing the articles. This is the most touching memorial of him whose greatness is now a handful of ashes in the Invalides, "on the banks of the Seine, among the French people, whom he loved so well."

Commercial Distress in Russia.—Great depression prevails among all classes in St. Petersburg, owing to the duration of the war, which completely paralyses all branches of commerce and industry. This depression has reached even the leading personages of the old Russian party, who were hitherto so warlike and so enthusiastic, but who are now beginning to despond. Nearly all labour is suspended in the manufactories, in consequence of the want of primary materials which no longer arrive from abroad, and also from want of hands, all being employed in the defence of the empire. The produce of the soil has no longer a market abroad, and in the interior business is at a standstill. Articles of the most indispensable kind have attained an exorbitant price. Coffee, sugar, and salt are luxuries which now are hardly to be seen, except on the tables of the great. The nobility support all the burden of the sacrifices in money imposed by the present circumstances, and the number of Boyards who will be utterly ruined by the war is beyond all idea. Add to this the grief of so many families, who have all to deplore the death of one or several relatives, and it will be easily imagined that the higher classes of the Russians are not over-disposed for amusements and fêtes; and yet they are forced by superior order to be gay. The summer season has not stopped the course of balls and soirées. The Emperor having one day said, in presence of his courtiers, that the nobles ought to invent some plan for preventing the commerce of the capital from feeling too severely the present state of things, and particularly the blockade of the Baltic, forthwith they set about organising a series of *tableaux vivans*, the performers in which are persons of the highest class of society. As these *tableaux* represent the different episodes of Russian history at all epochs, the actors and actresses in them are obliged to make purchases of the richest stuffs for the suitable costume. *Tableaux vivans* for the relief of the suffering tradesmen are at the moment the fashion on the banks of the Neva, and each noble feels obliged to give at least one of these patriotic pantomimes to prevent incurring the anger of his master, when no more generous motive exists. The tradespeople of St. Petersburg are relieved for the moment, but *tableaux vivans* on such a scale at length become onerous, and something else must be soon invented to alleviate the misery of the industrial classes.—*Private Letter from St. Petersburg.*

The receipts of the theatres and other places of public amusement in Paris considerably diminished during the last month. The amount received was 1,180,249 fr. 34 c., being 120,067 fr. 95 c. less than in the month of June.

The summons addressed to the National Guards of Paris, calling them out for Saturday (to-day), on the occasion of the entry of the Queen of England, states that each man must have in his knapsack a day's provision field ration.

SEVRES PLATE, PAINTED WITH A SCENE FROM THE BATTLE OF MARENGO, FOR THE EMPEROR NAPOLEON I.

THE TOMB OF NAPOLEON II., AT VIENNA.

It is often asked, why Louis Napoleon styles himself Napoleon III.? The reason is obvious. When Napoleon I. abdicated the throne, after the battle of Waterloo, he abdicated in favour of his son, the Duke of Reichstadt and King of Rome. Although that Prince never actually reigned, the theory of established Governments is, the new King succeeds *de facto*, the moment that the old King dies or vacates his position. The son of Louis XVI. never reigned, but he was recognised by the adherents of the elder branch of the Bourbons as Louis XVII.; and his uncle, who ultimately filled the throne, took the title of Louis XVIII. In like manner, the adherents of the Napoleonic dynasty insist that if the Duke of Reichstadt were Emperor only for the millionth part of a second, and until the news of his father's abdication could be promulgated, he was for that portion of time, infinitesimal though it were, the *de facto* Emperor of the French by the title of Napoleon II. Thus the present Emperor is legally, historically, and dynastically Napoleon III. The Duke of Reichstadt, as is well known, died in Vienna at an early age.

The accompanying Illustration shows the Duke's Tomb in the Church of the Capuchins, in the Neumarkt in that capital.

The Church in the Neumarkt is remarkable for containing the burial-vault of the Imperial family. It is shown by torchlight, under the guidance of a Capuchin brother. There are in all nearly seventy metal coffins. The oldest is that of the Emperor Matthias, 1619; the most splendid are that of Margaret of Spain, first wife of Leopold I., that of Joseph I., which is of pure silver, and those of Maria Theresa, and her husband Francis, and her son Joseph II.

In the accompanying Illustration the sarcophagus marked A is the tomb of Napoleon II. It will be seen that the Duke's name of Napoleon does not occur in the inscription; this omission is not accidental; and he is only there stated to have been the son of the Emperor Napoleon. The adjoining small tomb, B, is that of the Duke's mother, Marie Louise; and the large tomb is that of his maternal grandfather, the Emperor Francis

The following is the inscription upon the lid of the sarcophagus, A:—

Æternæ Memoriæ
Jos. Car. Francisci Ducis Reichstadiensis
Napoleonis Gall: Imperatoris
et
Mar: Ludovicæ Arch: Austr:
filii
Nati Parisiis XX Mart. MDCCCXI
in Cunabulis
Regis Romæ nomine salutati
Ætatis omnibus ingenii corporisque
dotibus florentem
procera statura vultu juveniliter decoro
angulari sermonis comitate
militaribus studiis et laboribus
mire intentum
phthisis tentavit
triennalis mora raptit
in suburbano augustorum sd pulchrum fontem
prope Vindobonam
XXII Julii MDCCCXXXII

TOMB OF NAPOLEON II., IN THE IMPERIAL VAULT, IN THE CHURCH OF THE CAPUCHINS, AT VIENNA.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE good people "all round the Wrekin" were so attentive to the little knot of antiquaries who assembled last week at Shrewsbury, as the Archæological Institute of Great Britain and Ireland, that we have no, seen any other expression of face on the excursionists—now once more in London than that of general satisfaction at the result. The temporary museum we are assured was, it is true, somewhat disappointing when it was contrasted with the exhibition of the same character at Norwich and Lincoln; but it was still good, and deserved the trouble it occasion-d. The inaugural addresses were, it is said, of the very commonest character, and the local papers more than confirm this account. The President, Lord Talbot de Malahide, expressed a very proper regret that the collection of Mr. Roach Smith had not been bought by the trustees of the British Museum. Another nobleman, Lord Dangannon, much to the delight of the head-master of the far famed Shrewsbury School, made the most marked portion of his speech the introduction of the threadbare quotation from "Ingenuas didicisse." The Dean of Manchester, in announcing that this was the first occasion of his being present at any of the meetings of the Institute, was led by a subtle train of reasoning into the novel remark that he hoped it would not be his last. This was very properly cheered—and may hereafter be copied by other speakers on similar occasions. The excursions were to Hawkstone, Wroxeter, Wenlock, and Baldwas Abbey. The principal papers were contributed by Mr. J. M. Kemble, Mr. Scharf, Mr. Blexam, and Mr. Petit. At Hawkstone they were fed in the tent under which the first anniversary of the battle of Waterloo was held. As antiquaries, they should have sat under Hotspur's tent. The recruiting officer (the Rev. E. Hill) did his work in so active a manner that all Shropshire was on the alert to feed the swarm of locusts in the shape of antiquaries that settled on Shrewsbury for the week, and ate and drank more like ordinary mortals than men deeply versed in Celts and old chins. The meeting was attended by Mr. Octavius Morgan, celebrated for his highly-interesting collection of old chronometers, clocks, and watches. He is said to have sought in vain for the Shrewsbury clock immortalised by Shakespeare.

Antiquarians are indeed alive. All that remains of the British Archæological Association is to assemble next week in the Isle of Wight—taking Southampton and Netley Abbey as offshoots of interest for visitation during the week. Gatherings like that just scattered at Shrewsbury, and this to come in the Isle of Wight, are much to be commended, if they are not pursued with an appetite intent rather on chickens and champagne than castles and cathedrals

Murray of Albemarle-street and of the "Handbooks," has this year gone abroad himself, carrying his own books for correction and completion. He is travelling somewhat cheap, but so potent a distributor of custom to hotels and inns has not been suffered to pass from town to town without industrious endeavours being made by landlords for a good word in his red handbooks. He "rains influence" and sits in judgment with clean hands, doggedly and indignantly refusing every bribe that the ingenuity of mine host can lay before him for a word of recommendation. It is impossible for so well-known a dispenser of patronage to travel unknown—and it is certainly desirable that books so properly esteemed by the public should have every advantage that further travel and careful revision can give them.

Mr. Thackeray, having finished his "Newcomes," is now actively intent on his forthcoming visit to America. He, starts, we believe, in September, with four lectures, entirely new, and which will be delivered for the first time in America. His subjects are admirably selected. He has chosen the four Georges, assigning a lecture to each reign. What smart and true things will he say of Sophia-Dorothea, of Caroline of Anspach, of Charlotte-Sophia, of Caroline of Brunswick! His favourite Queen must necessarily be Caroline of Anspach, Queen of George II. She was a very able woman. Only conceive the bitterness and bright bits of Lord Hervey and Lord Orford bittered and brightened by Mr. Michael-Angelo Titmarsh! On the War of Independence Mr. Thackeray must knuckle down a little to Jonathan, or he will not draw the dollars at Boston and New York. But he is sure to draw, and to express his own manly belief without fear or favour.

We had occasion some time back to chronicle the sympathy with the wants of an intelligent public, expressed and carried out, by the Dean and Chapter of the Peterborough Cathedral, and we have now to record another graceful act on the part of the authorities of the same cathedral. The Dean actually directed the service to be delayed on Monday one hour, to enable a large party of excursionists by rail to see what it so happened they could not otherwise have seen—the graves of Catherine of Aragon, and of Mary Queen of Scots. The orderly behaviour of the whole party, and the intelligence shown by very many, made this little act one of no ordinary grace and propriety. The excursionists left pleased with the concession that had been made to them, and in a better spirit towards a Church to which many of them did not belong. It is a pity that a scale of regulations alike to the whole of our cathedrals is not at once devised and carried out.

There was a silly proposition in the House the other day to erect a statue of the late Mr. Joseph Hume among the statues of statesmen now in course of erection in the new Houses of Parliament. The proposition fell, of course, to the ground. Hume was an honest man, who rendered good service to his country by his pertinacious and at length successful endeavours for Reform. But "Joe" was not a statesman. To put him among the seven already erected with Hampden and Falkland, with Selden and Mansfield, with Clarendon and Somers, with Sir Robert Walpole himself would be simply absurd.

Scholars are writing, will any one of the twenty successful candidates for Indian writerships turn out men of mark like Clive, Warren Hastings, or Sir William Jones? Your early-ripe fruits are not, it is said, the best. Cramming gives undue advantages, but seldom leads to lasting reputations. The twenty have now to cram for other duties—they have yet to learn Sanscrit, and to speak Hindostanee. A readiness of learning one language necessarily implies a facility in acquiring another. But there are other qualities for active life in India than the knowledge of its language. It would not have been said of Sir Henry Wotton—

> He had so many languages in store
> That only Fame shall speak of him in more—

if to this readiness in learning languages he had not been blessed with big thoughts, to which he could give a like expression in any tongue.

AN INDIAN TIGER-HUNTING PARTY.—The tiger-hunting expedition—consisting of three officers from Lucknow, a representative from each regiment—which left that station in the middle of May, returned last week, after a month's shooting in the Seraspore district, and adjacent Terai. These sportsmen were not as successful as their exertions merited, and, after being under canvas during the hottest month of the year, only brought back with them as trophies of their handiwork six tigers and one leopard's skin; however, they too, got back their own skins slightly embrowned with the exposure certainly, but in other respects none the worse of their trip.—*Central Star*

FATAL ACCIDENT AT WOOLWICH ARSENAL.—A young man employed in bringing back from the marsh to the Arsenal discharged shells, was killed the other day by the explosion of one. The young man, who was carrying the shell on his shoulder, remarked to a fellow workman that it was heavy, but that he might, perhaps, make it lighter by discharging the powder with which it was loaded through the nipple; to effect this, he removed it from his shoulder, and, taking it up with his hands, struck it against a stone in order to disengage the powder, which had been firmly rammed down. A terrific explosion was instantly heard, the young man's shell had burst, and the young man fell down dead.

At the special sessions held at Westminster by the High Constable, on Tuesday, the claims for compensation of persons who had their windows broken on the occasion of the rioting in Hyde-park were all disallowed.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

One of the leading features of the week has been the meeting of capitalists at the Turkish Ambassador's, respecting the new loan for the Ottoman Government, and the publication of the terms upon which it is proposed to raise the £5,000,000. It appears that the tenders are to be made in one sum at the Bank of England on Monday next; that the guaranteed interest will be 4 per cent; that the first deposit of 10 per cent will be payable on Wednesday the 22nd inst., and that the next two payments will be 20 per cent each. The whole amount must be paid up, under stringent regulations, before the close of January next, and no discount is to be allowed for payments in anticipation. However, we are not in a position to state at what price the loan will be taken; but, as the stock has already borne a premium of from 3 to 4 per cent, it is pretty clear that the five millions will be raised.

Notwithstanding that an instalment of 10 per cent on the late Loan of £16,000,000 will fall due on Tuesday next, and that the money market has been rather tight—though not tighter than last week most National Securities have been tolerably firm, and prices generally have been well supported. The following are the quotations this morning:—Bank Stock, 214 to 216; Three per Cent Reduced, 91½; Three per Cent Consols, 90⅞ to 91½; New Three per Cents, 90⅜ ⅝; Consols for Account, 91⅛; Annuities, 1860, 4 1-16; Ditto, 1885, 18 15-16. India Stock 211; India Bonds, 98s. to 99s; Exchequer Bills, 98s. to 99s. prem; Exchequer Bonds, 100 to 101. The above is the best series—100¾. Very little change took place in the general features of the market on Tuesday.—Bank Stock was 214½. The Three per Cents Reduced were done at 91⅝; the Three per Cent Consols, 91⅛ to 90⅝; Consols for Account, 91⅛; New Three per Cents, 90⅝ up to 90⅜; Long Annuities, 1885, 16 15-16; India Stock, 209½; India Bonds, 98s. to 99s.; Exchequer Bills, 98s. to 99s. prem.; Exchequer Bonds, 100⅞. The dealings on the following day were by no means extensive. Bank Stock, 214½ to 214¾. Three per Cent Reduced were 90 ⅝ to 91⅜; the Three per Cent Consols, 90⅝ to 91½; Consols for Account, 91⅛; the New Three per Cents, 90⅜; Long Annuities, 1885, 16 15-16. India Bonds, 97s. to 99s.; Exchequer Bills, 98s. to 99s. prem.; Exchequer Bonds, 100⅜ to 100⅝. On Thursday Consols were steady. The Three per Cents were done at 90⅝ to 91⅛; and for the Account, 91⅛. The New Three per Cents realised 90⅜; and the Reduced, 91⅛. Exchequer Bills, 14s. to 16s.; India Bonds, 98s. prem.; Omnium, 4¾ prem.

The Foreign-house has been steady, and we have very few changes no notice in prices. The leading quotations are as follows:—Brazilian Four-and-a-Half per Cents, 95½; Buenos Ayres Six per Cents, 56½; Peruvian Four-and-a-Half per Cents, 82; Portuguese Four per Cents, 42½; Sardinian Five per Cents, 87; Spanish Three per Cent Active, 22½; Ditto Three per Cents, 14; Turkish Six per Cents, 83½; Dutch Two-and-a-Half per Cents, 65; Ditch Four per Cents, 98⅜; Russian Four-and-a-Half per Cents, 90½. Belgian Four-and-a-Half per Cents, 91⅞; Ecuador, 4; Austrian Five per Cents, 81.

Very few shipments of bullion have been made to any quarter. The imports have amounted to about £300 000, chiefly from America and the West Indies. Several large parcels of silver have been sold at 61d per oz.

The return of the surplus deposits on the French Loan has been commenced. The Scrip has touched 3 prem

Joint Stock Bank Shares have continued very firm, and the quotations have been well supported:—Australasia have realised 95; City, 60½; London, 95½; London and Westmin ster, 47½; Oriental, 42½; Provincial of Ireland, 51½; South Australia, 40; Union of Australia, 52.

Miscellaneous Securities are sold as follows:—Australian Agricultural, 9; British American Land, 60; Canada, 102½; Ditto, Six per Cents, 111; Colonial Police Preference, 5⅞; General Screw Steam Shipping Company, 1¾; North of Europe Steam, 1¼; Peel River Land and Mineral, 2¾; Peninsular and Oriental Steam, 69; Royal Mail Steam, 64

The following are the positions of the Bank of France, and the fluctuations in the Stock of Bullion, &c., compared with the previous statement:—

Coin and Bullion	...	£13,551,378	increase £968,192
Bills discounted	...	16,125,584	,, 1,205,440
Circulation	...	24,800,444	decrease 1,907,512
Treasury deposits	...	1,124,541	increase 7,9 6,616
Private deposits	...	10,180,942	,, 74,540
Advances on Stock	...	2,1 8 511	,, 1,0 0,291
Advances on Railway Shares	...	4,603,204	,, 380,740

A considerable decline has taken place in the value of Great Western Railway Shares, owing to the rise of 2 per cent in most other railways. Rumours have been dull and rather drooping. The total "calls" for the present month have been now raised to £790,851. During the first eight months of the year they have amounted to £10,306,313 against £8,230,386 in 1854

The following are the shares and prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 49; Chester and Holyhead, 12; Eastern Counties, 5; Edinburgh and Perth, 91; Ditto, Preferred, 82; Great Northern, 89½; Ditto, B Stock, 127½; Great Southern and Western (Ireland), 105; Great Western, 86½; Lancashire and Yorkshire, 83½; London and Black wall, 71; London, Brighton, and South Coast, 87½; North-Western, Ditto, Preferred, 104½; Manchester, Sheffield, and Lincolnshire, 25½; Midland, 74⅜; Ditto, Birmingham and Derby, 43; North-Eastern, Berwick, 81; Ditto, York, 46½; North Staffordshire, 10½; South Devon, 13¾; Vale of Neath, 21; Waterford and Kilkenny, 1

PREFERENCE SHARES.—Great Northern Four-and-a-Half per Cent, 108; Great Western, Four per Cent, Ditto, Five per Cent, 101½; Ditto, Birmingham Stock, 74½; Manchester, Sheffield, and Lincolnshire, 8½ ex div; North Staffordshire, 22½

FOREIGN.—Antwerp and Rotterdam, 10; Bombay, Baroda, and Central India, 6½; Dutch-Rhenish, 12½; Grand Trunk of Canada, 11½; Great Luxembourg Shares, 8⅜; Ditto, Obligations, 3⅜; Great Western of Canada Shares, 6½; Madras Guaranteed, 103; Namur and Liege, 10½; Northern of France, 40½; Lyons, 49½; Sambre and Meuse, 9⅝; West Flanders, 4½; Zealand, 18½

In Mining Shares very little business has been done. On Thursday Brazil an Imperial were 3⅞; Ditto, New, 3⅝; Cobre, 7¾; Copper Mines of England, 24; Cuyaco, 19½; Pontgibaud Silver Lead, 14½; Santiago de Cuba, 5

Friday Evening.

Consols have somewhat improved since the morning, but the business done in them has been trifling. The Three per Cents have been 90⅝ ⅞ to 91 for Money, and 90⅝ 91½ for the Account. The Three per Cents Reduced are 91⅛; and the New Three per Cents 92¾. Foreign Bonds and Railway Shares are dull.

THE MARKETS.

CORN EXCHANGE (Friday).—About an average time of year's supply of English wheat THIS morning has been brought forward to our market this week; but the arrivals fresh up to-day by land carriage were small. Although the show of samples was but moderate, the trade ruled heavy, and most kinds were offered on rather lower terms. Over 10,000 quarters of foreign wheat have come to hand. The trade was in a depressed state HUPE quarters of foreign wheat have come to hand. The trade was in a depressed state and the quotations were nominally the same as on Monday. In floating cargoes, very few and the quotations were nominally the same as on Monday. In floating cargoes, very few transactions were reported. There was a moderate supply for barley at late rates; but most ruled heavy. The imports of foreign oats having been heavy, the oat trade was dull, and prices had a downward tendency. Beans and peas were also rather cheaper.

Arrivals this Week.—English: wheat, 2,26; barley, 1440; malt, 3300; oats, 800; flour, 1940. Foreign: wheat, 10,000 quarters; barley, 700; oats, 26,730; flour, 200 sacks.

English Wheat, Essex and Kent, red, 66s to 67s; ditto white, 71s. to 81s.; Norfolk and Suffolk, red, 63s to 73s.; rye, 49s.; grinding barley, 30s. to 31s.; distilling ditto, 29s. to 32s.; malting ditto, 39s. to 43s. Lincoln and Norfolk malt, ditto, 53s.; brown ditto, 50s. to 52s. Kingston and Ware, new, 70s.; Wareham, 71s. to 72s. Yorkshire and Lincolnshire feed oats, 25s to 27s; potato, 26s. to 30s.; Youghal and Cork, black, 24s. to 25s.; ditto, white, 31s. to 32s.; Sligo, black beans, 35s.; white ditto, 8s. to 10s. per bushel. English rapeseed, new, £40 to £42 per last. Linseed cakes, English, £12 5s. to £13 10s.; ditto, foreign, £10 10s. to £11 5s. Rapeseed cakes, £6 10s to £6 15s. per ton. Canary, 48s to 53s. per quarter

Flour.—The supplies of foreign kinds has become inactive, and prices have given way 6d. to 1s. per cwt. The stock in warehouse is considerably less than last year

Rice.—Most kinds are a slow sale, but we have no decline to note in the quotations.

Seeds.—About 600 bags Bengal have sold at 44s 6d to 45s 6d. per cwt.

Provisions.—The amount of business doing in all kinds of butter is very moderate, and in some instances the quotations have a downward tendency. The bacon market is firm, and the currencies have an upward tendency. In other kinds of provisions very little is doing.

Hay and Straw.—Old meadow hay, £4 0s. to £5 5s.; new ditto, £3 0s.; old clover, £4 15s to £5 5s; new ditto, £3 5s to £5 0s.; old straw, £1 4s. to £1 8s. per load. Trade steady.

Sugar (Friday).—We have had rather more business doing in hops this week, but no change has taken place in prices. Last year's produce is selling from £7 to £11 per cwt. Very favourable accounts reach us from plantations on the Continent.

[illegible] 2 shillal, 18s.; Haswell, 21s.; Hetton, 21s.; Lambton, 22s. 6d. Seaham, [illegible] Seaward, 21s.; Kyo, 22s. 3d., per ton

Smithfield Cattle Market.—To-day's market was rather extensively supplied with sheep of very middling quality. All breeds moved off slowly at a decline in the prices realised on Monday of 2d per 8 lbs. Prime Downs were scarcely disposed of at 4d per 8 lbs. Calves continue Half-fat sorts have undergone no improvement took place in their value. We received rather more than a full average number of beasts, but the trade for them ruled heavy, at barely previous rates. Milk-cows were steady, at from £14 to £20 each, including

[illegible] 1st quality, 4s. 8d to 5s. 2d.; second quality ditto, 4s. 4d to 4s. 8d.; coarse-woolled sheep, 4s. 4d to 4s. 8d.; prime Southdown, 5s to 5s. 4d.; prime coarse calves, 4s. 8d to 5s. 2d.; prime small ditto, 4s. 8d to 5s 2d; large beasts, 4s. 10d; small ditto, 4s. 8d to 5s. 2d.; lambs, 4s. 8d to 6s. 0d.; suckling calves, 18s to 26s.; and quarter-old store pigs, 20s to 27s each. Total supply: beasts, 2,91 sheep, 14,0 0 sheep and lambs, 12,800, calves, 700; pigs, 600. Foreign: beasts, 306, sheep and [illegible] calves, 502

Newgate and Leadenhall (Friday). The general demand ruled very inactive, as follows:

Per 8 lbs. by the carcase.—Inferior beef, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 10d. to 4s. 0d.; prime large ditto, 4s. 2d. to 4s. 4d.; ditto small ditto, 4s. 4d. to 4s. 6d.; large pork, 3s. 8d. to 4s. 0d.; inferior mutton, 3s. 6d. to 3s. 8d.; middling ditto, 4s. 0d. to 4s. 4d.; prime ditto, 4s. 6d. to 4s. 10d.; veal, 3s. 10d. to 4s. 10d.; small pork, 4s. 0d. to 4s. 6d.; lamb, 6s. 0d. to 6s. 10d.

ROBERT HERBERT.

THE LONDON GAZETTE.

TUESDAY, AUG. 14.

WAR-OFFICE, AUGUST 14TH

Medical Staff Corps.—Capt. R. S. Cole to be Assistant Staff Captain.

BANKRUPTS.

R. and C. HAYNE, Upper Woburn-street and Adelaide-street, carpenters.—J. COLQUHOUN and H. MARCHAL, London wall, soap makers.—W. BICKETT, Oxford, gas engineer.—J. FIELD, Burham Westgate, Kent, draper.—C. M. HIND, Upper Stamford-street, Blackfriars, apothecary.—A. CHOVEL, Strand, opening maker.—W. C. GOLDING, Lime-street, brokers' warehouseman.—H. ISKEL, [illegible].—J. SPENCE, Hilton, staffordshire, [illegible].—J. and T. MONK, Tipton, Staffordshire, boiler-makers.—C. GODDARD, North [illegible].—J. LITTLE, Wednesbury, Staffordshire, [illegible].—W. FEAR, jun., Bristol, lawyers.—L. AHLBORN, Liverpool, toy dealer.—W. BUCKLEY, Salford, Lancashire, timber-dealer.—J. PIANOFORTE HANDBOOK (Wade's). Improved by JOHN ANDROTT. 2s.
The above Series of Educational Works is intended, to supply, at the cheapest possible rate, books adapted for Schools and Private Study. The old system of instruction, by which the names of things only were presented to the mind of the pupil, has long been admitted to have been defective and unsatisfactory. What is necessary is to enable to speak to the eye as well as the mind—to give a picture of an object as well as a description; and the adoption of such a plan of tuition is not only by far the most effective, but also far less irksome to the teacher, and more pleasant to the pupil. The great success which has attended the works published in this Series, is a sufficient proof that such a class of works was required.
Published by HERBERT INGRAM and Co., 198, Strand, London.

PALACE OF ST. CLOUD, THE RESIDENCE OF HER MAJESTY.—THE ORANGERY.—(SEE PAGE 206.)

ST. CLOUD, THE RESIDENCE OF HER MAJESTY. THE A[illegible]

OFFICIAL DESPATCHES.

DESPATCH FROM GENERAL SIMPSON

War Department, August 14

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship by General Simpson, commanding her Majesty's forces in the East:—

Before Sebastopol, July 31.

My Lord,—I beg to enclose the list of casualties to the 29th instant, which I regret to say are very heavy.

The proximity of our works to those of the enemy, together with the lightness of the night, and rocky nature of the ground, making it impossible to obtain rapid cover, render ally contributes to such a result; notwithstanding which determination on the part of the enemy continue steadily, though slowly, to advance in the direction of the Green Ridge.

An agreeable change has taken place in the last few days in the temperature of the weather. Heavy showers of rain have occasionally fallen.

Several recruiting parties have been made from the valley of Baidar towards Ozenbash, Aitodor, and through the Phoros Pass towards Alupka, the enemy nowhere appearing in any force; but the narrowness of the mountain roads, with the exception of the Woronzow, makes it unnecessary for them to alter their concentrated position on the heights of Mackenzie and plateau of the Belbek.

The health of the troops continues very satisfactory

I am, &c., JAMES SIMPSON,

The Lord Panmure, &c. Lieutenant-General Commanding.

OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES KILLED AND WOUNDED FROM THE 27TH TO THE 29TH JULY, 1855, INCLUSIVE

NAVAL AND MILITARY INTELLIGENCE.

THE whole of the enrolled pensioners in Ireland are called out this month for ten days' exercise.

THE disembodied allowance of 2s. 6d. a day, heretofore granted to retired Militia officers, is now withdrawn, their regiments being again embodied.

THE Antrim Rifles gave fifteen volunteers to the regular army last week. This makes up their full quota on the establishment (35 per cent on 1000 men).

BY a recent decision of the Admiralty, the proceeds of the Russian prizes lately captured by revenue cruisers are not to be divided among the captors.

NEARLY one thousand gentlemen were appointed to commissions in the Army between the 1st of January and the 1st of July. In July, upwards of 200 commissions were conferred on candidates.

THE Government has effected another large contract with Colonel Colt for his celebrated weapons, which are to be supplied to the officers of both services, and to those in the Turkish Contingent under Major-General Shirley.

LAST WEEK Mr. Thomas Jamieson, of the Victualling Yard, Deptford, temporarily appointed inspector of provisions, examined, at the Royal William Victualling Yard, Plymouth, about 12,000 barrels of beef and pork, supplied by contract to the Government, and received at that establishment from the stores open at Harlowbline, Cork. It is stated that the officers at Plymouth consider about one in 10 of the stores unfit for Government use . . . . . opinion. It appears that the . . . . . being packed in mild weather, while . . . . . .

It is said here . . . . . vessels still . . . . . under War. Pensioners from the land forces will be eligible, but the majority of both officers and men will consist of those who, from slight wounds, are rendered incapable of performing active duties in the field, are yet fit for garrison service at home and in the Colonies. When the battalions are organised and clothed, which will not occupy much time, the Government will be enabled to withdraw some regiments of the line from Bermuda, the West Indies, and Canada for the Crimea.

THE Government has entered into large contracts . . . . for clothing for the troops in the Crimea. The latter to be supplied . . . . . lined with rabbit-fur, 45,000; trousers, ditt., 45,000; and fur waistcoats, 45,000. 10,000 of each of the foregoing articles of a better description are also to be supplied. The waterproof clothing contracted for is to consist of 50,000 cloaks with sleeves, 50,000 capes, and 60,000 ox hide boots, in previous to snow water. The greater portion of the above mentioned is to be delivered into store by the 1st of September.

PLANS are at present under the consideration of the Government for fortifying the island of Inchkeith. It is proposed to erect a battery just under the lighthouse. The Martello Tower at Leith has recently received its full complement of guns; and other works for the protection of Aberdeen, Dundee, &c., are being carried into effect.

MESSRS. LOSH, WILSON, and BELL, of the Walker Iron Works, Newcastle-on-Tyne, have completed a large order for shells for the Turkish Government; and they are now engaged in the manufacture of 25,000 shells, from 8-inch to 13-inch, besides a number of mortars, for the British Government. Their foundry is now exclusively employed in the construction of implements of war.

CAPTAIN GOSSETT, Royal Engineers, son of Major Gossett, Barrackmaster at Cork, has received the appointment of Surveyor-General in Ceylon. The salary is £1200 a year.

THERE are at the present time 400 tons of 13-inch shells being sent on board lighters at Messrs. Arnold's, for conveyance to Southampton, where they are to be shipped on board some of the large transports for the Crimea. A number of workmen in the Arsenal are engaged in plugging up 5,000 bomb-shells, to receive bullets instead of powder. Each shell has a piece of hot iron being put into the fuze-hole and then hammered tight in. They are intended for the use of the navy, which has . . . . . which they fall into pieces represent as nearly as any hard object, and cause as much damage as if they had the charge of powder inside the shell.

THE following . . . . . by the Queen to Sir Edmund Lyons, on the death of his son—Dunbarton House, June 29, 1855. The Queen cannot help . . . . one but to express to Sir Edmund Lyons the Prince's and her feelings of deep and heartfelt sympathy on the most melancholy occasion of the loss of his beloved and gallant son, Captain Lyons. We grieve deeply to think of the heavy affliction into which Sir E. Lyons is plunged at this anxious moment, and we mourn over the loss of an officer who proved himself every way worthy of his father, and was so far got an ornament to the service he belonged to. To lose him, just when he returned triumphant, having accomplished so admirably all that was desired and wished, must be an additional sting to his father. If sympathy can afford consolation, he possesses that of the whole nation.

THE 51st Regiment, which has for some time been stationed in Manchester, embarked on the . . . . at Liverpool, on board the steam-transport *Simla and Andes*, for . . . . The following officers accompanied the troops: Lieut. Colonel Errington, Major Erskine; Captains Irby, Dixon, Madden, Drought, and Mc Morris; Lieuts. Anderson, Aston, Ellis, Savage, Heard, Woolley, and Hall; Ensigns Bayly, Barker, Lewin, Scott, Oldham, Gloag, and Lambert; Ensign and Adjutant Clement; Paymaster Powell; Quartermaster Lawrence; Surgeon H. M. Webb; and Assistant-Surgeon Bacon. There are 41 sergeants, 20 corporals, 17 buglers, and 760 privates; making a total, including officers, of 896. The depot to be left behind consists of . . . . sergeants, 21 corporals, 8 buglers, and 348 privates; making a total of 400. The regiment will be recruited from detachments from the 31st and 48th Regiments, and the 71st Buffs, also embarked at the same time on board the respective vessels.

IT is said that orders have been received at the Laboratory Department of the Arsenal to get ready for immediate service 200,000 shells of different calibre in ten days.

BETWEEN thirty and forty gunners and drivers of the Royal Artillery were discharged on Tuesday morning as being unfit for further service in the Army. Some of them had lost a leg; others an arm each, and a few were incapacitated from disease. About twelve of the Royal Sappers and Miners were discharged at the same time.

A BOMARSUND ANECDOTE.—At Bomarsund, when the citadel was destroyed, the order was given for re-embarkation. The means of transport were insufficient, and a body of from 3000 to 4000 men could find no room. General Baraguay d'Hilliers appealed to Admiral Napier to obtain means of transport, and experienced a like refusal in the terms. The situation was grave, and the General demanded an interview with the Admiral, who came on shore. An English Vice-Admiral and General Not were present at the interview. General Baraguay d'Hilliers represented strongly the position of the Russian troops, and the urgent necessity for transports. Admiral Napier, appealing to the established rules, refused with regret; when the Vice-Admiral (whose name I do not recollect, now, and in a most respectful way) said he had no power, and, "Admiral, the French General is in the right; and the honour of England will suffer if you refuse his request. After some conversation the Admiral desired that the order should be put in writing, and that he would then reply. The next morning the transports were at the disposition of the General.—*Baron de Bazancourt.*

FRENCH MILITARY PRISONERS PARDONED.—On the occasion of the fête of the Emperor numerous pardons have been granted. Out of 878 soldiers detained in the different penitentiaries and prisons and undergoing the punishment of the *boulet* and hard labour, 577 have received full pardons, and 201 a reduction of their terms of punishment, 176 prisoners who have belonged to the army, and have been undergoing the punishment of hard labour, solitary confinement, or irons, have also been pardoned, or had their punishment reduced; 97 individuals, condemned by courts-martial for insubordinate acts, have had a whole or part of their sentences remitted. In the whole 1083 men condemned by the army tribunals have experienced the clemency of his Majesty.

THE BALLOON EXPERIMENT.—I mentioned a few days ago that experiments were making at Vincennes with a view to destroy the shipping and powder-magazines, &c., in Sebastopol, by means of projectiles and carcasses, to be dropped from a balloon; and also that, owing to the boisterous state of the weather, it had been up very few days which left but little time for the intention. Since then three more attempts have been made to carry the experiments to an issue, but fortune did not smile upon the subsequent essays any more than on the first. The balloon was filled each time at the gas-works near the Barrière du Trône, and had to be taken down to the Plaine de St. Maur, about three miles off, but never succeeded in reaching it—the wind, the trees, and on another occasion a gate through which it had to pass, tearing it to ribbons. The inventor is, however, determined to go on, and the Emperor, determined to give him a fair trial, has ordered that pure hydrogen should be made on the field, to obviate the accidents which have taken place, so that a decisive result one way or another may be shortly expected. I was mistaken the other day in stating the inventor to be an officer of Marine Artillery; he is only a non-commissioned officer in that corps—Sergeant Bourdonne: and the plan, whether feasible or not, does great credit to his ingenuity. The balloon, which is to be thrown up when the wind blows from the Camp to the town, takes up several carcases and 13-inch shells, which are to be fired and dropped by means of electricity. The plan is, as I have said, extremely ingenious; but is so complicated that among military men its success is much doubted. The Emperor will be present when the experiment takes place.—*Letter from Paris*

TRAVELLERS in the United States say that the crops of wheat and corn in Missouri, Iowa, Indiana, Illinois, and Ohio, surpass in luxuriance the most extravagant anticipations of a bountiful season.

SECRET DIPLOMACY.—STATE REFORM.

SINCE the nation was allowed to drift into war Secret Diplomacy has been very generally denounced by the people; and a few weeks ago, on the question of the Turkish Loan, it was almost fatal to the Government. Acting in the usual manner of carrying on negotiations exclusively by the prerogative of the Crown, and concealing them from the people, they went to Parliament to obtain its necessary assent to the convention to guarantee a loan to Turkey. They were almost defeated. They might, in like manner, have concluded a dishonourable peace with Russia—from which they were actually not far distant when Lord John Russell was at Vienna, or even a convention to guarantee a loan to Austria to enable her to occupy the Principalities—as unpatriotic Ministers have before now bestowed the national money on both Russia and Austria, and then it would have been imperative on the people to dismiss them. But the convention was unobjectionable By the mere force of our national credit we may enable Turkey to bring her great army into the field more readily for the advantage of the alliance, and, if the war be successful, may never have a single farthing to pay. But the more advantageous the convention, the stronger the objection to the secret mode of negociating it, which endangered its completion, and endangered the existence of the Ministry and the alliance between France and England. We cannot make the importance of the question and the extent of danger incurred plainer than by transcribing a few words from the *Times* of the 21st ult.:—

The sentinels (said our contemporary) who first saw the Russian great-coats looming through the thick fog of the 5th of November, as their columns crowned the heights of Inkerman, were not more completely taken by surprise than were her Majesty's Ministers last night, when they found that a measure, which they had a right to look upon almost as a matter of course, was menaced with a violent and preconcerted opposition. We are astonished at the magnitude of the danger, and the narrowness of the escape, and can scarcely believe that within so short a time the alliance with France, the prospects of the war, and the very existence of Turkey, should have been saved from the most serious risk by the narrow majority of 135 to 132. We must express our unfeigned astonishment that the convention with France was to be annulled, the guarantee refused, and the Emperor of the French lowered in the eyes of his legislature and his subjects, by having been made to propose to them the performance of a treaty which the Parliament of his ally subsequently refused to ratify. The real question was whether it should go forth to France and to the world that *this country, with all its pretence to good government* had really *no sweetness at all*, so far as foreign affairs were concerned—whether we should proclaim to Europe that *we are a people* well whom no terms should be made, because *by us* at least none would be kept. There was great danger it would be said that our popular government was as impotent in diplomacy as in war . . . . . the Emperor . . . . the French, finding that . . . . . knew from all who were in the . . . . . was all confusion and uncertainty and vacillation on ours.

This is a description of dangers incurred and risks run by Secret Diplomacy; for the people represented as faithless, and as keeping no terms, were never consulted about this negotiation; although their consent, signified by the House of Commons, was necessary to its completion. As long as such a consent is requisite to give validity to the acts of Ministers (and this is the very essence of the national freedom—the great point on which England differs from the Continental nations, where the Governments transact and complete all the national affairs without consulting the people, and only learn that they have done wrong when exasperation breaks out in a rebellion or a revolution), the Ministers are bound in common sense to consult the people before pledging the national faith. All the danger and all the risk might have been avoided by the Ministers coming down to the House of Commons a month or six weeks before they did, stating the utility of supporting Turkey by lending her our credit, and moving a resolution that such a course was expedient. Had they done so, they would have secured the assent of the House of Commons, and might have entered into the negotiation with a perfect conviction of being able to complete it. If the House, prepared for the motion of the Ministers, had refused its consent, the Ministers would not then have entered into the convention, and no person could have been affronted, and no alliance endangered. The war might have been as vigorously conducted. Such, however, there was no probability but no other evil could have arisen. Why did not the Ministers take such plain course? The *Times* says they could not consult Parliament before the treaty was concluded." Why not? In the answer to this lies the kernel of the matter and the whole explanation of Secret Diplomacy.

"It is one of the Sovereign's prerogatives," say the legal writers, "to make treaties, leagues, and alliances with foreign States and Princes." This prerogative the Ministers, though placed in office by the Commons, and now more the servants of the nation than of the Crown, are particularly desirous to preserve, and accordingly they insist that the power of making all kinds of convention and treaties belongs exclusively to them. They refuse accordingly, as the rule, to give any information to Parliament concerning negotiations in progress; though they lay treaties before it when concluded, and especially when they require its help to give effect to them, and they admit that they are answerable not to the Crown but to Parliament and the nation, for all the effects of treaties when made. It very frequently happens, as in the case of the Turkish Convention, that a treaty cannot be perfected without the consent of Parliament. The Parliament, or the nation, acting by the Parliament, accused of not keeping faith, is clearly the overruling power, and ought to be consulted before its faith is pledged. The thing proposed cannot be done without its consent. Prerogative is subordinate to Parliament, and therefore it is reasonable that Prerogative should ask the opinion of Parliament, and so assent of its assent, before it puts itself in motion, and be certain before it concludes treaties. To make the Sovereign, however, or to make the Ministers—who, as the servants of the Commons, usurp and wield the Sovereign power—submit to the nation, is considered by them derogatory; and whenever it happens, as in the present case, that a large portion of the Court is opposed to a special act of, prerogative, the Ministers, by such representations as those we have copied from the *Times*, by talking big of the prerogative, and threatening to resign, generally contrive to intimidate Parliament into assenting to any treaty which they have concluded. Parliament, can only turn out the Ministers, and repudiate their acts, and thus, while it retains a share of power, it is in reality deprived of all voice and vote in our foreign relations. So far as they are concerned, it is reduced to a mere debating club, with no more real power than the mock Parliament at the Garrick's Head. This is the Secret Diplomacy which is full of mischief. It may pledge the nation to an inglorious peace or involve it in an unjust war, and the nation will remain in total ignorance on the subject till the evil is consummated. All it can then do will be to dismiss the unworthy Minister, or have one of those revolutions in our party Government which are, on a small scale, disastrous like the great revolutions which, in Continental States, bring home retribution to Sovereigns. In reality, then, we must embroil ourselves in the additional trouble of breaking up the Administration without the power of correcting its errors at a time when rigorous and consistent Government is more than usually essential to the public welfare.

All these evils might be avoided by a proper discretion in exercising the Royal prerogative. No person, we presume, wishes to interfere with the right of the Executive to consider what negotiations are proper, to initiate them and to conduct them; but before imposing on the nation any new and onerous obligations they ought to consult it. We are all now thoroughly convinced that had the negotiations with St. Petersburg been submitted to the publicin 1852-53. when they were going on, the present war would have been avoided. Nicholas would then have learned the national feelings and the national determination, while he really saw and heard only Ministerial courtesies and Ministerial complicity; and he would have avoided a course, which he would have been made sensible would lead him into war. But Ministers, like other people, hate control. We have all wonderful confidence in ourselves, and an equal mistrust of others; and Ministers, like the rest of us, conclude that nothing can be well done but what they do. They cherish, therefore, with great pertinacity the old prerogatives. Gradually many of these have been laid aside, or been exercised with discretion, according to circumstances or pressure of public opinion Till now, the prerogative of making treaties has not excited much attention, and Ministers have exercised it with a high hand, producing in our foreign relations much evil. As the people increase in knowledge and the Parliament increases in power, old routine practices founded on circumstances long passed away should be departed from. It is an important part of the duty of Ministers chosen from the Commons to take notice of the changes in society, and gradually, for the sake of the Sovereign as well as the people, to adopt prerogative to existing facts. The House or Commons acting for the nation being now supreme, it would only be consistent with common sense for Ministers, before they conclude negotiations which cannot be done without dishonour, to act and obtain the approval of the nation. To get rid of what has become hateful under the name of Secret Diplomacy is now a necessary part of State reform. Though Ministers, in love with despotic power, and far more friendly to it in the hands of foreign sovereigns than to popular liberties, may and do plead that they will not be able, if under popular control, to negotiate with them, we beg distinctly and emphatically to inform them that their first duty is to the people of England. These must be served whether despots be pleased or not.

MINISTERIAL VIEWS ABOUT THE WAR.

RIDDERMINSTER.—Mr. Lowe, in his address to the electors, says:—"The real question which must be decided in this election is whether you are disposed to give your support to a vigorous war, carried on until we can obtain an honourable and lasting peace; or whether you will support some faltering and half-hearted compromise, which may, indeed, relieve us from the immediate pressure of the war, but at the cost of our honour and our security, and with the prospect of another contest, more expensive to carry on and more difficult to terminate. I feel certain of Lord Palmerston is dissatisfied with the latter of these views, and I believe, are the great majority of the nation. I owe it to your kindness to say that when I was yet a stranger to you, that I have been able to give my humble support to those principles in Parliament, and I trust to owe to your approval the honour of hereafter supporting them." Mr. Bayeott (who was opposed by Mr. Lowe) rested his claims to support mainly on his being in favour of a more vigorous and energetic prosecution of the war. The nomination took place on Tuesday, when Mr. Lowe was returned without opposition. Mr. Boycott having retired. Mr. Lowe, in his address to the electors, said—If they were heartily in favour of prosecuting the war, and wished to impress upon the Government the necessity of carrying it out with vigour, it was their duty not needlessly to impede that Government. They should not give the Emperor of Russia and his allies the opportunity of saying that the tide was turning in England that the people of England were ready enough to go to war, but that when they found out what it was, their boasted courage deserted them they were anxious for a graven peace, and hastened from the conflict. He (Mr. Lowe) was those men who urged them to stick to their colours and to fight to the last.

HERTFORD.—Mr. W. Cowper, whose return to Parliament was not opposed, says, in his address to the electors:—"The magnitude of the expeditions which England has been obliged to undertake for the purpose of restraining the aggressive designs of Russia against the freedom and civilisation of Europe, and the distance from the source of supply at which our army has to operate, threw upon the military departments a burden which, at first, they were unable to sustain; but new departments have been organised, and old ones remodelled, and the army is fully supplied with everything needful, and is preserved from many of the hardships the enemy has still to endure. . . . . I shall be happy to give in person any explanations of my political views that may be desired; but I believe that, at the present moment, you are less inclined to enter into those general topics than to demonstrate to the nation at large the desire to give such support and encouragement to the Government of Lord Palmerston as may enable him to give full effect to his declared resolution of prosecuting the war with the utmost vigour and energy, as the surest way of attaining an honourable and lasting peace." Mr. Cowper, who was returned without opposition on Tuesday, addressed the electors at some length. In the conclusion of his speech he said He felt assured that our best policy was to be honest and courageous, and not to listen to the counsels of fear, for this country would bear its burden willingly, in order to attain to a long and honourable peace, as our forefathers had borne the burdens when they were engaged in a contest more arduous will. the Emperor of that day, who threatened to invade the liberties of Europe (Hear, hear). We owed it to those brave men, who had lost their lives in the Crimea not to relax in our efforts: and he felt certain that the people of England never would waver faint, but would prosecute the war with the utmost vigour, until they had secured the honourable peace on which they had set their hearts, and for which they had made such great sacrifices."

KILMARNOCK.—Mr. Bouverie, addressing his late constituents, refers to the Aberdeen-Gladstone proposal to obtain peace by yielding to the enemy's demand, and adds]: "Another way is by perseverance in a vigorous prosecution of the war; by a determination to spare no effort to defeat the designs of our foe; by a resolution to win those fair terms of pacification from his consciousness of defeat, which it is idle to expect from his justice or his moderation. Such I believe to be the right road to a restoration of peace."

THE NEW GOVERNOR-GENERAL FOR INDIA. The present period of Lord Canning's departure is as yet undetermined. Much necessarily depends upon the movements and wishes of Lord Dalhousie. It is supposed, however, that the latter will not be formally relieved until the commencement of February. As the new governor-General contemplates a visit to Madras, and a brief residence there, in order that he may take counsel with Lord Harris; and, as it is, we believe, his intention to spend a week or two in consultation with Lord Dalhousie before he enters upon his official duties, it would seem that the end of October or the beginning of November, as we previously stated, is the most probable period of Lord Canning's departure. No successor to his Lordship has been appointed at the Post-office, nor has Lady Canning been relieved a Court.

PARIS UNIVERSAL EXHIBITION.—We understand that a letter has been addressed to the Chambers of Commerce of the United Kingdom, by the Board of Trade, calling the attention of those bodies to the steps taken in the various seats of British industry to the machinery for producing manufactures, and to the manufactures themselves, which are exhibited in the Paris Exhibition by France and other European countries, and of those Colonies which are situated in our great seaport towns, to the various kinds of imports, and especially those from the Colonies of the United Kingdom. At the same time a request has been made that in every case where the Chambers were to depute some of their members possessing technical knowledge on the subject to visit the Paris Exhibition for the purpose of furnishing a detailed report of the state of manufacture, it is believed that the progress of manufacturing production shown on this occasion, and its probable competitive influence on the markets of the world, will be found to be well worthy the serious consideration of the producers of the United Kingdom; and, should the suggestion be carried out with proper spirit, the Board of Trade expresses an opinion that a series of reports on the industrial position and recent progress of Europe would be obtained far more practical and useful than any reports which the Board could hope to obtain itself through its own agency.

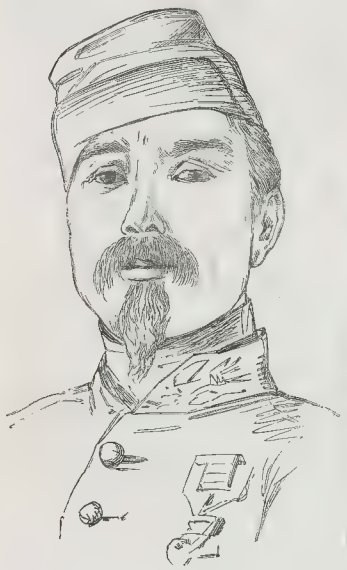
POST-OFFICE REVENUE. A return recently issued shows that the gross revenue of the Post-office for the financial year 1854-5, including the income derived from foreign and colonial postage, was £2,684,916 9s. 10½d.; the postage on letters returned, including £28,411 13s. 1d. charged on the East India Company, but written off by Treasury minute, was £64,579 18s. 4d.; the cost of management was £1,479,576 6s. 11½d.; charges other than management, £26,708 18s. 9d.; giving a net revenue of £1,139,051 5s. 10d. for the year. The total payments for the conveyance of mails by railway within the year amounted to £253,320 19s. 2d.; and for conveyance in previous years, £127,597 19s. 9d. The cost of the money order department for England and Wales was £61,317, and the amount of commission received £77,094; Ireland cost £7,925, commission £9,654; Scotland cost £9865, commission £7620: showing a total expenditure of £76,807, as against £93,833 receipts. The amount paid by the public departments of Great Britain for postage was £141,278 13s. 8d., while for Ireland the sum was £13,897 14s. 11d., giving a total for the United Kingdom of £155,143 7s. 5d.

PROGRESS OF NEW YORK. The census of the city of New York, recently taken, shows the population of the island to amount to about 750,000. Five years ago it was 517,000. The foreign emigration which so much to account for this increase, great as it is; 250,000 or 300,000 foreigners a-year have arrived at this port since 1850, and although the larger proportion have passed through on their way to the West, or to other states, as well as to California, many have resided there. Brooklyn, on the opposite bank of the East River, numbers about 200,000, and Jersey city and Hoboken, on the North River, will carry up the town population of New York, without taking in the surrounding villas, to over a million. Enormously great as the increase has been since the discovery of California, there is every reason to think that the additions are as great now as ever. The gradual restoration of confidence in business, the promise of a superabundant crop, and the continued arrivals of emigrants from Europe at this point, as well as the concentration here of ocean steam navigation with Europe, California, and the coast of the United States, are causes as actively at work now as at any moment for the last four years.

LIEUTENANT-COLONEL VICO.

THE following eulogium on this brave French officer, who died on the 10th of July, is from a despatch of General Simpson to Lord Panmure, dated July 14:—

My Lord,—I announced to your Lordship by telegraph, on the 11th, the death of Lieut.-Colonel Vico, of the French army, which melancholy event took place on the afternoon of the 10th inst.



THE LATE LIEUT.-COLONEL VICO.

It is impossible for me to find words to express my regret at this sad visitation.

Lieutenant-Colonel Vico joined the English Army as joint Commissioner the latter end of May, 1854, and had, up to the time of his death, never been absent from his duty for a single day. At Varna, where the cholera raged, and carried off hundreds—at the landing of the Allied armies at Old Fort—at the Bulganac, where his colleague, Lieutenant-Colonel de Lagondie, was taken prisoner, and from which time he had the sole charge of the communications between the French and English head-quarters—at the glorious battle of Alma—at that of Balaclava—at the stern and bloody fight of Inkerman—in fact, at every place, and on every occasion, where he thought his services could be of use, was Lieutenant-Colonel Vico to be found.

I know that the late Field Marshal Lord Raglan held him in the highest estimation, and placed the most implicit confidence in him; and although my acquaintance had, comparatively speaking, been but a short one, it had been long enough for me to appreciate the many excellent qualities with which he was endowed.

A pious Christian, a brave and gallant soldier, a single-hearted, upright man, a kind and generous one, who thought no personal sacrifice too great for the public good, he has gone from us, beloved and regretted by every Englishman who had the advantage of knowing him and enjoying his friendship

I have, &c.,
JAMES SIMPSON,
Lieutenant-General Commanding.

FOUNTAIN OF THE SULTAN VALIDE, AT SCUTARI.

FOUNTAIN OF THE SULTAN VALIDE, AT SCUTARI.

THIS is a fine specimen of the Fountains of Constantinople and its suburbs, and partakes in general character of the usual form of these quadrangular water-castles. Here we have the large broad-eaved roof, the sides richly gilt and decorated, and bearing inscriptions celebrating the praise of water; for water is to the Eastern the symbol of the principle of life; and the words of the Koran, "By water everything lives," are almost universally inscribed on the great fountains.

LADY REDCLIFFE VISITING THE WOUNDED AT SCUTARI

THE City of the Sultan presents many vivid scenes for the pencil of the artist; but few can compare in interest with the present incident of Lady Redcliffe, the wife of the British Ambassador, on her way to visit the wounded in the Hospital at Scutari, which has been fitted up under the superintendence of the humane Miss Nightingale. The locality is the principal portion of Pera, showing the entrance to the Galata serai which palace was destroyed by fire some years since. Here barracks and an hospital have been provided for our troops; and here, for the first time, English soldiers mounted guard in Constantinople—an extraordinary scene for the Turks, who then began to perceive that they were no longer masters at home. Lady Redcliffe is seated in her sedan chair, which is carried by two bearers in Greek dresses, embroidered in blue, they wear small skull-caps with long tassels, moustachios, and no beard. The chair is preceded by a gendarme—a portly man, wearing a tunic richly embroidered with gold, and a pair of pistols in pockets similary decorated; he holds a sabre in his left, and a cane in his right hand. An English footman follows the chair. In the right corner of the picture is the Police Guard-house.

ANTICIPATORY CHARACTER OF LORD J. RUSSELL.—He gives hopes where he ought to create absolute despair. This is that hovering between two principles which ruins political strength by lowering political character, and creates a notion that his enemies need not fear such a man, and that his friends cannot trust him. No opinion could be more unjust as applied to Lord John; but such an opinion will grow if he begin to value himself more upon his dexterity and finesse than upon those fine, manly, historico-Russell qualities he most undoubtedly possesses.—*Sydney Smith.*

LADY REDCLIFFE VISITING THE WOUNDED IN THE HOSPITAL AT SCUTARI.

DONKEY RACES IN ALEXANDRIA.

SKETCHES IN ALEXANDRIA.

During a recent visit to Alexandria our Artist availed himself of the opportunity to present to our readers a pair of Sketches of the street life of that interesting city. We give his own description of these characteristic scenes:—

"Just emerging from the great square of Alexandria, Captain Ponsonby and I entered the main street, preceded by a tall, athletic, and Mercury-like negro: he wears a long, sleeveless shirt, his only garment; and he flourishes a heavy stick above his head as a warning to passers by, and riders coming in opposite directions, that they had to clear the way before us. We are attended by a tribe of urchins, dressed in the same style as the negro, some black and others olive: and they forgot the poor diminutive donkeys with such unmerciful energy that I really wished for the interference of some member of the Society for the Prevention of Cruelty to Animals.

"A clever-looking and gracefully-shaped little fellow is riding before us, serving as interpreter, and continually turning round to us, explaining everything he sees, whether we like it or not, in five or six languages in succession.

"Two Egyptians on donkeys are approaching with their feet nearly touching the ground. In the right foreground are two Egyptian ladies, very obese, wearing wide yellow trousers and boots. A black nurse is carrying a pretty white boy, in white dress, in arms; the boy is dressed in the extreme French fashion, contrasting strangely with the Eastern costume of the family.

"The houses in the streets are lofty, and have windows with blinds always shut against the wind and dust; the roofs are flat. A group of Arabs is sitting in the middle of the square on the left, smoking. On the roofs of the houses are the flags of the different Consuls. Each house has a winding staircase with a small balcony.

"It should be added that the donkey in Egypt is a diminutive horse, with the exception of the ears and tail: it has no mane. These donkeys are comparatively high on their legs, which are admirably shaped. The have all the appearance of a very slender racer-looking horse; but they are much smaller than the English donkey. There is a sort of high cushion in front of the saddle, on which the hand of the rider usually rests.

"The second Illustration is a night scene in Alexandria, where the carriage of one of the wealthier class is preceded by a pair of negroes bearing tall lighted torches, nearly as the footmen of old bore lighted flambeaux in the streets of our metropolis."

Photography.—We understand that Mr. Ottewill, of Islington, the well-known photographic instrument maker, has invented a beautiful little addition to the camera. It is a dark portable chamber; this little box enables the photographer to change his plates at pleasure in the open air without the possibility of light getting into the instrument. This must prove a boon to photographers.

STREET IN ALEXANDRIA, BY NIGHT.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—SATURDAY, AUG. 16.

CHARITABLE TRUSTS BILL.

The LORD CHANCELLOR moved that their Lordships should agree to the Commons' Amendments, but he could not do so without expressing his regret that many of the provisions of the bill had not been adopted by the Commons

Lord CAMPBELL deplored that the bill had been mutilated in the other House, and though some service might be derived from it, that service would be trifling indeed when compared to what would have resulted from it, if it had passed in its original shape.

Lord LYTTELTON expressed a hope that early next Session the Government would endeavour to carry through Parliament the provisions that had been rejected in the other House.

After a few words from Earl GRANVILLE, the Commons' Amendments were agreed to.

The Commons' Amendments to the Criminal Justice Bill were considered and agreed to.

The Public Houses (Ireland) Bill, the Public Health Act Continuance and Amendment Bill, and the Diseases Prevention Bill, were read a third time and passed.

LIMITED LIABILITY.

On the motion for the third reading of the Limited Liability Bill,

Lord LYTTELTON renewed his protest against persisting with so important a measure without affording time for the due consideration of its details

The Marquis of LANSDOWNE defended the course which the Government had pursued in pressing forward the measure this Session, and briefly expressed his approval of the principles it involved.

The bill was then read a third time, and passed, after a clause had been added empowering the Board of Trade to appoint auditors, under certain regulations, for the purpose of inspecting the accounts of the companies who might avail themselves of the privileges created by the measure.

HOUSE OF COMMONS. SATURDAY.

STATE OF THE CRIMEAN ARMY.

In reply to Lord Hotham,

Lord PALMERSTON promised to produce the report and evidence taken by Sir J. M'Neil and Colonel Tulloch respecting their recent inquiries into the state of the Crimean Army, with the exception of certain passages of a confidential character

The Lords' amendments in several bills were considered and agreed to.

LIMITED LIABILITY BILL.

The Limited Liability Bill, which had just passed its final stage in the Upper House, having been brought down, the successive changes effected in that measure by the Peers were read from the Chair, and elicited much criticism. Mr. Williams, Mr. J. G. Phillimore, Mr. Malins, and other supporters of the original bill, complained of the narrow spirit in which it had been treated "elsewhere," and of the restrictive tendency of the amendments that had been introduced.

Lord Palmerston and the Attorney-General admitted the injurious nature of many of the changes thus effected, but recommended the House to accept the bill as it stood rather than risk it altogether by rejecting the Lords' amendments. In that case the Premier urged the whole ground would have to be gone over again next Session; whereas by taking the measure as it was the principle would be definitively adopted, and a better bill might easily be introduced hereafter on the foundation now laid.

This course was ultimately pursued, all the amendments being agreed to, and the bill passed without further modification as sent down from the Peers

The House, at four o'clock, adjourned until half-past one on Tuesday.

HOUSE OF LORDS.—MONDAY.

JUDICIAL PROCEEDINGS IN THE HOUSE OF LORDS.

Lord ST. LEONARDS moved for a return of the number of appeals heard and disposed of by their Lordships during the last five years, distinguishing those from England, Scotland, and Ireland, with the decision in each case He could not omit alluding to an attack which was reported to have been recently made in another place upon the appellate jurisdiction of that House, by her Majesty's Solicitor-General. The tone in which the judicial functions of their Lordships and the manner of discharging them were described was calculated to lower their jurisdiction—actual or legal—in the estimation of the public. If there was a period of the year more inconvenient than another for making such a charge, it was just when Parliament was about to be prorogued, and when no opportunity could occur to have the public mind set at rest and the matter rectified and put on its proper foundation. For himself, he could only say that he had always given the utmost attention and diligence to the consideration of appeals brought before their Lordships, and he felt satisfied that every Peer who took any part in disposing of them did the same.

Lord CAMPBELL had been unable to avoid feeling some degree of indignation at the attack said to have been made on their Lordships, which had a direct tendency to bring the jurisdiction of that House into disrepute. It was an attack which, if directed against the liberties of the country, and upon a public functionary, for he (Lord Campbell) must say that it was an attack upon his noble and learned friend on the woolsack, was presided over by their Lordships' decisions as Judges. It seemed to him, if the report were a just representation of what fell from the Solicitor-General, that he thought that jurisdiction would never be satisfactorily administered in that House until the time (the Solicitor-General) was presiding on the woolsack. Their judicial jurisdiction was of essential importance to their Lordships to enable them to preserve their weight, in purpose and usefulness; and any attack which called upon the country to consider it unsatisfactory and mischievous must be an attack on the constitution of the country itself.

The LORD CHANCELLOR was sure he need not dwell on the necessity and importance of maintaining unimpaired the judicial functions of that House, which had been regarded in all ages as one of the best securities for the generally efficient and impartial administration of justice by the subordinate tribunals. He knew that in theory there might be great objection to the constitution of that tribunal, and that it might be canvassed in every way bearing on that opinion; but, supposing the attack which he had read only half an hour ago to be a correct representation of what his honourable and learned friend the Solicitor-General had said, he could hardly consider that speech an attack on himself so much as an attack on the judicial business of the House. He could not take the observations of his honourable and learned friend personally to him self; but neither could he, therefore, shrink from expressing his entire concurrence in what was stated, that this attack, attributed to the Solicitor-General, was altogether unfounded.

The Consolidated Fund Appropriation Bill, Exchequer Bills (£7,000,000) Bill, and Militia Pay Bill, were read a third time and passed.

HOUSE OF LORDS.—TUESDAY.

The House of Lords met at half-past one o'clock.

PROROGATION OF PARLIAMENT.

The Royal Commission, consisting of the Lord Chancellor, the Duke of Argyll, the Earl of Harrowby, Earl Granville, and Lord Stanley of Alderley, took their seats at the foot of the throne, when the Royal Commission appointing them was read, in presence of the Speaker and about fifty members of the House of Commons, summoned thither by the Black Rod for the purpose.

The Royal assent to a number of bills having been given by commission, the Lord Chancellor read

THE ROYAL SPEECH.

MY LORDS AND GENTLEMEN,

We are commanded by her Majesty to release you from further attendance in Parliament, and at the same time to express the warm acknowledgments of her Majesty for the zeal and assiduity with which you have applied yourselves to the discharge of your public duties during a long and laborious Session

Her Majesty has seen with great satisfaction that, while you have occupied yourselves in providing means for the vigorous prosecution of the war, you have given your attention to many measures of great public utility

Her Majesty is convinced that you will share her satisfaction at finding that the progress of events has tended to cement more firmly that union which has so happily been established between her Government and that of her ally the Emperor of the French, and her Majesty trusts that an alliance founded on a sense of the general interests of Europe, and consolidated by good faith, will long survive the wants which have given rise to it, and will contribute to the permanent well-being and prosperity of the two great nations whom it has linked together in the bonds of honourable friendship.

The accession of the King of Sardinia to the Treaty between her Majesty, the Emperor of the French, and the Sultan, has given additional importance and strength to such alliance; and the efficient force which his Sardinian Majesty has sent to the seat of war to co operate with the Allied armies will not fail to maintain the high reputation by which the army of Sardinia has ever been distinguished.

Her Majesty has commanded us to thank you for having enabled her to avail herself as far as has been required of those patriotic efforts of extended service which she has received from the Militia of the United Kingdom, and for the means of reinforcing her brave army in the Crimea by an enlistment of volunteers from abroad.

Her Majesty acknowledges with satisfaction the measures which you have adopted for giving effect to the Convention by which, in conjunction with her ally the Emperor of the French, she has made arrangements for assisting the Sultan to provide the means which are necessary to enable him to maintain the efficiency of the Turkish army, which has so gallantly withstood the assaults of its enemies

Her Majesty, in giving her assent to the bill which you presented to her for the Local Management of the Metropolis, trusts that the arrangements provided by that measure will lead to many improvements conducive to the convenience and health of this great city.

The abolition of the duty on newspapers will tend to diffuse useful information among the poorer classes of her Majesty's subjects.

The principle of limited liability, which you have judiciously applied to joint-stock associations, will afford additional facilities for the employment of capital, and the improvements which you have made in the laws which regulate friendly societies will encourage habits of industry and thrift amongst the labouring classes of the community.

Her Majesty trusts that the measures to which she has given her assent for improving the constitutions of New South Wales, Victoria, and Tasmania, and for bestowing on the important and flourishing colonies of Tasmania extended powers of self-government, will assist the development of their great natural resources, and will promote the contentment and happiness of their inhabitants. Her Majesty commands us to say, that she has been deeply gratified by the zeal for the success of her Majesty's arms, and by the sympathy for her soldiers and sailors manifested throughout her Indian and Colonial empire, and her Majesty acknowledges with great satisfaction the generous contributions which her subjects in India, and the legislatures and inhabitants of the Colonies, have sent for the relief of the sufferers by the casualties of war.

GENTLEMEN OF THE HOUSE OF COMMONS,

Her Majesty commands us to convey to you her cordial thanks for the readiness and zeal with which you have provided the necessary supplies for carrying on the war in which her Majesty is engaged

Her Majesty laments the burthens and sacrifices which it has become necessary to impose upon her faithful people; but she acknowledges the wisdom with which you have alleviated the weight of those burthens by the mixed arrangements which you have made for providing those supplies

MY LORDS AND GENTLEMEN,

Her Majesty has commanded us to say that she has seen with sincere regret that the endeavours which, in conjunction with her ally, the Emperor of the French, she made at the recent Conferences at Vienna to bring the war to a conclusion on conditions consistent with the honour of the Allies and with the future security of Europe, have proved ineffectual. But those endeavours having failed, no other course is left to her Majesty but to prosecute the war with all possible vigour; and her Majesty, relying upon the support of Parliament, upon the manly spirit and patriotism of her people, upon the never-failing courage of her Army and her Navy, whose patience under suffering and whose power of endurance her Majesty has witnessed with admiration, and upon the steadfast fidelity of her allies, and, above all, upon the justice of her cause, humbly puts her trust in the Almighty Disposer of events for such an issue of the great contest in which she is engaged as may secure to Europe the blessings of a firm and lasting peace.

On your return to your several counties you will have duties to perform little less important than those which belong to your attendance in Parliament.

Her Majesty trusts that your powerful influence will be exerted for the welfare and happiness of her people, the promotion of which is the object of her Majesty's constant care, and the anxious desire of her heart.

HOUSE OF COMMONS. TUESDAY.

The House met at half past one o'clock

CONDUCT OF THE WAR.

Sir DE LACY EVANS wished to offer a few observations with the view of eliciting from the noble Lord such a statement as would be satisfactory to the country, that during the recess her Majesty's Government would prosecute the war with the utmost vigour (Hear, hear). There might be some hon. gentlemen behind him who might think such a declaration superfluous, but Lord having frequently and satisfactorily stated that House declared his determination to prosecute the war to a successful end, but, then, he recollected other right hon. gentlemen when connected with the Government, as the hon. Sir J. Graham had displayed considerable short-comings in acting up to their professions (Hear, hear). He had another reason. He was old enough to recollect the last war, and upon contrasting the operations of the Government of that day in prosecuting the war to a triumphant issue with the exertions of the present Government, he could not help saying he saw a great deficiency. The noble Lord having frequently

THE PUBLIC HEALTH.—(No. II.)

In the year 1850 Mr. Henry Stothert, of Bath, submitted to the Commissioners of Sewers in London a plan for removing and deodorising the sewage of the metropolis, and applying it to the purposes of agricultural irrigation. He exhibited a large model of his plan at Mr Russell's bleaching manufactory, in the Strand, in which the whole of his mechanical and engineering process was clearly displayed, and public criticism was invited to pronounce on its merits or demerits. In the presence of five of the Metropolitan Commissioners he experimented on the sewer which drains New Richmond, in the direction of Mortlake, at the point where it adjoins the gas-works. The Commissioners were satisfied with the results, for in each of the experiments "the solid matter precipitated stood about one-fifth the way up in the cylindrical glass vessel used on the occasion, the other four-fifths being clear water. A portion of the solid matter having been taken out of the vessel, was found to be free from odour." This fact, and others to a similar purport, being attested by Richard Jebb, Esq., Chairman, and that gentleman, with his colleagues, having promised to report favourably to the Committee, Mr. Stothert expected that further notice would have been taken of his plan; but, in common with many other ingenious men, he was doomed to disappointment. However, as public attention is now seriously fixed on the polluted state of the Thames, the occasion is favourable for a renewed inquiry into the advantages of Mr Stothert's plan.

It is evident that any work adequate to carry off all the refuse of this huge and annually increasing metropolis must be of colossal proportions; but it would be a reflection on our engineering skill if we could not surmount all difficulties. In the infancy of Rome Tarquinius Priscus commenced, and Tarquinius Superbus completed, the Cloaca Maxima; and Livy, who wrote in the age of Augustus, describes it as an undertaking so vast that even the magnificence of the period in which he flourished could not equal it; while Pliny, who records its repair, expressly says that this *opus omnium maximum* continued as strong in its main foundations as when first built by Tarquin. Such an example of the energies of an infant State ought to awaken our national pride; nor should we forget that water was brought to Rome through aqueducts, from distances of thirty, forty, and sixty miles, in one continuous covered channel of stone, carried by arcades over the widest valleys, and by tunnels pierced through mountains. Pliny writes, "If we consider attentively the quantities of water brought into the city for the use of the public, for baths, for fishponds, for private houses, for artificial lakes, for gardens in the neighbourhood of the city, and for villas; if we look also at the works which have been constructed for forming a regular channel for the waters—arches raised up, mountains pierced with tunnels, and valleys filled up to a level—it must be acknowledged that there is nothing in the world more wonderful." Frontinus states that, under the Emperor Nerva, to whom he was architect, nine of the aqueducts emptied their waters into the city, through 13,594 pipes, each of an inch diameter; and during every twenty four hours Rome received no less than 500,000 hogsheads of water by means of the aqueducts. Such noble contrivances for promoting and preserving the public health are worthy of our imitation.

Mr. Stothert estimates that 150,000,000 gallons of sewage matter ought to be removed daily from London, which is equal to 500,000 tons. Five-sixths of this quantity is due to the north side of the Thames. The calculations, however, are made, in round numbers, on 500,000 tons daily, and, as the solid matter of the sewage is computed at only one-hundredth part of the total quantity to be removed, the solid matter is reduced to 5000 tons daily. To this, however, must be added a quantity of antiputrescent matter to render the sewage innocuous, and this may be roughly put down at 250 tons daily, or one-twentieth part of the solid refuse. Mr. Stothert then describes the machinery required to carry out his scheme on both sides of the Thames, and we shall give the statement in his own words:—

City Side of River.—Thirty-six head of water will deliver six times the quantity through a one-foot pipe that can be delivered through a similar pipe of one-foot head

A pipe of three feet diameter with a thirty-six feet head, and say 800 yards long (for the length would not be more before you reach the second engine with enlarged pipe), would discharge 7308 tons per hour

7308 tons of sewage, lifted thirty-six feet high by a Cornish engine, would not require more than 1136 lb. of coal per hour

288-horse power would be required to raise 7308 tons of water thirty-six feet per hour

Velocity of water through the pipe, 10 feet 3½ inches per second.

Surrey Side of River. A twenty-four inch pipe with thirty-six feet head would discharge 2739 tons per hour.

2739 tons, raised thirty-six feet high would consume 416 lb. of coal per hour

108-horse power engine would be required to raise 2739 tons of water thirty-six feet high per hour

Velocity of water flowing through pipe eight feet six inches per second.

It is proposed to have five engines fixed on the north or City side of the river, whose united discharge in the twenty-four hours would be 316,800 tons of sewage matter, or 196,449,040 gallons

The coal required for working the five engines to raise and dispose of the above quantity would be 60 tons 16 cwt.

On the Surrey or south side of the river it is proposed to have three engines, whose united discharge in the twenty-four hours would be 196,474 tons, or 44,010,176 gallons

The coal required for working the three engines for twenty-four hours would be 18 tons 7 cwts.

The total quantity in gallons discharged from the eight engines on the north and south sides of the river, constantly at work, would be 238,312,216

The total quantity of coals consumed by all the engines constantly at work would be 74 tons 2 cwt

The whole of the above sewage would be conveyed through a pipe of seven feet diameter in the largest part on the City side, and a pipe of three feet six inches in the largest part of the Surrey side

Such, then, is Mr. Stothert's machinery and method of working. The next consideration is the cost of carrying the plan into practice. Of this he gives a very minute and detailed estimate, but it will answer the present purpose to classify the totals under separate heads. It must, however, be noticed that in each of them twenty per cent is added and included to cover unforeseen contingencies. The expenditure necessary for purchasing and fixing the machinery on the north side of the river, including the ground on which it will have to be erected, is put down at £423,400; on the south side, at £200,000; adding twenty per cent for contingencies, the total outlay in these departments amounts to £748,080. This is the cost for removing the sewage from London. The next item is the expenditure needed for mixing and distributing the sewage, which, for both sides of the river, is estimated at £1,558,440. The total fixed capital, therefore, for the whole plant represents £2,276,520. The estimated annual cost for working is valued at £107,655. If the capital—£2,276,520—were raised by loan at four per cent, the interest would be £91,060, which, added to the working expenses, would involve an annual outlay of £198,155. At this trifling cost the Thames would be restored to a state of purity, the air would no longer be polluted by its foul and poisonous exhalations, and the water used for domestic purposes would be sweet and wholesome. In the whole scope of State Reform nothing could be more beneficial; for this, at least, is not a "class movement," but one that concerns the whole community

We now proceed to show that the advance of capital proposed would not only be returned, but that, after its repayment, this sanitary operation would yield a large and permanent revenue, which might be appropriated to such other uses as Government might deem desirable. Mr James Dean, land surveyor and civil engineer, who has had large experience in agricultural drainage, when examined before the Health of Towns Commission, expressed his conviction that, where grass land yields one mowing crop and feed, by the application of sewage to such land it would produce two, and in some seasons three, crops, and at least double the quantity of feeding On being asked whether he could adduce any practical confirmation of his views, he referred to Ashburton, and other towns, especially Devonshire. The system had been successfully adopted within his own recollection for forty years at Ashburton. The unimproved land in that locality near to a town, is usually worth from 30s. to 40s. an acre; when improved by sewage it becomes worth from £8 to £12 an acre.*

Mr. James Smith, of Deanston, stated to the Commissioners that land which let formerly at from 40s. to £6 per Scotch acre, is now annually let at from £30 to £40; and that poor sandy soil on the sea-shore, which might be be worth half-a-crown per acre, now lets at an annual rent of from £15 to £20. The average value of the land he had examined, irrespective of the sewer-water application, might be taken at £3 per imperial acre, and the average rent of the irrigated land at £30; making a difference of £27; but £2 may be deducted as the cost of management, leaving £25 per acre of clear annual income due to the sewer-water. Mr. Smith then made the following general statement:

I have ascertained that the quantity of sewer-water due to a town of 50,000 inhabitants amounts to about 1,190,000,946 gallons per annum, which quantity will yield an annual application of 17,000 gallons per acre to an extent of 66,410 acres. Taking the average cost of guano and farmyard manure at £2 per acre, and deducting 12s. 8d., the cost of the application of the sewer-water, there will appear a saving due to the sewer-water of £1 7s. 4d.; allowing one-half thereof to go to the farmer, there will remain a free income due to the sewer-water of £45,241, which is nearly £1 per head of the population.†

Mr. George Stephens, speaking of the irrigated meadows near Edinburgh, states that about fifty acres have been treated with sewer-water for about a century. Although the formation is irregular, as he observes, and the management was very imperfect at the time he wrote, he describes the effect of the water to be most astonishing ---

They produce crops of grass not to be equalled, being cut from four to six times every year, and given green to milch cows. The grass is let every year by auction, in small patches, from a quarter of an acre and upwards, which generally yields from £24 to £30 per acre. This year (1856) part of the Earl of Moray's meadow grass as high as £67 per acre.‡

At Milan, the sewer-water has for a long period been applied to profitable use, and forms a most important branch of the agriculture of Lombardy. Some of the meadows, so treated, yield a net rent of £21 per tonnara (a measure of 10,000 square metres, equal to about two acres and a half), besides a land-tax of £1 francs 10 cents, the expenses of administration, repairs of buildings, &c. These meadows are mown in November, January, March, and April, for stable feeding; in June, July, and August they yield three crops of hay for the winter; and in September they furnish an abundant pasture for the cattle till the beginning of the winter irrigation.

This evidence, and it might easily be multiplied, establishes the principle that towns may be purified actually without cost—the preliminary outlay being in truth one of the safest and most profitable of investments. If Government will not undertake the responsibility of the operation, it neglects its duty; if it refuse to confer due powers on a company, to enable them to perform what itself refuses to execute, then it becomes criminal. The purification of the metropolis on Mr. Stothert's plan, or on any other plan shown to be more eligible, affords a fine opportunity for testing the merits of limited liability, where a wise law would be used for a wise purpose. Mr. Stothert's calculations of outlay and annual expenses are based upon removing the sewage matter of a population of two millions, as well as extraneous sewage matter arising from other than the main sources; he has shown this to exceed two millions annual y; and as an acre of land, properly irrigated, will absorb 100 tons of dilute sewage, London can provide for the fertilisation of two millions of acres. He calculates that the amount to be received per acre for distributing the material would be £4 per acre—an estimate founded on the experience of the Sewage Manure Company; but this we venture to think somewhat too high, as there is the competition of foreign guano to encounter. However, proceeding on this estimate, and taking only one million of acres to be irrigated, the aggregate annual receipts would be four millions sterling; deduct the cost of working and the annual interest, which has been stated the net profit on the undertaking would be £3,801,845 per annum, which, would replace the original outlay in less than twelve months. Here we must pause till next week.

‡ Essay on Irrigated Lands, by George Stephens, p. 72

ASCENT OF MONT BLANC.

Mr. William Young, of Belfast, and Count Henri de made the ascent of Mont Blanc on the 30th and 31st of July. A friend of the former gentleman, who wrote an account of the event to the *Belfast Mercury*, says that the Grands Mulets are terribly "infested with flies, so that when he attempted to get rest he was fairly driven out of the place."

RESULTS OF THE FUSION.—(*Gazette Anstrochienne*, under date of Vienna, August 4, says:—"The Duke de Montpensier yesterday evening paid a visit to the Count de Cumbord (immediately on the arrival of the latter), which lasted an hour. The Count returned the call the next morning, and remained with his son all day as long a time. He left for Frohsdorff at half-past two the same afternoon."

COLLISION IN THE CHANNEL.—

The steam-packet that left Dover for Calais on Saturday night, at 11 20, came into collision with the brigantine *Henry*, of Yarmouth, bound from Shields to Rouen, deeply laden with coal, when the latter was sunk, and the master, Robert Hyde; the mate, Charles Holmes; and a boy, F. Fulcher, sank with the vessel, not having been able to cast the boat, which they had got into, adrift from the ship. Two other men who were on board, named Rastrops and Ruddun, were picked up by the bows of the packet. It is said that the vessel was anchored directly in the fairway, about half a mile off Dover Harbour, and that she had no light up.

MILITARY ECONOMICS.—

All the country in the enemy's front was visited by a second spring. It is to be hoped it will also do something for replenishing the springs of water, which have been nearly dried up by the continued heat. Much might have been done long before now towards alleviating this want, which there was a probability would be severely felt before the autumn. The French from the commencement instituted a corps of well-sinkers, paying a premium on the springs discovered, and it is to our allies that the whole of the right attack is at present indebted for the supply of water. We have begun now to turn our attention towards alleviating the hardships of the winter in prospect, and the quartermasters have been called on to furnish a list of the warm clothing necessary to complete the soldiers of their respective regiments, and under the present system there is little fear of the inconveniences and surmountable hardships recurring. As we shall most probably be in possession of the south side of Sebastopol before the snow falls we should be able there to find sufficient shelter for the whole army, even should the Russians in their desperate flight destroy as much of the town as has escaped the destructive effects of our shot. Our army is sanguine of success, although we have remained outside so long that the siege of Sebastopol seem as far from us as the stars of heaven. By the formation of a Land Transport corps our soldiers will be spared from acting as "commissariat mules," and the words: houses give them a good shelter, which an English campaigning tent never does In these days of Army reform attention might be called to the state of British camp equipage-tents: camp-kettles, packs, shovels, and hatchets, remain the same as those issued to the army, under Abercrombie, in Egypt. Latterly the only useful article has been the improved camp-kettle, and the new pattern shovel-hatchet, very portable and serviceable, but we require bill-hooks, made adapted for cutting brush-wood for firing than for chopping logs. We have tried some improvements in the old wooden water-barrels with copper hoops. Bottles made of indiarubber and gutta percha were issued for trial, the former, when cooled and dried, allowed the sides to collapse and stick together so fast that it was impossible to make use of them again; and the gutta-percha bottles, when exposed to a hot sun, because so soft that anything made a hole in them; besides this, they gave a disagreeable taste to the water contained in them. Before the heavy rains of winter come down the soldiers should be supplied with nipple covers for their rifles, and an improved style of stopper. For the former, something made of indiarubber, like the cover of an ink-bottle, would no doubt be found to answer, and this might be adapted for the muzzle also.—*Letter from the Camp, July 30.*

SCENES IN PARIS. THE TUILERIES GARDENS.

THERE is a shady avenue in the gardens of the Tuileries stretching along the wall which marks the Rue de Rivoli from the Palace to the Place de la Concorde. The fine old trees afford a deep shadow, under which enterprising speculators have long kept convenient chairs to be let out to attentive mothers, noisy nurses, old gentlemen retired from business, and idlers who are in search of novelty or excitement. The custom they have enjoyed has fully justified the capital invested in deal and rushes. Any summer day, about two o'clock, the stranger, who may suddenly find himself in this avenue, will have before him ample materials for the study of Parisian belles in every stage of their growth, from the serf and wizened little fellows whose fists wander confusedly about their noses, and who have a most unpleasant way of expressing a desire for their natural freedom, to the young soldier, brandishing a tin-toy sword in the face of a remonstrating nurse. The dresses, seen from a distance, are lively in the extreme, but the varying shades of colour are relieved by the snow white coiffures of the nurses—here sang like sugar-loaves, in token of a Norman descent; there flying off the back of the head, according to the Parisian fashion. Under all these high caps sit pear Norman features, brown as the native pippin; under the low caps are faces of a town complexion. Certainly the country nurses have the advantage in point of beauty. They appear generally to be the best-humoured creatures in the world; and to per-severe in fruitless efforts to calm the ferocity of their charges, even when these efforts are directed to the summary removal of the high cap or gay kerchief. Then there are the fond mothers, under the trees, watching their offspring at play, and reading the last volume of the Librairie Nouvelle, or working wonderful patterns to decorate the infantile petticoats intentionally dropped below the dress, that the maternal activity in the matter of embroidery may be patent to the eyes of the world that revolts the Tuileries gardens. Interspersed amid the wide circles of mothers and nurses, chattering about their little *choux* and *chéris*, their *petites anges* and *cocottes*, are some very solemn old gentlemen who have retired from life,—a ribbon at their buttonhole, and some 5000 francs a year at their disposal, for the remainder of their days. These latter cross their rest during two or three hours daily while the fine weather lasts, chattering to one another about the last news; offering one another snuff; lending their substantial walking-canes to tiny children; now and then turning a skipping-rope; and often paying ever-welcome compliments to the mothers on the health and beauty of their offspring The idle will remark the general tendency of these hundreds of boys, all fantastically dressed, to adopt the clothes, if not to court the favours of the military profession The parental indulgence, pandering to this weakness, is obvious in the large proportion of the boys dressed up with military hats, knapsacks, muskets, swords, and drums. To the young gentlemen who manifest a thirst for military renown at the early age of five, the drummer always represents the branch of the service to which he aspires. We accordingly see these little fellows marching to the sound of the drum in every direction. If here and there the stirring music is not audible, be certain that there are some young rascals near at hand, at blind one of these trees, investigating the hidden sources of their instruments, an investigation that will be presently arrested by a vigorous sortie from two or three bronze guards in their high white caps.

The Paris doll may be here found also in great strength, and dressed, if incongruously sometimes, at all events gaily. Proud are the miniature mothers who carry their painted charges about; scold them only for the pleasure of forgiving the imaginary wrong doing immediately afterwards; and undress them to dress them again in the presence of a select circle of jealous little women, who have either lost their own charges, or allowed some terrible accident to arrive to them through the wilfulness of their brothers Women, seen through the wrong end of the telescope, are these little coquettes, met in solemn council to discuss the qualities of Pauline's doll, or the appointments of Lisette's lately-purchased cradle. How they advise one another upon the disposition of a shawl, the fit of a dress, the work upon the edge of trousers! How they compare each other's bonnets, and, caring little to dissimulate for the present, give themselves secretly the best of the comparison. Exquisitely ludicrous are their great quarrels! Mademoiselle Julie refused to turn the rope for Mademoiselle Augustine any longer, therefore, Julie dislikes Augustine's bonnet, and detests her boots. Each little Countess plays the great lady with her neighbour; and, when severely tried by the pretensions of her rival, threatens, in the majesty of her wrath, to tell her mother. Then these little ladies have their loves even now boys with whom they have danced, and who have held their dolls for them while the bonnet was being tied on. These lovers are unceremonious as a rule, and exhibit a rapacious desire for any sweetmeats the betrothed may happen to possess diminishing their attentions as the supply of *bonbons* falls off or the last *pâtée* is broken.

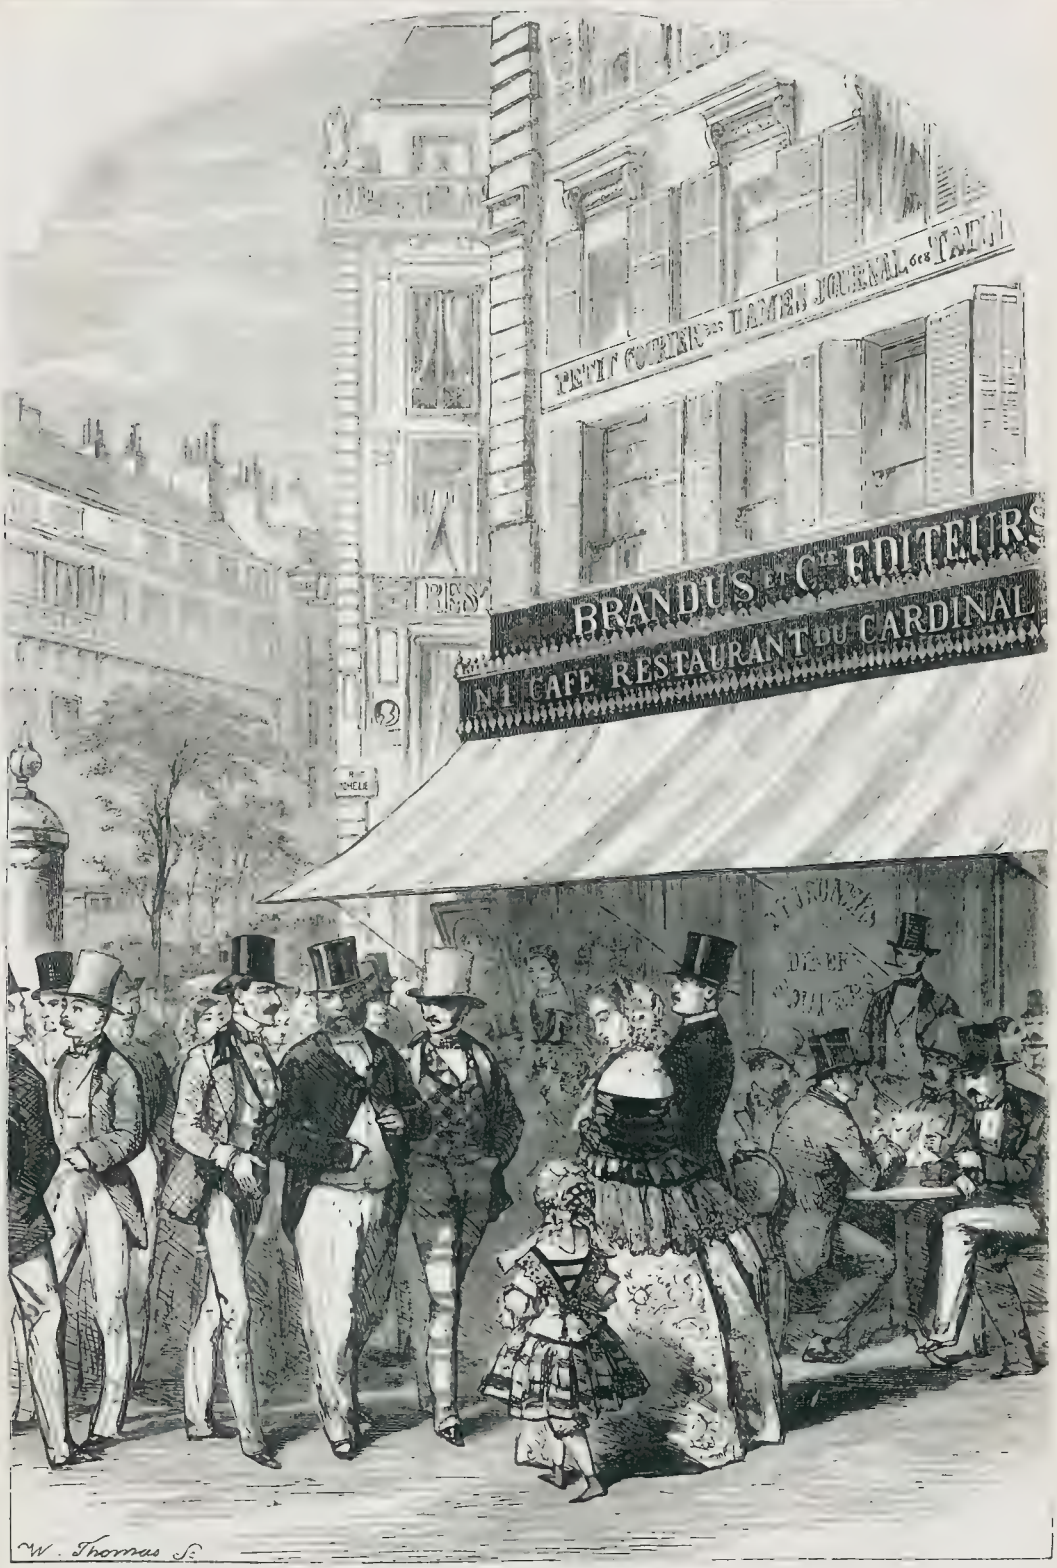
Great is the commotion in this avenue when two or three girls arrive, clad in white, and bearing wreaths of flowers upon their heads! They are the girls who have been crowned at school for good conduct. Their coquetry is worth the study of Webster or any painter who can seize the delicate outlines of human emotion which give a charm to these little heroines. Not a joy lies in the cup from which they are destined to drink hereafter so unmixed, so exquisite, as that which glows upon their round cheeks, and glistens in their frank, bold eyes, to-day! They cling to the happy mother's side, and are fond in the fond words she has heaped upon them, are tingling to their games with skipping-rope.

The skipping-rope is essentially a Parisian toy. I have watched children at play in the parks of London; I have seen them at liberty at Copenhagen; I have remarked them enjoying the bracing autumn air on the Alster Platz, at Hamburg; but in none of these places may be seen that really remarkable grace and agility displayed by Parisian children in the use of the skipping-rope. Last autumn crowds used to collect in the Tuileries gardens round a particular group of children, who appeared to have earned a reputation for their skipping. Of this little company one very little child—in size about four years old, but in manners five-and-twenty at the very least—appeared to be the acknowledged mistress. Her shrill little voice directed the turning of the rope; told her companions when to take their turn; and gave the word for "Company!" when she was performing her own remarkable scene in the game. I often stopped to notice the little queen. She was perfectly conscious of her popularity, as her small feet kept time to the turns of the rope; and as her little arms mounted the number during which she had "kept up." When at last she stopped, she retired with all the coquetry of a little tragedy queen; and it was with an air of infinite condescension that she consented to take the end of the rope to turn for a friend. I could trace in the little creature's face a lurking spirit of malignant satisfaction whenever one of her rivals made a mistake. Sometimes there was a ring of fifty or sixty people about her, all anxious to see her begin Had she been Grisi or Taglioni she could not have been more conscious of her success. I am certain that she must have been a tr[illegible] who was at day kept her away from the gardens

But the avenue in the Tuileries gardens is not the only spot which Paris babies have invaded. The sunny aspect of the Quai de Paris, on the Boulevards; the inviting chairs placed against the wall, above all, the advantages the place offers to that considerate [illegible] of the gentle sex which has no [illegible] to sea, and be [illegible] combined to attract the happy mothers of the French capital to [illegible] Accordingly the first time in the early part of every year [illegible]'s sun's rays afford perceptible warmth, when the cold waiters first [illegible] to put a few little tables on the pavement—even before the swa[illegible] have returned to the nutshell—bill-of-fare is perceived, followed by [illegible] large moderate bundles of clothes, somewhere in the [illegible] which grasp [illegible], wending their timid way towards the baby master. The colt soon drives them away, and it is probably only two months later that they return and fairly take up their summer positions. When, however, Tortoni's season has fairly set in, the fashionable world of Paris appears to disgorge its babies upon this point. The pavement is choked up with people looking on at this gigantic nursery; and at the various nursery duties which are here performed, as calmly as in the recesses of a home. The ladies wrote or read, passing now and then to take [illegible] at "*le bal*," or to see that it is well shrouded from the sun.

A third region given up to children, [illegible] ps the prettiest of all, is the party in the garden of the Luxembourg. [illegible] Entelmann learn to walk, and are possibly taught to love [illegible] regard the bees only as so many marauders who have rifled their darling flowers. Here the offspring of professors and artists, of retired bourgeois, and the native tradesmen of the Rue de Seine, get the fresh air; swim their little boats in the basin of the great fountain, and watch the evolutions of the troops in the long avenue leading to the Observatory. These children differ in dress from the gay little world of the Tuileries gardens—being the descendants of less wealthy and less ostentatious parents. They have, however, many of the characteristics of their pretensions rivals; and are destined to grow up, probably, as distinct in sentiment and object as are their parents from those mothers whonow watch the glittering little pageants of the Tuileries avenue.—B.

THE GARDENS OF THE TUILERIES



SCENE ON THE BOULEVARDS DES ITALIENS.—(SEE NEXT PAGE.)

THE CAFES OF PARIS.

THE Cafés of Paris are a world apart. They are associated with all that is gay, all that is elegant, even much that is intellectual, in that "whirligig of life," in search of which men, freed for a time from the cares of business or the wear of political or literary responsibilities, hasten to the splendid capital of our allies. They are the pride of every Parisian; for herein may be seen not only living illustrations of every grade of society, and amusing studies of foreign eccentricities, but also the gorgeous results of French art-work. Nothing in the Tuileries, not even the gilded and painted reception rooms of the Hôtel de Ville, nor the Salon des Glaces of Versailles, can surpass, in their wealth of gold-leaf, carving, and pictorial embellishments, the spacious halls in which the *flâneur* of the Boulevards sips his absinthe and his coffee. If there be a want of palatial clubs in Paris, there is assuredly no lack of all the elegant conveniences which even the best London club offers to the most exclusive of subscribers. To be sure the Parisian rooms are open to all the world to the blouse out for his Monday as freely as to the count whiling away an hour over the *Presse*, that he may not arrive too early *en soirée*. But then this freedom, this mixture of classes, does not offend even the most refined sensibility. The private may be seen at the table next the colonel, fraternizing his Lyons beer, and perfectly at his ease in the presence of his superior. The love of exclusiveness, which appears to be the vital element of London clubs, and which is altogether foreign to the French character, which would only provoke ridicule, if it were displayed by any knot of cosmopolites, must be fairly installed into Parisian society, before a Pall-mall can arise on the banks of the Seine. Let it be the special duty of White's to examine into the possibility of creating in Paris assemblies of exclusive gentlemen after its own pattern. We decline to enter into the question, being, at present, content with the wonderful lines of open houses, decorated with exquisite taste, which stretch along the Boulevards from the Madeleine almost to the Column of July. Well heated when the east wind sweeps along the broad pavements, and beneath even the most sultry sun, when the ice forms on the ground, and pleasantly shaded from the sun, when Paris poodles idle about, their noses hurried in wire-baskets, in the dog-days; inviting the shivering traveller quite irrespective of the distance he has journeyed, and the day on which he feels the want of refreshment, to warm himself with a little glass of punch, soft as velvet; or bidding the parched pilgrims from the Tuileries-gardens try the effect of *groseille* amid the perfume of flowers fresh, last market-day, from the country—the Cafés of Paris present an inviting aspect at any season of the year. Their reward is an extraordinarily extensive patronage from eight o'clock every morning till eleven o'clock every night all the year round. Here the bachelor breakfasts, or rather takes the preliminary *café au lait*, that shall enable him to enjoy nature till mid-day, when he will sit deliberately down to his first meal. Then men who have been working very early in the morning drop in to breakfast simply—with a bill of fare of eggs and bread, and coffee or chocolate. Then, towards noon, stragglers of all kinds—men out for a holiday; students who have furnished themselves with excuses for a day's idleness, *rouds* who have just managed to scramble from their beds, to moisten their parched throats; old gentlemen, with the ribbon of the Legion at their button-hole, who are anxious to see the morning papers; keen-eyed speculators from the Bourse, who have made an important appointment; perhaps an old bronzed lady from the country, accompanied by a dapper son who has obtained a day's freedom in consideration of the maternal visit: these are among the matutinal patrons of a central Parisian café. The list may be largely increased by Germans anxious for beer; Englishmen who, having breakfasted at their hotel, evince an early and irresistible desire for bitter ale, at two francs per bottle; Italians in search of coffee as at the Neapolitan pattern, at Pergod's; some roguish Spaniards, and sharp Jews from Hamburg, remarkable at once for whiskers and watch-chains. But it is after the mid day breakfasts that the Cafés become gay with the rapid, laughing, careless, thoughtless life of Paris.

It is a fine summer day. The air is heavy with the mid-day heat. Lazily the *rentiers* roll along the Boulevards—heavily the Auvergnat moves along with his buckets of Seine water—still lightly and briskly the grisette skips along, with her dark green bonnet-box, dreaming of the dinner at the "Rendezvous des Gourmets," where Victor has promised her for coming Sunday. Dapper waiters—to be seen only in Paris—draw down the awnings, arrange the familiar green round tables along the pavement throw a little damp yellow sand under them, and await their certain customers. They resemble range ships lying in a calm, with occasional Parties who after the matutinal *demi tasse*, intend to make the tour of the lake in the Bois de Boulogne; strong musterings of the *demi-monde*, in the liveliest of colours; sallow gentlemen to whom dominoes are irresistible attractions; spectacled students who are keeping the shop and the books thereof (and who are making snug savings unknown to their trusty husbands)—all swell the list of patrons who support the Cafés of the Boulevards. At this time of the year the stiff collars and pendent whiskers of Brussels show themselves in the midst of the throng. Particularly at the Café Cardinal, which our Artist has represented, are our brave countrymen to be found, airing their eccentricities for the amusement, and spending their money for the profit, of our allies. But according, to the hotel keepers, the Clubs Royal and Imperial, and the cabmets the English are but sorry substitutes for the absent Russian nobles. John Bull enjoys the reputation of having become "too knowing." It is said that he knows the cab tariffs of the capital as well as a Lord Parisian. But he no longer gives two sous instead of two sous to cab waiters—that he fully understands the cheapness of French wines, and no longer strolls about with the idea that his shillings are worth only one franc each. Therefore, when he sits down at one of those little round tables, in company with Mrs. Bull in the Camberwell bonnet (which Lucy Hooper must regard as a fit present for the Archæological Society), the waiter brings the lady the little stool for her feet, as he brings one for those of the neat grisette, but without betraying any particular anxiety to pay special attention to the foreigners. Our prestige as thoughtless spendthrifts is gone. The waiter is now perfectly convinced that Camberwell will not produce a handsomer *pour-boire* than the Rue de Breda; and he measures out his civility accordingly. Not that a Boulevards waiter can be unkind. Civility appears to be the motive power of his life. That wonderful fleetness with which he dashes through the Café into the open air, and threads his way through the rows of lounging customers at the green tables, carrying upon the tips of his four fingers and thumb an inextricable cone, liqueur-glasses, tumblers, bottles of iced water, and lumps of sugar, which are the glory of childhood in Paris, appears to be the noble effort of a chivalrous nature. Ask him for a light, and he produces lucifers from any pocket. Although people are calling him, or blessing to him in various directions, he find time to light two or three lucifers, and even hold them till the flames of the sulphur have passed away before he presents them to you. He pretends to be a judge of politics: he has his opinion of the Emperor on the conduct of the war; he knows by heart the last despatch from Pelissier: he is "up," as the phrase runs, in the closing prices of the public funds, and he is volatile about the theatres. He is free with you; has a right retort for every stupid joke; and is the most familiar—never rude to you—he never will forget his *pour-boire* when you pay, and he will receive the exact sum of the little bill without an observation. On the other hand, even when you handsomely acknowledge his services, he is dignified. He thanks you—but not with that kind of unctuous satisfaction, that fawning obsequiousness—peculiar to the over-paid waiter in a London tavern. As customers crowd in to the Café—invade every table—every man raising his hat to the splendid lady at the splendid counter as he enters—as the hissing of impatient customers increases—the waiter does not sink to the level of the occasion. He dashes about with a tremendous impetuosity; he shouts to the man whose life is passed carrying a huge coffee-pot in one hand and an equally large milk-can in the other, to the various tables of his master's establishment, to pour out at numbers several "bocks," and then he calls for a dozen ices in one breath; he answers the questions of one table while he attends to the wants of another. Doing three or four distinct things at once, he is yet never confused; and he seldom blunders. Order four ices—one, half vanille and half lemon; the other, half pistache and half raspberry; the third, half orange and half strawberry; and the fourth, half pineapple and half currant,—and the chances are that he will bring them to your table, together with an equal number of different combinations for your neighbours, without making a single mistake. The traveller who wishes to study the Parisian waiter in perfection, should choose a fine summer's night, and take his seat outside the rotonde in the Palais Royal about eight o'clock, in the midst of about three hundred people, served by eight waiters, who are not only bowing with newspapers, with an activity that any Harlequin might envy. The number of people who visit some of the well-known Paris Cafés, in the course of a summer's day, is astonishing. For instance, the director of Pergod's Neapolitan ice establishment, expects to sell, every fine summer's evening, no less than one thousand ices. If the consumption fall short of this estimate, he is discontented with his waiters.

Not the least amusing feature in Café life is the conversation heard by snatches, and varying every two minutes. On one side the silent smoker hears that La Ristori is a most amiable person and an excellent mother; on the other, that she is neither amiable, married, nor a mother. From a dark corner come murmurs about five hundred thousand francs—director—forty per cent at the very least—and two thousand free shares. Laughter ceases merrily from under shaggy beaver hats opposite, intermingled with murmurs about Victor's model, Mère Martens's table d'hôte, the armour upon Jules's Knight, and the shortness of Diana's legs in Adolphe's last performance. From behind the Ristori authorities come snatches, in which a friend of mine lives at the Tuileries—heard it himself—impossible to be taken a million a day—are very prominent. Two ladies are localized in the group from which the above mysterious syllables proceeded. From them come silvery whispers, in which—the laces I am sure—she went to Madame de Tivoli's in it last year—he is very stingy thirty-five at the very least—are distinct to every neighbour.

From the Café proper we turn naturally to the Estaminet. The Estaminet is a café wherein smoking is allowed, and where, consequently, ladies are seldom seen. Here may be found the young men of Paris playing billiards; chatting with the lady at the elegant counter; whiling away a summer's morning over a pack of fumbled cards, or enjoying the moderate excitement of dominoes. The company is neither so elegant nor so quiet as that of the Café. The waiters adopt the free tone of their society and hum airs as they serve absinthe; and their politeness is difficult points, in the various games going forward. Gay young fellows, remarkable for tight trousers and loose morals, come humming in, their hats on the back of their heads, and their hands in their pockets. They know every body—the lady at the counter, the waiters, the old gentlemen at cards, and the young men at billiards. They take *consis*, while the old gentlemen sip *eau sucrée* flavoured with orange flower-water. Here the snatches of conversation affect reputations; hint at all kinds of political immorality; express a profound distrust in everybody and everything; and give form to all kinds of unreasonable hopes. The visitor who is anxious to see Young Paris should, however, pay a visit to some of the more conspicuous Estaminets of the Boulevards and the Quartier Latin; while the quiet traveller, who affects elegance and delights to mingle with the select of Ireland's ills is desirable—may take his seat at the Café du Cardinal, the Café d'Anglais, or Tortoni's or the Café de Paris, and there watch all that is light, and cheerful, and exhilarating in the respectable life of Paris.

A HERO OF THE WAR SIR STEPHEN LAKEMAN.

WHEN Sir Stephen (then Mr. Lakeman) returned from the Cape of Good Hope, where he had rendered such eminent services to his country in the Kaffir war services which the Government, not without magnanimous delay and difficulty, acknowledged, by rewarding him with honorary distinction—we called attention in the columns of the Paper to the serious injury our public service was doing by the obstinate adherence to forms, which in that case—if not in others—appeared to us to be worse than useless—to the check of brilliant talents desirable—may take his seat at the Café du Cardinal, the Café d'Anglais, or Tortoni's or the Café de Paris, and there watch all that is light, and cheerful, and exhilarating in the respectable life of Paris.

A HERO OF THE WAR SIR STEPHEN LAKEMAN.

WHEN Sir Stephen (then Mr. Lakeman) returned from the Cape of Good Hope, where he had rendered such eminent services to his country in the Kaffir war services which the Government, not without magnanimous delay and difficulty, acknowledged, by rewarding him with honorary distinction—we called attention in the columns of the Paper to the serious injury our public service was doing by the obstinate adherence to forms, which in that case—if not in others—appeared to us to be worse than useless—to the check of brilliant talents desirable—may take his seat at the Café du Cardinal, the Café d'Anglais, or Tortoni's or the Café de Paris, and there watch all that is light, and cheerful, and exhilarating in the respectable life of Paris.

Mr. Lakeman was knighted, but, finding it impossible to procure military employment in the British army, he was forced to seek service under a foreign power. We stated at the time, that we should watch the career of this officer. The following particulars with regard to him afford additional illustration of the necessity for the removal of those hideous barriers which in Great Britain still impede the path of energy and merit, but which are not allowed in other countries to stand in the way

Sir Stephen Lakeman, having been decidedly rank in the British Army, was appointed, in the month of February, 1854, Colonel of the 2nd Regiment of Guards in the Turkish service, and with them he proceeded to the Danube, where he took part in the operations before Silistria. When the Russians raised the siege of that fortress he inflicted severe loss on the Muscovites. The bravery he displayed on that occasion caused Omer Pacha to appoint him Inspector-General of the Turkish Cavalry. The Sultan shortly afterwards sent him to the rank of Pacha. In the month of June following he was made a General of Brigade, and took the command of the Turkish advanced guard at the crossing of the Danube. On that occasion he followed up the Russians in their retreat to Bessarabia. At the head an army of Bozuc-the Turks, under Sir Stephen, charged and defeated the enemy under General Soutzo. He was then appointed Governor and Commandant of Bucharest, and, during five months' occupation of that city with the Austrians, his energy and prudence protected the interests of the Sultan against the nefarious attempts of the Austrians, under Count Coronna, to coerce and threaten the inhabitants. When the Turks retired from Wallachia, Sir Stephen was sent to direct and superintend the embarkation of the Turkish troops at Szopoh for the Crimea. On his arrival at Szopoh he had many difficulties to surmount; but by energy and promptitude he succeeded in getting under the ground the construction of a pier or jetty. Finding a good supply of wood in an adjoining forest, he was enabled in a very short space of time to construct one of the most perfect and useful piers in Turkey, running 600 feet into the sea, and having twenty-five feet depth of water at its extreme point. From this he embarked the whole of his cavalry and troops, without any loss or accident. This petty now remains a most useful addition to the harbour works of Turkey, and from which as many as 9 horses and 2400 men have been safely embarked in one day. After the embarkation of these troops Sir Stephen proceeded to the Crimea, and, in the attack on the Mamelon, he was one of the first to enter that redoubt, for which he received the decoration of the Legion of Honour from the Emperor of the French, and was made a Lieutenant-General in the Turkish service, the Sultan also rewarding him with the Grand Cross of the Order of Medjidi. In addition to these marks of distinction, he has been presented with the Order of the Osmanli, and the Crimean Medal.

Sir Stephen Lakeman is now in London, having returned to this country on short leave of absence for his personal affairs. He returns in a few days to the Crimea.

NASMYTH'S WROUGHT-IRON GUN.—We understand that the first of the two gigantic pieces of artillery to be made at the Bridgewater Foundry is now nearly forged, but how long the succeeding operations of turning and boring may take, and the gun be ready for shipment to the Baltic—for that we believe is its destination—is more than we or any one, we presume, can tell. At all events, it cannot be practically tested this year. The mass of iron composed of small bars, welded together by the Nasmyth hammer, will present a huge, shapeless lump, apparently some 8 or 10 feet long, diameter. The process of forging presents a grand sight. . . while the huge lump is being turned and bored and . . . and dexterity as if it were a common mortar. Indeed, the . . . the hammer, the hydraulic crane, &c.,—is quite a triumph . . . and genius. Several of the balls are now ready. They present a most . . . ful half-a-ton, and are of an oblate spheroidal shape, not unlike . . . In fact, not unlike the common mine ball. Should the gun answer, its power and range must be enormously great, great havoc would be effected against ships.—*Manchester Guardian.*

A MANOR IN DEVONSHIRE LOST IN A GAME OF CARDS.—In the year 1845 I was staying with a friend at . . . leigh, who, knowing I was fond of old places and old things, took me to various warehouses, belonging to Cheyam Clayfield, built on the site of King John's favourite residence. Here it is preached through a gasteleyer. Mrs. Clayfield showed us some portraits of the Devonshire family, and one or two tables and chairs of carved oak, showing the two Lords of Pippet Lord by Mr Downe; and an ancestor of Lord present Sir Stafford Northcote who were playing together, when Mr Downish, thinking he had won the game, betted the manor of Kerswell, and said, The Northcotes Lold it—they gained the game. The table was made to commemorate this event. *Notes and Queries.*

MR. LAING AND HIS CONSTITUENTS.—The Chairman of Mr. Laing's election committee has addressed the following letter to Lord Palmerston:—"My Lord, I am directed by Mr. Laing's friends to express their speech delivered by the member for the Northern Burghs in the House of Commons on Friday evening, and while still entertaining the highest esteem for my hon. friend's public and private character, I nevertheless feel called upon, as chairman of his central committee at last election, to state to your Lordship that the sentiments expressed by the hon member on that occasion are not, in my opinion, the sentiments of the constituency at large. I am directed by them to believe to be prepared to make still greater sacrifices in supporting the Executive in a vigorous prosecution of the war in which this country and our noble allies, the French, have been unfortunately involved. We do not view the war as a question of 'counterpoise versus limitation,' but a great contest between civilisation and barbarism, and of liberty against despotism, and that not only ought her Majesty's Government to insist on a material guarantee for the future, but also indemnification for the past.—I have the honour to remain, my Lord, your humble obedient servant. DAVID DAVIDSON.

A TEN-TON NUGGET.—The *North British Mail* says:—"We have seen a letter from Melbourne, dated the 10th May, per the *George Marshall*, to a respectable firm in town, wherein it is stated that a rumour was then prevalent in Melbourne that a piece of solid gold weighing ten tons had been found at the Tarrangower diggings. If this turns out to be true, it will have an important and beneficial effect upon the trade of the colony."

SUBDIVISION OF THE LAND IN FRANCE. The *Constitutionnel*, quoting a fresh volume on the statistics of France, by the Ministry of Agriculture and Commerce, under the direction of M. Legoyt, now the chief of the statistical bureau, observes that:—"France is, *par excellence*, the country of middling and small properties. The statistics shows us the soil split into 126,000 parcels, belonging to 11,053,000 proprietors. This refers, as we have said before, to the mean year 1827. It results from the examination of the rolls of the land-tax taken more recently that the number of land portions was 11,511,000 in 1842, and that it has successively mounted to 12,122,000 in 1854. The proportion of increase would consequently be upon 1827, on a yearly average, more than 18 per cent in 1854."

PHOTOGRAPHY. M. Claudet has just been appointed, by special warrant, Stereoscopic Photographer in Ordinary to her Majesty.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is said that, on her Majes ty's return from France, his Royal Highness the Prince Consort will take a trip up the Baltic in the Royal yacht.

The report in Paris is that, if the Empress Eugenie gives birth to a daughter, the Emperor will repeal the Salic Law, in order that his daughter may reign.

The Paris Mint is now engaged in striking a medal in commemoration of the visit of Queen Victoria. It will be executed in gold, platina, aluminium, silver, and bronze.

The King of Denmark lately sent his portrait to the Emperor Napoleon.

The Emperor of the French has himself selected the pictures which are to adorn the residences at Paris of her Majesty and Prince Albert. Some of the choicest pictures from the Louvre will hang for a while upon the walls of the Palace of St. Cloud.

The banner, sword, crown, and achievements of the Emperor of the French were last week placed by Sir Charles Young, Garter King of Arms, over the stall of his Imperial Majesty, which immediately faces that of the King of Prussia, in the Chapel Royal of St. George, Windsor.

The ex-Queen of the French has enjoyed much better health since taking up her residence at Bessmarus, where the family are likely to remain some weeks longer.

The Duke and Duchess of Saxe-Coburg-Gotha-Cohary have arrived at Dresden from Vienna. The Duke and Duchess de Montpensier have also arrived from the same city.

The Prince de Joinville is expected to arrive at Vienna this week, on a Fusonist visit to the Comte de Chambord.

The Emperor of the French has just placed at the disposal of the President of the Committee of Gendarmerie a sum of 10,000*l* to be distributed among the wives and children of those soldiers of the regiment of Gendarmerie of the Guard now in the Crimea.

Lord John Russell, with his lady and family, arrived at Edinburgh from London on the 9th inst, and left next morning for Dunkeld; whence, on Saturday, he was to proceed by railway to Loch Rannoch, the seat of Lady Menzies, of which his Lordship has taken a lease for the shooting season.

The young King of Portugal and his brother were expected to arrive at Lisbon about the end of last week.

The Duke of Newcastle was, according to the last accounts, at the Camp before Sebastopol. He arrived in the *Ottawa* steamer, and intended to be there for a couple of weeks.

The Duke de Brabant, who is at present at Lucerne, lately made an excursion to the Rigi with the Abbé Martin, who accompanied his Royal Highness to Jerusalem.

The Prince Royal of Saxony has arrived at Brussels, with his suite, travelling incognito, under the title of Count de Wurzburg.

Several of the Russian prisoners exchanged for French officers have lately had an interview with the Emperor of the French.

The King and Queen of Prussia were expected to remain at Ems until the middle of this month.

An effective photograph of Mdlle. Rachel, in the character of *Hermione*, has been issued.

A Professorship of Tamul has been instituted at University College, London; and Mr. Caldwell, our Strong has been appointed to the chair.

At the Ministerial fish-dinner which took place on Wednesday week a costly dinner-cup was presented to the Right Hon. W. G. Hayter, M.P., by the members of her Majesty's Government, as a remembrance of the zeal and activity displayed by that gentleman in the discharge of his arduous duties during the recent Session.

The Earl of Burlington and the Earl of Ellesmere are named as likely to succeed the Earl of Sefton as Lord-Lieutenant of Lancashire.

Mr. Millard Fillmore, ex-President of the United States, has arrived in Paris.

Prince Wasa has left Paris, after having been received in special audience by the Emperor.

The Imperial Austrian Ambassador at the Court of St. Petersburg, Count Valentine Esterhazy, will remain at Vienna till the month of October.

M. Thouvenel, since his arrival at Constantinople, has had frequent interviews with Lord Stratford de Redcliffe, and the most perfect unanimity is said to prevail between the two Ambassadors.

Prince Augustus, third son of King Oscar of Sweden, has started on a journey for the benefit of his health. He will be absent for some months, and will visit Germany, Switzerland, Italy. He travels in the strictest incognito.

The Very Rev. Dr. O'Brien has been appointed Roman Catholic Bishop of Waterford, by his Holiness Pope Pius.

Sir Moses Montefiore has arrived in Jerusalem with firmans authorising the foundation of several religious establishments, and even a synagogue, for the Jews of Palestine.

A letter in the *Post* from Lille, mentions the arrival there, on Wednesday, of Lady Raglan, on her way, with her family, to Paris. The widow of the late lamented Field Marshal is, it is said, one of the visitors to the Imperial Court.

The Right Hon. E. Cardwell, M.P., late President of the Board of Trade, has succeeded to the estates of Hulbert-hall, near Chorley, by the death of his uncle, Mr. James Cardwell.

The Russian General, Bodisco, has arrived with his family at Brussels.

Lord C. J. F. Russell has kindly thrown open his garden and pleasure-grounds for the month of August, on Monday, Friday, and Saturday evenings, to the members of the Woburn Literary, Scientific, and Mechanics' Institution, also to the wives and friends of members.

Mdlle. Rachel sailed for New York on Saturday, in the *Pacific*, When the steamer had received all her passengers and mails on board, and was about to depart, the gifted actress appeared on the stern of the vessel, where she was greeted with cheers and waving of handkerchiefs, which she gracefully returned.

The Duke of Cornwall has granted to the Government School of Mines by the Prince of Wales, some time since, a prize of £100 per year been awarded to Mr. Gould, a son of the entomologist.

Mr. Massey, M.P. for Newport, has been appointed Undersecretary of State for the Home Department, in succession to the Hon. W. F. Cowper, now President of the Board of Health.

Abd-el-Kader has been summoned from Brousse, in consequence of his request that he might be in France at the time of the visit of Queen Victoria.

The Archbishop of Paris has addressed a circular to his clergy, directing a "Te Deum" to be sung in all the churches of his Diocese on the 15th, and offering prayers to be offered up for the life of the Emperor, and also for the valiant army which so nobly supports the honour of France in the East.

At Barcelona several workmen of a superior class have been arrested as Socialist conspirators.

The Somerset Archæological Society intends to hold their next meeting at Taunton, on the 21st inst.

The *Gazette de Cologne* states that the sittings of the Prussian Council of State will commence in September.

The Nottingham Anacreontic Society advertises in the local papers a prize of five guineas for the best glee, male voices, subject "The War." Competitors must be natives or residents of the town or county.

Mr. M'Daft, civil engineer, has designed a war raft, 1500 feet long and 300 feet wide, propelled by screws and paddles, to carry a weight of 20,000 tons, at a speed of fifteen knots an hour.

The project of a new Corn Exchange at Chelmsford seems to be well received. A committee has been appointed to consider the selection of the site.

A German journal states that after the recent earthquake in the Grand Duchy of Baden the malady in the potatoes was observed to have returned.

The Victoria Regia, in the Royal Zoological Gardens at Brussels, a gigantic plant—just now shows three beautiful blossoms on the surface of the water.

Among the medical graduates of the Edinburgh University who obtained their diplomas at the last examination, were a Chinese and four Egyptians. The Chinese graduate, Wang Fun, is believed to be the first of the Celestials who has ever graduated at a British University.

The University of Konigsberg intends to erect a monument to the philosopher Kant, once the great ornament of that institution. It is to be a statue in bronze, and will be placed on the daily promenade of the great man, which, after him, has been called "der Philosophenteig" (the Philosopher's Path)

NOTES OF THE WEEK.

PARLIAMENT is up, and the leading daily journal reminds us that there is now no quarter to apply to for information as to the great question of the day—except the press. Society is inclined to be consoled. The exception is rather an important one; and, if we come to look into the real state of the case, even more important than it seems at the original view. In the first place, all the information which has been afforded, early and ungrudgingly, ever since the war began, has been given by the press; and, secondly, it is only upon the platform of press statements that Parliamentary questioners have taken their stand, and extorted confirmation from the authorities. "Our Own Correspondent" has long made it his business to anticipate Ministerial revelations; and though Lord Palmerston is laudably prompt with his "compliments," "happiness," or "regrets," as the case may be, we are in nowise beholden to Parliament for this. As for the information elicited by questions, it is very second hand business, and a mere echo of newspaper paragraphs. A century ago honourable members used to receive private letters from abroad, or pretend they did so, and could profess their inquiries with some dignity: "Sir, by advices from Turkey merchants which have come to hand, it is known that the Great Mogul hath adventur'd;" or, "We hear, Sir, though 'tis denied by some who walk up backstairs, that the Elector and the Dutch are no enter-cousins;" but this sort of thing is over, and members of Parliament know no more than they learn over their coffee and muffins, and can only ask the Minister of the day to "correct the press." We can dispense with this operation, the rather that the press is generally right, and almost always so when contradicted officially; and, upon the whole, we shall be able to comprehend the progress of the war, even though there is no member of the Cabinet in his place to answer, evade, or mystify.

There may be no particular reason why members of a Cabinet should think aloud upon any given subject, but one has a sort of notion that a Government is valuable because its opinion is the result of the united thought of several clever and practical men. Hence English people dislike "open questions," and are almost annoyed at seeing colleagues contradict one another. Perhaps it would be as well if states men a little condescended to respect this English prejudice a little. Our present rulers are rather above such a consideration. On the Limited Liabilities Bill, Lord Lansdowne expressed, very handsomely, his thanks to the Lords for the amendments which they had introduced into the measure, by which it was greatly improved; and the Premier, in presenting it with those alterations to the Commons, remarked that objectionable as the amendments were, it was better to pass the bill with them than not to pass it at all. And still more recently the Solicitor General having spoken with some acerbity of the Lords' system of appeals, and had ridiculed the practice of the law Lords in attending on occasions of appeal as they would on an ordinary debate, hearing as much or as little as they pleased, and deciding after such careless hearing, the Lord Chancellor entirely denied the truth of his learned colleague's assertions, and expressed regret that they should have been made. All the public can say is comprised in the old sentiment—"May difference of opinion never alter (political) friendship."

Was not the Judge a little too hard upon the gallant militia officer of Aldershot who brought the action for breach of promise of marriage against the "remarkably fine young lady" the other day? One is quite with Mrs. Norton, as to the unfair way in which woman is treated by her master; but is man to have no feelings at all? Here was really an aggravating case. The officer had not been a cruel Captain Smith who lived in country quarters, but had made the most decorous offer, had been accepted, had been an unexceptionable suitor, had made such progress in the lady's affections that she wrote him letters containing "lots of love and lots of kisses from your own little pet," had bought presents and dresses, and things had gone so far that bridesmaids had been "retained"—when the "little pet" talks to her big brother, in convinced that she did not love the officer, by way of party, throws him over in a highly-worded billet certainly, and cruel.

Is not man to have some feelings as well as woman? Is he

ADMIRAL DUNDAS SURVEYING THE SOUTH ENTRANCE TO CRONSTADT.—(SEE NEXT PAGE.)

PLEASURE TRIP TO THE TOLBOUKIN LIGHTHOUSE, IN THE BALTIC.—(SEE NEXT PAGE.)

ADMIRAL DUNDAS SURVEYING THE SOUTH ENTRANCE TO CRONSTADT

On the 7th of July the gun boats represented in the Sketch on the preceding page—the *Thistle*, the *Pincher*, and the *Weasel*—conducted by the *Merlin*, were seen by the Russians in front of Cronstadt, but not so very near as to encourage any valiant Muscovite captain or commodore to rush out and offer battle to the enemy. Admiral Dundas was on board the *Merlin*, accompanied by Capts Pelham, Hall, Codrington, Mundy, Elliott, and other officers. The object of the English Admiral was to survey the south entrance to Cronstadt—a degree of information which the Russians did not like to see. They knew it could be for no good purpose that our vessels were venturing so near their stronghold, and therefore they opened fire upon them. The Menschikoff battery on the left, and the Risbank battery on the right, did their best to hit our nimble little vessels, but without effect; the shots all fell short of the gun-boats, and the *Merlin* sailed majestically along, her "streamers waving in the wind," as the song says, without firing a single shot in return.

A PLEASURE TRIP TO THE TOLBOUKIN LIGHTHOUSE.

A few months ago the St Petersburg papers were filled with accounts of pleasure parties formed in that city, for the purpose of sailing down to Cronstadt to have a peep at the Allied fleets. As that was before the infernal machines had been found out to be of so little use, we may safely conclude that the Russians who came down to look out on the open sea, from which they now find themselves utterly debarred, expected to enjoy the pleasant spectacle of an exploded armada. Now that the French and English ships and gun-boats are found to be safe, the pleasure excursions from St. Petersburg are given up.

The Sketch given by our Artist represents a pleasure trip which a party of English officers and sailors made to the Tolboukin Lighthouse on the 24th of June. The two boats in the foreground are those of the *Royal George* and the *Conqueror*, in which may be seen Commanders Boyd and Croft and the officers of those two vessels. As the day was fine, the sky being almost without a cloud, the view from the Light-house, which commands the city of St. Petersburg and a large tract of the surrounding country, must have been very fine.

RECONNOITRING TELESCOPES.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—In the last number of your excellent journal, I saw a sketch and description of an instrument, or "apparatus, patented by *Mr.* Lubbock for *reconnoitring purposes, &c.*" By *Mr.* Lubbock, I presume is meant *Sir John* Lubbock, the eminent banker of Mansion-house-street, and one of the Vice-presidents of the Royal Society; and, if so, much good may be expected from his scientific mind being directed to this subject. But I was much surprised to read that he had taken out a patent *for the application of a reflector to the end of an old telescope*, and, therefore, induced to ask you to favour me with a few lines space in your columns for the following observations. Several years ago I had a telescope mounted upon precisely the same principle (for equatorial purposes), and it was at the meeting of the British Association, when it last assembled at York. It was once placed for some time in the window of Mr. Jones, the optician, in Rupe.t-street, London, where it was noticed by different scientific men. I did not employ this principle as a new invention, for I had seen a telescope similarly constructed, in the Observatory at Oxford, many years before. The same principle was applied to an instrument by me, before the Royal Astronomical Society by Mr. Rutherfurd last spring. I merely mention these points to explain my *surprise* at the principle being *patented*, especially as it is intended to be "a boon to the officers and others serving at the seat of war," and, on account of its *trifling expense*, to be "within the means of every one." In the beginning of June I submitted to the authorities of the War Office a cheap instrument to answer the same purpose, which they were pleased to approve and adopt, and sent 1000 of them to the Crimea. But I did not, till required so to do, apply a telescope power to it, lest the cost (which I found, on inquiry would increase the price from 3s. to about 30s. each) should prevent their being brought into general use. Nor did I even think of registering it, as my object was chiefly to give to the authorities any advantage I possess for the good of the army, and I presume it has some merit or the Government would not have given me substantial proof of their approbation of it. In using Sir John Lubbock's instrument, there is some difficulty in finding the object, as you must look in a direction at right angles to a line between it and your eye. It also reverses objects, making the right to appear on the left, &c., which at first is somewhat perplexing. In my instrument that difficulty does not occur, as you look at once in the direction of the object, which appears exactly as it does to the naked eye. I must apologise for encroaching so much on your valuable space, but I am sure your impartiality will extend alike to all, even to

Your humble and obedient servant,

73, Oxford terrace, Hyde-park. WM. TAYLOR.

CARDINAL WISEMAN AND THE REV. MR. BOYLE.—The Court at Croydon was densely crowded on Monday, principally by persons from London, who were attracted by an announcement that the case of "Boyle v. Wiseman," which has become so familiar to the public, would be tried for the third time. The Rev. F. Oakeley (Canon of Westminster), and the Rev. Mr. Gilbert (Roman Catholic priests were present; while the Rev. Dr. Worthington and some other clergymen of the Church of England, who sympathise with Mr. Boyle, attended for the purpose of watching the proceedings. Before the Court assembled, Mr. Edwin James, Q.C., and Mr. Woodsworth, representing Mr. Boyle; and Serjeant Shee, Mr. Branwell, Q.C., and Mr. Badeley, representing the Cardinal, had a lengthened conference, when it transpired that although the case had been specially fixed for this morning, several of Mr. Boyle's chief witnesses were abroad and in Ireland, and that it would be damaging, if not destructive, to his case, if it proceeded without them. Under these circumstances the Cardinal's counsel intimated their intention of consulting the plaintiff, but in this course of proceeding was subsequently abandoned, it being shown that by such means the case would only be deferred, as Mr. Boyle would be in a position to go on with it at any future time, when his witnesses might be forthcoming. A proposition was then made on behalf of the Cardinal, that if Mr. Boyle would withdraw the record his Eminence would consent to pay the costs of the two former actions, and also of the one now pending. The counsel for Mr. Boyle appeared willing to accept this offer, if the Cardinal would consent to add thereto an apology for the libels he was said to have written and published reflecting upon the character of the plaintiff, and which led to the several actions. This proposition appeared to the counsel; and after some further discussion, it was agreed that the case should stand over during Monday.

KENSINGTON-GARDENS.—The Queen has given permission for the band of one of the regiments of Life Guards to perform in Kensington-garden on Sunday afternoon between six and seven o'clock. Sunday is the first occasion on which her Majesty's permission was rendered available for the celebrated Kensington-gardens were thronged by a most miscellaneous audience.

THE CHOLERA EPIDEMIC.—The report of the Committee of Scientific Inquiry in relation to the cholera epidemic which prevailed in London in 1854, was issued on Monday last. This, like the previous reports, is published after the lapse of two years, and the deaths in London, which in those years were numerous in 1853, slightly exceeded the deaths in 1848. The deaths by cholera and diarrhœa in 1854 were, however, 4000 less than the number that would have been had the epidemic been as in the epidemic of 1849, allowing ten per cent for increase in the population. In 1849 the deaths from cholera were 14,137; from diarrhœa, 2899; making together 18,036. In 1854 the deaths from cholera were 10,736; from diarrhœa, 3000; together, 14,500; showing that the reduction of mortality in 1855, as compared with 1849, was 4721 deaths from cholera, and 299 from diarrhœa. The second outbreak began later in the season in the last epidemic than it did in the epidemic of 1849, and the diminished figure of the mortality arises from the smaller number of deaths in the months of July and August. The disease had lost none of its virulence, and the deaths by cholera in September, 1854, being 6084, exceeded the deaths in September, 1849, by 1085. The danger of an attack of cholera varies with age; thus, at the age of 15-25, out of 100 persons attacked, 36·9 die: at the age of 25-35, the deaths to 100 cases are 25·4; at 65-75 the deaths to 100 cases are 58·2. The mortality of cases of diarrhœa also varies at different ages. The mortality among the population in London was at the rate of 47, among the female population at the rate of 56, in 10,000. The concurrence of opinion that the public apprehension for the sanitary state of the metropolis should suffer no abatement, but that the most active and complete measures should be adopted to prevent the approach or to mitigate the violence of impending visitations. The council, in closing their report, suggest that these inquiries, as useful, ought to be continued in the absence of the disease, which they aim at elucidating. It seems certain, they add, that in the chemistry of organic decomposition there is contained a large share of the mystery to be solved, and it is impossible yet to say how much of the remainder may belong to undeveloped branches of meteorological science. Opportunities, therefore, ought not to be lost for establishing a better nominal standard than is yet discovered to measure the chemical and meteorological anomalies of an epidemic period.

Mr Russell, it is reported, has resigned the chairmanship of the Great Western Railway, and is to be succeeded by Mr. S. Walpole, M.P. for Midhurst, and late Secretary of State for the Home Department, in the Cabinet of the Earl of Derby.

THE WAR IN ASIATIC TURKEY.*

THE march of Russian aggression in the Asiatic provinces of Turkey has been attended with continuous and desultory warfare for years past, and although the interest attaching to it has lately been somewhat eclipsed by the claims of more gigantic operations in the Crimea, the field is one which must by no means be lost sight of in a general survey of the pending struggle. Mr. Duncan has just produced a very intelligent narrative of the Asiatic campaign of the preceding year, the result of his personal observations, which supplies a deficiency hitherto remarked in the literature of the war.

With the prospect before us of the active co-operation of Western Intelligence with Oriental arms and appliances, the revelations contained in Mr. Duncan's volumes will be read with great interest, and serve as a valuable guide for the future. Never were the incapacity, the venality, and the general misconduct of high Turkish officials more completely or more graphically exposed than in these pages never was effect more clearly traced home to cause than the repeated disasters of the Ottoman troops to the vices of their leaders. On Mr. Duncan's arrival at Kars he found the army, which was perhaps 15,000 strong, commanded by no less than twenty-one Generals, each with the rank and pay of Pacha; and who mercilessly appropriated to themselves every piaster which found its way to the military chest, leaving their unfortunate subalterns and troops starving and unpaid. These Pachas, who for the most part had been advanced through the most unworthy influences, were continually quarrelling amongst themselves, and undermining each other's good name at the Seraglio. As to fighting the enemy, such an idea never entered their heads; and on the only occasion when they were drawn into contest they were signally beaten. Only imagine one of these gentry exposing himself from the responsibility of one of these defeats by alleging that he was asleep at the time, and therefore knew nothing about it!

An additional source of contention and confusion has been created in recent times by the introduction of European officers into the service; men of various character and merit some good, some bad, some indifferent—but all equally the objects of jealousy and hatred on the part of the Pachas, who forget their mutual animosities whenever there is an opportunity to combine against their common rival. Without going to other names, Mr. Duncan's pages afford a striking example of the working of this system, in the case of General Guyon, an Englishman by birth, but a Hungarian by circumstances and adoption, who, being called from Damascus for the purpose, undertook the task of reorganising the army at Kars. "By a great display of energy he succeeded in inspiring the soldiers with a little ardour, and gradually the confusion which reigned on his arrival, made way for order and discipline. He found part of the contents of the military chest, which some of the Pachas had detained for their own use, to be paid to the soldiers, on account of their arrears; and took energetic steps to procure provisions for the starving and ill-treated troops, who but for his auspicious arrival, would have been dispersed to their homes. The presence of the General," continues Mr. Duncan, "was at first hailed with satisfaction by the Turkish military officers, who had despaired of the existence of their army; but gradually the national antipathy arose, and sentiments of jealousy prevailed over their judgment. The existence of Guyon was from that moment rendered one of torment. In his position as head of the staff, he possessed no actual power, nor could he dispose of a single regiment. His duties were confined to advising the commanding General, Zarif Mustafa Pacha; and that officer had established as a general rule to disregard the counsels offered him by General Guyon, and to execute without hesitation the measures which were disapproved by that officer." With the troops, including the subaltern officers, the "Magyar Pacha," by his affable manner, his deep sympathy, and his personal bravery, made himself justly beloved; but what availed that against a combination of Pachas?

This is a prejudice and a spirit of opposition which will have to be surmounted before the project of applying European discipline and military science to the army of the Porte can be successfully realised. Of the absolute importance of making the attempt, regardless of the intrigues and prejudices of the native officers, no one can doubt who considers what has been effected by Omer Pacha, with Turkish troops, simply by good training and upright management; and who contrast the example set by those troops with the picture of wholesale disorganisation and inefficiency presented by the armies of Asia, as described in the pages before us. As for the Turkish soldier himself, Mr. Duncan in numerous passages bears high testimony to his admirable qualities and conduct:—

In their present condition they are worthless [illegible] to engage in [illegible] but [illegible] and [illegible] eye [illegible] officers, the Turkish army could be raised to a point of excellence [illegible] purpose, force. The sobriety of the men, their simple wants, unfailing patience, and power of sustaining fatigue, offer the most splendid materials for creating an irresistible infantry. The men are both intelligent and courageous. A commander, in whom they possessed confidence, they would follow without hesitation or regret. And this confidence is liable to obtain. A few kind words, a display of interest in his welfare, and bonesty of purpose, are sufficient to gain the poor Turk's heart for ever. The Turkish artillery is excellent, even in its present state, but is susceptible of great improvement in the management of this arm the Turkish soldiers show great aptitude, and the pride of the men in their guns, and the affection they [illegible] guns, is admirable. At the subsequent battle of Kurekdere, when [illegible] cavalry were in headlong flight, and the Russian dragoons were hewing down the forsaken gunners at their pieces, the artillerymen stood steadily by their cannon, and defended them to the last breath. The Turkish regular cavalry is utterly ridiculous, and is not in my conviction susceptible of ameliouration. The [illegible] of cavalry drawn up in line, and trained to charge and manœuvre in a body can never be realised by the Turk, whose military antecedents condemn that system. The irregular cavalry is, on the contrary, excellent.

And in another place he says:—

In the winter months, when the troops were suffering from famine and disease, and when the future appeared so gloomy and overcast, I recorded with a feeling of admiration the wonderful patience they exhibited. Now that they were comparatively well fed and happy, the same good behaviour was sustained. During my eight months' experience with this army, I did not once observe a disturbance or a quarrel; nor, to my knowledge, had any crime been committed in the camp. The men were good soldiers, they performed their duty with alacrity, were honourable and humane to each other, and devout in their religious ceremonies.

The services of the Bashi-bozouks also come in for honourable mention, although the author despairs of their ever being trained to usefulness as part of a regular army; and the experiment then being tried by General Beatson he predicts can be of no better result. These troops, however, at the time when the two camps were within five miles distance of one other, afforded the only exception to the general wasteful inactivity. Under General Kmeti they distinguished themselves so highly by their night skirmishes amongst the Russian encampments and reconnoitring, that Field Marshal, proposed to the General to undertake a more important operation, promising to support him with regular troops. The proposal was joyfully accepted, and one feeling of satisfaction and emulation prevailed through the camp:—"The expedition was fixed on for the night, however, were both doomed to bitter disappointment, for nothing was further from the Muchir's thoughts than to engage with the enemy. In fact, having drawn out his army to within an hour's distance from the Russian lines he commanded a halt. For nearly two hours the Turkish army remained in this humiliating position, and then the Muchir ordered the whole army to retreat." Thus were three hundred Bashi-bozouks basely sacrificed, a large proportion of them being mowed down with grape and round shot; the remainder, of course, who escaped wending their rage against the cowardice of the Turkish commanders in no measured terms."

This is but one example out of many of Turkish warfare under Turkish commanders. The fault, however, clearly lies with the latter, there is every reason to hope for better things when a proper education and discipline throughout all the ranks of the service is established.

Amongst the principal positions in the present Asiatic war are Kars and Erzeroum, on the Turkish side (the latter depending on the former), and Gumri and Tiflis, on the Russian. Kars, which is now the point threatened with attack, would appear to be very ill prepared to resist a regular siege. The ancient walls which once surrounded the town have long since crumbled away, as well as the castle which crowned the height. Early in the last campaign, however, General Guyon caused some redoubts, mounting forty-eight cannon, to be thrown up on the ridge of mountains known as the Karadagh, which commands the approach to the town, and these are the only means of defence it has now to rely on. On the other hand, Gumri, which lies at a distance of eighteen leagues from Kars, is strongly fortified with works in masonry, some of them casemated, and mounting 150 guns. Tiflis is situated in a plain, and is not fortified. Its defence against an attack of the mountain hordes of Shamyl would depend upon operations in the field. Mr. Duncan appears to attach very little importance, in a military sense, to these marauding incursions of the redoubtable Caucasian leader, the extent and consequence of which, he says, have always been much exaggerated.

It would be an impossibility (he says) for that chief to assemble and keep together any considerable force for a longer period than a week. If it were even in the power of Schamyl to provide food for his undisciplined force, his followers would nevertheless disperse—for it is for plunder, and plunder alone, that the Circassian Lesghien or Daghestanese, quits his mountain village. A single Russian Dragoon regiment, backed by a troop of Horse Artillery, would suffice to rout any force Schamyl could bring to Tiflis. Nobody is better aware of this than that chieftain himself, and he has displayed consummate wisdom in never having committed himself in any similar expedition.

Apart from the valuable information afforded in these volumes upon matters of essential and practical import, they will prove attractive reading to those who take pleasure in the lighter incidents of travel.

WATERSPOUT AT OXFORD.

A CORRESPONDENT writes from Oxford:—"On Wednesday evening, the 25th ult., at six p.m., as we were sitting at dinner, at Headington-hill, the appearances here represented (Fig. 1) took place in the clouds. The first

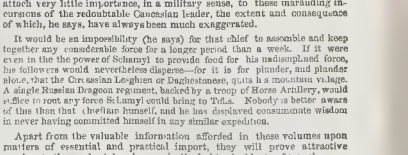

FIG. 1.

appeared like a pearly, broken cornice, it was three or four inches drawn [illegible] the cloud altogether, each time lengthening on its reappearance, till at last it touched the horizon, appearing like a monstrous scimitar (Fig. 2), the convex side furthest from the wind. This [illegible] remained for several minutes, when a light cloud passed [illegible] apparently about one-third up; it then separated, and the point from the horizon turned upwards, with the convex side to the wind (Fig. 3), and remained as strongly marked as before for several minutes, when this point spread, and the hilt was absorbed into the clouds."

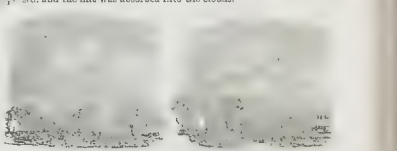

FIG. 2. FIG. 3.

Another Correspondent writes:—"At the moment of its breaking it appeared to be moving more rapidly than before, and the broken part seemed to have been dispersed in a mist, so that at first it was doubtful whether the apparent separation was not caused by intervening cloud. The lower fragment, however, immediately enlarged its dimensions, and after appearing to roll for a few seconds, like a horizontal cylinder, it disappeared.

The cloud from which the Waterspout projected was thick and heavy with a well defined and tolerably level under surface.

MEMORIAL OF MARY RUSSELL MITFORD.

HAVING from time to time devoted a portion of our space to the life and writings of Miss Mitford, we have now the utmost gratification in drawing the attention of our readers to the following Circular, in the sentiments of which we most cordially agree; and we cannot permit ourselves to suppose that such an appeal for such an object will not be responded to liberally by those for whose pleasure and improvement her gifted pen was so long and so earnestly devoted. Knowing something of the character of the gentlemen who form the Committee, we think we may on their behalf announce that the grateful shilling of the humble will be by them received with as much satisfaction as the larger contribution of the wealthy:

It is proposed to erect to the memory of the authoress of "Our Village," whose name is immortal which shall testify the respect entertained by many, not only in England but in America, both for her literary talents and her private virtues.

There are, it cannot be doubted, thousands who owe to her writings a more genial and humane spirit, as well as a more truthful and intimate, knowledge of English country life, and who look on her as building a high rank among those writers, who since the appearance of the poems of Crabbe and Wordsworth, have investigated and pleaded the cause of the agricultural poor. Her private virtues are necessarily known to a smaller number, yet it is hoped that there are many who have been made wiser and better by beholding the sweetness and gentility, the trust in God and man, and the heroic industry, which never failed the noble woman during years of poverty and sorrow, disease and pain, and every ill, save that of not loving and being beloved, which death is heir to.

It is hoped that funds may be provided for erecting a plain Monument over her grave, in the churchyard of that Village which she has made famous by her presence and her writings; to place in the church a tablet with a suitable inscription, and for building, if possible, a School, which, we understand, is much needed, at THREE MILE CROSS, to be dedicated by name to her memory.

Subscriptions for this purpose will be received by the Rev. W. Harness, Privy Council Office, Whitehall; F. Bennoch, Esq., 77, Wood-street, Cheapside; the Rev. C. Kingsley, Eversley, Hants; George May, Esq., Castle-street, Reading; the Rev. Hugh Pearson, Sonning, Berkshire, and in America, by the eminent publishers, Tickner, Fields, and Co., Boston, Mass.

A SEASONABLE DELUGE.

A SEASONABLE DELUGE.—Soon after five o'clock this morning a most violent storm of wind and rain commenced, and continues as I write. It will cause, I fear, much discomfort, if not actual damage, in the Camp, over which it rages with a combined fury and duration which I do not remember to have seen surpassed. The considerable portion of the Camp of which I command a clear view from my house is covered into a lake, to a depth exceeding faster than it can sink into the earth. Over the surface of this lake the rain is drifted in clouds by the driving wind, forming a sort of watery curtain, through which the soaked tents look dreary and dismal enough. Such as it is, however, their imperfect shelter has been sought; and one sees but here and there a forlorn figure struggling through the blast. In the pens the mules and horses mourafully bang their heads, enduring with melancholy philosophy the inevitable and unwelcome *douche*; while in sundry nooks and corners, to the leeward of tents and under the eaves of huts, the Camp fowls have taken refuge, with drooping plumes, and that look of profound discomfort peculiar to poultry under difficulties. Down the numerous slopes of the Camp the water has made itself channels—which will not, however, I fear, prevent its finding its way into many of the soaked tents before long, and so the great disturbances of their domestic economy. Even the furious war of the elements does not wholly suspend the strife of man, and from time to time, above the roar of the wind and the plash of the rain, the boom of a gun reaches one's ear. As I write, however, the tempest passes over, the clouds fly seaward, the rain ceases, and already the Camp resumes its stir.—*Letter from the Camp, July 31.*

THE Government, in accordance with the recommendation of the Committee moved for by Mr Mackinnon on the Arctic Expedition, have paid £3000 to Captain M'Clure, and the same sum to the Admiralty, for his officers and crew.

THE confiscation of thirty-one estates belonging to the political refugees in the province of Venice, has been annulled by Austria.

S. MORDAN and CO.'S MANUFACTURES, 23, City-road, London
PATENT SWIVEL AND ESSENTIAL PENCIL.
S. Mordan and Co. caution the Public in purchasing this useful article to see that the Patentee's name be stamped legibly on the case. A quantity of counterfeits are constantly passed on the public, as they yield a greater profit to the salesman, but will be found of no value in use. These remarks apply also to S. Mordan and Co.'s Patent Leads, for replenishing the same.
FINE ARTS.
S. Mordan and Co. beg to inform the public that they are ready to supply a genuine Instrument for Lead DRAWING PENCIL, whether on a particle of grit, or any other impurity. S. M. and Co. have no hesitation in asserting that such excellent pencils in every respect have never yet been produced; and in confirmation of this the highest testimonials from artists, architects, and engineers have been received. The following is an abbreviated List:—

Charles Barry, Esq., R.A.	Philip Hardwick, Esq., R.A.
T. L. Donaldson, Esq., R.A.	Henry Hering, Esq., F.S.A.
I. K. Brunel, Esq., F.R.S.	Cosby Fleeting, Esq., P.W.C.S.
Clarkson Stanfield, Esq., R.A.	W. Yeo, Esq., R.A.
Richard Westmacott, Jun., Esq., R.A.	David Roberts, Esq., R.A.
	J. T. Willcox, Esq., R.A.

H. C. Wilson, Esq., Director of the Government School of Design.
S. MORDAN and CO.'S PATENT COMBINATION LITHOGRAPHIC and COPYING PRESS.
One of the most simple mechanical arrangements, the Patentees have succeeded in producing a most efficient and Portable Printing and Copying Machine, equally well adapted for the Counting-house, Office, or Library. With this Press every person may easily become independent of his Printer.
This combined Machine is produced at a less cost than the cheapest Lithographic Press in the market, and in addition to its capability of doing the work of a Lithographic Press it is an exact and perfect Copying Press, so that it may be said that this is for qualification is obtained by the purchaser gratis.
The above can be purchased of all the leading Jewellers and Stationers.

BURGLARS DEFEATED. CHUBB'S NEW DOUBLE-BOLT DETECTOR LOCKS, Upper Thames-street, London, July 6, 1855.
Gentlemen,—The safe you fixed here some years ago has indeed proved a good one, and done good service. Last week some fools or broke in our office, and tried their hands upon your safe. First they seem to have used their crowbars, and then gunpowder, but to no prevail ends; for money, bills, and deeds were all safe enough in your "Safe," and under your lock and key. We have great pleasure in informing you of this, of which you can make any use you please.—We are, gentlemen, your obedient servants,
JAS. NICHOLSON and Co.
Messrs Chubb and Son, 57, St. Paul's-churchyard.
CHUBB and SON, 57, St. Paul's-churchyard, London; 16, Market-street, Manchester; Horsley-fields, Wolverhampton; and 28, Lord-street, Liverpool.

HER MAJESTY'S NEW STEAM-YACHT "VICTORIA AND ALBERT."

THIS magnificent steam-yacht, built in place of the *Victoria and Albert* (which last year was added to the fleet for general purposes, under the name of the *Windsor Castle*), was launched at Pembroke, on the 16th of January last. Her building was commenced in May last year. This ship, which is nearly as long as the great *Himalaya* steamer, is built on the diagonal principle, so as to combine lightness and strength, chiefly of mahogany and East India teak. Her decks are laid with Canada fir planks; there are water-tight bulkheads near the State cabins, and felt is laid between the beams and deck to deaden sound. The whole space from the paddle-boxes aft is devoted to the accommodation of Royalty. On the upper deck is a large dining-room, 24 feet by 17 feet, glazed all round, and commanding an uninterrupted view to sea, and over the weather deck. From the interior of this saloon or hurricane-house a staircase descends to Royal apartments.

The State-cabin is 21 feet by 17 feet, and the Royal bed-chamber 19 feet by 14 feet, with a dressing-room at each end. The cabins are thoroughly ventilated, by means of pipes passing up through the ship's sides and terminating at the gunwale upon deck. On the orlop deck beneath is situated the Royal nursery, and other cabins, for the use of her Majesty's suite. The fore-part of the vessel will be devoted to the berths of the officers and crew.

The quiet and neat elegance of the internal arrangements of the yacht, and the good taste displayed in her decorations and fitting-up, leave nothing to be wished for. "Great credit and praise (says the *Art Journal* for the present month) are due for the excellence and beauty of the maple-wood fittings and relievo leather decorations in the cornices, &c., for which we are indebted to the taste of the Hon. Captain Denman, Mr. A. Walker, Messrs. Wakeling, and to Mr. F. Leake, who has made new designs and models for the cornices, &c., and produced them in their beautiful relievo leathers, enriched with gilding. On their being submitted to her Majesty and his Royal Highness the Prince, they expressed themselves especially pleased with the union of the emblems of England and France as a fitting decoration for their yacht on her first trip to France on the mission of union already ratified by the people, the navies, and armies of both countries—and long may it continue."

The new yacht was designed and built by Mr. O. W. Laing, the master shipwright at Pembroke.

Upon her trial cruise she went out with 350 tons of coals, and brought back upwards of 100. She made 29½ revolutions, and realised a speed of upwards of 15 knots (which is upwards of 17½ statute miles) per hour, and this laden deeply.

THE ILLUSTRATED LONDON NEWS

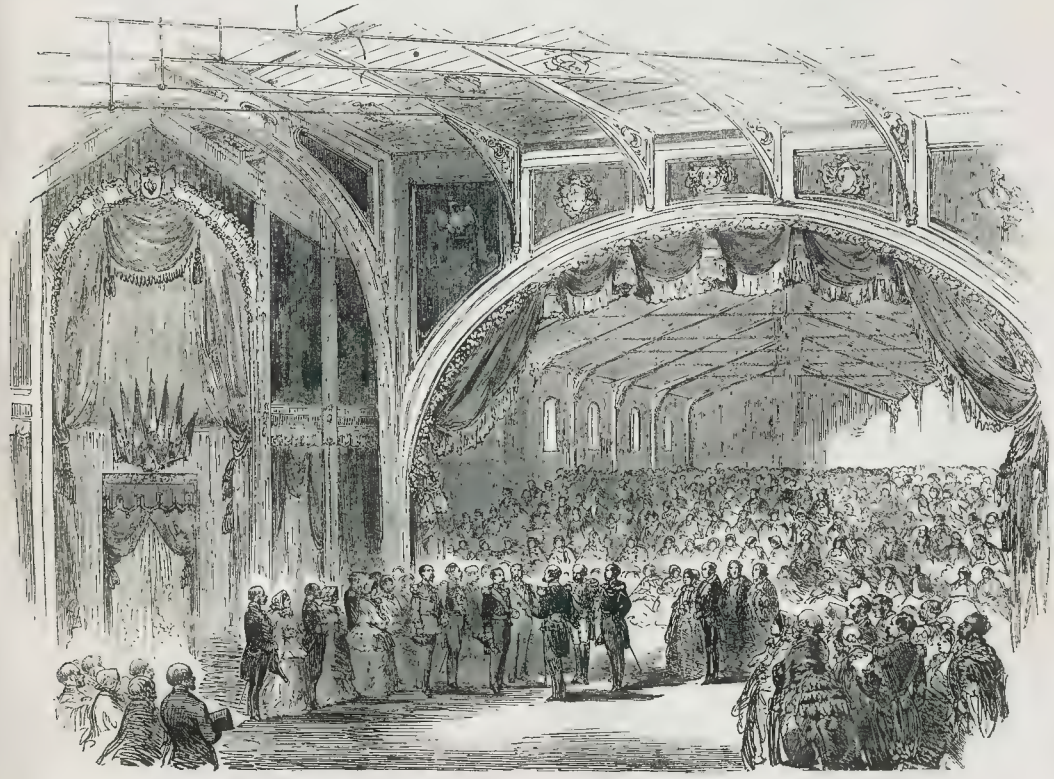
No. 758.—VOL. XXVII.] SATURDAY, AUGUST 25, 1855. [PRICE FIVEPENCE, STAMPED (POST-FREE) 6d.

THE QUEEN IN PARIS.—THE HOLY ALLIANCE OF ENGLAND AND FRANCE.

We this day record and illustrate the great event of the week, and of the age—the auspicious visit of her Majesty to the Imperial Court and the people of France.

The world has heard of "holy alliances" which were not holy. The present alliance between the people of Great Britain and France—of which the latest as well as the most magnificent proof is the reception of Queen Victoria in Paris—may claim the high designation with greater justice than any compact ever yet formed by Kings or nations. Its objects are entirely unselfish. No vision of glory to be won, of territory to be acquired, of influence to be extended, swayed the councils or inspired the resolutions of either nation when it reluctantly took arms to repel the ruthless and all-grasping ambition of the late Czar Nicholas. No such idea has possession of either of them at the present moment. Glory they will each obtain; but it will be the glory of success in a wise and generous policy; and when glory is no longer to be acquired by such means, Civilisation will have yielded itself a prey to all-conquering Barbarism, and mankind will have retrograded into a darker night than that of the Dark Ages.

But holy as the alliance must be considered, the events of the present week have proved it to be no less hearty than holy—no less affectionate in itself than just and noble in its objects. The Queen's visit to Paris has realised the dream of the first Napoleon, who saw in a firm alliance with the England, which then scorned his pretensions and defied his power, the only security for the peace and welfare of Europe. The wish, though not gratified in his own person, has received its fulfilment in that of his successor—a man as great in his peculiar career as his immortal predecessor was in one wholly different. England and France are united both by the courtesies and the friendships of their respective Sovereigns, and by the sentiment and the reason of the two nations themselves. Henceforth, or as long as that alliance shall last, the first place in the world is theirs. Russian ambition has received a check from which it will not recover in our day, if ever; and European Civilisation and Freedom know where to look for protection against invading Barbarism and Serfdom;—for protection that will not fail;—and for strength and resources in the hour of need sufficient to defy and overpower the combined forces of all possible opponents. The reports of each successive day show that all the splendour and enthusiasm which were predicted by those who best knew the French and the English character have been exceeded by the reality. Each day offered a new ovation all the more gratifying to the illustrious and beloved lady who was its immediate object for being offered, not to her alone, but to the great nation of whose system of government she is at once the highest emblem and the most graceful ornament. It is easy to command and to procure a certain amount of popular applause. The multitudes in all nations, civilised or barbarous, are fond of show, and love to look upon the representatives and depositaries of power, and shout after them with hurrahs and acclamations. But enthusiasm of this surface kind soon exhausts itself. Real enthusiasm is not excited by the presence of Emperors or Czars, Kings or Queens, who have not known how to cultivate the esteem and gain the affections of their people. Neither love nor loyalty is to be obtained by order, or to be purchased by money. The popular instinct is unerring, and the heart of every great and free people is invariably sound. When the great Nicholas visited England, with treachery in his thoughts, the people—who knew nothing of his treachery, but who knew that he was a selfish and a cruel despot—could not be induced to give him a hearty welcome. If his Imperial presence excited some admiration, it excited no affection. Far different was it when Napoleon III. came to London. The man and the principle were before the people; and to the man and to the principle they gave the spontaneous homage of as generous and warm a welcome as ever was bestowed upon a man or a Sovereign. So it is in the case of Queen Victoria's visit to Paris. The enthusiasm among the French has been universal. The Emperor's right to the throne, though affirmed by the universal suffrage of the people, is not altogether uncontested. There are attached friends of the older dynasty of the Bourbons still surviving, though not in great numbers; there are adherents of the house of Orleans—though so mean-minded a King as Louis Philippe scarcely deserved to be remembered by such respectable people as still see in the restoration of his dynasty a hope for France; and there are enthusiastic Republicans, who cling to a theory with all the fanaticism which theories of Religion and Government are so apt to inspire, even in the face of insurmountable and opposing facts;—but all of these have been drawn into the great current of the popular



THE QUEEN'S VISIT TO PARIS.—WAITING THE ARRIVAL OF HER MAJESTY AT THE BOULOGNE RAILWAY STATION.—(SEE PAGE 242.)

feeling, and share in the triumph of Napoleon III. with as much good-will and cordiality as if it were the triumph of their own principles.

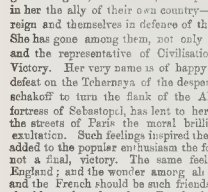
Queen Victoria has not gone to Paris unarmed or unguarded. Though no troops have accompanied her—though she is almost alone, with her husband and children, on the soil of a nation which has been often the enemy and always the rival of her own—she is not unprotected. Every man in France is her friend. That magnificent array of soldiers and of National Guards that lined the Boulevards on her arrival—that countless multitude of human beings which congregated in the splendid thoroughfares of the most splendid city in the world to greet her approach, and re-echo the hearty hurrahs that they had learned from Englishmen as the most appropriate music of the occasion—were all her friends and guardians, and formed a portion of her state. Nothing like it was ever known. Queen Victoria has made many Royal progresses. She has been long accustomed to the roar of applause, to the exuberant expression of loyalty, and to the happy faces of delighted and grateful crowds; but in no previous progress, and at no former manifestation of popular rejoicing has she been received with so much enthusiasm as that which has tracked her footsteps since she set foot upon the soil of France. Perhaps her life and may it be long and happy!—will never afford her such another ovation. We can scarcely expect that it will; for it is not probable that an event so great in its splendour and significancy will find its parallel with the same individuals as actors in it.

Her Majesty's subjects can but express their loyalty and affection—their admiration of her public no less than of her private character—their respect for her as a woman, a wife, and a mother, and their steady attachment to her as a Sovereign. Opportunities for the expression of such sentiments are continually afforded them, and, whether expressed or not, underlie the whole current of the national mind; but the citizens of a foreign State—while participating in all these feelings can feel and express something more. The French not only see in the Queen of England an interesting woman, who appeals to their feelings and their gallantry by coming among them with her husband and children; but only the descendant of a long line of illustrious ancestors, and a wise Monarch, who governs a great, a contented, and a prosperous people; but they see in her the ally of their own country—united with their own Sovereign and themselves in defence of the holiest rights of humanity. She has gone among them, not only as the messenger of Peace and the representative of Civilisation, but as the harbinger of Victory. Her very name is of happy omen. Already the signal defeat on the Tchernaya of the desperate effort of Prince Gortschakoff to turn the flank of the Allies and relieve the doomed fortress of Sebastopol, has lent to her triumphal progress through the streets of Paris the moral brilliancy derived from hope and exultation. Such feelings inspired the minds of all spectators, and added to the popular enthusiasm the fervasts of still greater, if not a final, victory. The same feeling animates the people of England; and the wonder among all classes seems, not that they and the French should be such friends and allies, but that they should ever have been foes. But the days of their enmity are past; and it will be their task to extend the blessings of the happy peace which subsists between themselves to the whole of Europe; to attract other nations to their alliance, and, when the sword has done its work, to make even Russia herself see the admission into the great Commonwealth of Europe, and submit to the same laws and the same restraints as those other and more peaceful States, which are now engaged in the inconvenient but necessary task of restraining and punishing her ambition.

OBITUARY OF EMINENT PERSONS.

THE DUKE OF MANCHESTER.

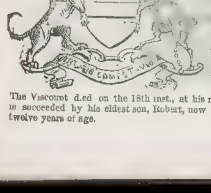
George Montagu, 5th Duke and Earl of Manchester, Viscount Mandeville and Baron Montagu, of Kimbolton, in the Peerage of Great Britain, was the eldest son of William the fifth Duke, by his wife, the Lady Susan Gordon, third daughter of Alexander, fourth Duke of Gordon. He was born the 9th of July, 1799. He married twice, first, the 8th of October, 1822, Millicent, only daughter and heiress of the late General Robert Bernard Sparrow and his wife, the present Lady Olivia Sparrow, by whom he leaves issue two sons and a daughter, namely:—Viscount Mandeville, M.P. (now the seventh



Duke); Lord Robert Montagu, and Lady Olivia, married to Lord Ossulston, M.P. His Grace married, secondly, the 29th August, 1850, Harriet Sydney, daughter of Conway R. Dobbs, Esq., of Castle Dobbs, in the county of Armagh, by whom the noble Duke has had a son and daughter. George, sixth Duke of Manchester, entered the Navy in early life, obtained his Lieutenancy the 20th of November, 1818, and was made Commander in July, 1822, which rank he held on the reserve list at his death. In 1826 he was elected a member of the House of Commons for Huntingdonshire, which county he represented in the several successive Parliaments up to 1837, and throughout was a consistent Conservative, voting against the Reform Bill, the Municipal Corporation Act, and the Irish Tithe Bill. His Grace was a Deputy-Lieutenant of the county of Armagh. He inherited the family honours on the death of his father, the 18th of March, 1843. His own demise, after a long and painful illness, occurred at Tunbridge Wells on the 18th inst. He is succeeded by his eldest son, Viscount Mandeville, M.P., who was born the 15th of October, 1823, and married in 1849 the Countess Louise d'Alten; he was some time in the Grenadier Guards; and from 1843 to 1846 was Aide-de-Camp to General Sir Peregrine Maitland, the Governor of the Cape of Good Hope. He retired from the Army in 1850.

VISCOUNT HEREFORD.

The Rev. Robert Devereux, fifteenth Viscount Hereford in the peerage of England, and a Baronet, Premier Viscount of England, was the eldest surviving son of Henry, the fourteenth Viscount, by his wife, Frances Elizabeth, third daughter of the late Sir George Cornewall, Bart. He was born the 3rd of May, 1802, and married in 1841 Emma Jemima, daughter of the late George Ravenscroft, Esq., by whom he leaves issue three sons and two daughters. His Lordship succeeded to the ancient viscounty on the death of his father, the 31st of May, 1843. He was educated at Downing College, Cambridge, was in holy orders, and was Rector of Little Hereford.



The Viscount died on the 18th inst., at his residence in Wilton-crescent; he is succeeded by his eldest son, Robert, now the sixteenth Viscount, a youth twelve years of age.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

It is greatly to be regretted that the arrival of the Queen in Paris occurred so late as to prevent the possibility of her Majesty's being distinguished by the enormous crowd waiting to greet her passage through Paris. The sums that were paid by *les curieux* anxious to have a full view of the spectacle sound really fabulous. It is said that the balcony of Giroux, on the Boulevard des Capucines, was let for 2000 francs (£80); and a *cabinet de Restaurant* for 600 francs (£24). In order to be quite secure of their places, and to avoid the crowd, many persons stationed themselves in the windows they had hired, early in the afternoon, some even sooner, and remained till past eight o'clock, the hour at which the cortége passed, when it was already so dusk that nothing was distinguishable. Nothing, however, could exceed the enthusiasm that marked the passage of the Royal guests; on all sides natives and foreigners, vied in the cordiality of their welcome; and the gracious and graceful acknowledgments of the Queen to all the homage paid her, from the moment of her landing in France, has produced the warmest impression of personal regard for her Majesty. As usual, "the Queen's weather" gives double éclat to all the festivities arranged in her honour; and enables her to enjoy, and to see to the fullest advantage, the various objects of interest and curiosity she will have to examine during her stay.

It was at one time feared that the presence in Paris at this moment of the Prince Adalbert of Bavaria might give rise to a question of precedence between himself and Prince Albert, which would be delicate and difficult to solve. The resolve, however, of the former to preserve his incognito—a determination which, it is believed, he made expressly to avoid this question—has removed all uneasiness on the subject.

Extreme regret has been caused by the death of the excellent Bishop of Nismes, who expired after two years of intense suffering, angelically endured, of internal cancer.

All the medical reports state that never has the public health been in a more satisfactory condition than at present—a circumstance the more surprising from the fact of the immense temporary increase of the population in the capital. Half the beds in the various hospitals are vacant, and the list of deaths is unusually short. A few isolated cases of cholera have appeared in one or two of the departments; but even these occurred some time since.

General Canrobert arrived the end of last week in Paris, having received a particular order from the Emperor to seek a temporary repose from the fatigues of his severe and arduous campaign. Wherever the General passed on his homeward journey he was greeted with lively demonstrations of regard and consideration; and on his arrival at Paris was most warmly received by the Emperor, who has conferred on him the distinction of Senator.

The artistic world has had a serious loss in the person of Henri Valentin, whose masterly and graceful drawing placed him high on the list of illustrators—that *specialité*, at the head of which stands Gavarni, to whose style Valentin's bore a resemblance, without being an imitation. Valentin, the son of an old Waterloo soldier, came to Paris at twenty, without money, friends, or protection. By means of his talents and incessant labour, he found the means not merely of supplying his own wants, but of securing comfort to his family. The fatigues he underwent in the accomplishment of his object proved, however, too severe for his strength. After a cruel illness he expired at the early age of thirty six, at Strasbourg, where, in the early part of his malady, he had retired, in the hope that a period of rest, passed with his father and family, would restore him and enable him to resume his labours.

Jean Baptiste Erard, the head of the great *fabrique* of pianos, also expired last week, at his suburban villa, La Muette, near Passy. His funeral took place on Monday, and was most numerously attended.

A special commission has been organised by the Prince Napoleon for the purpose of selecting, among the various productions in the Exhibition Universelle, such as, from their utility and cheapness, may be with the most profit introduced into general use. As soon as these objects have been duly examined and approved, they will be united in a certain place appointed. The Commission will propose that prizes shall be awarded to the inventors; and will, moreover, take upon itself to recommend and bring them into general favour and employment. There is even a question of taking off, or greatly reducing, the duties on such of these articles as may be of foreign manufacture; this matter, however, remains yet to be pronounced upon. It appears that England, Belgium, and Austria will be among the nations that will contribute most largely to this collection.

A report is afloat that affairs are in train to bring into the Imperial family of France an Archduchess of Austria.

The Cirque, in imitation of the Porte St. Martin, has brought out a piece in fifteen tableaux, by MM. Théodore, Barrière, and Henri de Flock, entitled, "L'Histoire de Paris." The work is extremely defective in construction, wanting sequence and connection, and being in many parts obscure and difficult of comprehension; but it contains some highly effective scenes. As a whole, however, it can hardly be regarded but as a failure, more especially when brought, as it must inevitably be, in comparison with the "Paris" of the Porte St. Martin.

AMERICA

The mail-steamer *Atlantic*, which left New York on the 8th inst., arrived at Liverpool on Sunday.

Despatches from Washington announce the removal from office of Rush Elmore, Associate Justice of the Supreme Court of Kansas Territory, and the appointment of Judge Moore, of Alabama, as his successor. The reasons for this removal are the same as those given in the case of Governor Reeder, namely, unsatisfactory explanations relative to the charges of speculations in lands.

A very serious conflict between American citizens and foreigners took place at Louisville on the morning of the 7th, during which some twenty persons were shot, and twelve buildings were destroyed by fire, many persons, it is stated, perishing in the flames. After some time the military succeeded in restoring order. The cause of the outbreak is ascribed to electioneering quarrels.

Colonel Kinney arrived at San Juan on the 16th ult., with twenty-four men. Colonel Walker was at Leon, and it is stated that, having become disgusted with the treachery of his allies, he contemplated joining the Government party.

Files of papers from Nicaragua and Costa Rica, the former up to the 14th July and the latter to the 21st, stated that the insurrectionary or democratic movement in Nicaragua was in a state of disruption, and that many of the chiefs had escaped into the Costa Rica.

The steamer *Northern Light* had arrived at New York from San Juan, with dates from California (San Francisco) to the 16th of July, and 541,000 dollars in specie. Another steamer left at the same time with about an equal amount of treasure. The advices are favourable for money and trade, and the accounts from the mines are very encouraging.

The dates from Mexico are to the 13th ult. Santa Anna had, of his own accord, proposed the formation and inauguration of a new constitution, in a circular addressed to the governors of the different departments and provinces.

Wills, Personalty, and Bequests. The will of the Rev. John James Blunt, B.D. of Cambridge, the Lady Margaret Professor of Divinity, was proved under £20,000; Major-General William Henry Cornwall, £25,000; George Coates, Esq., Springfield, £10,000; Mrs. Mary Ann Clark, of Norwood, £70,000; Thomas Fussell, Esq., Warbury House, Somerset, £80,000; W. Selwyn, Esq., Richmond, £40,000; James Smith Ley, Esq., Durrant House, Devon, £20,000; Frederick Alder, Esq., Brompton, £18,000, and has bequeathed to the Licensed Victuallers' School and Asylum £500 to each, St. George's and St. Mary's Hospitals £500 to each, and to the Chelsea Benevolent Institution £120.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

His Royal Highness Prince Albert has consented to lay the foundation-stone of the Midland Institute at Birmingham early in November.

A letter from Vienna states that the Empress of Austria is again in an interesting situation, giving hopes of an heir to the Throne.

Lord Stratford de Redcliffe, as the Queen's representative, is to invest Omer Pacha with the order of the Knight Grand Cross of the Bath.

The King and Queen of Prussia were to return to Potsdam on the 18th, and proceed to Konigsberg on the 25th with a numerous suite.

The Emperor of the French has sent a handsome picture of the Virgin, to be placed on the altar of the chapel at the Camp of Sauthonay.

The ex-Royal family of France visited Carnarvon Castle last week, and the following autographs were entered in the visiting-book:—"Marie Amelie," "Duc et Duchesse de Nemours," "Princess de Salerne," "Duc et Duchesse d'Aumale."

It is said that a marriage is about to take place between the Princess Louise, daughter of the Prince of Prussia, and the Prince Regent of Baden.

The Queen has been pleased to appoint Sir Richard Pakenham, K.C.B., to proceed to Lisbon on a special mission, to convey to the King the Queen's congratulations on his attaining his majority.

The Queen of Spain will remain at the Escurial until the middle of September.

A few days ago the mother of the Empress of the French, the Countess Montijo, and the sister of the Empress (the Duchess of Alba) dined at the residence of Gudin, the celebrated marine painter, where several diplomatists and artists were assembled.

In reply to the invitation given to Prince Albert to be present at the approaching meeting of the British Association in Glasgow, his royal Highness states that other engagements will prevent him from accepting the invitation.

The sons of the brothers and sisters of the Emperor Napoleon I. who do not form part of the Imperial family, are to add the titles of "Prince" and "Highness" to their family names—viz., his Highness Prince Charles Bonaparte, his Highness Prince Lucien Lucien Bonaparte, his Highness Prince Pierre Bonaparte, his Highness Prince Antoine Bonaparte, his Highness Prince Lucien Murat.

The Duke of Newcastle has had an attack of illness in the Camp, but was considerably better by the last accounts.

It is said that M. Lucien Bonaparte, son of the Prince de Canino, is to be made a Cardinal at the next Consistory.

Lord Panmure is the Secretary of State selected to remain in London during the absence of the other three Secretaries of State from the metropolis. The noble Lord is also required to remain in town from the pressure of business in his department.

The Dowager Queen of Saxony has arrived in Litzburg, from whence she will set out for Ischl.

Lord John Russell has purchased Hill House, Rodborough, near Stroud, until lately the seat of Sir John Dean Paul, Bart., and intends making it his country residence. "By some," says the *Gloucester Journal*, "political motives are attributed to the noble Lord in fixing his residence at Stroud. It will be remembered that he sat in Parliament for the borough from 1835 till 1841."

The furnishing of the new mansion at Balmoral is being proceeded with in a most expeditious manner; and an intimation has been received that her Majesty will arrive early in September.

Lord Strathspey has become the purchaser of Mr. Dennistoun's handsome mansion in Grosvenor-place; and Mr. Jones (of Pantglas), M.P., has bought the one lately vacated by Viscount Enfield, in Eaton-square.

The pleasure-yacht of Lord John Scott has arrived off Berwick direct from the Baltic, where she had been cruising for six weeks, mingling with the combined fleets of the Allies, and passing the forts of Sweaborg and Cronstadt.

"If all Europe is at Paris," says a letter of the 15th, from Baden, "all the Parisians are upon the Rhine. Never have Ems, Wiesbaden, Homburg, and Baden received more visitors. As many as 33,000 visitors have passed through this city during the last two days."

The Queen has been pleased to approve of M. Frederick John Scott as Consul in the Island of Trinidad, for the Queen of Spain.

Amongst the victims to cholera at Florence is the Princess Demidoff. So great has been the ravages of the disease that the Tuscan Government has taken especial measures on the occasion.

The Lord-Lieutenant of Ireland has revoked the proclamations which placed seven baronies of Clare and nearly the entire of the county Cavan under the operation of the Crime and Outrage Act.

Madame Lagusti, wife of the Civil Governor of Madrid, who, through fear of the cholera, wished to leave the capital, has fallen a victim to the disease. "She was one of the prettiest persons in Madrid."

A Hamburg paper publishes an inflammatory letter from "Archbishop Innocent" to Prince Gortschakoff encouraging the Prince to continue to fight for "that orthodox faith of which Russia is now the Noah's ark." He also congratulates the General on having the same name (Michael) as that archangel who "combated the infernal serpent and sent him to hell." "It is a good omen," adds the pious archbishop.

Augustus Stafford, Esq., M.P., left London, on Monday, on a second benevolent mission to the military and naval hospitals in the East of Europe.

The Paris correspondent of the *Independance Belge* has a fine collection of *on dits*. General Canrobert is to command a new Army of Italy; Naples is to have a new King ("the descendant of a French Prince who has already reigned there;") Sicily is to be given to the English, and Spain is to be given to Prince Napoleon (!).

Sir Roderick I. Murchison passed through Dingwall the other day, *en route* to inspect the limestone cliffs at Durness, Sutherlandshire, which geographical inquiries the learned knight will likely describe at the Glasgow meeting of the British Association.

M. Lesseps is said to have confided the management of the works connected with the new undertaking of the Isthmus of Suez to M. Barthelemy St. Hilaire.

By the death of Mr. Hoof, the railway contractor, Sir Henry Muggeridge, the Sheriff of London, becomes possessed, in right of his lady, of an addition to his fortune, said to amount to a quarter of a million sterling.

The annual sitting of the French Academy will be held on the 30th inst.: M. de Noailles will report on the Montlyon prize and M. de Villemain on the prizes of eloquence.

A letter from Constantinople, in *La Presse*, states that General Canrobert, in taking leave of the French army, promised them that he would soon return.

Rossini has left Trouville, and returned to Paris, where it is expected he will take up his residence for the winter.

Madame Ristori is engaged for a series of representations at Vienna, on her departure from Paris, at the close of the present month.

The Victoria Regia is now in full bloom at the gardens of the Royal Dublin Society, Glasnevin.

It is as difficult now for tourists to visit the trenches before Sebastopol, as it would be to gain admission to a Cabinet Council or the private sitting-room of Queen Victoria.

A working bellhanger, in North Shields, has received information of the gratifying fact that by a late decision of the Court of Chancery he has become entitled to a very large fortune—reports state £70,000.

A fire broke out in San Francisco on the 4th of July, and before it could be checked nearly eighty thousand dollars' worth of property was destroyed.

The married men of the Kilkenny Militia, stationed in Limerick, have been permitted to hire out for cutting down the harvest, returning to barracks in the evening after the day's work.

One of the principal events of the day in Paris is the opening of a new café, called the Café Parisien, on the Boulevard, near the Chateau d'Eau. This is the largest cafe in Paris, and has mounted twenty billiard-tables.

A circular from Archbishop Cullen, denouncing the abominations of Donnybrook fair, and leading the efforts made to suppress that nuisance, was read last Sunday in the Roman Catholic chapels in Dublin.

Accounts from Alexandria state that the waters of the Nile have risen two fathoms higher this year than last, and this is considered a guaranty of an abundant harvest.

The planet Venus, as seen through a telescope, is at present a beautiful crescent. It now appears to the best advantage, each day diminishing the beauty of its form.

The large consumption of water at Aldershott has affected the supply of water to the canal on the Basingstoke Canal, the Footpool, and the London. Compensation has been obtained by some of the millers, and is claimed by the rest.

It is said that the yearly consumption of tobacco in Turkey reaches 350,000,000 lb. allowing 40 lb. a year each for 8,000,000 of smokers.

THE QUEEN'S VISIT TO FRANCE.

From our Special Correspondent.

(Continued from Supplement, page 247.)

THE PROGRESS FROM BOULOGNE TO PARIS.

The progress of the Imperial train from Boulogne to Paris was marked by very few points of interest. The Paris visitor who has travelled by the Boulogne route will have remarked the wearisome flatness, the terrible monotony of the landscapes which lie between the capital and the Boulogne railway station. Rows of poplar-trees rising straight into the air, from a road direct as an arrow; farm houses of ordinary aspect, with women and children lounging at the doors; cows feeding along dusty lanes, attended by little vagrants in blue blouses; and women standing with railway signals in their hands at level crossings (and nearly all the crossings are level), pointing forward, are the main points of observation that rest in the traveller's memory, as he reaches the Paris terminus. But on this occasion the occupants of the train gave a new aspect to every mile of the road; peopling the dusty lanes with labourers and their wives and children in holiday gear; covering the few bridges with heads; and inspiring villagers, turned awhile from their labour, to line an embankment, to raise a lusty cheer. The train dashed forward past these curious country people at a tremendous speed, for Paris was yet far distant, and the sun was sloping to the west. The first station at which a stoppage was made was that of Montreuil. The interior of the station was prettily covered with evergreens, flowers, flags, and emblems of the Allied nations. Here the visitors were received by some military and municipal authorities, but they did not descend from their carriage. The engine having taken in water, the travellers sped rapidly forward to Abbeville, when the State carriage was brought to a stand-still before an elegantly-decorated recess, in which were the municipal authorities and some ladies. The station was elegantly decorated; the water-tank was also hung with flowers, against which a banner was displayed, inscribed "Welcome to England!" Upon the columns of the station were medallions bearing the Royal and Imperial initials. Within the station, over the entrance, was an inscription, "Welcome Victoria!" The National Guard of Abbeville were drawn up to receive their Majesties; and as the train entered the station the band of the 8th Dragoons gave them a musical welcome. The time being very short, their Majesties did not leave their State carriage, but, after a delay of a few minutes, went rapidly forward to Amiens. The approach of the State train to this town was announced by a salute from the artillery of the National Guard, stationed in a field near the railway. The crowds of people congregated upon the sloping public gardens, perched upon the railway bridge, and crowded within the narrow windows of the overhanging houses, gave the Queen and the Imperial host a hearty welcome. Then the train plunged into a tunnel, to emerge within the spacious Amiens station crammed with ladies arranged upon raised seats, surrounded with National Guards and municipal authorities, in full official costume. Here the Queen left the State carriage, and, bowing to the people assembled, repaired, with the Emperor, Prince Albert, and the Royal children, to the tastefully-disposed waiting room prepared for them. This waiting-room was ornamented with light muslin hangings and pendent chandeliers of flowers. Having spoken some gracious words to one or two local notabilities, and received an address, the party returned to the carriage; and, to the strains of a military band, went once more forward to Paris. The last station at which the State train stopped was Clermont, which was prettily decorated with flags, initials, and flowers, and where the National Guard mustered, four hundred strong, to receive the illustrious travellers. Having taken in water here as hastily as possible, and received the enthusiastic demonstrations of the assembled crowds, the train moved forward, to stop again only at the Paris terminus. The entire distance performed, including stoppages, within five hours must have been highly pleasing to both Sovereigns. On all sides the people had flocked to the stations to cheer the Royal guests of their Emperor; and, we may trust, to mark hereby their approbation of the alliance which appears to be cemented more closely daily.

ARRIVAL IN PARIS.

The aspect of Paris on the 18th of August, 1855, will long be talked about by the good *bourgeois* and the happy *bourgeoise* of the capital. To believe, however, that the Parisians alone gave a welcome to the Queen of England on her entry into the capital of her great ally, would be to do an injustice to the thousands of people from the provinces who rushed to Paris to assist at the ceremony. The truth is, that for a fortnight previous to the Queen's arrival, every train from the provinces of France conveyed to Paris hundreds of bronzed passengers from the vine countries, thoughtful-looking mechanics, and little dapper rentiers, exhibiting confused notions of the Paris fashions. Daily the prices of apartments rose, as the demand increased, just as they had fallen immediately after the opening of the Universal Exhibition. Perhaps, on the whole, there is no man more thoroughly alive to the various methods of turning popular excitement to pecuniary account than is the Parisian tradesman. While trade is flat, he supplicates purchasers to become his customers by tempting them with low prices; but let five or six people crowd at once into his neat little shop, and at once he is inflexible in his demand for double the proper price of the articles he sells. Thus the arrival of the Queen in Paris was held to be a fête, promising the most magnificent pecuniary results. At last Parisian lodging-house keepers would realise their long-cherished dream, by being able to frighten lodgers into garrets at ten or twelve francs per night. In this instance they have not been disappointed; for they have been able to let a bed at prices which, under ordinary circumstances, they would be happy to receive for an entire flat. Every hotel was crowded, every lodging-house choked up with lodgers from the cellars to the *mansardes*, on

HER MAJESTY'S VISIT TO FRANCE.—THE ROYAL YACHT ENTERING BOULOGNE HARBOUR.—(SEE PAGES 242 AND 246.)

the eve of the 18th. Along the Boulevards the good citizens of Paris were as actively engaged letting their windows at forty francs per seat as were the authorities in raising ordinances, distributing flags and golden initials, rearing aloft colossal eagles, or trimming the gigantic proportions of a triumphal arch. The weather favoured the hot speculators as well as the patriotic decorators. People eagerly sought places where they would be free from the excitement of a crowd, and where they could secure an uninterrupted view of the cortége, and at an early hour on Saturday morning ladies elegantly dressed might be seen tripping quickly forward to take up their places upon the balconies; crowds of boys, of course, were early occupants of the kerb-stone; and then troops of provincials took up prominent positions upon the pavement, and deposited by their side baskets of substantial refreshment. It was evident that these people intended to make a firm stand for the day. Some women might even be seen taking out their work, in order to while away the many hours that lay between the moment of their arrival upon the ground and that at which the cortége would pass on its way to St. Cloud. As the day wore on these early comers were backed by a substantial wall of people. The workmen were still giving a final touch to the wreaths about the Venetian poles; men were still at work upon the triumphal arches. On all sides the colours of the Allied nations floated in the dazzling sunlight. The windows of the houses on both sides of the Boulevards grew gay with the brilliant dresses, and still more attractive faces, of the ladies who crowded within their narrow space; upon the housetops gathered crowds of people. Seen from the Rue Lepelletier, and looking towards the Rue Richelieu, the vast blocks of houses looked like so many mountains of living creatures. Nothing could surpass the elegance of the arch which the 9th battalion of the National Guard had reared at the Porte St. Denis, with its inscriptions: "A la Reine d'Angleterre—à Victoria!" nor that of the arch before the Rue Lepelletier, erected by the artists of the Opera. Let it be remembered that all these preparations were the joint efforts of private people or public companies. Thus the proprietor of the Gymnase Theatre had covered the entire front of his establishment. On one side of this extensive decoration were these inscriptions:—"18 Août, 1855—Dieu et mon droit—Honi soit qui mal y pense," on the other, "16 Avril, 1855—Dieu protége la France—Union, Force, Désintéressement." Opposite the Rue de Rougemont, the company of the Comptoir d'Escompte had placed a trophy of the Allied flags, with the arms of France and England upon escutcheons. The Boulevard Poissonnière, in the hands of the 7th battalion of the National Guard was gay with wreaths and flags, and the arms of the Allied nations. The 6th battalion, responsible for the decorations of the Boulevard Montmartre, had followed the example of the 7th; but on the most elevated ground, opposite the Rue Vivienne, two elegant porticoes erected by the Bourse and the Bank, and two monumental columns being allegorical figures of Justice and Abundance, erected at the cost of the Tribunal of the Paris Chamber of Commerce, gave a brilliant effect to the scene, approached either from the Rue Richelieu, or seen from Vachette's. The French director of the Defender Assurance Company had raised before his offices two "emblematical pilasters," surmounted with eagles and trophies. The Opéra-Comique Company had arranged, in the midst of a portico of evergreens and flowers, an Ionic column, the pedestal of which represented the four sides of the Palace of Industry. Upon the Boulevard de la Madeleine, a red and yellow pavilion, decorated with flower-garlands, shaded two colossal figures—one, with a lance in the hand, representing England; the other, leaning upon a sword, representing France. From this point to the Champs Elysées, the decorations of Venetian columns, flags, and escutcheons, were continued without variation. Upon the Place de la Concorde, deputations from various corporations of working men, were assembled, together with various deputations from the provinces; having received permission to fall in behind the Royal and Imperial carriages. Then in the Champs Elysées an immense concourse of girls, dressed in white, was ranged the length of the great avenue, with the most delightful effect. The Palace of Industry, was of course, decorated with the Allied colours.

As we turn from the preparations at this part of the route, to approach the Boulevard leading to the Strasbourg Railway terminus, we may remark that at the point where this Boulevard reaches the main Boulevard, an immense square of columns decorated with oriflammes, and supporting on one side an allegorical trophy, gave great effect to the distance as the cortége advanced from the railway station. Our readers may now imagine pictures of these splendid Boulevards crammed with tens of thousands of people, all in holiday attire; heads peering from every window; roofs exhibiting the appearance of a theatre pit; scaffolding turned into elegant balconies; and along each side of the way uninterrupted lines of soldiers. One word on the disposition of the troops. The regular army furnished the *haie*, or made the line, to the left; and the National Guard of Paris, on the right. These troops took up their positions at three o'clock in the afternoon, in the following order. From the railway station to the Barrière l'Etoile, on the right, the line was made by the National Guards of Paris and the Banlieue. Around this arch—the gates of which were opened for the occasion, that the cortége might pass under it—were squadrons of cavalry. From the railway station to the Boulevard St. Denis, on the left hand, detachments of the Imperial Guard, under the command of General Count de Montebello, Aide-de-Camp to the Emperor, including the dépôts of infantry—Grenadiers, Voltigeurs, and Zouaves—kept the way. Then the Army de l'Est, which furnished the greater part of the left line, was under the command of Marshal Magnan. The first brigade and third division of this army occupied the line from the Porte St. Martin to the Rue Caumartin, and included the 12th battalion of Chasseurs—all under the orders of Generals Grobon and d'Hugues. From the Rue Caumartin to the Arc de Triomphe the line was formed by the second division of this army, under the command of General Renault. From the Arc down to the Avenue de l'Impératrice the lines were kept by cavalry in the following order:—Cuirassiers, the Guides, the Gendarmerie of the Imperial Guard, the mounted Paris Guards, the Gendarmerie of the Seine, a brigade of Carabiniers, including the two regiments of this arm, the 8th Cuirassiers, the 12th mounted Chasseurs, and the 10th Cuirassiers. The Bois de Boulogne was occupied by the first division of the Army de l'Est, under the command of Generals de Linlers and Chapuis.

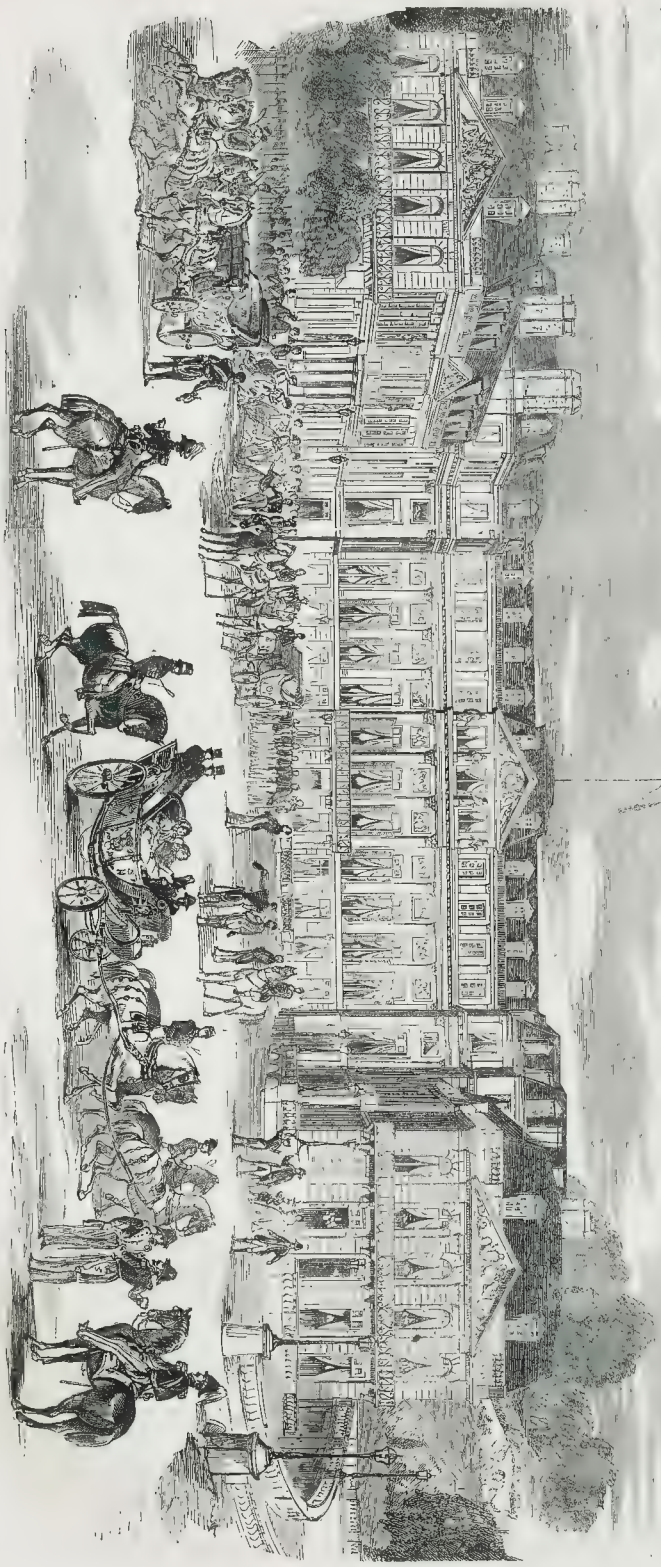
The crowds who extended the whole length of this long line—who were as thick near the Bois de Boulogne as near the Strasbourg Railway station—occupied their trying positions under a broiling sun with that wonderful

THE QUEEN'S VISIT TO PARIS.

THE ARRIVAL OF HER MAJESTY AT THE RAILWAY STATION, BOULOGNE.—(SEE PAGE 242.)

good humour peculiar to French crowds. Not a single row took place (if we except a little confusion once or twice at the end of the Boulevard du Strasbourg) during the many hours the million of people who were posted to meet the Queen of England stood broiling under an August sun. But fresh toilets, in spite of the care of the wearers, became flat and crumpled; the neat hair parted from the comb; gloves became soiled; and the more delicate ladies were compelled to make seats of all kinds of uncomfortable places. The soldiers' lines grew uneven, and the officers strolled up and down before their men, their hands in the pockets of their

RECEPTION OF HER MAJESTY AT THE FOOT OF THE GRAND STAIRCASE, PALACE OF ST. CLOUD.—(SEE PAGE 243.)



ARRIVAL OF HER MAJESTY AT THE PALACE OF ST. CLOUD.—(SEE PAGE 243.)

wide trousers. It was seven o'clock when a salvo of artillery announced to the people of Paris the arrival of the Queen at the railway station. A thrill of excitement ran through the vast crowds of tired sight-seers; the troops formed in lines straight as arrows; the officers took their hands from their pockets to draw their swords, and give the word of command. All the loud orders which heralded foreigners in the execution of French arrangements flew along the military lines.

ARRIVAL AT PARIS.

Exactly at twenty minutes past seven the State train passed into the splendid terminus of the Strasbourg Railway, where Prince Napoleon, Marshal Magnan, the Prefect of the Seine, the Prefect of Police, and a host of municipal and railway officials, were grouped upon the platform to receive the Queen and Royal family. A really English cheer burst from the crowd of people assembled in the galleries of the station as her Majesty, leaning on the arm of the Emperor, and followed by Prince Albert, the Prince of Wales, Prince Napoleon, and the Princess Mathilde, made her way to the splendid State carriages in waiting. The scene in the station, when the illustrious visitors appeared upon the platform, defies description with the pen. Let it suffice to say that it effaced a worthy opening to the memorable progress through the capital of France at last to begin. Draped with velvet and gold, and fit up with candelabra, the spaces between the pillars looked like a magnificent series of Royal boxes filled with elegantly dressed ladies. Then the arms of the various towns to which the Strasbourg line gives easy access appeared to be there only to show how much advantage the colossal arms of England, which formed the centre. In this station assembled all the notabilities of the Imperial Court. Lady Cowley, two or three English officers, Brigadier-General Sir Arthur Torrens, Queen's Military Commissioner in Paris, and Count Bourdeau, Director of Fêtes at the Imperial Court, were picked French regiments. Then, amid the glitter of the splendid regimentals were the beautiful Court dresses of fifty ladies, who had obtained leave to form themselves into a deputation—for the very obvious purpose of seeing the Queen to the best advantage, and exhibiting a beautiful toilet. But not the least interesting of the brilliant crowd assembled within the station were the *cantinières* of the Guides, in their gay dresses—reminding English people of the Opera, rather than any kind of military service. The directors were, of course, the Strasbourg Minister; but neither police, directors, nor military could stay the torrent of people, who, cheering and hurrahing, rushed to where the Royal party paused for a moment while Her Majesty graciously shook hands with Lady Cowley. There was no time for complimentary speeches in the reception-room, nor for thankful prayers at a superb collation; night was rapidly closing in, and St. Cloud was far away. Her Majesty at once entered the first Imperial carriage, followed by the Princess Royal, the Emperor and Prince Albert; and Marshal Magnan took up his station at the Queen's right hand, and General Lewestine, Commander of the National Guard of Paris, stationed himself on the opposite side; and so the Queen of England entered the capital of France amid the cheers of the thousands of spectators, and through the immense semicircle kept before the station by the Imperial Guard. The carriage that immediately followed was occupied by the Prince of Wales, Prince Napoleon, the Marquis of Breadalbane, and Lord Clarendon. In the remaining carriages were the members of the Queen's suite, including the Marchioness of Ely and Lady Churchill, Ladies in Waiting; Miss Bulteel, Maid of Honour; and Miss Hildyard, governess to the Princess Royal; the Marquis of Abercorn, the Hon. Colonel Phipps, Lord Alfred Paget, and General Grey. On all sides people rushed against the delay that threatened to turn an array so imposing as that prepared for the reception to a failure. But people were determined to be content under any circumstances—even in the face of the rough treatment of the Parisian police. And so the cheers were long and hearty as the trumpets and Band of the Guides announced to the tens of thousands dispersed on the Boulevard de Strasbourg that the Queen of England was in Paris, and on her way through its grand avenues to the Château of St. Cloud. The people on all sides, as the procession moved forward, expressed their delight with the Queen's gracious manner of bowing. Her Majesty, it was evident, was delighted with her reception: and as she was about to turn out of the Boulevard de Strasbourg she turned completely round and bowed profoundly to the enormous masses of people behind. As the cortège made its way towards the Madeleine the night entirely failed, and her Majesty saw only the dim outlines of the arches and trophies and allegorical figures—and thousands of flags and oriflammes, which had been charmingly disposed on each side of the splendid way in her especial honour. The Royal lady for whose eyes the various words of welcome were disposed on all sides, saw none of them. I fear not even the "Hurrah for Queen Victoria," written upon a splendid streamer near the Gymnase. Some of these words became apparent to have been sagaciously contrived to wear at once an air of patriotism and business. Thus, "The Directors of the Defender Assurance Company to her Majesty Queen Victoria" looked too much like a puff. "Low premiums" underneath would have completed it. Before her Majesty had reached the Arc de Triomphe night had fairly closed in; so that when the Imperial carriages passed by the pretty arch erected by the *cantonnières* of the Bois de Boulogne, at the Boulogne-gate, and finally over the bridge at St. Cloud, also spanned by arches, it was impossible to read the words of welcome offered by the honest folk of Boulogne and St. Cloud to the Royal guests of their Emperor. Yet, we may be assured, no carriere who had withstood the broiling sun, sitting upon the gravel of the Avenue de l'Impératrice—no purchaser of a Boulevard seat, price 40 francs—felt more grieved at the delay in the Royal arrival than did the Queen herself. For her Majesty has been known, throughout her reign, to exhibit uniformly a scrupulous punctuality in her appointments with the public. The delay, which is still the talk of every Paris café, has, however, enabled many journalists to display their historical strength, in allusions to her Majesty's striking resemblance to Canute in her inability to command the tide.

ARRIVAL AT ST. CLOUD.

Arrived at St. Cloud at a quarter to nine, her Majesty was received at the foot of the grand staircase by the Empress, the Princess Mathilde, and the Imperial household. The great officers of the household having been presented by the Imperial host, the Queen retired to her private apartments (which I have elsewhere described) for a short time. Dinner was served at half-past nine o'clock in the Gallery of Diana; and at eleven the illustrious visitors took leave for the night of their Imperial host and hostess.

In Paris, however, long after the Queen had retired to rest, crowds of people thronged the Boulevards as the splendid illuminations. The mile could give no more accommodation; the little green tables upon the pavement were eagerly caught up as guests departed; and eager merchants sought to dispose of commemorative medals of la Reine Victoria's visit to Paris. The night was very far advanced before the Boulevards were entirely cleared of the hundreds of thousands of people who had rushed to Paris from every department of France to witness the public entry of the British Sovereign into the capital of her great ally.

On the following day (Friday) early de-patch arrived from St. Cloud for Lord Cowley, informing him that her Majesty was too fatigued from the exertions of the previous day to come to Paris, and commanding the immediate attendance of Mr. Hales, the Chaplain to the Embassy, at the château, to read prayers. The reverend gentleman instantly obeyed the summons, read prayers in one of the apartments of the château, and then delivered a short sermon, which did not occupy more than a quarter of an hour in the delivery. In the afternoon the Queen and Empress, and the Emperor and Prince Albert went for a drive in the Bois de Boulogne; and in the evening the illustrious party dined *en famille*.

VISIT TO THE PALACE OF THE FINE ARTS.

Early on Monday morning people began to wend their way from various parts of Paris towards the Palace of the Fine Arts, in the Avenue Montaigne. The façade of the building was effectively decorated with flags and banners and escutcheons of the Allied nations, and squadrons of mounted Municipal Guards kept the way clear. The admission to the building being only one shilling, the crowding on the arrival of the Queen at ten o'clock the doors were closed. I strolled about to notice the crowds who had assembled in the various salons and galleries to give a welcome to the Queen. They appeared to be generally of the bourgeoisie class, the working men and women present being almost exclusively bronzed visitors from the departments, in their quaint holiday dresses. Exactly at eleven o'clock the band of the mounted chasseurs, stationed in the vestibule (where the Danish and Swedish pictures are hung), struck up the National Anthem, announcing the arrival of the Queen and the Emperor, accompanied by Prince Albert, the Prince of Wales, and the Princess Royal. The crowding to the various openings which the Queen passed was most impetuous, and required all the police force of the Palais de l'Industrie to contend against it. The pictures were entirely neglected, with the exception of those to which the Queen's attention had been directed. Winterhalter's Court group—of which the Empress Eugenie is the central figure, and the most beautiful woman seemed to wear a new charm after the Queen had sat for a few minutes before it, to contemplate the many good portraits it includes But, satisfactory as this Royal visit must have been to the public, it could not have gratified the artistic tastes of her Majesty and her Royal consort, for as I watched them on their way I found that they hardly paused twice in the same gallery. For instance, they were not five minutes, even in the great salon of the French school, where Winterhalter, Muller, Rosa Bonheur, and Gerome are hung. I am, I think, right in stating that her Majesty's attention was not even directed to the "Hayfield," by Rosa Bonheur, which is one of the glories in the list of French contributions. But the most striking point during the entire visit (which lasted nearly two hours) was her Majesty's ascent from the ground-floor to the gallery, in which the water-colour drawings are exhibited. This staircase crosses the end of the vestibule, giving the people on the ground floor an excellent view of anybody who ascends. Thus, when the Chasseurs struck up the National Anthem a second time, announcing the approach of the Courts, people thronged the vestibule in the expectation that her Majesty was going to leave the building. Pleasantly, however, some servants were seen ascending the gallery stairs, and in another minute the forms of her Majesty and the Emperor (who, like Prince Albert, was in simple morning dress) were apparent through the intervals of the banisters. This unexpected view of her Majesty had an electrical effect, and the crowd set forth a tremendous cheer, to which her Majesty replied by bowing very low three or four times. I remarked on this, as on other occasions, that the Emperor appeared to be wholly unconscious of sharing the cheers which rose wherever he appeared with his Royal guests; but this chivalrous deference might be naturally expected from an Emperor who, when he had handed a Sovereign, arrived on a visit to him, into her carriage, sprung into his saddle, and insisted upon acting as the equerry of his Royal guest on her progress to the railway station—his own equerry becoming, for the time, an outrider. This incident of the landing of the Queen of England at Boulogne is now the subject of conversation in all the well-informed circles about the Court.

On leaving the Universal Exhibition of Fine Arts, amid the cheers of the people, and escorted by Cuirassiers of the Guard, her Majesty went to breakfast at the Elysée, where she alone received the *corps diplomatique*. After breakfast the Emperor suddenly ordered an open carriage to the palace, placed the Prince of Wales in it—told the guards to take no notice—and dashed out into the Faubourg, driving himself. In this way—to the astonishment of the people on all sides, who could hardly believe their eyes—the Emperor of France and his first Aide-de-Camp, the Prince of England, passed along the Boulevards; went to the Tuileries (where, I believe, the Emperor had some business to transact), and then returned to the Elysée, to accompany her Majesty and the Prince Consort to the Sainte Chapelle and Notre Dame. Here her Majesty appeared to be delighted with these noble buildings; and after the Archbishop of Paris had delivered an address of congratulation in the latter building, chatted with the great churchman for some time. The illustrious party then returned to St. Cloud to dine, and hear a play performed in the noble theatre of the château by the actors of the Théâtre Francais.

AT VERSAILLES.

Tuesday was spent happily—under a splendid sky—at Versailles. Her Majesty was conducted by the Emperor through the private apartments of the château, to the room where the Revolution surprised Louis XVI. and Marie Antoinette, through the picture galleries to the Salon des Glaces. At the balcony of this noble gallery her Majesty was led forward to receive the lusty cheers of the crowds assembled in the beautiful grounds, in which the garrison of the town was conspicuous. Then getting into an open carriage and four, preceded and followed by detachments of the Cents Gardes, and cantered by the side of the Imperial equipage, the Emperor showed his Royal guests the fountains in full play, passing down the long, shady, verdant passages of dense foliage to the all-conquering Naiades of water issuing from the fountains at their extremity. Then the party drove to the Trianon; visited Marie Antoinette's toy farm, and of the little Trianon, where she played the shepherdess and the farmer's wife. Here, before the lake, in a little room of the *hameau*, a breakfast had been laid for the party, now joined by the Empress. Forty persons here partook of the Imperial hospitality; and people who enjoyed the privilege of watching the Royal and imperial families sitting upon the lawn after breakfast, taking coffee, pleasantly chatting, and listening at intervals to the delightful music of the Guides, all under a beautiful sky, and in a garden crowded all over Europe, could appreciate the aspect as one of the more charming pictures which this memorable visit has produced. At half past four the Queen and Empress started together for St. Cloud in an open carriage, followed by the Emperor and Prince Albert, and the Prince of Wales, with the Princess Royal. In the evening her Majesty went in state to the Opera.

The illuminations along the Boulevards as far as the Rue Lepelletier were very brilliant, and were terminated by a colossal chandelier, hung under the lintel, and in the open air, which had a very beautiful effect. The Rue Lepelletier itself was a blaze of light. The illustrious party travelled in close carriages. They were loudly cheered both on their arrival and on their departure. In the theatre the enthusiasm was intense, and "God save the Queen" was encored, amid the vehement applause of the crowded and brilliant audience. The performance consisted of a selection from Verdi, Halévy, and Meyerbeer, followed by a ballet.

VISIT TO THE PALAIS DE L'INDUSTRIE.

On Wednesday her Majesty, with Prince Albert and the Emperor, paid their visit to the Palais de l'Industrie. With the exception of borders of season tickets, exhibitors, and foreign commissioners, the public were not admitted. The Queen and the Emperor, accompanied by the Imperial and Royal suites, arrived at the Exhibition at ten minutes past eleven. Their Majesties were received by Prince Napoleon, the Commissioners, and the Jurors. The approaches were densely crowded, and there was much cheering.

After visiting the Exhibition, the Queen and the Imperial party proceeded to the Tuileries to take lunch, after which a considerable time was spent in examining the magnificent Palace. Their Majesties returned to St. Cloud to dinner. At a quarter past five the Queen, Prince Albert, and the Princess Royal left the Tuileries and drove through the Rue Rivoli, Rue Castiglione, Rue de la Paix, and along the Boulevards to the Bastille and the Pont d'Austerlitz. Thence they drove round the outside of the Jardin des Plantes, and returned to the Tuileries by the Quays on the left bank. The Prince of Wales also went out with his tutor, and made several purchases, and took a walk for an hour about Paris. In the evening the artistes of the Gymnase had the honour of appearing before their Majesties and a select party at St. Cloud: the piece performed was "Le Fils de Famille."

Thursday, according to the programme of proceedings, was to be a comparatively a day of rest for her Majesty, and so it proved. Prince Albert, however, arrived from St. Cloud at half past ten o'clock, accompanied by Lord Clarendon, Colonel Phipps, and suite, at the Palais de l'Industrie. Compared with Wednesday, the attendance was scanty, but still sufficiently numerous, however, to give His Royal Highness a right hearty welcome. The Prince spent three hours in the building, and examined several of the articles exhibited with great attention, asking questions and exp anations of the exhibitors, with an affability that won for a golden opinions from all with whom he conversed. His Royal Highness did not, on the occasion, visit the machinery *annexe*, but confined his attention to the main building. The Prince was accompanied by Prince Napoleon, who directed his attention to the most interesting features of the Exposition. At about two his Royal Highness left the Building. He proceeded to the Tuileries, where her Majesty and the Emperor were to meet him at luncheon.

The day was exquisitely fine, and great numbers were on the Boulevards, so that when the Royal cortège arrived (about two o'clock) there were sufficient crowds to give it a hearty welcome. The Majesties of Queen and Empress, and the Emperor, with their suites, consisting of eight carriages, drove at once through the gardens of the Tuileries to the Palace, where they were joined by Prince Albert, on his return from the Exposition. Here they partook of lunch, prior to her Majesty's inspection of the Louvre.

In her visit to the Palais de l'Industrie on Tuesday the Queen selected from the stand of M. Duvelleroy a fan painted by Louis Lasalle, representing the Empress Eugenie and her sister, the Duchess of Alba, visiting the poor in Paris.

THE CASE OF STRAHAN AND CO.—Sir John Dean Paul was brought up at Bow-street on Friday morning from the House of Detention, to be admitted to bail. Mr. Humphreys, the solicitor for the prosecution, informed the magistrate (Mr. Henry) that he was perfectly satisfied with the names of the gentlemen now tendered as bail. They were Mr. Thomas Graham, of Reading, and Mitre-court Chambers, Temple: and Mr. John Woodhall, coachbuilder, of 23, Orchard-street, Portman square. The usual formal questions having been put to the bail, they were bound over in £3000 each; and Sir John Paul, having entered into his personal recognizances for £6000 was set at liberty, and left the Court with his friends.

CALIGRAPHY.—Among the curiosities exhibiting at the Polytechnic Institution, in Regent-street, is a marvellous specimen of penmanship, beautifully executed by Mr Thomas Duncalfe; it contains no fewer than 300 figures, and has been designed as a memento to the late Sir Robert Peel, Bart.

NATIONAL SPORTS.

Nor a few of the racing world reached York on Tuesday afternoon, and proceeded at once to the great sale at Rawcliffe Paddocks, which embraced sixty three lots. Of these, eleven were withdrawn without a bid, and the remaining fifty-two realised £7611 guineas.

The racing at York, on Wednesday, was only moderate. Capucine won the Oaks, almost pulled by Job Marson out of his saddle, and Fly-by-Night gave nothing a chance in the Convivial Stakes, for which Aleppo, after being very awkward at the post, was "nowhere." Twelve also started for the Biennial Stakes; but Kingstown was not among them, as he broke down lately, trying Oulston, and will most probably never run again. Cocrebus was also saved for a better thing, and hence Rifleman had very little difficulty in beating a bad field of eleven. He had last for the first quarter of a mile, and then gradually crept through his horses one by one, and won almost without turning a hair.

On Thursday, the Ebor St. Leger race between Wild Dayrell (Bartholomew), and Oulston (Job Day), was "nowhere" interest. The winner of the Derby was in very fine form, but had both his front legs bandaged. In size he presented an enormous contrast to his somewhat slight 6000-guinea opponent, to whom he gave 5lbs. Oulston made the running at a strong pace, and by keeping it up for two lengths off to the Middlethorpe turn, where he began to draw up, reached Oulston's head within the distance, and won with the greatest ease. The victor was hailed with immense cheering, and a very exciting race is expected between him and Fandango for the Doncaster Cup. He has now run three times and is still unbeaten.

The racing for next week presents nothing of more than local interest. Manchester will flock out on Monday, Tuesday, and Wednesday, to attend the little meeting at Redcliffe, which is, however, of a very different stamp to the Heaton Park meeting of yore, whose place it professes to supply. Derby is on the list for Tuesday and Wednesday, with a very promising card; Abingdon for the same days; Woodford and Loughton for Tuesday; Bungay for Tuesday; and the once far-famed Egham for Thursday and Friday.

Between her two great race-meetings Yorkshire will betake herself to cricket and accordingly, on Monday next, the three Ridings play Sussex, at Sheffield. To-morrow (Monday) the Y. A. C. will play on the side of Sheffield that they have no Monday's game on their own account. On Thursday they will be found at Rochdale, engaged with eighteen of its club, who are to be allowed the assistance of four professionals. The A. E. have only one meeting on hand for the week, which will begin at Hereford on Monday.

Newcastle will be all agog on "the banks of cauley Tyne" next Monday, to see Lindsay and Shaftoe row for £20 aside, from the High Level-bridge to the Meadow-house. The Ranelagh Yacht-club have also their second sailing match at Battersea on Tuesday. On Wednesday there is a regatta at Poole; while the Dover and Cinque Ports and Thames Surrey Regattas are fixed for Thursday, on which day Mancey and Robins have their £20 rowing match from Putney to Mortlake.

On the whole the accounts from the moors are better than we expected, and on the Cumberland Westmoreland, and Yorkshire ones the grouse has been found much forwarder than they generally were in Scotland. Blackrock shooting, which commences on Monday, will, however, make up considerably for these short comings. Partridge-shooting comes in on Saturday; and if the weather still holds up the handlers of "the deadly tube" will find a large space of stubble cleared for their operations. Some of the gamekeepers in the southern counties describe the coming season as "quite an out-and outer" for birds.

YORK AUGUST MEETING.—WEDNESDAY.

Dundas Stakes.—The Royal, 1. Orange Blossom, 2
Yorkshire Oaks.—Capucine, 1. The Mosquito, 2.
Selling Stakes.—Rasby, 1. Chairman, 2.
Convivial Stakes.—Fly-by-Night, 1. Mangaroo, 2.
Second Great North and Scottish of England Biennial Stakes.—Rifleman, 1. Ellerraire, 2
Sweepstakes of 100 sovs each.—Hungarian beat Vignette
Chesterfield Handicap.—Vindex, 1. Pole Star, 2
Queen's Plate.—Neville, 1. Little Brown, 2
Burgundy Stakes.—Aurolat walked over.

THURSDAY.

Ebor Handicap.—Vandal, 1. Little Harry, 2
Juvenile Stakes.—Alfred, 1 Van Galen, 2.
County Plate.—Princess, 1. Early Bird, 2
Prince of Wales Stakes.—Artillery, 1. Mirage, 2.
Ebor St. Leger.—Wild Dayrell, 1. Oulston, 2.
Selling Stakes.—Mac gneen, 1. Bonnet and Buxom, 2.
Hopeful Stakes.—Alcyone, walked over.
Eglinton Stakes.—Musquito, 1.
Ake Produce Stake.—Overreach, 1. (Objected to.)

FRIDAY.

Knavesmire Stakes.—Lord of the Isles beat Paletot.
Great Yorkshire Stakes.—Rifleman, 1. Fandango, 2.
Tyro Stakes.—Tenessee, 1. Blandus, 2.
Dord Derby's Plate.—King of Trumps, 1. Ellerraire, 2
Gimcrack Stakes.—Bonnet and Buxom, 2. Aloe and Buxom, 2.
Member's Plate. Miss Birch, 1. Sandbag, 2.
Consolation Stakes.—Para, 1. Professor, 2.
Sapling Stakes.—Elterdale colt beat Gildert

COUNTRY NEWS.

OPENING OF THE CRUMLIN VIADUCT.—NEWPORT, HEREFORD, AND ABERGAVENNY RAILWAY.—This stupendous specimen of engineering skill was opened on Monday with great éclat. The viaduct, a complete network of iron, stretches from the Sovereydd mountain across the valley to the Trynant on the other side, a distance of upwards of 1500 feet, at an altitude of nearly 220 feet above the level of the river. The various trains that arrived throughout the morning from Shrewsbury, Hereford, Gloucester, Bristol, and all parts of Wales, added thousands of visitors to the numbers already assembled on the spot. The ceremony of opening the line being duly accomplished, the directors, committee, and a number of ladies and gentlemen partook of an elegant dejeûner in a spacious marquee erected on a piece of table-land, looking over the valley.

SERVING ON JURIES.—The annual jury-papers are now in course of delivery at every occupied house in the kingdom, to be filled up by the tenants and occupiers, and returned to the overseer of either from overseer or other agent. By being promptly attended to by the occupiers, &c., a great deal of trouble would be saved to those entitled to exemption as well as the clerks of the peace, whose duty it is to compile from overseers' returns for the Counties in the course of next month, these jury-lists will be prepared by the overseers of each parish, and exhibited at the doors of every church and chapel in the county. Names are improperly inserted can have them struck out at the petty sessions.

HARVEST WAGES IN IRELAND. Agricultural labourers are in greater request and receive higher wages than has been known in Ireland for many years. Fifteen shillings per week, mowing, and other harvest operations, is engaged in Limerick on Saturday last, at 12s. 6d. per week (wet or dry) and diet; and on Monday morning, when fine weather appeared to have set in, they were eagerly picked up at 2s. 6d. per day and diet.

A MYSTERIOUS MURDER. Last Saturday evening, about half past six o'clock, Melinda Payne, a fine little girl about ten years old, was [illegible] a quart of beer, to the Cook's Folly tavern, about [illegible] from their cottage, on the borders of Durdham Down, near Bristol. At about two in the afternoon from the river below, reflected by a winding and somewhat rugged path through the woods. Her poor little girl reaching the tavern, purchased and paid for the beer, and having had a couple of small cakes given to her by the landlady—one for herself, and another for a little brother sick at home—she left for the piece of ground again to the cottage. On Sunday morning her little dead body was found in the woods, concealed beneath some bushes. Not a person—little that the poor girl was killed where the body was found, as marks of any struggle, footmarks, or stains of blood can be elsewhere found; but the police consider that she must have been murdered elsewhere and carried to the spot where she was found, from the fact of the place being within twenty yards of a cottage, and not more than forty from her father's house, at either of which her cries might have been heard; from the unusually small quantity of blood found among the grass; and from the fact of the head and face being literally covered with blood, as if they had been wrapped in a cloth or a sack.

A SUN BLAST. On Sunday morning the 5th instant, between the hours of eleven and one o'clock, a strange blight seized all the white thorn and gooseberry bushes which were in an exposed and elevated position. The whole of the trees seized were blackened on the southern side, as if they had been burned with fire, and conjecture was rife as to the cause of so strange occurrence. We are informed by a gentleman competent to enlighten us on the matter, that the cause was a "sun blast."—*Haverfordwest Telegraph*

ON Thursday night, about eleven o'clock, a thunder-storm of a very severe character commenced in the metropolis, which lasted till several hours after midnight. The rain came down in torrents, accompanied by vivid flashes of lightning in rapid succession, illuminating the steeples of the various churches in the most beautiful and picturesque manner without intermission during the time the storm lasted.

CALENDAR FOR THE WEEK.

SUNDAY, August 26.—12th Sunday after Trinity. Prince Albert born, 1819.
MONDAY, 27 West India Docks opened, 1802.
TUESDAY, 28.—St. Augustine. Submarine Telegraph first laid, 1850.
WEDNESDAY, 29.—Louis Philippe died, 1850.
THURSDAY, 30.—Act abolishing Slavery passed, 1833.
FRIDAY, 31.—John Bunyan died, 1688.
SATURDAY, Sept. 1.—St. Giles. Partridge-shooting begins.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING SEPTEMBER 1, 1855.

LIST OF ENGRAVINGS

IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

HER MAJESTY'S VISIT TO PARIS.

Waiting the Arrival of her Majesty at the Boulogne Railway Station *page* 225
The Royal Yacht Entering Boulogne Harbour 226
The Arrival of her Majesty at the Railway Station, Boulogne 228
Reception of Her Majesty at the Foot of the Grand Staircase, Palace of St. Cloud 228
Arrival of her Majesty at the Palace of St. Cloud 229
Procession on the Boulevards des Italiens 232 233
Plan of the Bombardment of Sveaborg 235
Arrival of the Royal and Imperial Train at the Strasbourg Railway Station, at Paris 236
Reception of her Majesty at the Strasbourg Railway Station, at Paris ... 247
Performance before her Majesty in the Theatre of the Palace of St. Cloud .. 240
The Imperial Ceut Guards 241
The Royal and Imperial Cortége in Paris 244-245
Her Majesty's State Bed-chamber in the Palace of St. Cloud 247
Her Majesty's Visit to the Cathedral of Notre Dame 248
Arrival of her Majesty in the Place du Carrousel, Tuileries (Four page Cut)

THE QUEEN'S VISIT TO PARIS.

THE SERIES OF MAGNIFICENT ENGRAVINGS

of this Grand International Event will be continued in

THE ILLUSTRATED LONDON NEWS

for Next Week, SEPTEMBER 1, and succeeding Weeks.

In addition to the Engravings in this Week's Publication, of which a List is given above, the Series will include Illustrations, by the first Artists of Paris and London, of all the Public Appearances and Receptions of her Majesty. Among other Engravings already in preparation are—

Palace of St. Cloud: Her Majesty's Salon.
Grand Staircase.
Reisener's celebrated Bureau
Grand Reception of her Majesty in the Streets of Paris:
Several Views of the Procession on the Boulevards.
Triumphal Arch, &c.
The Visit to Sainte Chapelle.
The Lake in the Bois de Boulogne.
Grand Review in the Champ de Mars.
The Imperial and Royal Cortége passing the Madeleine.
Visit to the Universal Exhibition
Visit to the Exhibition of the Fine Arts, with Specimens of the Pictures.
The Imperial and Royal Cortége at the Arc de l'Etoile.
Portraits of Prince Napoleon,
Prince Jerome,
M. de Rouville,
The Count de Morny, and
M. de Fleury.
Concert of the Conservatoire de Musique.
Reception of the Corps Diplomatique.
Visit to the Grand Opera.
Visit to the Picture Galleries of the Louvre.
Grand Ball at the Hôtel de Ville.
Drive in the Forest of St. Germains.
Versailles: The Palace Gardens and Fountains.
The Galerie des Glaces.
The Trianon and Reception.
Panoramic View of Paris, with the Louvre and Rue de Rivoli completed.
Large Picturesque Map of Paris.
Departure of her Majesty for England, &c., &c.

Persons wishing to subscribe to this Series must order immediately of the various newsmen, as the orders will be supplied in rotation as received.

ILLUSTRATED LONDON NEWS OFFICE, 198, Strand.

*** Several Illustrations of Foreign and Domestic News are unavoidably deferred, owing to the great extent and number of the Engravings of her Majesty's Visit to Paris.

BOMBARDMENT OF SVEABORG.—Next week we shall engrave Mr. Carmichael's Sketches of the Attack on Sveaborg.

*** THE FOUR-PAGE ENGRAVING OF HER MAJESTY'S ARRIVAL AT THE TUILERIES is intended to form the Frontispiece to the present volume of the ILLUSTRATED LONDON NEWS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 25, 1855

COULD Parliament have been detained at its post but a few hours longer, the Speech from the Throne would have congratulated the nation on two victories to the arms of the Allies. The Baltic fleet and the Crimean army has each stricken its blow, and stricken home—the former aggressively, the latter in defence. In the northern sea a highly-prized and formidable fortress has been assailed, to the incalculable loss of the enemy; in the southern peninsula a numerous army, led by the Commander-in-Chief to the most important attack since Inkerman, has been routed with tremendous slaughter. A couple of days added to the Session, and these announcements would have preceded the spirited paragraph in which her Majesty declares that no course is left to her but a vigorous prosecution of the war. But the absence of such information in the Speech is amply atoned for. Nothing could be timed more fortunately—not to use a word of higher significance—than the arrival of the glorious news of the week. The reception of our Sovereign in the capital of those whom we trust and believe our posterity will learn to call our "hereditary friends" could not have been other than cordial; but a new element in the sentiment with which she has been met has elevated it to enthusiasm; for, while the Queen of England is the guest of France, the people of France learn that an Anglo-French fleet and an Anglo-French army have brilliantly vindicated the honour of the two nations on land and sea.

The exploit at Sveaborg is the less important of the two, but is far from being the mere experiment which it has pleased some writers to consider it. The skilful and masterly way in which the objects of the British and French Admirals were effected, without the loss of a single man, is also a matter to be noted; and this feature in the affair is assuredly one of those novelties in warfare for which the advances of science have prepared us to look, but for which the pedantry and obstinacy of constituted authorities, jealous of all innovations, have hitherto compelled us to look in vain. We doubt not that many an old officer's head has been shaken over the details of this Sveaborg affair; and that, despite the terrific explosions, the bombardment of forty-eight hours, the conflagration of four days, and the batteries seen to have been blown to pieces, he has dubious faith in an achievement unattended by a good deal of slaughter on our own side. For ourselves, we confess that the destruction of the vast stores and matériel of Sveaborg is the best instance we have seen, since hostilities began, of the way in which a highly-civilised nation should conduct its war. We have delivered a fearful blow, and we have not lost a life. Such triumphs cannot, under existing circumstance be often gained; but let them be always recognised by the ccates of progress and enlightenment in military as in civil affairs.

The moral effect of the c stisement which the Russians have received at Sveaborg is likely to be great. The glare of the conflagration must have been visible from the spires of St. Petersburg; and, though the mendacious talents of the Russian despatch-makers will doubtless exert themselves in a way worthy of the occasion, and show that a tremendous outlay of powder and ball by the Allies has produced little or no result, the fact that a hostile fleet had approached almost within sight of the metropolis, and fired away for days, the Russian vessels not daring to issue forth and repel the aggressors, must have its weight on the population of the Imperial city. To the actual suffering caused by the blockade this fierce insult is now added, but the Czar is impotent alike to relieve or to avenge. He orders private theatricals, to assist a ruined commerce, and he brings out old priests with new prayers to give success to a despairing army. It is stated that the Grand Duke Constantine, stung by the humiliation of seeing the Allied fleet destroying the stores of the famous stronghold, hastened to the Emperor and begged to be allowed to lead the Russian vessels to battle, but his solicitation was refused. This is to be regretted, as, had his wish been granted, his Royal Highness would, in all probability, have been, by this time, at Brussels; and such of his ships as were not at the bottom of the Gulf of Finland would have been on their way to Portsmouth to be rechristened and refitted.

But the battle of the Tchernaya, the news of which immediately followed the arrival of the tidings from the Baltic, is, as regards its results, far more important than the havoc committed in a fortress which bore no immediate part in the struggle. The Russians in the Crimea do not deceive themselves as to the final fate of Sebastopol. They know that they will not be able to fulfil their pledge, and "deliver up that holy jewel in safety to their master." The Allies are closing in upon them with relentless perseverance and energy; and, whether the last onslaught be made a month sooner or a month later, it will be made, and the place must fall. The crisis, however, warranted one grand effort, which, if successful, would much retard the catastrophe, and which, if the chances of war were propitious, might even jeopardise the invaluable position of the Allies in reference to their true ally, the sea. Besides which the resources of the Russian commanders have been greatly crippled by the recent operations in the Azoff, and there is reason to believe that the army near Sebastopol was dispirited and enfeebled by its privations, while new levies, or such remnants of them as survived the dreadful march from the interior, were being poured in to increase the embarrassments of the chief. Every reason combined for the giving battle, and for giving it on a large scale. Putting himself at the head of some 60,000 men, not intrusting the conduct of the affair to the baffled leader at Inkerman, Prince Gortschakoff advanced to the combat. Not as at Inkerman did the brunt of battle fall this time upon the British ranks. The French position was that which it would have been the great triumph of Prince Gortschakoff to force, and he addressed himself with all his energy to the task. The new levies are supposed to have been thrust forward in the first instance, but the assailing force also contained some of the best soldiery under the Prince's command. The French received them as France knows how to receive a foe, and our newer allies, the Sardinians, had, to the gratification of every man in the English and French army, the opportunity of sharing in the glory of the day. The English were not quite out of the work, though the triumph belongs to our friends, a well-served battery of ours being thankfully mentioned by the French leader. The result was another rout for the Russians, a fearful slaughter, and a heavy loss in wounded and prisoners. They were repulsed, and beaten back to a pass where for some three hours their hurrying masses underwent the deadly fire of the Allies, and Prince Gortschakoff retreated, in disgrace, leaving nearly five thousand men behind him. The all-important position was saved, and the battle of the Tchernaya is another name for the pages of history.

INCREASED SALARY OF MAGISTRATES.—On Saturday last a new Act was issued to increase the salary of the chief magistrate at Bow street from £1000 to £1200 a year. The other metropolitan magistrates have had their salaries increased from £1000 to £1200 a year.

CALIGRAPHY.—Among the curiosities exhibiting at the Polytechnic Institution, in Regent-street, is a marvellous specimen of penmanship, beautifully executed by Mr. Thomas Dunnable: it contains no fewer than 200 figures, and has been designed as a memento to the late Sir Robert Peel, Bart.

MISS NIGHTINGALE AT SCUTARI.—A gentleman writing from Constantinople, under date of the 14th, says: "Miss Nightingale has returned from the Crimea to Scutari, and her health is now re-established. In person she is tall and graceful: her head is small and finely shaped; her face full of loveliness; her eyes have the charm of the most womanly softness; the upper lip and mouth display unlimited courage; and, taking nature for my model, and apart from all romance, she may be termed beautiful. I should say she might be from twenty-eight to thirty years of age. What has not the current cost? By her courageous efforts we have now a hospital at Scutari where the most perfect accommodation can be given to 3000 sick men, and every want satisfied; the beds, bed-linen, and wards are scrupulously clean and beautifully ventilated, and the attendance perfect. Would that as much could be said for many of the hospitals I have visited in London. Mons. Soyer has left for the Crimea, however, before he had got the kitchen in good working order, and the two young Frenchmen are in charge of its management. Jellies, lemonades, and good things appeared to be the order of the day. In each ward of the hospital the Queen's letter, addressed to Mr. Sidney Herbert, appears painted on the wall, in large letters of red, blue, and gold."

THE HARVEST AND THE MILITIA.—The war and the recruiting for the Militia having drawn many young and strong hands from the labours of the field, it was probable that some difficulty might be found in finding a sufficient number of able men to lower and get in the crops with the rapidity that will be necessary to take advantage of the fine weather while it lasts. Lieut.-Colonel Brise, commanding the West Essex Militia, therefore requests us to make known that, should the demand for harvest be greater than the supply for harvest operations in any district in this county, he will be happy to assist any brother agriculturists, by granting furloughs, for a short period, to a limited number of men of the West Essex Militia, for the purpose of assisting in the harvest.—*Chelmsford Chronicle.*

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

A WELL-KNOWN person in the history of English literature during the nineteenth century has just been removed from among us. What young lady, of any age—within the teens, and even beyond that uncertain range—has not heard of Henry Colburn? Sometimes the name was mixed with that of Bentley—oftener it appeared alone; but it was a name referred to with confidence in London circulating libraries, and boldly appealed to at lesser libraries, to be seen at Scarborough, Harrowgate, Cheltenham, Leamington, Ramsgate, and we will add, Margate.

Henry Colburn died at his house in Bryanstone-square, London, on Thursday, the 16th inst. His age is not stated; but we will appeal to Lady Morgan, and ask if the intelligent publisher of her best works had not exceeded at his death the Scriptural period of threescore and ten? We first hear of Mr. Colburn in Conduit-street, Regent street—(we have been in circles of his old friends, where his name has been mentioned invariably with kindness)—yes, we first hear of him there—the sole representative, in 1814, of a "Public Library" conducted on liberal principles, and supported by aristocratic patronage. In 1814, and for a few years longer, he was a kind of Ebers, or Cawthorn, or Mudie—managing a business of his own in a business-like manner, making friends, and forming that intimate knowledge of trade hereafter of such excellent use in catering to the wants of the great reading public in Great Britain and Ireland.

He began with light literature, and may be said to have adhered to it through his forty years' existence as a London publisher. Mr. Lockhart, indeed, assures us that he was long exclusively known as "the standard purveyor" of what is called light reading—novels of fashionable life, and "such like pretty ephemera." But he had another kind of reputation, which, amidst the trash of perhaps ten thousand volumes (for he is said to have published as many) will preserve his name among the leading booksellers of Great Britain; the Memoirs of Evelyn, and the still more famous Diary of Pepys, were first given to the public by this careful caterer for public wants. The Memoirs of Evelyn (this is something for *Notes and Queries*), after a miraculous escape from the thread-papers of at least two dowagers, were transcribed by Mr. Upcott for publication; refused by every house of fame in London; and, at last, published by a library-keeper in Conduit-street, in two quarto volumes—price five pounds fifteen shillings and sixpence! This work, disregarded by the London trade, arrived at a second edition, in the same shape and price, within a year—much to the surprise of the "Row;" and, we believe, much to the surprise of Mr. Colburn himself.

It has been said of Mr. Colburn since his death by one perfectly competent to pass an opinion of the kind, that in his long experience of the London trade no one was more intuitively a publisher than Henry Colburn. He had a keen appreciation of what the public required—an excellent knowledge himself of the market value of what was offered to him for sale, and a tact in finding others to whom he could appeal with safety in any doubt. His leading adviser was Mr. Charles Ollier, once a publisher himself, and eminently skilled in assisting at the birth of a volume of memoirs, or a three-volume novel or romance.

The first works of any originality published by Mr. Colburn were those of Lady Morgan. There was merit in whatever Lady Morgan wrote: but the *Quarterly*, by its bitterness, materially assisted in forcing their early circulation. With "France," by Lady Morgan, commenced Mr. Colburn's career as an ingenious advertiser on a large scale. No bookseller ever rivalled him in the admirable art of puffery. He had recourse to every artifice; and years elapsed (and his fortune was made) before his skill in advertising was allowed to be quackery. An instance of his style in "doing" John Bull is before us while we write, in one of his Catalogues of "Important Works"—for all his books, when put before the public, were equally "important." To make Lady Morgan's "France" sell he appended to the advertisement this taking paragraph:—

The *Journal de Paris* makes the following remarks on this spirited and amusing work:—

"Lady Morgan has been run after, entertained, and almost worshipped, in all our fashionable circles: she has studied us from head to foot, from the court to the village, from the boudoir to the kitchen.

Peasants, noblemen, duchesses, citizens' wives, priests, soldiers, Royalists, Ultras, Constitutionalists both of the year '89 and 1816, children of the Revolution, eulogisers of former times, authors, players, painters, musicians, poets, dancers, gamblers, mendicants, promenaders, parasites, valets-de-chambre, footmen, nurses, frequenters of the theatres, auditors of the institute; no individual has escaped the notice of Lady Morgan. She has seen, observed, analysed, and described everything, men and things, speeches and characters.

His skill was still more admirably shown in an advertisement (so we are assured) in which he forced "Pelham," the first novel of Sir Edward Bulwer Lytton, into not an undue, but into an unexpected sale.

To Mr. Colburn's knowledge of what the public required we are indebted for the *New Monthly Magazine*; and, in part, for the *Literary Gazette*, that originator of weekly literary criticism. The *New Monthly* (now in Mr. Ainsworth's hands) was started in 1814, as a rival to the *Old Monthly*, then under the control of its publisher, Sir Richard Phillips. It was established "on the principles of general patriotism and loyalty," and was advertised "as an antidote to a magazine distinguished for sentiments tending to encourage disaffection and infidelity." The first editor was Dr. Watkins (once known by his Dictionary and his "Life of Sheridan"), who was succeeded, in 1820, by Campbell, the poet; and Campbell, in his turn, was succeeded by Bulwer, the elder Hook, and Hood. Mr. Colburn was always especially liberal in his management of his magazine, and was as proud of the *New Monthly* as Murray was of the *Quarterly*, or Blackwood was of "My Maga."

In the year 1830 Mr. Colburn, then living in New Burlington street, took a partner—Mr. Richard Bentley, the printer, of the firm of S. and R. Bentley. This unexpected alliance did not last long. On the 31st of August, 1832, they unexpectedly dissolved partnership—Mr. Colburn, it is said, undertaking not to recommence publishing in any place within twenty miles of London. This prohibition he soon found irksome; and, like the retiring partner in the tallow concern, who stipulated for coming in on melting days, he set up as a publisher at Windsor, beyond the distance. Afterwards he removed to Great Marlborough street, and finally surrendered his business to Messrs. Hurst and Blackett, still, however, reserving to himself a few favourite copyrights, such as the Diaries of Evelyn, Pepys, and D'Arblay, the Peerage of Burke, Miss Strickland's "Queens," and a stray work or two which still promised something.

Mr. Colburn retired from the turmoil of business surrounded by many literary friends, whom he delighted to see at his table. He was fond, too, of the Fine Arts, and his drawing-rooms were decorated by two masterpieces of our living English school of art. In the front drawing-room was Mr. Maclise's large and admirable picture of "Caxton showing his First Proof-sheet to King Edward IV. and his Courtiers;" and in his other room, one of the finest landscapes of Mr. Clarkson Stanfield.

It would be easy to gossip about such a man in a column dedicated to such matters as this delights in. But we must part with so forbidding a subject—only remarking, that Mr Colburn was twice married, and that his wife, Eliza Ann, only daughter of Captain Crosbie, R.N., to whom he was married in 1841, still survives him.

An affecting anecdote connected with the sudden death of Mr. Patrick Park, the sculptor, is current in artistic circles. Mr. Park was at Warrington, at the station, in apparently rude health. On leaving the platform his attention was arrested by a porter endeavouring to lift a heavy hamper of ice. With impulsive generosity he stepped forward to assist him, and placed the load on the man's shoulder. No sooner was this done than he found his mouth full of blood. He had ruptured a portion of the ice which the man was carrying, to stop the hemorrhage; but the remedy was ineffectual—he had ruptured a blood vessel on the lungs. After some delay—during which he transacted business, unaware of his danger—he was conveyed to a hotel, where the best medical assistance that could be procured was employed in his behalf, but in vain. He expired, it is stated, on the third day after the accident.

The ballads and broadsides sold last week at Mr. Nicol's sale proved to be the duplicates of the famous Roxburgh collection. This was detected by Mr. Halliwell, by whom they were secured.

THE QUEEN'S VISIT TO PARIS.—PROCE

N ON THE BOULEVARDS DES ITALIENS.—(SEE PAGE 243.)

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

BEFORE SEBASTOPOL, AUG. 11, 1855.

THE protracted tediousness of the siege of Sebastopol—the increased difficulties which meet us at every moment as we advance—the augmenting numbers of our killed and wounded in the trenches—arestill the subjects for repetition and comment this week as they were last. The confidence of the Russians is apparently as great as ever it was; and, when they showed one of our officers—their prisoner, Captain Montagu—the Redan some days ago, their officers expressed their conviction that Sebastopol could not be taken. That Sebastopol must be captured is, however, the determination of our Generals; and in the pursuit of their object they are not to be deterred by any obstacles. Notwithstanding the persistence of the enemy, his continual shelling and the dangers to which working parties are exposed, the advanced parallels are assuming a favourable aspect. The ground, as we advance, is more and more rocky as we approach the town, so that they cannot be made strong enough, unless earth bags are brought from a distance. The boldest of our men crawl in the dark nights to the outer and unprotected side, and there, amid the din and crash of shells, which burst into red-hot particles like huge sparks from a giant anvil, they labour and strengthen the works. So great appears at this moment to be the quantity of ammunition in possession of the enemy, that they have resumed a habit in which they indulged at first; and at short intervals in the night the farthest camps of the Second and Light Divisions are visited by 84-pounders, which roll in among the tents, and far beyond the famed windmill, up to which of old they had not been able to reach. Deserters, from the Russians, of whom there are great numbers, tell us that guns which can no longer hold on their carriages, or have been condemned for other reasons, are imbedded in the ground, fired by a train of powder, and thus gifted with the tremendous force which enables the shot to be projected to a great distance without danger to the artillerymen. It is supposed, from the vast number of carts which enter Sebastopol, and which one does not see issuing out again, that they are vehicles of the rudest construction taken to pieces and burnt on their arrival, whilst the cattle are either sent back in droves, or consumed as food for the army. For five days past the Russian fire has been heavier, perhaps, than we have known it in the intervals of regular bombardments. It consists chiefly of mortar-shells, which are thrown from all the works; and, amongst the rest, from the summit of Fort Constantine, where a mortar-battery was lately erected. Our losses from these projectiles cannot be short of 800 killed and wounded per month. Sickness, on the other hand, is not abating, and shows itself especially amongst the newest draughts which arrive here. The 72nd, amongst the rest, has been seriously visited, having had in the course of one week twenty-four deaths in a draught of 250 men. In the midst of all this General Simpson is gaining golden opinions by his care, his activity, and his determination to see everything and attend to all. He is continually seen everywhere visiting and encouraging all.

Omer Pacha, who left the Crimea ostensibly for the purpose of obtaining from the Ministry at Constantinople permission to take the direction of the Asiatic war, has not since returned hither, and will, it is said, surrender his command into other hands. After the Bulgarian campaign in which Omer Pacha's fame had been raised by the successful resistances of Oltenitza, Kalafat, and Silistria, and the occupation of Bucharest, there was but one laurel that the Turkish Generalissimo wished to add to those he had already won. He wanted to take part in a pitched battle, where his soldiers might finally establish a reputation of good fighters in the field. The inglorious successes of campaigns in Kurdistan, the mountain warfare of the Bosnian and Montenegrin insurrection had not been of a kind to test this, and it seemed likely, as the spring of this year had opened vigorously with a bombardment, which cost the Russians 7000 men, that the operations of the siege, conducted by the Allies, would be sufficiently speedy to enable the united forces of the English, French, Turks, and Sardinians to force the heights occupied by the reserves of the enemy. Having been asked for the support of a small body of troops to co-operate in any movement which might be made in the open field, in the event of speedy successes, Omer Pacha, anxious for distinction, brought a larger force than had been required of him, and spent his time in marching back and forward from Balaclava to Baidar, failing in all efforts to draw the Russians from their positions, which touch Aloupka on the right, and have their centre at Bagtcheseral. It was not for this that Omer Pacha came out. His old rival Muchir Ismail Pacha, who refused the chief command in Asia that he might take that of the Crimean corps, fell back upon the command of the armies in Bulgaria, and chuckled now, no doubt, at finding that no general engagement had been fought. Omer Pacha, foiled here, and perhaps not finding among his European colleagues that condescension to his views which he hoped to obtain, saw, in the advance of the Russians to the investment of Kars, a new field for exertion in that part of the Sultan's dominions where failure had hitherto been the rule, and where he might hope that success would be the result of his presence. The Russians, however, alarmed I believe by a movement of the Circassians against Tiflis which would have placed the force before Kars in an undesirable position, and not having even the thousandth part of the supplies which are so plentiful in the town of Sebastopol, in the shape of siege guns and ammunition, retired from the investment which they had commenced, and fell back, leaving to the Asiatic campaign in its turn no possibility of being signalised by great deeds. Omer Pacha remains for the present at Constantinople, and if he does not soon resume his command here, is to be succeeded by Muchir Abdy Pacha, a soldier of European instruction, whose military star has not hitherto been a happy one. The only known events in his career are his failures last year in Asia.

You may remember amongst the men who particularly showed bravery at the passage of the Danube last year, Colonel Ogilvie, of General Cannon's staff. He saw much service during the winter at Eupatoria, where he defended a redoubt with his regiment during the attack of the Russians. I regret to tell you that a few days back this officer, who was on the eve of returning to England, died of cholera after a short illness of twelve hours.

Whilst we are expending daily efforts in the endeavour to destroy the Russian ships of war, which week after week present their broadsides in hostile array at us, safely confident of the strength given them by their thick linings of earth-bags,—whilst interminable protocols make the annihilation of Russian naval power in the Black Sea the *sine qua non* of peace,—we hear that another fleet, larger than that which floats in the waters of Sebastopol, has been launched at Nikolaieff. We are told of a three decker just off the stocks, and six or seven ships, all of which may be armed by simply moving them down the river. If this be true, is it not extraordinary that steps were not taken to pay a visit to the celebrated dockyard of Nikolaieff? Are Kinburn and Otchakov fortresses that effectually close the mouths of the Bug and Dnieper? I am not aware that this is so; nor do I believe that any attempt has been made to try the possibility of entering the strait defended by these works. Yet we have ships fit enough, and men determined enough, for such a service. Well may the Russians think themselves invincible, if we permit them to build a new fleet before we have succeeded in destroying the old.

Other letters and despatches have been received from the Crimea, but they contain very little additional information. On the 11th, which was only five days before the battle of the Tchernaya, the sardinians were said to be "hard at work, fortifying their position, which is certainly a rather exposed one, being just on the hills where the Russians could cross the river." The forethought which made them prepare for the threatened attack has been amply justified. Regarding the alleged aggressive intentions of the Russians, the same correspondent says:

Scarcely has the last report of a meditated attack by the Russians died away when it is again revived. They are said to be only expecting reinforcements, which most of the deserters call the militia, evidently meaning troops from the military colonies with which Russia abounds. Already, some time ago, a list of volunteers was opened for the passage of the Tchernaya, but it seems not to have met with great favour in the eyes of the troops. One of the deserters says that in his regiment, which was the most enthusiastic, only 320 men offered themselves; in other regiments even fewer, so that on the whole the number of volunteers did not amount to more than 10,000 men. This number would not be very formidable, but, of course they will be in case of an attack supported by those who have not volunteered.

Nearly all deserters speak of the shortness of supplies in Sebastopol; indeed, there now seems every reason to believe that it was the desperation caused by the prospect of half rations which led to the late attack. On this head the *Post* of Thursday says:—

We have, more than ever, reason to believe that the Russian forces in the Crimea are suffering intensely from want of food and necessary supplies; and that this, combined with other causes, assures their speedy expulsion from Sebastopol and the south of the Crimea.

THE BATTLE OF THE TCHERNAYA.

In part of our last week's impression we gave a brief telegraphic announcement of the signal defeat of the Russians on the 16th inst. Since then other despatches have been received from the Crimea, which more than confirm the first report. The loss of the enemy turns out to have been much greater than was at first supposed, while that of the Allies is comparatively small.

This is partly owing to the fact that the latter were thoroughly on their guard, against a surprise. Some weeks ago various Russian deserters apprised the Allied Commanders that the enemy meditated an assault upon the line of the Tchernaya. Acting on the warning, while suspecting that it had no foundation, because it seemed an act of madness to assail the Allies, so strongly posted and so well prepared, the Commanders kept the covering army in a state of constant vigilance; and, as General Simpson stated in a recent despatch, frequent reconnaissances were made in the direction of the Russian positions. He rightly guessed, too, that they would maintain their central posts on the plateau of the Belbec; and although General Pelissier and himself evidently entertained the idea of an attack upon the Tchernaya as a possibility, they could hardly have looked upon it as probable, because it would be so perilous. It seems, however, that the deserters were right; that reinforcements had come up, and that an offensive movement was meditated and arranged.

The line of the Tchernaya is well adapted for a defensive position, but it would not probably have arrested the onset either of French or English troops. The river breaks through the mountains near Tchorgoun, and runs along a pleasant valley, passes under the heights of Inkerman, where the valley narrows to a gorge, and flows into the Bay of Sebastopol. From Tchorgoun to Inkerman the ground on the left bank slopes upwards from the river, the hills approaching nearer to the river than they do on the right bank. At Tchorgoun and at Traktir bridges span the stream, and a few miles to the west of Traktir there is a ford. The lines occupied by the French and Sardinians extend from the ridge in the rear of the plateau of Sebastopol, along the slopes of the hills, across the Simpheropol road, up to Tchorgoun. Four French divisions occupied the left and centre of the position, defending the ford and the bridge of Traktir; while on the right the Sardinians held the ground above Tchorgoun, with the Turks in their rear at Kamara. The Russian troops had to descend from the Mackenzie ridge and deploy, partly on a high hill much further removed from the Tchernaya than the rising ground occupied by the Allies, and partly on the more level country between the mass of which runs the Simpheropol road. The Allies, therefore, occupied a position from which artillery could play with good effect upon troops attempting to pass the river, while the enemy were under the disadvantage of moving upon lower ground before they could come to effectively close quarters with the Allies. Moreover, the latter had time to make themselves completely masters of the position; the sardinians, especially, had covered their front with earth works calculated to sustain the shock of superior numbers. Except so far as numbers were concerned, the position was that of the Alma reversed, and the result proved the great inferiority of the Russians under such circumstances.

It was at dawn that the Russians came on, under the leadership of Gortschakoff, displaying, as the sun rose, the imposing masses of an army of 60,000 men, including 5000 horse and twenty batteries. The principal weight of the attack was directed against the bridge that crosses the river at Traktir; but the losses of the Sardinians show that the enemy's left must have been hotly engaged with the gallant Italians. It may be inferred that the enemy persisted obstinately in his efforts to force the bridge of Traktir, for we are told that he left many of his dead there. The battle had lasted three hours, and then the enemy, already defeated, seeing the reserves of the Allies marching up to the scene of action, retreated on Mackenzie's farm. General La Marmora says he has 200 men put *hors de combat* General Pelissier, in a despatch to the French Minister of War, says:—

August 17, Half-past 11 p.m.

In the attack of yesterday the enemy came forward with five divisions, 6000 horse and twenty batteries, determined to occupy the Tchouchune mountains. After passing the river at several points, they had brought up an immense accumulation of sapping tools, planks, mantlets, ladders, and ladders, all which they abandoned in their flight. According to its usual custom, our artillery fought bravely and with great success. An English battery of position on the Piedmontese hill afforded very efficient assistance. The Russians left on the field at least 2500 dead. Thirty-five of their officers and 1620 soldiers are in our ambulances. Three Russian Generals were killed. We have made besides 400 prisoners. Our loss consists of 181 dead and 810 wounded. Taxer, Darbois, Alpy, and Saint Remy are severely wounded; De Failles and Barthe less severely. Our brigade has only received a slight wound.

A despatch dated Sunday last from General Pelissier gives the following estimate of the Russian loss:—

The nearest return we could make gives the following results:—Russians buried by the French, 2129; by the Russians, 1200: total, 3329.

THE WAR IN ASIA.

On the 16th of July the Russians made a grand demonstration against Kars: their object was to cover and bring safely into camp an enormous convoy of provisions, which had been sent on to them from Alexandropol. From that day to the 21st all was quiet, but General Mouravieff was drawing together his forces, and effecting the operation he had at his disposal. His two battalions of infantry, one battalion of chasseurs, one of engineers, three regiments of dragoons, two regiments of Cossack regulars, some Bashi bozouks of the Chirvan district, and some Armenian militia, besides eight guns, which he had received from Tiflis, were ten days strong. This army may be computed to be from thirty-five to forty thousand strong. It is divided round Kars, having a radius of about three leagues. It forms four corps, is independent of the division occupying Soukhoum Kaleh, and is drawing supplies from Unskar-Dagh.

The Turkish forces are divided into two corps, under the chief command of the Muchir Vaaf Pacha. The first corps, that of Kars, consists of four divisions—viz, that of General Kmetty (Ismail Pacha), 4500 strong; secondly, that of Tahir Pacha, 3000 strong; a third, a division of 4000 men, fourthly, another of 3500 men. The second army corps, commanded by Mehemet Pacha, Governor General of Erzeroum, which has 1500 men, who are Irregulars, and are commanded by Vakir Pacha; that of Kupu Kenl, 10,000 strong, but also Irregulars, and commanded by Veli Pacha; lastly, that of Alth, 3000 strong, who likewise are Irregulars, and are commanded by Ali Pacha.

The *Oesterreichische Correspondenz* publishes a letter from Constantinople of the 13th inst., in which it is stated that the postal communications between Kars and Erzeroum was interrupted on the 7th inst., that the Russians had advanced as far as Kapricio on the road to Erzeroum, and that ten thousand Bashi-bozouks had arrived at the latter place.

MAJOR-GENERAL SIR WILLIAM EYRE, K.C.B., has been appointed to the command of the Third Division in the Crimea, and his successor in the command of the Second Brigade of that Division is Colonel Charles Trollope, of the 52nd Regiment.

GOVERNMENT has decided upon erecting barracks on an extensive scale at the foot of the new bridge at Ranelagh; and the troops will be able to drill in the new park at Battersea.

SEVERAL newly-constructed mills, on wheels, with shafts, for the purpose of grinding corn for the army, have been forwarded to the Crimea.

The *Glatton* floating battery, accompanied by the *Horatia*, 24, put into Falmouth on the 13th: they would seize a favourable opportunity of getting to sea, to cross the Bay of Biscay in as smooth water as possible. The *Glatton* is highly spoken of, and as having done exceedingly well.

OFFICIAL DESPATCHES.

DESPATCHES FROM GENERAL SIMPSON

War Department, Aug. 23.

Lord Panmure has this day received a despatch, addressed to his Lordship, by General Simpson:—

Before Sebastopol, August 11, 1855.

My Lord,—I have the honour to acquaint you that during the past week the army has been unceasingly employed in strengthening and improving the advanced works, which are now so close to the enemy that it is with the greatest difficulty my approach can be made.

Brevet-Major Macgowan, of the 93rd, is supposed to have fallen a prisoner into the hands of the enemy. I have caused a letter to be addressed to the governor of the place to ascertain his fate, but up to this time I have received no answer.

The health of the army is, on the whole, good, although the cholera still continues to take daily several victims.

I have, &c.,
JAMES SIMPSON, General Commanding.

The Lord Panmure, &c., &c., &c.

War Department, Aug. 23

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship by General Simpson:—

Before Sebastopol., Aug 7.

My Lord, Since the 5th instant nothing has occurred to form the subject of a despatch.

I have the honour to enclose the list of casualties to the 5th instant. I regret to be have to inform your Lordship of the death of Colonel Cobbe, 4th Regiment, which took place yesterday. He was an excellent officer, and is a severe loss to her Majesty's service.

Captain Layard, 38th Regiment, Deputy-Assistant-Quartermaster-General, left this morning of disease, in charge of a steamer, *Pirth*, in Balaclava harbour, to which ship he had been removed in the hope of benefiting his health.

I have, &c.,
JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES, KILLED AND WOUNDED FROM THE 3RD TO THE 5TH AUGUST, 1855, INCLUSIVE

KILLED.

1st Battalion 1st Foot: Lance-Corporal Richard Horan. 77th Foot: Private William Cooper. 1st Battalion Rifle Brigade: Private John Delaney. 3rd Battalion Grenadier Guards: Private Thomas Miller. 1st Battalion Scots Fusilier Guards: Private Daniel Thompson. 3rd Foot: Lance-Corporal Henry Bellew; Private Henry Oaten. 38th: Sergeant R. Hughes. 49th: Private George Moore. 23rd Foot: Private Edward Quin. 46th: Private Michael Sweeney. 95th: Sergeant Maurice M'Grath.

WOUNDED.

1st Battalion Scots Fusilier Guards: Captain Hon. W. C. W. Coke, slight contusion. 55th Foot: Lieutenant C. H. Evans, dangerously.

August 3.—1st Battalion 1st Foot: Privates Thomas [illegible], dangerously; George Rogers, severely; James Sullivan, slightly. 17th Foot: Private William Dowell, severely. 23rd: Private John Fowler, severely; David Richardson, dangerously; [illegible], severely. 30th: Private George Clarke, slightly. 1st Battalion Rifle Brigade: Private William Russell, severely; William Davies, slightly.

August 4.—1st Battalion Grenadier Guards: Private John Pullen, William Holywood, severely; George Wilhall, Charles Shepherd, slightly. 1st Battalion Scots Fusilier Guards: Private Thomas Burns, slightly. 1st Battalion 1st Foot: Private Charles Nicholls, William Sanders, slightly. 19th Foot: Private James Caulfin, severely; John Stanley, Thomas Medlicott, Daniel O'Connell, slightly. 21st: Lance-Corporal George Edwin, severely. 34th: Private James Frost. Corporal Thomas Roberts, Private Edward Lennon, William Crutchley, Thomas Carder, Michael Sheridan, John Weekly, Henry Walton, slightly; James West, severely. 41st: Corporals John Gresdon, Martin O'Dea, slightly; Privates G. T. Gee, William Mansby severely. 42nd: Lance-Corporal L. Bert Ingram, severely. 49th: Private Thomas Hagan, slightly. 50th: Private James Anderson, slightly. 56th: Sergeant Robert Carey, Patrick Callaghan, Lance-Sergeant Benjamin Haddick, slightly; Corporal Daniel [illegible], severely; Private Jeremiah Lucey, severely; William Martin, Wm. Stanley, Wm. [illegible], Edward Bloomfield, Thomas Scanlan, Thomas Graham, Thomas O'Reilly, Henry Addison, [illegible] Cann, John Crowe, William Mara, Michael Conway, John Cain, slightly. 77th: Private [illegible] Stratford, severely; [illegible], slightly. 88th: Private Richard [illegible] Lakey, Michael [illegible], severely; Sergeant John M'Gilvray, slightly; Private John Campbell, severely; [illegible] Kan, dangerously. 79th: Private Robert Rea, [illegible]. 95th: Corporal Matthew Barke, dangerously. 96th: [illegible]

August 5.—1st Battalion 1st Foot: Lance-Corporals Thomas Mahon, severely; James Mullan, slightly. 7th: Private James [illegible], Henry Hall, severely; [illegible], slightly. 17th: Private Michael Walsh, slightly. 23rd: Private [illegible], slightly. 30th: Private Matthew Craig, slightly. 34th: Private Joseph [illegible], severely. 41st: Private Patrick Brazel, severely; Patrick Brazel, severely. 49th: Private James Thomason, slightly. 50th: Private Edward [illegible], slightly. 68th: Private John Leahy, severely. 79th: Private [illegible], severely. 95th: Private Joseph Crowther, slightly. 96th: Private Thomas [illegible], severely. 97th: Private [illegible], severely. 2nd Battalion Rifle Brigade: Private [illegible].

DETTLEMENTS [illegible]. Lieut Charles Prevost, slightly.

DESPATCH FROM ADMIRAL LYONS.

Admiralty, August 18, 1855.

The Despatch, of which the following is a copy, has been received from Rear-Admiral Sir Edmund Lyons, Bart., G.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea:—

Royal Albert, off Sebastopol, August 4, 1855.

Sir,—In continuation of the proceedings of the squadron in the Sea of Azoff since those which were reported in my letter of the 30th ultimo (No. 613), I have the honour to inclose, for the information of the Lords Commissioners of the Admiralty, a copy of a letter from Commander Sherard Osborn, of the *Curlew*, the senior officer in that sea, reporting to me the steps he had taken to harass the enemy as much as possible, and to punish him at Berdiansk for having fired at some of our people, although the town had been previously spared on the plea of its being defenceless.

Commander Osborn does not fail to point out how to do justice to the merits of the officers by whom he has been so ably seconded; and he particularly mentions Commander Rowley Lambert, of the *Curlew*, the officer next in seniority to himself, who has on all occasions been conspicuous for his activity and gallantry.

Commander Osborn has also on several occasions borne the highest testimony to the merits of those gallant officers, Lieutenant William Horton, commanding the *Swift*, and Lieutenant John E. Commerell, commanding the *Weser*.

I am, &c.,
(Signed) EDMUND LYONS,
Rear-Admiral and Commander-in-Chief.

The Secretary of the Admiralty, &c.

With reference to the above despatch, the undermentioned officers have this day been promoted:—Commander Sherard Osborn to be Captain, Lieutenant William Horton to be Commander.

NAVAL AND MILITARY INTELLIGENCE.

PRESENTATION OF COLOURS TO THE BRITISH FOREIGN LEGION.—On Wednesday last the Duke of Cambridge, the Premier and Lady Palmerston, Lord Panmure, Mr. E. Ellice Peel, the Earl of Cardigan, and other military and civil officials, arrived at Dover by special train, and were received with a salute from the heights, and at the station by Colonel Winlock, Major Mildmay, Colonel Commandant Streatfield, Captain M'Dwaine, R.N., and a guard of honour. Thence they proceeded in carriages to the western heights, where the Swiss Legion, comprising 1200 men, were drawn up, and from Lady Palmerston received their first colours, with the usual ceremony on the occasion. The body of troops received their colours with great enthusiasm, and one of the officers addressed the distinguished visitors, and then the Swiss, with much eloquence and good feeling. The men then marched past in review order, and subsequently were dismissed, to partake of an entertainment of roast beef and good ale, provided for them on benches on the heights. The distinguished visitors, attended by Colonel Winlock and Major Mildmay, left for Sandling Park, near Shorncliffe, where Lady Palmerston also presented the colours to the 2nd battalion of the British German Legion, under Colonel Wooldridge. The Baron Stutterheim, the Commander-in-Chief of the legion, presided at the table, and the whole of the officers of the regiment were present. After the ceremony, Mr. Raikes Currie, M.P., entertained at the park the whole of the officers at a grand déjeûner; and the whole of the legion, 3000 strong, were regaled in the same manner as the Swiss, at the expense of a county subscription. Colonel Dickson, Colonel Stahlbrieger, Colonel Rayner, Major Lytham, and the officers of the Swiss Legion gave an elegant luncheon, in a spacious marquee on the heights, to a select party of visitors.

MESSRS. W. and T. SMITH, of Shields, have nearly completed, and will have ready for sea this week, a powerful [illegible] named the *Chesapeake*, which is fitting up as a floating factory for the army in the Crimea. Her arrangements are most complete and ample, and artisans will be able to execute any kind of iron work on board of her. Between decks is laid out as a large iron fitting shop, which is furnished with [illegible] of the latest improvements, consisting of drilling-machines, shearing machines, and slotting-machines. She has also several smiths' forges, and two blasts fitted up, between the benches, and cupola for [illegible] and brass founding. In addition to her marine [illegible] horse portable engines will drive the machinery, and [illegible] work on board. She is built in the [illegible] and is a [illegible], and the artisans engaged to go out with her are engine-fitters, blacksmiths, brass-finishers, cast-iron and brass founders, house carpenters, shoemakers, and gun-carriage smiths. A party of miners also proceed with her, for the purpose of being engaged in sinking wells for the supply of water for the army. They have a complete set of mining apparatus. The machinery has been procured from the best factories in London, Liverpool, and Manchester, and has been fitted up with much care, under the superintendence of Captain Collinson, R.N., and Colonel Tulloch and Mr. Anderson, surveyor of machinery from Woolwich.

THE erection of a large range of wooden huts at Pembroke Dockyard is now rapidly proceeding, a number being finished. These barracks are to be capable of accommodating 1600 men, with their officers and staff. The contract with the Board of Ordnance specified that they were to be finished in six weeks. The launch of the *Repulse*, 90 guns, is to take place during the spring tides of next month.

THE BOMBARDMENT OF SVEABORG.

By the arrival of letters and despatches from the Baltic we are now in possession of ample details relating to the bombardment of Sveaborg. It was on the 7th instant that the English fleet sailed for that fortress. At 9.30 a.m. signal was made from the flagship, "Outward and leeward-most ships weigh." The fleet, consisting of nine British line of battle ships, thirteen steam frigates and sloops, sixteen mortar-vessels, and an equal number of gun boats, sailed from Nargen, and after a pleasant run of five hours anchored at a distance of about 5000 yards from the fortress of Sveaborg. In the course of the same evening the French fleet joined, and immediately commenced throwing up a mortar battery on the island of Langörn, situate some 2000 yards to the north of the cluster of five islands which form the principal part of the fortress of Sveaborg. Next day, the 8th, both fleets were busily employed preparing for action; the mortar-vessels were towed into position, about 3700 yards from the fortress, with 400 fathoms each of cable to "haul and veer on," as circumstances might require. This arrangement proved of the greatest advantage, and much credit is due to the originator of it. The line of-battle ships remained in the same order they had at first anchored in. The steamers *Magicienne*, *Vulture*, and *Euryalus*, took up a position in rear of the mortar-vessels, for the purpose of being ready to give them and the gun-boats any assistance they might require. The *Lightning* and *Locust* were ordered to hold themselves in readiness to tow out any gun or mortar vessels that might be injured, or otherwise rendered incapable of remaining longer under fire, in fact every possible arrangement having been made which prudence and fore sight could suggest, the signal was made from the flagship at 7 15 on the morning of the 9th, "Gun and mortar vessels open fire with shell"

At 7 50 a.m the first mortar was fired, and taken up along the whole line, the gun boats running in to within 3000 yards, and getting their range. The enemy returned our fire very briskly with red-hot shot and shell; but, although their range was good, the damage inflicted was comparatively trifling, owing principally to the excellent handling of the gun boats and mortar-vessels—the former being continually on the move, and the latter hauling or veering on their 400-fathom cable as soon as they found the Russian shot falling too close to be pleasant. At 10.20 the first Russian magazine exploded, and a fire broke out in the Arsenal. About noon a second magazine exploded; and at 12 15 a most terrific explosion took place, followed by a succession of minor ones. The force of this was so immense that a battery of guns *en barbette* was literally blown to pieces. At 12.40 more magazines exploded; at this time, the dockyards, arsenal, barracks, all the Government buildings, storehouses, &c., were burning furiously. The sight was most grandly imposing. The yards and poops of the line-of-battle ships were crowded with the excited "tars," who cheered vociferously after every explosion, as only British sailors know how to cheer. To add to this frightful din, the liners *Cornwallis* and *Hastings*, and steam frigate *Amphion*, opened their broadsides at the same moment; and, as if to crown the whole, the *Arrogant*, *Cossack*, and *Cruiser* chimed in with this tremendous chorus, by commencing a heavy fire, with good effect, on a large body of troops which they chanced to espy on a small island to the eastward of the fortress. The commende continued with little abatement up to eight o'clock p.m., when the gun boat recall was hoisted. Several of the mortar-vessels were also found to be injured from the quick and incessant firing, and had to be brought out to undergo repairs; those, however, which were not damaged, still kept up their fire, in conjunction with the French mortar battery, until 10 30 p.m, at which hour the rocket-boats from the fleet went in and kept up their part of the performance until daylight. The scene during the night was grand beyond description: the whole of Sveaborg appeared one mass of flame, the rockets and shells adding not a little to the awful splendour of the fiery landscape.

At 5 30 a.m., on the 10th, the fire again opened from our whole line, and continued throughout the day, at the end of which little appeared left to be done; all the mortars, French and English, were more or less injured. Some idea, however, of the services rendered by these vessels may be gathered from the fact that during the two days' bombardment not less than 1000 tons of iron were thrown into a space of about half a mile in diameter by the English vessels alone, and that upwards of 100 tons of powder were expended.

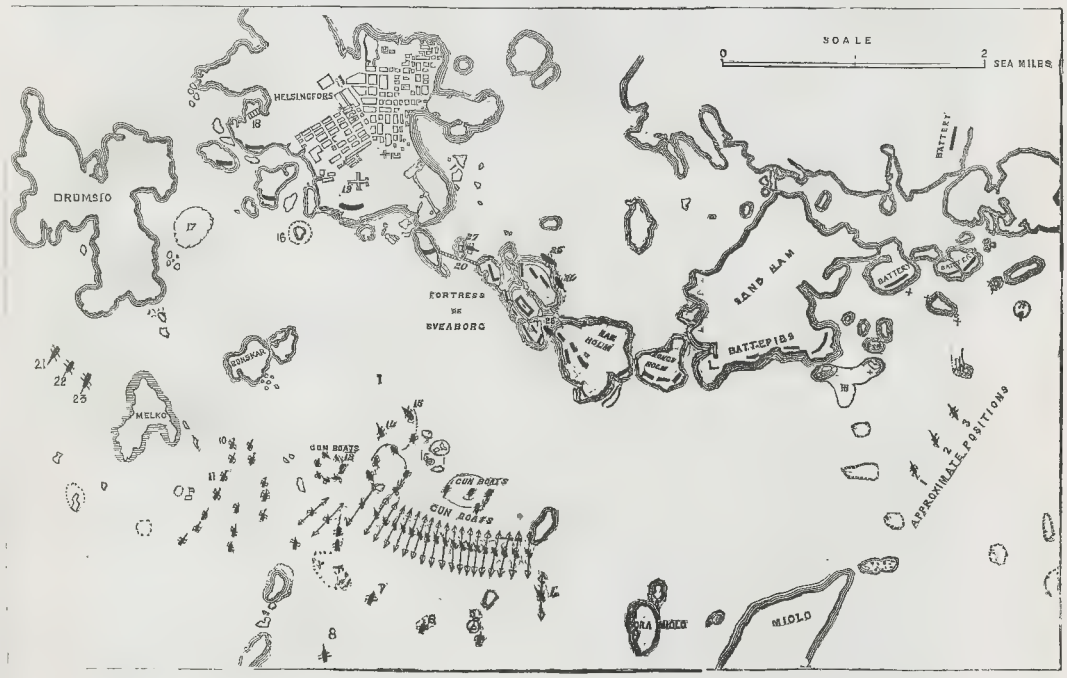
On Friday night, the 10th inst., the rocket-boats again went in and played with great effect. On Saturday no firing took place, and Sunday was a day of rest On that day everything was quiet and in repose. The tolling of the bells at Hel-ingfors was distinctly heard; the dull and plaintive sounds, mingled with the strains of sacred music from our men-of-war, came floating over the calm waters, and offered a soothing contrast to the noise, turmoil, and excitement of the two preceding days.

At six a.m. on the 13th all the fleet got under way from off what remains of Sveaborg, and, crossing the Gulf in a rather irregular manner, anchored in Revel roads again at noon. At the time they left the fortress, once so renowned and formidable, was still on fire, having burnt almost without interruption during the space of three days and a half.

One hundred and sixty gun boat sheds, many with row-boats in them, were totally burnt, as were also the Government rope walk, storehouses, dockyard, barracks, main-guard, and signal station The fire was so hot and the practice so admirable, that the three-decker moored across the entrance, after having several shot in her, was forced to haul out of her position and take shelter behind the stone walls The value of public property destroyed is estimated at £2,000,000.

Admiral Dundas gives a long account of the proceedings, but he does not attempt to give any account of the amount of damage inflicted on the enemy. Admiral Penaud, in a despatch to the French Minister of Marine, dated August 11, says:—

The bombardment ceased this morning at half-past four; it consequently lasted for two days and two nights, during which time Sveaborg presented the appearance of a vast fiery furnace. The fire, which still continues its ravages, has destroyed nearly the whole place, and consumed storehouses, magazines, barracks, different Government establishments, and a great quantity of stores for the arsenal. The fire of our mortars was so accurate that the enemy, fearing that the three-decker which was moored across the channel between Sveaborg and the island of Back-Holmer would be destroyed, had her brought into the port during the night. The Russians have received a serious blow and losses, the more severe, as on the side of the Allied squadron the loss is confined to one English sailor killed and a few slightly wounded. The enemy's forts returned our fire very vigorously, and did not slacken it until the moment of the explosions above mentioned, but the precision of our long-range guns gave us an incontestable superiority over those of the Russians. Every one in the division fulfilled his duty with ardour, devotion, and courage: the crews evinced admirable enthusiasm, and have deserved well of the Emperor and of the country. I am perfectly satisfied with the means of action placed at my disposal. The mortar-vessels and gun-boats rendered immense services, and they fully realise everything that was expected from them. The siege battery produced very fine results, and it may be said that it was from an enemy's island, on which we had hoisted the French flag, that the most destructive shots were fired.



PLAN OF THE BOMBARDMENT OF SVEABORG.

The following graphic account of the bombardment is from our Artist, who was present from the commencement:—

We opened fire on the Russian batteries at 7.25 a.m. on Thursday morning, at a range from them of between 3000 and 3020 yards distance. There seemed a little delay on the part of the Russians: they appeared to be making sure of their aim, for they did not return fire until 7.30, when the firing became general on both sides. There appeared no advantage on either side until 10 a.m., when a large house took fire. This seemed to cheer our tars, for I thought their firing fiercer. At 10 25 the first grand explosion took place, which went up with a terrific effect. Through the kindness of our Captain I had got a splendid point of view on a rock facing the scene of action, and out of range. As the first eruption stimulated the men engaged, so it did the whole fleet, for simultaneously a stunning cheer was vented forth by every man in the fleet. All seemed going on well: flames began to appear in various parts of the town. While the *Arrogant*, *Magicienne*, and *Cruiser* were peppering away, scouring through a wood on the left, the *Hastings* and two other vessels were firing away briskly at forts on the island of Sandhamn on the right. These wings of action, with the centre occupied with the constant fire of the French battery, and conjointly our and their gun and mortarboats, blazing away in a manner worthy of the two great nations, made the scene a stirring one. At 11.15 another sublime explosion and another heartfelt cheer! must have been seen and heard to have been estimated. At 12.15 the grandest of all the explosions took place, shaking the earth. It was a long succession of explosions, with a heavy black inky smoke; and, as another explosion went into it, it looked like transparent vermilion endeavouring to displace clouds of black velvet. This scene was terrific: it seemed as if hell had burst open to destroy. At 3.30 the citadel was on fire, covering a very large surface with heavy lashing flames coming from many parts. At 6.30 the centre of the town was all on fire. At 10 9 the rocket-boats commenced their business of havoc. The sight was grand. With a hissing noise, like serpents the rockets flew about with a curious eccentric motion, circle intercepting circle. After each boat firing on an average about sixty rockets, they retired to their respective ships, having received little or no damage, although shot, shell, and rockets were returned upon them.

On the Friday the mortar and gun-boats went at it as on the day before. Although they had known no rest all night—keeping up the firing, and reloading with shot, shell, and ammunition had occupied all their time—the commanders and their crews felt no desire to sleep. I talked with many, and they all were full of energy and fire. There was a great endeavour to set fire to two ships that were so placed by the enemy that you could not get near them with impunity, for the batteries so well protected them. Captain Hewlett, who commanded the Lancaster guns, hit one of them more than once, and she was on fire, but they managed to escape; and the three-decker was withdrawn from action higher up the harbour out of our range. About 3 p.m. there was the largest conflagration about sixty sheds on fire, with several ships on the stocks, and where the town was not on fire there issued a deep yellow-brown dense smoke, which contrasted beautifully with the other smoke and flames in all their freshness. The burning continued all day; at night it was beautiful. The fire from the enemy considerably slackened. We and the French kept up the play until 4 a.m. on the Saturday morning, when the order of recall was given, and at that time our mortar-boats were much knocked up, there being, upon examination, only four of them left efficient for further service: all the guns, also, in the gun-boats getting into a dangerous state from the frequency of firing. The mortar-boats fired away 3099 13-inch shells, each weighing 210 lbs., and each falling with a weight of 75 tons. Besides 18 carcases, there were 16 English gun-boats, which fired 11,200 shot and shell. The powder expended by the English was 156,000 lbs. The French threw 3000 10 inch shells, and expended 36,000 lbs. of powder; with 6000 shot and shell from their gun boats, with an expenditure of 84,000 lbs. of powder: total from mortar-vessels, 6099 shells; total from gun-boats, 17,200—making a grand total of 23,299 shot and shell: with a grand total of powder of 240,000 lbs. Hurrah for England and France!

J. W. CARMICHAEL.

CASUALTIES ON BOARD THE BRITISH FLEET DURING THE BOMBARDMENT OF SVEABORG, AUGUST 9, 1855.

WOUNDED.—*Amphion*, Mr. Charles Sturges, assistant paymaster, John Brasher, leading seaman, severely; John Markham, A B., slightly. H.M.S *Cornwallis*: Mr. Frederick Bowen, mate, slightly; John Osborne, 1st class boy, severely; Edward Peters, quartermaster; William Brumby, ordinary seaman, slightly; John Coady, 2nd class boy, severely. ALLEGED BOMBARDMENT OF RIGA.

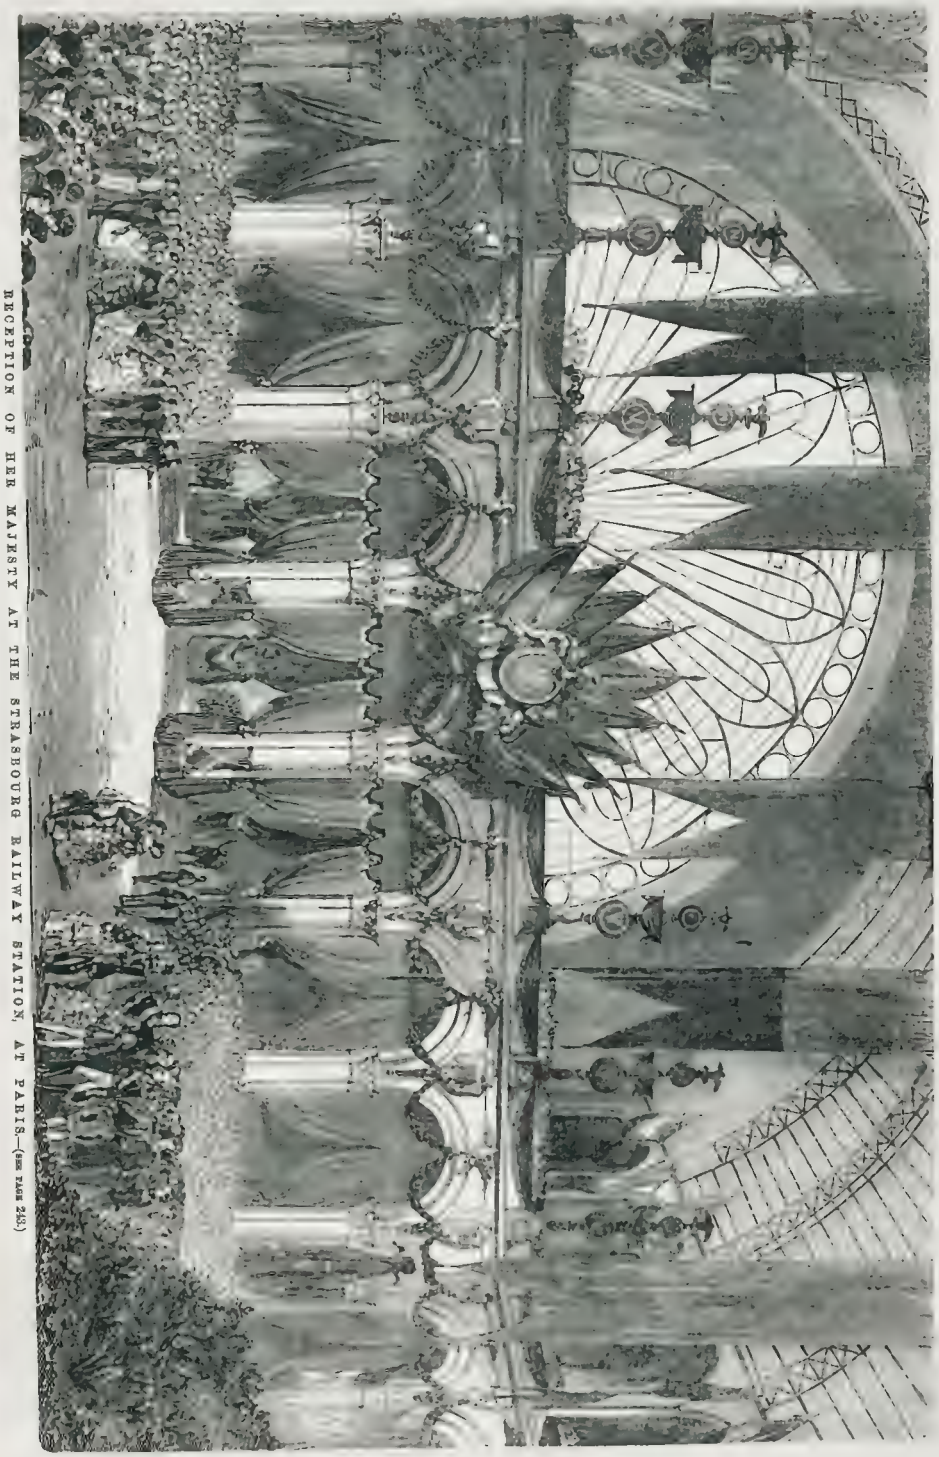
Private letters received at Hamburg from Riga state that about four o'clock on the morning of the 10th inst., two English steamers—a line-of-battle ship and a frigate—appeared off that port, and about an hour later, when at a distance of 1600 yards, they opened a heavy fire on the coast batteries, and the division of gun-boats anchored before them. The cannonade lasted for more than an hour, and about nine they stood out to sea, apparently in chase of a vessel that was sailing down the coast of Liefland. About three in the afternoon they went in again and renewed their bombardment at five o'clock, which lasted till dark, when they again proceeded to sea, and, up to the date of the letters had not appeared again. A few of the guns were dismounted in the batteries, otherwise the cannonade does not appear to have done much damage

OUR NEW SIEGE WORKS.—A letter dated Camp, Aug. 6, says:—"Batteries are springing up on all sides; trenches are turned, approaches are made, and with a degree of stability that contrasts strongly with the puny defences thrown up formerly. We are nearly 300 yards nearer to the town than we were on the 18th ult, and our allies are within sixty yards of the ditch of the Malakoff, and thirty yards of the Little Redan. This latter work is at—seldom the proper (Russian) left of the Malakoff, between that fort and the Careening-bay Battery. The French have considered it of sufficient importance to merit a separate point of attack, and by most judicious and scientific engineering they are placing their approaches in such a position as to isolate the defence of the place and compel it to reserve for its own defence that fire which otherwise would tell most effectually owards the flanking defence of the Malakoff."

The new arrangement by which all orders for Army clothing are to be sent to London has given rise to loud complaints in Dublin, although a small portion only of such orders was usually executed in Ireland.

ARRIVAL OF THE ROYAL AND IMPERIAL TRAIN AT THE STRASBOURG RAILWAY STATION, AT PARIS.—(SEE PAGE 245.)



RECEPTION OF HER MAJESTY AT THE STRASBOURG RAILWAY STATION, AT PARIS.—(see page 245)

CHESS.

TO CORRESPONDENTS.

STUDIOUS.—Bishop Hall has some pertinent remarks upon the subject, to which we cannot do better than direct your attention. "Recreation," he says, "is intended to the mind as wheeling to the cloth, to sharpen the edge of it, which otherwise would grow dull and blunt, but, therefore, that speaks his wisdom true in recreation is how wheeling, never mowing; he grease may grow and his steed starve; as contrarily he that always toyles, and never recreates, is one mowing, never wheeling, labouring much to little purpose; as good no recreation at all."

N. F. RETREATES, Herr K., P. B. J.—Now under consideration.

EXETER.—Your "load" to move the Pawn two steps under the circumstances mentioned; but we are not prepared to take it in a case of the kind.

DUBLIN.—We do not believe it has ever been the case.

TOURNAMENT.—A collection of Problems, without a word, was first printed as a small volume entitled "Aufgaben für Schachspieler," &c. &c. &c., in the same year.

EXCHEQUER.—For two particulars you require concerning M. Deschappelles we must refer you to the November No. (1847) of the French Chess Magazine, *La Palamede*, which contains an amusing account of that clever but eccentric gentleman. His resistance to Whist, which is highly spoken of by the local papers, is embodied in the Whist articles of *Bell's Life*.

OTHELLO, Utica, New York. 1. In Castling à *la Italienne*, a player, instead of being restricted to move his King and Rook each in a particular square, has a choice of several squares. For example—If he Castle on the King's side, he may move his King to any one of the three squares at his side, and the Rook to one of the other three squares. If he Castle on the Queen's side, he has five squares open to his King, and four as the command of his Rook. 2. Philidor's work, in French or English, is obtainable in London for a mere trifle.

SOLUTIONS OF PROBLEM No. 599 by A. Z., Retreater, Old Crony, Dr. F., W. H. A., Nalis, Worth, F. R. of Norwich, H. J., Glasgow, Fiddler, D. G., Beddias, Henry, A Johnian, Dunbridge are correct.

WHITE.

White, playing first, mates in three moves.

MUSIC.

The ROYAL OPERA at Drury Lane is now the only musical entertainment in London. We have had occasion more than once to mention the spirit and success with which the theatre is conducted, and we have the satisfaction to state that the season, which began so well in these respects. The performances this week have been exceedingly agreeable. On Monday Barnett's well-known opera, "The Mountain Sylph," was followed by a revival of the once famous, but almost forgotten, ballatta of "Rosina." "The Mountain Sylph" was very well performed. Mr. Killiot Galer, who sustained the part of *Daniel*, is making great progress in his art. His voice, which used to be remarked as a sweet but feeble tenor, is acquiring strength and body, and his whole performance is becoming firmer and decisive. Miss Escott, who is becoming more and more a favourite, made a very charming Sylph; Miss Lanza was a sweet and interesting *Jessie*; and Mr. Farquharson, as the wizard *Hela*, sang with considerable effect. The concerted music, especially the famous trio, "The Sylph's Song," was nicely sung, and the whole performance was warmly applauded. Mr. Smith has done well to revive "Rosina," an admirable piece, which used to delight the playgoers of half a century ago, when Sinclair's "Pray, Goody," lifted him at once into celebrity. It is full of wit and satire, and the music, chiefly French melodies, is charming. As now performed, with Miss Fanny Reeves as *Apollo*, Mr Barrett as *Midas*, Mr Halford as *Pan*, and Mr Farquharson as *Silenus*, it is very amusing and gives the elder part of the audience a pleasant reminiscence of old times.

Wallace's "Maritana" was performed on Tuesday evening, for the last time this season, after having had a successful run, which it very well deserved.

The Drury Lane répertoire this season has been very limited, and Mr. Smith would do well to extend it. There are several English operas which we would gladly see produced. One in particular, "The Night Dancers," by Edward Loder, is not inferior to the best works of the age, and it would be a thing of excellent and interesting fame to revive it. We observe that this admirable musician has just produced at the Manchester Theatre a new opera, called "Raymond and Agnes," which has been attended with the most brilliant success.

Miss Catherine Hayes.—The Swan of Erin has been turning the heads of the Dutch amateurs in Holland. Her first concert took place on the 11th of April. "Like Caesar," says an enthusiastic correspondent, "it was 'Veni, vidi, vici!' with the Mi-Hayes." Her singing of Meyerbeer's "Ad Astra" in the "Prophète," "Ah, non fia," took the Batavians—Hollanders as well as Netherlanders at once. The "Casta Diva" from Norma" completed her triumph. Miss Hayes subsequently appeared at the Hague, and the journalists there raved about her, not in choice Italian, but in choice Dutch. She played *Norma*, in "Don Pasquale," *Semiramide*, and the chorus of *Rataplan* attended where she gave, with the energy of a Rachel singing the "Marseillaise," the Dutch national air, "Wilt Neerlands bloed." For this achievement she received a military crown, and was presented with a golden garland, and a splendid diadem of precious stones, with which to carry Miss Hayes on board of the *Oldenbarnevelt*, the ship in which she sailed to Australia—crowds escorting her to the bay when she embarked.

Haymarket Theatre.—A new piece by Mr. Brough was produced on Thursday, entitled a "Romance of the Squib, under the title of "Olympus in Trouble; or, the Wrong Men in the Wrong Places." The political application is sufficiently obvious.

Miss Herald and "Wife or No Wife."—The new play lately added at the Haymarket is not intended to be published, but to remain in itself-repute in the exclusive performance of the young actress, as a representative of *Olympia*. It will, we understand, be forthwith repeated in the provinces, where Miss Herald is about to fulfil a round of starring engagements. Those who have seen her performance of Mrs. Copp Royal, Cambridge, on the 3rd or 4th of September; and the play itself will be performed there during the following week. This monopoly of a part is understood to be generally a lucrative possession to an artist capable of supporting the popularity of a unprinted drama.

Mr. Love as the Approaching Clerk of the London Season.—This popular ventriloquist celebrated on Wednesday the two hundredth night of his extraordinary entertainment at the Regent Gallery, on which occasion he distributed gratuitously to his audience copies of a portrait and memoirs, elegantly bound. The *séance* was fashionably and numerously attended; and the lecturer, being in capital voice and spirits, was witnessed in the full force of his surprising talents, for impersonation and polyphonic illusion. The performance will continue for a few nights longer.

The French papers mention that a few nights ago the church of the Hermitage of Schaenberg, in the department of the Haut-Rhin, was utterly consumed by one of the windows, and five gold crosses and a pearl necklace were taken from a statue of the Virgin.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS. *Rectories*: The Rev. G. W. Pigott, to Great Upton, near Shrewsbury; Rev. S. G. Wood, West Keal, near Spilsby; Rev. W. T. Jones to Llysvein, near Crickhowell; Rev. A. Turner to Burnham Deepdale, near Fakenham; Rev. W. M. Kilvert to Credenhill, near Pontrilas; Rev. H. Heming to East Farndon, near Welongborough; Rev. J. B. Deane to St. Martin Outwich, in the city of London; Rev. J. Farr to Gillingham St. Saints, near Beccles; Rev. J. Price, *Vicarages*: The Rev. W. V. Musgrave to Maiserey, near Hawtrey, Northamptonshire; Rev. W. J. Jamieson to Dilwyn, near Weobley; Rev. S. H. Hoop to Dyrham, near Sandall; Rev. C. Sabine to Dalton, near Barnsley; Rev. D. Claridge to North, St. Ives, Huntingdonshire; Rev. Matthew Field, Rev. M. Mitchell to Bark Newton, near Alford; Rev. C. H. Marriott to Rushton, near Kettering; Rev. H. Gilchrist to Mandeley, near Cambridge; Rev. J. M. Holt to Keelby, near Great Grimsby, Lincolnshire; Rev. H. L. Dodds to Great Glen, near Leicester; Rev. T. P. Hutton to Dempling, near Brighton; Rev. J. Fry to Lingfield, near Godstone, Surrey; Rev. F. T. Attree to Middleton-by-Wirksworth; Rev. J. F. Harward to Little Maplestead, near Halstead, Essex.

BISHOP OF LONDON'S PASTORAL LETTER.—Her Majesty's Government having refused to allow a Royal letter to be issued in favour of the Church-building and Education Societies, in accordance with a custom which has long prevailed, the Bishop of London has issued a Pastoral Letter, addressed to the clergy of his diocese.

ACCIDENT ON THE LANCASHIRE AND YORKSHIRE RAILWAY.—On Saturday last a heavy excursion train, conveying about 1000 persons, left Bacup-bridge, Lancashire, for Blackpool, and on its return journey was run into by a goods train, and several passengers were injured, but none fatally. Owing to the slippery state of the rails from wet weather the excursion train was late, and reached the Summit Tunnel, near Todmorden, about one o'clock on Sunday morning. After proceeding some distance into the tunnel, the train came almost to a stand for want of steam—the incline at that place being very considerable. One of the company's servants, in attendance on the train, ran back with fog signals; but a goods train had already entered the tunnel, and, after passing over one of the signals, had not time to stop completely before it came in contact with the last carriage of the excursion train, though the shock of the collision was considerably weakened. None of the carriages were smashed, but several passengers were bruised severely, and one of them, a boy, had one of his legs fractured. A signal-man, stationed at the entrance of the tunnel, appears to have neglected his duty, as according to the company's rules, no train would have been allowed to enter the tunnel until the first one had passed through.

THE CASKET LIGHTS. The three lighthouses on the Casket Rocks, in the British Channel, have been raised in height about twenty-five feet each. Owing to this increase in height the lights may be discerned six or seven miles farther than was lately possible. The Casket Lights warn mariners from the dangerous rocks which beset the Channel Islands, and are of great use to ships trading between London and France. The person who has charge of them has race l a family on the small and rugged rock on which they stand. When the sea is smooth enough, which is rare in the case, he effects a communication with the land of Alderney. The Caskets are fertile, like the neighbouring islands of Jersey and Guernsey, and the lighthouse-keeper has won prizes at horticultural shows in those islands.

A DETERMINED YOUNG LADY.—An elopement took place last week, on the Fell shre, of a young lady, with some young man whom she proved of by her family. On Tuesday morning, about three o'clock ago, the young couple hastened across the country to the nearest railway station (Plumpton). Having procured tickets they awaited the arrival of the train with feverish anxiety, but just before it arrived the fair young lady's brother, who had become cognisant of her flight, dropped in upon them. A scene ensued, the fair one was marched off under protest, fighting her brother all towards and blows exchanging as she left the station, in a tone of sarcastic defiance, "Never mind, Joseph, I'm yours! I'll be true." Well! but him yet!" Her brother, however, was not to be so easily foiled as the disobedient ward imagined. He immediately removed her to Liverpool, where she was placed under strict surveillance; but she with feminine ingenuity wrote to her lover, and after about a fortnight he, accompanied by a friend, presented himself under her bedroom window at midnight. All she came, throwing her wards she before her. On the following morning the parties with whom she was staying found that she was missing, and tel graphed to her lover. There was an editorial a look-out along the Lancaster and Carlisle Railway, by which the pursuers were enabled to overtake the fugitives. They had between Preston and Lancaster, and the young lady was resolved not to be overtaken. However, instead of taking the train to Scotland, as was the intention of Scottish, they were arrested according to the law of Scotland.—*Carlisle*.

MONETARY TRANSACTIONS OF THE WEEK.

... our City Correspondent.)

Although money is generally remunerative, very scarce and dear, the famed Bull has been to be seen in every nook and corner of the west, and there have been sometimes numerous fluctuations in price. The unfunded Debt has been heavy and drooping. When we consider the large sum which will be taken out of the market for some time, viz., £5,000,000 of the new Turkish and French Loans, and £6 ,000,000 on account of our last loan of £16,000,000, sometic cannot be expressed at the present tightness of money. That is the opinion of the firm of Rothschild, no doubt entertained; and we shall not be surprised to find the Bank of England using its rate of discount. At present the institution is doing a very large business, and large demands have been made upon it this week by trade classes, under the impression that the maximum rate will short ... Consols have fluctuated from ... ½ ex. dividend, and left off ... ½ ex. dividend. The Stock Exchange will, consequently, be relieved of any great weight upon it. The new French Loan has been done at 2 prem.

The arrivals of bullion have been very moderate. To the Continent, notwithstanding that the exchanges have been dearer, very few shipments of bullion have been made; but to India nearly £400,000 has been forwarded, chiefly in silver.

There was a moderate business doing in the Consol market on Monday, and prices ruled steady. The Three per Cents Reduced were 92¾; the Three per Cent Consols, for Money, 91¾; Ditto, for Account, 91¾; the New Three per Cents, 92⅜. Long Annuities, 1860, were 2 ... Indi Bonds, ... Ditto Debentures, ... Ditto Three per Cents, ... Exchequer Bonds, 100 ... Ditto Three per Cents, 97¾; Ditto New Three per Cents, ... Ditto Two-and-a-Half per Cents, ... Ditto Annuities, ... Consols, 91¾ to 91⅝; the New Three per Cents, 91¾; Long Annuities, 1885, 4; Ditto, 1903, 4; India Stock, 258 to 260; India Bonds, 23s. to 20s.; Exchequer Bills, 18s. to 15s. prem. On Wednesday very little change took place in prices. The Three per Cents Reduced, ... per Cent Consols, 91¾ ... and the New Three per Cents ... ns in English Stocks on the following Tuesday ... and the Reduced, 91¾ to 92. Exchequer Bills, 20s. to ... Indias, 258 premium. Bank Stock was ... Consols ... Stock ... Small, Five per Cents have realised 103; ... Three per Cents, 97; Ecuador Bonds, 4¾; Granada Deferred, 18¾; Mexican Three per Cents for the Account, 21¾; Peruvian Four-and-a-Half per Cents, 78¾; Ditto Three per Cents, 53¾; Spanish Three per Cents, 37¾; Ditto, New Deferred, 18¾; Turkish Six per Cents, 95¾; Dutch Two-and-a-Half per Cents, 63; Dutch Four per Cents, 96¾.

There has been a good demand for Railway shares to-day for some time; nevertheless, the quotations have ruled tolerably firm. City, 60; English, Scottish, and Australian Chartered, 18¾; London, 85; London and County, 30¾ ex div.; London and Westminster, 4¾ ex div.; Royal Mail, 3¾.

Miscellaneous securities have been steady as to price, but the transactions have been comparatively small: Australian Agricultural, 20¾; Crystal Palace, 2¾; Ditto Preference, 5¾; Ditto New, 3¾; Sydney Railway Company, ... London Docks, ... Ditto ... Ditto ... Peel River Land and Mining, 2¾; Peninsular and Oriental Steam, 69¾; Mexican and South Sea, 8¾; South Australian Land Company, 4¾ ex div.; Royal Mail Steam, ... Ditto ... Ditto ... Ditto

AMUSEMENTS, &c.

PERFORMANCE BEFORE HER MAJESTY IN THE THEATRE OF THE PALACE OF ST CLOUD [illegible]

HER MAJESTY'S VISIT TO PARIS.—THE IMPERIAL CENT GARDE.

THE QUEEN'S VISIT TO FRANCE.

THE VOYAGE FROM OSBORNE.

THE Royal Visit to Paris, an event fraught with so much interest to the destinies of Europe, has set the seal to an alliance consecrated and cemented by the blood already shed in defence of civilisation. The news of the glorious successes of the French arms in the Crimea, which only preceded by a few hours, the recent demonstration at Spithead by the Allied fleets, and the commencement of another monument of the Russian lines south of Sebastopol, were circumstances of such happy augury that the Queen seemed to carry victory and good fortune in her train; while the glorious harvest weather, with its associations of plenty gave unbounded hope and joy to the Royal progress.

Her Majesty, with her Royal Highness Prince Albert, the Prince of Wales and the Princess Royal, went on board the *Victoria and Albert*, in Osborne Bay, at seven in the evening of Friday. The Royal party dined on board, and retired to rest at an early hour. At half-past four on Saturday morning the Royal yacht weighed anchor, and proceeded on her voyage. The *Victoria and Albert* was accompanied by her paddle-steamer the *Fairy*, and also by the *Irene* and *Fox*, two of the Trinity-house steam-vessels elsewhere ships, celebrated for their speed. On board of these were accepted the Elder Brethren of the Trinity-house, who availed themselves of the occasion of their Master (Prince Albert) passing along the shores and lighthouses under their supervision, to pay his Royal Highness a special honour. The morning was superb, the sky serene and bright, the sea unruffled, and so rapid was the motion of the yacht, that it was soon seen by those who had the direction of her that, unless her way was stopped the Royal squadron would arrive at Boulogne before the preparations for the reception of its august freight were completed; or, of what was of more immediate consequence, before there was sufficient water in the harbour to allow the entrance of a vessel of such extraordinary size and tonnage as the *Victoria and Albert*.

At half-past eight the Royal convoy was off Beachy Head, and at ten off Dungeness. Hitherto, all the way from Osborne Bay, there had been something like a race outside their own quiet sailing between the *Fairy* the *Irene*, and the *Victoria and Albert*; the little *fairy* bustling along after them as a sporting jockey on his pony watches and tends the race horse in his trial of speed. Another party had gained much on the other, but the master and seamen of the new Royal yacht drew on pressure of sail without as well from a less known as from those who watched her progress with pleased though jealous eyes. Off Dungeness the rate of speed was diminished, and the squadron slowly steamed along the coast through the Straits towards the French shore. At Fairleigh, the *Victoria and Albert* in all its pride and freshness, came up with the old *Victoria and Albert* (now in charge of the *Osborne*), comparatively toiling like a dredging ship that comes over with the passenger rival was entering swiftly. A foot from the *Victoria and Albert* visited the *Osborne*, when had left the Isle of Wight at twelve on the previous evening, and communicated fresh orders. The Royal squadron then gave chase in its course, and the Queen of England, leaving her less the eldest lion of England, quitted her Island Empire, escorted, as the Sovereign of the seas should be, by a worthy fleet; but unlike most Sovereigns of England, who, thus accompanied, have swept the shores of France, bearing with her the olive and peace, and bringing to those with her great ally in the train of hostility, to mingle the development of those arts whose highest aim is the increase of the wealth and the advancement of commercial prosperity, and the addition to the happiness of all mankind.

THE PREPARATIONS AT BOULOGNE.

The preparations for the reception of the Royal party had begun on the previous day. Like all—always a holiday picture, with its long range of white houses, and the green trees along the quay, welcoming the visitor as with a kind wish, he enters from the sea—put on its gayest holiday dress. Early morning, though it had scarcely recovered from the effect of the late and protracted fêtes of the Napoleon fête on the previous afternoon. At two in the morning the *Rosamond*, 6, paddle-sloop, Commander Crabbe with two of her Majesty's carriages and some of the Royal servants on board—which had passed in at the mouth of the harbour, but, finding a deficiency of water, had anchored off in the roads sailed up to the quay and deposited her freight, making, at the same time, careful examinations and inquiries as to the capacity of the harbour to receive the Royal yacht at the particular spot pointed out in the programme of preparations. About eleven the yacht was seen in the distance towards the quay, for at a distance the British fleet was seen advancing towards the roads. First came the *Fire Queen* despatch-boat, at half past eleven. The *Neptune*, 120 (flag ship), and the *St George*, 120, sailed majest cally to their anchorage within two miles of the harbour. The *Sanspareil*, 71, followed next; and, as she steamed up, drew many an observation regarding the gallant position she took up before the batteries at the entrance of Boulogne harbour. Soon afterwards the *Ardent*, 17, the *Bulla*, 6, and the *Sprightly*, steam-tender, arrived; and these ten vessels, including the *Rosamond*, took up their position in a line at a distance of from one to three miles from the harbour. This was accomplished by half past one; the vessels lining the fort which, however, did not return the salute until gun-fire. The Royal fleet was speedily the cause of a crowd of boats, of all dimensions steam, sailing, and rowing; and, to add to the brilliant effect of the sea-view, about twenty yachts ran out of the harbour together to witness a regatta got up for the occasion, for the prize in which twelve of their number were about to contend.

Every one was delighted for the time in gazing on so pretty a spectacle from the shore, as they might well be. The 300 English visitors who landed about three o'clock from the Folkestone packet to witness the animated scene on the quay, the bright coloured uniforms of the soldiery contrasting well the quiet costumes of the civilians, and the light toilettes of the ladies—all was bustle and gaiety. The streets were thronged with country visitors in every variety of costume. The limonadier, with his jingling bells and iced drinks at his back; the fishwoman, with nets on shoulder and bare legs; the village cure with broad hat and rosy cheeks; the cavalcades, with the bells jingling on their harness; the hurrying aide-de-camp; the wandering lacquet and his faded prima donna; the tall tambour major, and the short but sprightly vivandière; the red-faced Englishman, the stolid Dutchman, the vapouring Belgian, the smoking German, and the sallow Italian, gave life and variety to the picture. Every other house had a flag of one of the three nations, and at its windows its fair representatives of two of the Allied Powers at least. At the Hôtel du Nord, a busy crowd were curiously investigating the five Imperial carriages by which the Royal party were to be conveyed from the steam-boat to the station on the morrow. Many were the expressions of admiration occasioned by the green panelling of the bodies, the rich white satin linings, the magnificent harness, and the gorgeous scarlet and red wheels and pole, which constituted the fittings of the vehicles.

At five o'clock all eyes were turned towards the station; for at six o'clock the Emperor was expected to inspect in person the preparations made for the reception of his Royal guests, and to abide their coming in the apartments prepared for his Imperial Majesty and suite at the Hôtel du Pavillon Impérial. It was while waiting here that an opportunity was afforded to a sojourning spectator for a full view of the magnificent triumphal arch which the Northern Railway Company and the town of Boulogne had erected, at an expense of nearly £6000, in honour of Queen Victoria's visit to France by way of Boulogne. At the four corners of the bridge leading from the quay to the railway station, four pilasters of sculptured marble were erected, supporting large globes of gold. In front of the entrance to the station was a triumphal arch, 75 feet in height, formed of trellis-work of gold, in the Moorish style, having tall arches of much diminished width on either side. Nothing could be more elegant in fancy, more exquisite in proportion, more perfect in design. It was the realisation of the Eastern palaces of our dreams—an open-air Alhambra in itself. Above this arch, with out stretched arms, as if to welcome within them the coming guest, stood in an attitude at once bold and simple, a statue of the "Genius of Civilisation"—an appropriate sentiment admirably expressed for the progress of civilisation, and with it the happiness of the human race, as leading betwards real liberty and lasting peace, is the true scope and tendency of the alliance between England and France. Passing through this arch, on the right side, might be seen a series of verandahs or arches, formed of the same exquisite trellis-work, and it reached, as in the triumphal arch, by palm trees of golden trunks, with knots of broad gold leaves clustering at their tops. Each of the arches contained rows of seats covered with crimson cloth. The whole square of ground forming the court of entrance in front of these, which, but ten days before had been a dry patch of arid sand, was now changed into a lawn of green turf, dotted with beds of blooming flowers. Flowers had been extemporised by hundreds to form a back ground, and train after train from various parts of France, had brought up its greenest turf, on which the eyes of England's Queen might rest for a while and be refres ed.

The arch, the verandahs, the outer windows of the station, were everywhere adorned with the Royal arms, and everywhere by clusters of tricolors and the national flags of the Allied Powers in every possible arrangement. The reception rooms of the public towns of France and England figured in numerous compartments. From the centre of each small arch hung suspended a *corbeille* or basket—chandelier of flowers—which conveyed an impression of brightness, lightness, and airiness to the mind of the spectator. It will be remembered that the boulogne station of the Northern Railway of France is constituted of a number of arches, filled in with glass, as in our Great Northern. Advantage was taken of this to produce a charming effect. On entering, to the right, through a door surmounted by the Royal arms and covered with crimson velvet studded with golden bees and stars, the spectator found himself opposite to a large sized window, such as may be seen in an opulent abbey, at the top of which were a canopy of crimson velvet curtains, looped up with golden cord, and furnished with white lace—the light of the window being softened by entirely covering the glass with Swiss muslin, on which, as a background, the drapery was disposed. A centre of flags surmounting the Royal arms, completed this exquisite arrangement: to which a further magnificence was added by the velvet compartments being also *parsemés* with golden bees and stars in great profusion. To the left an area opened on an amphitheatre of crimson velvet benches—intended to be occupied by ladies in elegant toilets. To the right was a door having crimson velvet curtains edged with gold lace, which opened into the private boudoir of her Majesty. The Royal arms were above the door, while five golden eagles supported the canopy of each compartment. Every arch was garlanded and filled with flowers; from the ceiling, also, hung a vast *cassolette* of flowers, about which were suspended twelve small golden baskets of exceeding lightness, from which flowers were pendent in tasteful profusion. The carpet to this apartment was remarkable for the brilliant brightness of its colours, but, at the same time, the harmonious tone of its composition. It was an arrangement of flowers, and does honour to the workmen of Nancy, who have been for some time past engaged upon it. Twenty six golden chairs of light construction, but with the novelty of crimson velvet cushions, on exceedingly light frames, were placed on the floor, with a luxurious easy chairs, also gilt, and crimson bottoms.

The Queen's leader, opening from the alcove or door before mentioned, was a master specimen of French taste. The walls were covered with fluted white and rose-coloured drapery, reaching from the ceiling to the floor. The curtains of the windows, and the drapery of the door, consisted of the most exquisite Gobelins work, relieved by an under curtain of the finest lace. The chimney piece was of pure white marble of the classic character, surmounted by a mirror of elegant design. The carpet of the boudoir, woven in one piece, is said to be one of the most exquisite pieces of work which ever left the manufactory of the Gobelins *Convolettes* in gilded white porcelain, with cherubs holding wax lights were suspended by floral wreaths from the ceiling, the light being entirely artificial. The chairs, sofas, and *portieres*, were all white and gold covered with Gobelins tapestry; while throughout the apartment rare excited added to the beauty of the scene. Such was the almost fairy scene presented to the spectators at the entrance to the railway station.

ARRIVAL OF THE EMPEROR.

Exactly at six o'clock on Friday afternoon the trumpets of a detachment of Lancers announced the arrival of the Emperor, who, accompanied by Marshal Baraguay d'Hilliers and two aides-de-camp, proceeded in a *char-a-banc*, drawn by four horses, to the Hotel du Pavillon Imperial on the sands, which has Imperial Majesty had selected as his residence pending the Queen's arrival at Boulogne, as affording the farthest view out to sea. The Emperor was cheered by the people in the streets especially by those of the order of the peasantry, and also by numerous English gent emen either residents or visitors to the town. On reaching the hotel, the Emperor, who was in plain clothes, came forward to the balcony and bowed to the applauding assem lage in front. At this instant the British fleet fired a Royal salute, as also did the battery on the fort. After dinner the Emperor again appeared on the balcony, where he remained some time smoking his cigar, apparently in quiet, but it was understood afterwards that he was taking *coup d'œil* of the scene around, and that he desired at that period the remarkable effect to be produced the next morning by the array of the troops along the cliff, and the platoon firing, which formed so great a feature in the reception of her Majesty.

Boulogne was bright throughout the night—an illumination at the Tintilleries, with a ball for the middle classes, and a more select entertainment, at "four francs per ticket," at the "Etablissement des Bains," continued the pleasurable excitement far into the morning.

THE MILITARY PROCESSION.

At eight o'clock on the eventful Saturday the Emperor was up and away to his camp; at nine he was breakfasting at his hotel; at ten the streets were crowded, scaffolding erected opposite every possible house on the line of route, and red trousered and leather legged Lancers and Dragoons, with helmets of glittering brass and long horse-hair tails, were galloping from hotel to station. The whole quay and the upper town looking down on it were thronged. At eleved, 2000 Lancers marched to occupy the square before the station, and to line the route from the Custom-house, where was erected a gorgeous pavilion, to mark the spot of her Majesty's landing.

At half-past eleven commenced one of the grandest military processions ever witnessed. From the Camps at Honvault, Ambleteuse, in other villages extending along the coast, and towards St. Omer, forty thousand men of different infantry regiments marched into Boulogne—each regiment headed by its band some playing martial airs, others with their trumpets sounding and their drums beating. The clang of arms, the steady tramp of so many thousands, the waving of their colours, the very hum of so many voices—for a French soldier will not march in silence—the sound of the words of command from near and from afar—the recollections of the past, with which the scene, the men, the genius, and the fame that inspired them all, the *presens numen* of the time, had something solemn and inspiring. At a quarter to twelve Riflemen, Voltigeurs, and Chasseurs de Vincennes were seen climbing the hills that skirt and command Boulogne on all sides. Everywhere around and above were soldiers, in long lines stretching out to the very farthest distance.

The Emperor at this moment, dressed in a uniform of green and gold came out into the balcony of his hotel, smoking a cigar, and gazed, as it were, with longing eyes across the sea. At half past twelve he mounted his horse and rode down to the small pavilion, or elegant little kiosk erected at the point of landing. Having seen and approved that all was in readiness, he returned, and mounted the elite to review the Chasseurs.

The scene presented by the *entente*, between the "Etablissement des Bains" and the Custom house—the place of landing was strikingly magnificent; the harbour was lined with noble steam-vessels, merchant ships, yachts, and craft of every kind, all gaily dressed with colours flying to the light wind. The whole range of routs seemed bristling with bayonets, the soldiers dense in masses of colour—blue, red, and yellow the people in scarlet and white. One hundred thousand spectators were along the streets, in the windows, and on the platforms leading along to the station. The centre group was formed by the reception pavilion surrounded by flowers and vases of myrtles. About this were a dark mass of Roman Catholic clergy, relieving in effect a crowd of representatives of our own red-coats—Marines, Guardsmen, Engineers, and Foreign Contingent—with here and there a Crimean hero or two. Near these, conspicuous, shone the Emperor himself on a chestnut charger, in advance of a brilliant staff. At half past one the Emperor, who had ridden out once more to the high grounds, in his impatient anxiety, returned, and at twenty-five minutes to two the first cannon announced the

ARRIVAL OF HER MAJESTY.

A mist had overspread the Channel early in the morning, but it cleared away as the day advanced. When the Royal yacht had steamed to within about four miles from Boulogne, Captain Smithett, who piloted her, waited for a few minutes after for the tide or for the arrival of the steamers forming the Royal escort, or for both, and then the *Victoria and Albert*, conspicuously by her three masts, her great size, and fine proportions, steamed majestically for the harbour. She carried the Royal standard of England at the main, the trinolor at the fore, the union jack at the bows, and the Royal ensign at the stern. The English men-of-war forming the squadron of Lion or were drawn up outside the harbour, and formed an imposing spectacle. Each ship had the British ensign and the tricolor floating at the main, and each gave innumerable flags to the wind. At twenty five minutes past two the first puff of white smoke was seen by the sharp ring of a brass gun at the battery on the Capecure cliff; and one after another the Royal salute came distantly booming upon the ears of the Royal visitors, who could now distinctly see from the deck the fine cathedral like dome of the church in the Upper town, and the clean stone houses of the Haute Ville. The English men-of-war now took up the music thunder, and immediate after broad-side pealed from them. The ships were soon enveloped in smoke, and when it had cleared away and the Royal yacht had neared the squadron every ship appeared with manned yards. As the *Victoria and Albert* drew still nearer to the shore a big dark streak was seen stretching along the heights for miles to the right and left of the town. Then waved and pulls of smoke, the gleam of bayonets, and, by-and-by, the distant rattle of musketry convinced the long dark streak into lines of French soldiery. They not only crowned the heights, but wherever a lower ridge upon the cliffs gave "coign of vantage" to a company of infantry there were drawn up Chasseurs de Vincennes, or the light companies of a French infantry regiment, whose sharp volleys alternated with the deep-mouthed welcome of the ordnance of the port. When the Royal yacht crossed the bar, at fifteen minutes to two, loud hurrahs broke from the crowds upon the left jetty. On the right jetty, along the lower stage near the water was one unbroken line of French infantry, who presented arms as the Royal yacht passed. Bands of music were stationed at intervals on both sides of the jetty, and the sound fully spirited and warrior like. The French drums was continuous. The spectacle was now most striking. The quay contained an immense multitude. Tricolored flags and British ensigns waved in profusion from every house, and the whole port was gay with streamers, flags, and garlands. Every window had its group of fair spectators. Opposite the Dépôt de Bagages was seen a square pavilion or small temple-like edifice, open at the sides and decorated in the style of the *loggie* of the Vatican, which, as it appeared the most conspicuous object along the quay, was correctly supposed to be the place where the Emperor awaited the arrival of his Royal visitors. As soon as the *Victoria and Albert* drew alongside this pavilion her Majesty appeared on the side, and gracefully acknowledged the salutations of the Emperor. As the yacht was brought to the Quay, the Emperor took up to run up the platform, and, after respectfully kissing her Majesty's hand, saluted her upon both cheeks, according to Imperial and Royal etiquette, and the theory which presumes that crowned heads stand in sacred and fraternal relationship to each other. The Emperor then cordially shook hands with Prince Albert, the Princess Royal, and the Prince of Wales, and, giving his hand to the Queen, led her down the stage to the pavilion, within which state chairs were placed on a dais, and here her Majesty, seated, received the following address, agreed upon at a meeting of the English residents and visitors in and near Boulogne, at the Hotel du Nord, on the previous Wednesday:—

May it please your Majesty,—We, the British residents and visitors of and near the town of Boulogne-sur-Mer, with feelings of the most profound respect, beg to present our cordial congratulations on the happy occasion of your Majesty's visit to your ancient ally the Emperor of the French at event which we doubt not will be, under God's blessing, still further to strengthen and perpetuate the cordial union at present so happily existing between France and Great Britain.

That Almighty God may long preserve your Majesty to reign over a loyal, happy, and contented people, and that He may inspire Him whose heart leaps to your Majesty's Royal consort, the Prince Albert, and to your Majesty's Royal Family, in the fervent prayer of your Majesty's most dutiful and loyal subjects the British residents and visitors in and near Boulogne-sur-Mer.

WALTER KERR, R.N.

The address was presented through Mr. Hamilton, her Majesty's Consul at Boulogne, and was read to the Queen by the Earl of Clarendon. Her Majesty was graciously pleased to accept the address, and bowed her acknowledgments. Baron James Rothschild, the Chairman of the Northern of France Railway, being in attendance with the other directors, presented to her Majesty a magnificent bouquet of flowers, with ornamental accompaniments of great value. The Queen smilingly accepted the gift, and bowed her thanks to the Baron.

ROUTE TO THE RAILWAY STATION.

Her Majesty was then handed by the Emperor into the carriage he had placed at her service. The Queen and the Princess Royal occupied seats with their backs to the horses, his Royal Highness Prince Albert and the Prince of Wales sitting opposite. The Emperor having then mounted his horse rode upon the right of the carriage. At this spectacle of the Emperor himself forming a part of her Majesty's escort and guard of honour, the acclamations of the multitude were redoubled, and cries of "Vive la Reine!" and "Vive l'Empereur!" were mingled with the hearty cheers of the English spectators. Then came a carriage containing the two ladies in attendance upon the Queen, the Earl of Clarendon, and the Marquis of Breadalbane. The other members of the Royal House hold followed, and the Dragoons and Lancers brought up the rear. The road was kept by French infantry, whose drums and bugles made military music as the Royal cavalcade slowly proceeded through dense crowds to the railway station. Her Majesty, who appeared to be in excellent health and spirits, acknowledged in the most gracious manner the *vivats* of the people. The Queen wore a white bonnet and blue satin visite, and Prince Albert a Field-Marshal's uniform, with the blue ribband of the Garter. The Emperor wore the uniform of a General of Division, with the Grand Cordon of the Legion of Honour.

The whole scene was one of dazzling brilliancy, and the most eloquent pen would fail in depicting it in its true colours. It is stated that there were nearly 60,000 soldiers under arms for the occasion; and as they were seen crowning the heights of the cliffs as far as the eye could reach upon each side of the harbour, as well as lining the route by which the august party were to move, the effect produced was one of surpassing splendour. The Royal and Imperial cortège was preceded by regiments of Lancers and Carabiniers. The Imperial Guard and the Chasseurs de Vincennes were also in attendance. The rich and varied uniforms of the officers rendered the coup d'œil one of the most entrancing character. Not the least striking and interesting object at the entrance to the station was the presence of the *pêcheuses* or fishwomen of Boulogne, who occupied the most prominent seats on the semicircular benches erected there. It appears that they enjoy some peculiar privileges on such occasions. Their rich red petticoats and nicely trimmed caps gave them a most picturesque appearance. They generally hold bunches of flowers in their hands; and they bore their honourable and prominent position during the passing of the gorgeous pageant before them with that dignity and calmness which a thorough consciousness of their prescriptive rights no doubt imparted to them. Her Majesty took marked notice of them, and made some inquiry respecting them.

The Imperial and Royal cortège arrived at the railway station at about twenty minutes past one o'clock. Having stopped a few minutes to partake of the refreshments that were prepared, the illustrious party entered the carriages in waiting, and proceeded by the railway at a rapid rate on their route to Paris.

DEPARTURE FROM BOULOGNE.

The train conveying their Majesties and suite left the Boulogne station at a quarter to two. Her Majesty was accompanied by the Marchioness of Ely, Lady Churchill, the Hon. Mary Baltiel, the Marquis of Breadalbane, the Marquis of Abercorn, the Earl of Clarendon, Earl Granville Major-General the Hon. C. Grey, Colonel the Hon. C. B. Phipps, Lord Alfred Paget, Lieutenant-Colonel Baldwin, Sir James Clark, and Mr. Gibbs. The engine was gaily decked out with flags, and the Imperial couleurs with outstretched wings were placed on each side of the engine. The first station at which the Imperial train stopped was Montreuil, where it arrived at a quarter past three o'clock. This station had been converted into a perfect forest of evergreens, shrubs, and flowers; among which the flags of the two nations were tastefully arranged; and on the upper portion of a triumphal arch were the words "Welcome to France."

After a delay of a few minutes the train was again in motion, and at five minutes to four o'clock the old town of Abbeville was approached—Abbeville, with its remnants of its old feudal fortifications still washed by the waters of the Somme, its antique towers of the vener able church of St. Vulfran, with its old Abbey, in the Rue Barbe just, where Mary Tudor, sister of Henry VIII., became the bride of Louis XII.—the old town where the treaty was signed by which our Henry III restored to St Louis the possessions of his Gascogne, where the French army went forth to meet the English archers on the battle field of Cressy, where the Black Prince won his spurs, and where, in later times, Colbert established his Government cloth factory, and where now the waters of the Somme still drive the whirling wheels and spindles of numerous cloth factories. The station was decorated with a profuse display of banners and evergreens. The guard of honour drawn up along the station consisted of the National Guards of the town and a squadron of dragoons. A tasteful pavilion, with drapery of crimson velvet and gold, was erected for the Mayor and the members of the Corps Municipal of the town. The Mayor had the honour of being introduced to her Majesty during the few moments the train stayed at the station, and once more the engine was on its way, to the land of the National Guard playing the national air, "Partant pour la Syrie." The department of the Pas de Calais, with all its historic associations, its names and sites familiar to earlier English history, was left behind, and the barren sands, and extensive shallows and inlets of the sea, were exchanged for the fertile and richly-cultivated province of Picardy and the department of the Somme.

The train sped rapidly on its way. At the small stations of Pont Remy, Longpré, Hangest, Picquigny, Ailly, a glimpse only was afforded of the tasteful decorations which evinced the joyous welcome to the Emperor and his Royal guests. At forty eight minutes past four the train passed the old fosse of the town of Amiens, and where ramparts once bristled with the arms of foemen, there were assembled thousands of the population who crowded the boulevards, now the peaceful promenade of the town. There was a line formed of the National Guard of Amiens; then came a short, dark tunnel, again the National Guard, and again thousands of the population, who crowded the embankments; another short tunnel, and again the National Guard and the applauding multitudes and the salutes from the artillery. Once more the train emerged from a tunnel, and rested at the Amiens station. There were two squadrons of Cuirassiers on foot; the Mayor in his scarlet robe, the members of the Corps Municipal in their robes, Monseigneur Salinis, the Bishop of Amiens, and the clergy of the town in their sacerdotal robes; the members of the Learned Society in their square boarded caps and dark coloured gowns; the professors of the College of the Lycée Impérial in their academic robes; there were hundreds of the most beautiful and elegantly dressed ladies of Amiens; velvet draperies and festoons of flowers, and trophies of banners and Imperial ciphers, and the cordial "Welcome to France!" there were bands of the Cuirassiers and of the 67th Regiment of Infantry, and of the National Guards, playing alternately the national airs of England and France. The *last ensemble* was in every respect worthy of the occasion and creditable to the taste and good feeling of the authorities of Amiens. Her Majesty and suite, with the Emperor, alighted from their carriages and entered a boudoir at the station fitted up in the most *recherché* style, and the Mayor and the chief functionaries of the town had the honour of being presented to her Majesty. The daughter of the Prefet, an interesting young lady of seventeen, habited in white, approached the Royal carriage, and timidly but gracefully presented to the Queen a splendid bouquet, which her Majesty received with more than Queenly ease.

At five minutes to five the train was once more shrieking along its iron path away from the town where, half a century or more since, that treaty of peace was signed for which Sheridan said every one was glad but none were proud. Away went the convoy passing rapidly by the villages of Boves, Ailly, Breteuil, Saint Just, and in the pleasant department of the winding Oise at five minutes to six. Once more it stopped on its course, at Clermont. There, again, the National Guard lined the station, amid a profusion of evergreens and flags and trophies; while the presence of several hundred ladies in elegant attire, seated beneath tastefully-draped awning of crimson velvet with rich gold fringe, imparted grace and beauty to the decorations. In the centre of the station was a compartment, draped with velvet and furnished with gilt seats for M. Baudouin de Berther, the Préfet de l'Oise, and the civil functionaries; and companies of Sapeurs-Pompiers, Gendarmerie, and National Guards, lined the approaches to the station. The train was passed at ten minutes after six; the train entered the department of the Seine et Oise, and soon passed the Saint Leu, Pecy, Ermont, Beaumont, Isle Adam, Anvers; and the train stopped for the last time before entering Paris at Pontoise.

The sun was setting on the richly cultivated plains of Montmorency, and tinging the thick-wooded rising ground in the distance, as the Royal visitors were borne past Herblay, Franconville, Ermont, and Enghien; and at five minutes past seven her Majesty passed through St. Denis. The fortress of the advanced works of the fortifications of Paris. At the five minutes and the line of the fortifications of Paris was passed for the first time by a reigning Sovereign of England; and at twenty minutes past seven, amid salvos of artillery, her Majesty alighted from her carriage in the station of the Strasbourg Railway. The names of "Boulogne" and "Strasbourg" are associated with important events in the history of the Emperor; and it is a curious coincidence that the names of these towns, by which the Emperor had prematurely endeavored to reach the throne of France, should be exactly those which are connected with the visit of the Queen of England to the Emperor, now that he has attained the highest summit of a proud and honorable ambition.

THE STRASBOURG STATION.

Here everything was arranged with the lavish magnificence and the exquisite taste of the great masters of decorative art. The whole station was transformed, as if by magic, into a suite of palatial apartments. There was an outer room facing the Boulevard de Strasbourg, then a small and beautiful saloon, and inside a vast space resembling a drawing-room. Within this latter inclosure, and just in front of the spot at which the train was to arrive, was laid out a large and splendid parterre of the finest flowers. From its roof depended long streamers, known, we believe, by the name of oriflammes. The openings at its sides were hung with red silk curtains; around it were seated living lines of female grace and beauty, while officers of different branches of the military service, members of the railway directory, or their friends, paraded in the centre and near the time of the arrival of the grand cortège, and a number of other gentlemen, mixed with some ladies, occupied seats in the galleries above. The windows of the small saloon were hung with rich dark velvet, and in its centre was a charm ing canopy covered with white satin. In this room were collected a number of orange-trees, bearing their small delicate blossoms.

The public had been informed that the illustrious party were to reach their destination in Paris at six o'clock; but it was soon ascertained that they could not arrive until after seven. Prince Napoleon came shortly before six, and was followed a few minutes afterwards by Marshal Magnan, several general officers, Ministers, municipal authorities, and members of the Legislature.

THE ARRIVAL AT PARIS.

As seven o'clock passed away the expectation of the fashionable company at the terminus, amounting, perhaps, to about 2000 persons, seemed considerably to increase; and at length, at twelve minutes after seven, a low murmur and an anxious gesture from some of the more advanced observers showed that they had already descried indications of the approach of the train. In a few instants the boom of cannon announced that it was at hand, and at a quarter-past seven precisely, amidst a roll of drums, it swiftly wound along to the termination of its course. Here a military band stationed by the spot struck up the English National Anthem, thrilling many a heart. At the close of this performance her Majesty, leaning on the arm of the Emperor, trod the soil of the bright capital of France, amidst the intense applause of the whole of the brilliant company around.

The Emperor was in full costume, and wore the ribband of the Garter. Prince Albert, the Prince of Wales, and the Princess Royal came next, with their suite; then Prince Napoleon, accompanied by a host of high officers of state. Her Majesty paused for a moment, apparently for the purpose of observing the scene through which she had to pass. The illustrious party then advanced to the outside of the station, and entered the open carriages, six in number, and each drawn by four horses, prepared to convey them to St. Cloud. In the first of these carriages were her Majesty, with the Princess Royal on her left, and then Prince Albert facing the Queen, and the Emperor facing the Princess. In the next sat the Prince of Wales and Prince Napoleon, with the Marquess of Breadalbane and the Earl of Clarendon. Before starting a magnificent bouquet was presented to the Queen by General Lawestine, in the name of the 9th battalion of the National Guard, which was doing duty on the spot. The cortège set out in the midst of acclamation, and cries of "Vive la Reine d'Angleterre!" "Vive l'Empereur." "Vive le Prince Albert!" Just as the party was starting for the terminus a deputation of the pupils of the Polytechnic school who had relatives killed before Sebastopol appeared, each of whom were crape round his arm. As they passed along rather at a slow pace the illuminations commenced, and each step seemed to bring forth a successive train of light.

THE PROCESSION TO ST. CLOUD.

The road of the procession lay along the Boulevard de Strasbourg, the Port of St. Denis, the Boulevards Bonne Nouvelle, Poissonnière, Montmartre, Italiens, Des Capucines, and the Madeleine, down the Rue Royale, across the Place de la Concorde and by the Champs Elysées, the new Avenue de l'Impératrice, and the Bois de Boulogne to St. Cloud. At regular distances, all down the Boulevards, tall banner standards had been erected, from which long graceful streamers, suspended in the Venetian style, waved with every breath of air; and, besides these street decorations, each house had its separate manifestations of welcome, so netimes in the form of the familiar tricolor, sometimes in a bit of tapestry hung out from a balcony, sometimes in the less pretending shape of coloured lanterns strung across from window to window, even to the lofty garret. It was curious to observe the intense desire displayed by all classes to make the wonderful city of Paris look its best and fairest before the eyes of our gifted Queen, to make her Majesty and the members of the Royal family who accompanied her with a due appreciation of the claims which Paris has to be considered the gayest and most brilliant capital in the world. Certainly those claims were never more overpoweringly displayed. The great breadth of the Boulevards and the importance of preserving the series of splendid perspectives which they present unhurriedly prevented a series of triumphal arches; but along the route of the procession many trophies had been erected, some of them including sculpture of considerable merit, and bearing inscriptions suitable to the occasion. At one point the names of the departments inscribed on shields drew attention to the sentiment that Paris on that occasion represented all France; at another it was some institution or private company close at hand, which, rushing to the edge of the *trottoir*, vindicated its importance by setting up a special sign of welcome. The one triumphal arch was really a fine piece of construction, and looked exceedingly imposing. Raised by the *artistes* of the Opera close to the Rue Lepelletier, it had the inside of its piers and *tableaux* covered with Imperial bees; the tympanum of the figures over each pier being formed by pairs of coloured eagles, with extended wings. At several other points flanks of steamers, or cords to bear some pendent banner of inscription, crossed the thoroughfare, but otherwise the grand series of vistas which the line of the Boulevards commands was not disturbed. It is worthy of remark that not only did the decorations extend throughout the route itself, but also along the side streets which open up from it, and that these were hung with flags and trophies of evergreens as far as the eye could penetrate down them. This was particularly observable with that noble street, the Rue de la Paix, which was so brilliantly ornamented as to make one almost wonder that the order was not irresistably led to enter the Place de la Concorde and the Champs Elysées in that direction. Whether by fortunate accident or skilful premeditation, the decorations appeared gradually to diminish as the more open space was gained, but even these enough was retained to preserve the festive character of the occasion and to heighten the ordinary effect of the colonnade.

The Royal and Imperial party appeared struck with the tasteful and appropriate decorations of the lofty arch of triumph at the corner of the Rue Lepelletier, under which they passed. The beautiful illuminations of the Opera Comique also attracted their attention. As they approached the Champs Elysées they proceeded at a less slow pace. They passed under the the triumphal arch of the Barrière de l'Etoile That majestic monument bore no trappings; it was left, with good taste, in its solitary and imposing grand air. Even then the crowd was as great as on any other part of the line of march. Indeed, from the Strasbourg terminus to that spot there was no place empty, no window unoccupied. The Bois de Boulogne was crowded, and every house in the Boulogne-sur-Seine had its display of flags. At the bridge of St. Cloud a triumphal arch was formed of the foliage of the oak, interwoven with garlands of flowers. A salvo of 100 guns announced the approach of the cortège to St. Cloud. It was near nine o'clock when they reached the château. The Queen was received by the Empress at the foot of the grand staircase, accompanied by the Princess Mathilde, and the officers and other members of the Imperial household, the grand officers of the Crown, and the Ministers. On entering the state apartments, these were presented to her Majesty by the Emperor.

ST. CLOUD.

The acclamations, the hurrahs, did not cease resounding along the entire length of the procession. In proportion as the day waned, all the illumination, sudden, brilliant, and fairy like, dispersed the darkness, and preceded like a train of flame the passage of their Majesties. Enchantment, added to the programme, carried to its climax the enthusiasm and ecstasy of the crowd.

At a quarter to nine the cortège arrived at St. Cloud, announced by salvos of artillery. Her Majesty the Empress stood at the foot of the staircase, accompanied by her Imperial highness Madame the Princess Mathilde, by the ladies and officers in waiting of the Empress and Empress, as also by the Marshals of the Palace, by the ladies and officers appointed to wait on Her Majesty the Queen of England during her sojourn, by their Excellencies the great Officers of the Crown, by his Excellency the Minister of State and the Imperial Household, and by his Excellency the Minister of Foreign Affairs. Conducted by the ascending to the grand apartments the Emperor presented to her Majesty the Queen the Ministers, the great officers, and the officers of the household. At half-past nine their Majesties entered the Grand Gallery, where dinner was served. Their Majesties afterwards returned to the state apartments, where they remained till eleven.

In the evening St. Cloud, Boulogne, and the principal streets of Paris were splendidly illuminated.

Sunday was observed as a day of rest by the illustrious visitors at St. Cloud. In the morn ng they attended Divine service, which was performed by the Chaplain to the Emperor, and in the afternoon they took a drive in the park and through a portion of the Bois de Boulogne. After dining *en famille* with his Imperial Majesty they were present at a concert of sacred music given at the palace by the Conservatoire de Musique.

PALAIS DES BEAUX ARTS.

Whatever regret might be felt by the multitudes excluded on Saturday, at the delay which prevented her Majesty from being well seen in the progress through the streets of Paris, the programme to be observed during her stay in Paris afforded abundant opportunities for counterbalancing the disappointment this occasioned. It was evidently the Emperor's intention to let the people of his capital have every reasonable opportunity of seeing his illustrious guests, and for manifesting their respect and sympathies. This was made evident on Monday by the manner in which the visit to the Palais des Beaux Arts was conducted, and by the subsequent drive along the Boulevards and the exhibition of that splendid procession, La Salute Clapelle. Some 600 spectators were present at the Beaux Arts and the promenade on the Boulevards was, of course, crowded by all Paris. With one slight *contretemps* the arrangements were carried with perfect order and regularity, and the Queen was thus afforded a sight fully within the influence of that artistic spirit which, among the French people, and in Paris especially, makes such constant calls upon the admiration of the stranger.

As it was known that the Queen would visit the Palace of the Beaux Arts on Monday morning, the approaches to it were crowded at an early hour, as well as the line which her Majesty was to follow from St. Cloud to the Exhibition. The Avenue Montaigne was kept clear, and with Venetian poles up, ornamented with shields bearing the names of towns and flags and streamers were in great abundance. The beautiful façade of the front of the Palais des Beaux Arts was decorated with flags, as well encircled with poles ornamented with escutcheons and flags and banners, flammes of the English and French colours, covered with golden trabeques. The central part by which their Majesties were to enter was in like manner ornamented with shields and clusters of flags. At eleven o'clock the acclamations of the crowd announced the approach of the Queen, and the shouts and hurrahs were repeated as the cortège reached the entrance. Ten beautiful carriages, the first two drawn by four superb horses, and richly adorned, comprised the Imperial cortège, escorted by the Cuirassiers of the Guard. The Queen was handed from her carriage by the Emperor, who gave his arm to her Majesty as she entered the principal saloon, while the band of the Cuirassiers à Cheval played the National Anthem. They were accompanied by Prince Napoleon, Prince Albert, the Prince of Wales, the Princess Royal, the Presidents of the Legislative Corps, the President of the Council of State, the Ministers, and the suite of the Queen. The Emperor as well as Prince Albert was dressed in plain clothes, and the Imperial Commissioners of the Exhibition were presented to the Queen by their President, Prince Napoleon. They had mustered in the saloons immediately adjoining the principal entrance, and it was at once remarkable and interesting to see so great a gathering of men who, in different countries and for various scientific, had achieved repute for and position in the various arts and sciences. Among Frenchmen, M. Renaut, the President of the Institute; M. Horace Vernet and M. Ingres, the artists; M. le Play, M. Arlès Dufour, M. Salandruze de Lamornaux, M. de Rouville, M. Michel Chevalier, Baron Rothschild, M. Perrière, M. Schneider, M. Fresnel. Among foreigners, Mr. Wagen, Professor Liebig, and M. Von Vechtan. Among our own countrymen, besides Mr. Cole, C.B., Mr. Redgrave, R.A., Dr. Forbes Royle, Professor Wheatstone, Mr. Fairbairn, Mr. Locke, M.P., Mr. Digby Wyatt, Mr. Warren de la Rue, Professor Willis, Mr. Cubitt, Mr. C. Mathy, Mr. Wicksworth. A beautifully-executed bust of her Majesty stood on a pedestal in the centre of the reception-room, and on every side were the walls covered with chefs-d'œuvre of art, and crowds of the best spectators hemmed in from an invasion of the crowd which was pressing to the building. This small force, it was said at first adopted, would prove sufficient to protect the illustrious visitors from pressure by the crowd in the course of their survey; but, after a time, notwithstanding their exertions, they got overwhelmed, and in consequence it was found requisite to supplement their numbers by some *sergens de ville*.

The reception over, the cortège, led by the Prince Napoleon, advanced into the principal saloon for the display of certain pictures, and here the works of chief interest were pointed out by Dr. Waagen, than whom none could be more qualified to fulfil such a duty. These are some fine productions of the excellent French court, such, for example, as the three powerful paintings by Vinano, near the entrance; and there is a great statue of St. George and the Dragon, which occupies the centre, is a noble effort of sculpture; but the merits of the collection as a whole scarcely rise to the level of that exhibited by Belgium, which the illustrious party next proceeded to examine, with as much care as the circumstances rendered possible. The attention of their Majesties was, of course, much distracted by the cheers and cries of "Vive la Reine!" which greeted them at different points, but the Prince and the Royal children, who kept themselves more at liberty, were so earnestly bent on seeing all they could that several times they were left behind, and, but for the exemplarity energy shown by M. Arles Dufour and other officials, might have got lost altogether in the crowd. It would have been strange

L CORTEGE IN PARIS.

indeed all the wonderful pictures of the Belgian masters failed to elicit the highest admiration. Such artists as De Groux, Robbe, Stevens, and Verboeckhoven do honour to their country by the style of their works, and successfully maintain its celebrity as a school of painting amidst the formidable rivalry of France and England. From the Belgian collection the Emperor led his guests into the principal saloon of French painting, and here they were prepared for a rich intellectual treat, when in rushed the crowd of spectators, and for several minutes all was confusion. The illustrious party made its way as rapidly as possible to the next saloon, which was at once cleared for its reception, and here the scattered cortège was after some time reassembled. While a reinforcement of *sergens de ville* was at the door, the masterpieces of Delaroche and other painters, suspended in this inner saloon, were leisurely examined. No great inconvenience, therefore, arose, and both the Emperor and her Majesty seemed delighted at the temporary inroad upon their freedom of locomotion with exemplary good nature and self-possession. As soon as order had been restored the progress through the Palace was resumed, and the Sovereigns bowed to extend their steps to the French Sculpture Court. Here a great and varied display of artistic excellence was presented to them, comprising many works of rare merit. The sculptors of France are evidently more disposed every day to depart from the severe standards of classic taste, and to consult mainly the inspirations of their own fancy. Some critics will lamentably lament that it should be so, but after all it cannot be denied that the artistic world at large profits by diversity, and that both by the faults and the merits thus developed permanent instruction for the future is derived. From the Sculpture Court, the Imperial and Royal visitors passed into the saloon devoted to M. Horace Vernet's chefs-d'œuvre. There for a considerable time they admired his celebrated battle, his battle of Italy, and some of the great paintings in which he has commemorated the victories of the first Empire. In this Court stands a remarkable statue of the first Napoleon when a student at Brienne, the work of M. Rolland, and which attracted much attention during the ninth hour of the Palace the progress of the cortège was interrupted for some minutes while their Majesties listened to the performance of a large choir of workmen singers trained on a system bearing some resemblance to that of Hullah in England, and who went through a chorus in which 'God Save the Queen' was introduced, led by their conductor, M. Chivot, with extraordinary precision and musical effect. At the north-east corner of the building a pause took place to examine the restoration of the Minerva executed by Phidias in precious metals, jewels, and ivory, which was placed in the cella of the Parthenon at Athens. This restoration, which is in complete accordance with the description of the original by ancient writers, is the property of the Duc de Luynes. It scarcely satisfies the expectations that are naturally excited by such a work, but of course is an interesting feature among the general attractions of the Palace. Their Majesties now entered the saloon of M. Ingres, who divides with M. Horace Vernet the honour of having had a special court allotted to him for the exhibition of his works — a mode certainly justify that high compliment, for, though rather limited in severe in his treatment, the artist has boldly carried his individuality into the first school, and produced masterpieces that rivet attention by the emanated spirit breathed over them. From this point the Queen was conducted by her Imperial host through the gallery of British Artists. It is unnecessary to dilate upon the excellence of a school with which all must be familiar who have paid any attention to art are familiar. Our pictures are upon the whole admirably represented, and the experience of exhibitions in no degree diminished the interest attached to a collection which exhibits such strong contrast to the general character of the works in the Beaux Arts. England shows a strong predilection for cabinet paintings, because pictures are purchased there mainly to decorate the walls of private dwellings and to enhance the attractions of domestic life. Continental customs the habits of the people and their relations with their Governments have hitherto had the effect of making their works of art dependent upon a different class of custom and patronage; and the result is, that their subjects are more ambitious, their treatment more adapted to grandeur than to minute elaboration, well fitted for display in palaces and galleries, where focal distance can be secured, but out of place in private residences. Ascending the staircase, at the north east corner of the latter, the cortege described the circuit of the upper galleries, in which are displayed the water-colour drawings, the miniature paintings, the engravings on wood and steel, and the architectural designs contributed by different countries. Here England takes a very high position from the excellence of the works exhibited by her artists in several of these departments. After completing the circuit of the galleries, their Majesties returned to the central saloon, from which they had been compelled to retreat at an earlier period by the inroad of spectators. Here they took leisurely a survey of the great works with which the genius of French art has embellished the walls. "The Last Days of the Reign of Terror," and the great picture of the "Imperial Guard re entering Paris after Waterloo" (by Muller), M. Cousins' painting illustrating the manners of the Lower Empire, Delaroche's cattle picture, and Rosa Bonheur's "Haylield," were all carefully examined; and so delighted were our Royal family with the masterpieces here displayed that they made the circuit of the *salon* twice!!!

PALACE OF THE ELYSEE.

Shortly before two o'clock they took their departure, amidst enthusiastic cheers, and proceeded to partake of Luncheon at the Palace of the Elysée. Their arrival just before two o'clock there was a reception of the *corps diplomatique*.

At three her Majesty, accompanied by her Imperial host, visited La Sainte Chapelle, and was received on her way there and back in the most cordial manner by immense numbers of the population. It was known that at two o'clock she would leave the Boulevards on her return to St. Cloud, and from two o'clock a considerable number of persons took up their station at the archways from the Bastile to the Madeleine. The weather was hot, bright; and as the triumphal arches, flags, and other decorations still remained undisturbed, the spectacle of Saturday was repaired, and the Queen could at leisure admire the beauty of that great thoroughfare. The reception, which was warm in the Rue de Rivoli, through which the Queen passed to the Sainte Chapelle, was enthusiastic among the Boulevards and the other streets the cortege passed through the Rue Rivoli, the principal bridge in which, including Meurice's, were handsomely decorated. At half past five the Imperial and Royal party returned to St. Cloud. At eight in the evening a grand dinner of sixty covers took place. The proceedings of the day terminated with a performance by the company of the Théâtre Français.

To-day (25 h) there are to be great doings at Versailles. Immense preparations have been going on there all the week, under the general direction of M. Duval (the successor of poor Visconti), as architect of the Palace. Many old Parisians went to Versailles every day merely to see the preparations. The magnificent Galeries des Glaces, which is so familiar to all visitors, and which is one of the present generation has ever seen filled, has been all that time in the hands of the upholsterer. Lustres, consoles, and furniture of the most luxurious kind, have been placed in that historical gallery, a magnificent residence of Louis XIV., which no Sovereign of France until the present century has ever felt rich enough to inhabit. One of the most striking features of the gala will be an illuminated representation of Windsor Castle, placed on the banks of the lake at the extremity of the grand avenue in front of the palace. The bouquet will display illuminated initials, bearing the names Victoria, Albert, Napoleon, Eugénie. The environs of Versailles, which have usually a somewhat neglected aspect, are considerably changed for the better. The high road to St. Cyr has been repaired, and the beautiful avenue there, which was covered with moss has been cleaned. The look to the Avenue de Sceaux has been prepared for the artillery of the Imperial Guard.

HER MAJESTY AT BOULOGNE

[ADDITIONAL PARTICULARS.]

From our Special Correspondent.

Up to the 10th of the present month the rather greedy residents of Boulogne, who angle for British visitors, had reason to complain of a very slack season. The steam-boats that used, in former years, to convey two or three hundred Cockneys daily to the hotels of the lower town, to the manufactories of eau de Boulogne (sold to the unwary as eau de Cologne) and to the mild galeries of the Etablissement des Bains, were bringing parties of thirty or forty visitors only. Nineteen out of every twenty after having been filtered through the Custom house, passed along the port in the railway omnibus, *en route* for Paris. Sad was the state of things to local speculators; and, seeing the depression which an indifferent season spreads over water-rig place Blondes and shell-ware houses, we are led to excuse the eccentric bitterness of tone in which the Boulogne journals attacked Calais, when it aspired to the honour of receiving her Majesty on her way to the French capital. When, however, it was officially announced that the disembark tion would take place at the port and, which the name of Napoleon appears to be inseparably connected, the triumphant editors of the Boulogne organs, while twitting the inhabitants of Calais with the neglect they were doomed to suffer, expressed an immediate conviction that the authorities of the port selected would do justice to the Emperor's preference.

It is just to add that this conviction has been justified by facts. Boulogne received the Queen of England in a manner befitting an event destined to become a prominent chapter in the history of Europe in the nineteenth century. In anticipation of this reception, crowds of people began to flock to Boulogne by the railway and the Channel boats. Some of the Folkestone steamers crossed from the English coast with upwards of 350 passengers on board. Despatches arrived hourly to the hotel-keepers, stating that the Emperor hired the Pavilion Hotel for ten days, dating from the 10th inst. Stables for the Imperial stud were taken at the Hôtel du Nord; and at the new Prefecture plans were actively debated for the proper ornamentation of the town.

I am indebted to the Sous-Préfet for many of the facts which I have already communicated to you; but, above all, for many interesting details relative to the final arrangements. The importance of official, as well as rumours prevail in every by-way, and it becomes almost impossible to sift fact from ingenious fiction, is obvious. My acknowledgments are therefore due to the gentlemen who have enabled me to trace the progress of the Boulogne preparations from their origin up to the hour of the Queen's arrival. Of these preparations it may be said, generally, that they were as complete as the time and means at the disposition of the town and cities permitted. In the first place, before the point of disembarkation on the Place Daunou, a pretty tent was erected, carpeted, and ornamented with flowers. Marking the opening of the road towards the railway station were two high columns, supporting vases, in which incense was placed. A spacious square was kept at this point by the bands encamped near Boulogne. The Custom house, and the rows of hotels behind, were gay with the flags of the Allied nations; but, above all, the glistening bayonets of forty thousand soldiers, marked the rugged edges of the cliffs from Ambleteuse, with its ruins of a fort, to Portel, the little fishing-town. Above the splendid scene—the amphitheatre of rocks, dotted with many-coloured houses, and capped by the towering cathedral, and the gay ramparts of the higher town—was a sky of unspotted blue. Not even a silver cloud passed overhead during the memorable morning of the 18th. As the regiments destined to do duty within the town came march ing along the port to the strains of their military bands; as the municipal and orities came sailing along in squadrons, dressed in their gay uniforms edged with silver, and their tricolor sashes; as, one by one, some of the red-coats of old England relieved the blue of French municipal dignity; and as various orderlies dashed hither and thither with large square despatches, while elegant toilets filled up every available window, and pretty faces peered above the evergreens which choked up the railings of the balconies, every body began to talk wildly of the immense significance of the day, and the space it was destined to occupy in history. Now the two nations were fairly allied; now Englishmen and Frenchmen were really and truly brothers. Before, many people had doubted the solidity of the friendship between the two foremost nations of the world; now, this friendship was sealed, was assured henceforth the two countries will be one. Pleasantly enough the soldiers and officers who thronged the jetties, even up to the lighthouse, took every opportunity to say something obliging to subjects of the Sovereign they were about to receive. I strolled to the extremity of the pier—past lively *cantinières* tempting dusty men to try the contents of their little barrels; past English ladies perched upon sand hills, in positions they would never dare to take up under less exciting circumstances; past old gentlemen of nautical pretensions giving acknowledged landmen descriptions of the English fleet lying at anchor off the coast, and past solemn officials walking silently to and fro, with telescopes under their arms. The pier-head was entirely occupied by drummers; and the formidable drum-majors of the French army, wielding their immense sticks with that spirity that has so long excited the admiration of the juvenile frequenters of the Luxembourg Gardens. Still, as the day advanced, and the battery of Capecure remained silent, people began to relax the intensity of their enthusiasm. Three hours spent, standing under a broiling sun, far removed from all the refreshments dear to summer idlers, while it heated the body, cooled the head. Comments on the arrangements began to spread about; while every gentleman who appeared to be even distantly connected with the naval profession, was pounced upon, and required to give his opinion on the delay in her Majesty's arrival. Everybody expected to see the Royal yacht at the pier-head at one o'clock precisely, knowing her Majesty's love of punctuality; and many English people, when they found the time go by without any signal having been given even of the approach of the yacht, began to fear that some event or accident had intervened to prevent the present accomplishment of the meeting of the Allied Sovereigns. The officers on duty lighted their cigars and cigarettes; their men lighted their pipes and patronized the refreshment offered by the *cantinières*; while the elegantly dressed ladies accepted even uncomfortable seats with languid gratitude.

Suddenly the report of a cannon sent a spasm through the eighty or ninety thousand people gathered upon the heights, along the quay and piers, and thronging around the railway station. The Royal yacht was approaching at full speed over a deep blue sea, smooth as a glass. The soldiers put their pipes in their pockets, the officers threw their cigars away, the drummers at the pier-heads seized their drums, as the landbattery and the splendid ships thundered forth a Royal welcome to the advancing ships, and the forty thousand troops fired volleys of musketry.

At the landing place appeared crowds of officials, the silver and gold of their uniforms glistening in the sun. Along the water's edge stood some sturdy sailors, dressed in white, ready to run out the ladder the instant the yacht to reach the quay. A buzz among the crowd presently drew our attention to the approach of the Emperor, who appeared within the square formed by the Lancers in the regimentals of a Lieutenant-General, and wearing the ribbon of the Garter. He was followed by Colonel Fleury (his first Aide de-Camp), Lord Cowley, and other notable personages. He rode up and down the square for a few minutes, and then, as the head of the *Victoria and Albert* passed the pier-head, dismounted. The French were astounded with the majestic proportions of the Royal yacht as she steamed boldly along the windings of the narrow port, and made direct for the landing place, at the head of which the Emperor was standing anxious to catch sight of his Royal guests. The cheers of the spectators rose again and again into the air as the noble ship advanced; the [illegible] and [illegible] were [illegible]; and the Imperial carriages drew up [illegible] to [illegible]. It was obvious that the right chaps upon the right spot. Under the tent were not to be seen—but the breakfast at the Pavilion Hotel and [illegible] were [illegible] and that the illustrious party were best upon reaching the [illegible] with as little delay as possible.

No sooner had the trim sailors made a communication between the yacht and the French shore, than the Emperor hastened forward to meet his Queen, saluted her Majesty, and cordially welcomed the Prince and the Royal children, amid the enthusiastic cheers of the dense crowds gathering along the quay and jetties. The scene at this moment was imposing. Forty thousand troops presented arms to the Queen of England as her feet for the first time pressed the French shore, and the Emperor of the most powerful military nation on the face of the earth offered his arm to the Queen of the people who rule upon the ocean.

Her Majesties at once entered the carriages. It was a quarter past two as they started on their rapid progress from the railway-place to the railway station—between two lines of infantry, formed by a regiment of Cuirassiers, the Imperial Guard, and the Line. Loud and frequently repeated were the cheers which greeted the progress of the cortège from the immense concourse of people, consisting of an equal proportion of the subjects of the two Sovereigns. The hotels were covered with flags, and their balconies were filled with elegantly-dressed ladies; and the streets displayed the colours of the Allied Powers. Her Majesty appeared to be greeted with the really splendid pageant prepared for her, as she turned from the port, over a bridge, between four Italian marble obelisks ornamented with devices in gold and flowers, and approached the beautiful triumphal arch erected in front of the railway. This arch was seventy-five feet in height. It was not constructed in the usual style of an evergreen wall, studded with devices; but consisted of elegant pillars, connected by work, intermingled with wreaths of flowers, and crowned by a bold figure of Civilization, that, with outstretched arms, bade forth her welcome to the Emperor's Royal guests. The base of the arch was marked by a green scroll, upon which the words "Welcome to France," were inscribed in letters of gold. Above rose the arms of England and France, forming the supports of the great central figure. Around the figure floated the flags of the Allied Powers; below, those of the secondary States of Europe. Shields, streamers, emblazonments, and devices, scattered plentifully about the lower part of this temporary construction, made up a lively effect. Before this arch a regiment of Dragoons and companies of infantry of the Line were posted, and as her Majesty passed under it, taking her leave of the town which had so feted her on memorable a welcome, a tremendous cheer rose into the air. Within the inclosure an army hitherto of seats, backed by gilt arabesque work, had been raised. These seats were filled by rows of elegant dressed ladies; and opposite them a lawn had been laid out and interspersed with beds of choice flowers—to which one local gardener is said to have contributed no less than 4000 plants. The station itself was hung with scarlet velvet. The Royal standard and the tricolor of France floated over the belfry. The initials of the Royal guests shone upon the sides of the entrance. As the carriage containing her Majesty, the illustrious boy, and the Prince Consort, drew up before the doorway leading to the first class waiting-room (which had been splendidly fitted up with velvet hangings, sparkled with golden emblems of the Allied nations), the crowd of ladies and gentlemen assembled on each side rose and [illegible] a passage direct from the entrance to the railway platform. The people gave a final and a lusty cheer, as her Majesty entered the station, leaning upon the arm of the Emperor. The [illegible] and guest were radiant with smiles as they crossed the platform bowing to the people assembled on either side. They were evidently delighted with the reception they had just met. His Majesty at once assisted her Majesty into the splendid state carriage; while the Prince Albert turned to Marshal Baraguay d'Hilliers, and entered into conversation with him. Judging from the pleasure painted upon the Marshal's face, and from the low bows he continually made as the Prince Albert addressed him, he was receiving through his Royal highness the Queen's acknowledgments for this wonderful picture of an admirably disciplined army, which he had so often seen display along the heights of Boulogne. These civilities having been [illegible], the Emperor invited the Prince of Wales to enter the [illegible], which the latter did with all the careless activity of a schoolboy. [illegible] Royal lady immediately followed the Queen. And now came a [illegible] of those courteous attempts to give the *pas* which charmed the [illegible] of Boulogne when Prince Albert visited Boulogne last year. [illegible] as on the above occasion, insisted that his guest should take precedence, whereupon the Prince skipped lightly into the carriage, and was [illegible] followed by his gracious host. Then the state and Court officers of the Imperial household scrambled into the carriages behind, and [illegible] were hastily stowed away; the military band struck up "Partant pour la Syrie," and the Imperial train started off on its way to Paris.

[The continuation of the narrative, by our own Correspondent, will be found among our later Intelligence.]

THE IMPERIAL CENT GARDES.

(*See Illustration, page* 241.)

This magnificent corps of men—consisting, as its name implies, of one hundred—is the select body-guard of the Emperor of the French, and were displayed to great advantage in the grand state arrangements of the Royal visit to Paris during the past week. Here is much that is uniform and grand in appearance which is exceedingly fine and imposing. They are carefully selected from among the non-commissioned officers of the other regiments in the service, not merely on account of their height and physical appearance, but for their intelligence, fidelity, and good conduct. Appointed to the Cent Gardes, the men who are so fortunate as to be selected rank the same as lieutenants in the army, and receive the salutes due to other officers of the army. The commandant of the corps takes rank as a colonel, and the next officer below him that of lieutenant-colonel in the army. The undress uniform of the men is a light blue frock-coat reaching down to the knees, with gold aiguillettes, cuffs and collars with gold or lace stripes; a black shako with gold cord and sword, and cocked hat. Most of the men are of fine figure, five, if any, under six feet in height; and their dress is faultless in its fit. When mounted, the men wear a light blue tunic with crimson facings, cuffs, and collar, silver jacking ribbed, profusely decorated with gold, and carrying a kind of double-end gold worm feather. The epaulettes are gold, and fringe gold mixed with crimson silk, the effect of which is remarkably fine. The breeches are white leather, and the boots similar to those of the Horse Guards. The saddle-cloth is crimson, richly embroidered in gold. The horses, like the men, are a very select body, and are groomed by the servants of the men. As a crack body for parade, they are unequalled in appearance in any country.

The tariff for seats to see the procession ranged from two francs (1s. 8d.) to four francs (3s 4d.). As early as three o'clock people were taking their places, where they deliberately made up their minds to remain for many hours, awaiting the spectacle. In the Boulevard de Strasbourg 5f. was the very least sum charged for a tolerable seat on a back-row bench. But there were places very far retired indeed, and more favourable to the exercise of the imagination than of sight, which were let as low as 2f. Further along the line, on the Boulevards, proper good places fetched 15f., 20f., and 25f. Many shop-window were let for 200f. and 300f. A spectator paid 400f. for the balcony of the Café du Grand Balcon. The Maison Dorée would not admit parties to dine in a private room fronting the Boulevard (and these rooms, or cabinets, as they are call d, are of unlimited proportions) except on condition that the dinner was to cost at least 30f.

During the visit which the Queen made to the Palace des Beaux Arts on Monday, the youth and grace of the Prince of Royal was a theme of general admiration, both outside and inside the building. A common looking woman in a cap and blue apron, standing in her doorsteps, was overheard saying to a neighbour—"Avez vous vu la petite Princesse? Est-elle gentille et gracieuse?"

THE PALACE OF ST. CLOUD

(From our own Special Correspondent.)

[The following paragraphs only form a portion of our Impression of Saturday last.]

Throughout the Residence of Her Majesty the Empress—who has graciously thrown open all the private apartments of the Tuileries, St Cloud, Versailles, and the Château of Compiègne—our Special Correspondent has been provided by your Artist with the means of procuring for you and your readers authentic and exclusive details of the important visit which, by the time these lines see the light, will be in course of fulfilment.

At St Cloud the preparations for the reception of the English Court have been carried on with remarkable activity. I have spent two days of this week in the Château, inspecting—under the obliging auspices of the Governor, Colonel Thiboult—the rooms of which your Correspondent sends a sketch, and which Eugénie is to call by her passionate regards. Here, amidst the splendid suite of private apartments destined to receive our Queen and Court. These rooms occupy the wing of the Château which is devoted for a Queen whose subjects whose sacred misfortunes, will stand in wonderful contrast with the happy reign of the Empress who now occupy them. On entering these apartments from the private staircase, beautifully decorated with arabesques of the time of Louis XV., the visitor has to the left and reach a the Archbishop's or Prince Albert's private apartments. The antechamber is a beautiful room, [illegible] which are of various rich marbles tastefully intermingled. Passing from this room, the visitor enters the Prince's salon, a lofty fully furnished apartment, the walls of which are enriched by splendid paintings. Upon the mantelpiece I noticed a beautiful clock by Gille l'Aîné, the design of which, finely executed, is supported by a massive bronze bull. Beyond the Prince's salon is his bed-room, hung with red Lyons silk, worth a hundred francs per mètre. Here, as in the rest of the private apartments, [illegible] Besson, the painter of the private rooms of the Empress, has been busy filling in the panels with some of his sprightly and tasteful sketches. Beyond the Prince's bed room is his dressing-room. It is fitted up with light green hangings, which, pleasantly harmonise with the white walls, relieved by the beautiful gilt wood-carvings executed when this same room was the boudoir of poor Marie Antoinette. Beyond the Prince's dressing-room, and forming an angle of the suite, is the Queen's state bed-room. The walls of this [illegible] room are hung with [illegible] gold [illegible] exquisitely manipulated wood-carvings. Here the state bed is, of course, the principal object. Your artist can do more in the way of description of this wonderful piece of furniture than any words. I may, however, state that the skeleton of the bed is in white and gold; the outer curtains being of rich pale green silk, and the inner curtains pink, covered with muslin. The Royal initials and arms are worked into the decorations with excellent effect. The furniture is of green and gold.

Beyond the state bed room, and between it and the Queen's boudoir, is a bath-room, hung with pink watered silk, covered with lace or muslin. The effect of this little apartment is charming. Beyond it lies the Queen's boudoir, the walls of which resemble those of the state bed-room and the Prince's dressing room, and belong, as I have already remarked, to the time of Louis XVI. The hangings, of blue, are exquisitely tasteful; and here are two cabinets, recently finished, which are masterpieces of the modern art-work manship of Paris. Here are, also, some splendid vases. [illegible] boudoir is her Majesty's study, a fine apartment, ornamented with pictures by Terburg, &c., Next the study is the Queen's salon, to be engraved next week. Beyond her Majesty's private drawing-room are the apartments of the ladies and gentlemen in attendance.

These rooms are splendidly furnished, and enriched with choice specimens of Rubens, Vandyke, Andrea del Sarto, Domenichino, Lebrun, Boucher, &c. These rooms close the splendid suite of private apartments prepared, under the daily personal superintendence of the Emperor, for her Majesty the Queen. All that the wealth of the Louvre, the skill of modern art, the power of the loom, the improvements and contrivances of science, could furnish towards the embellishment of a residence, perfect in every particular, may be said to be present here. Every minor point has been studied to the utmost by the Imperial host, in proof of which I may mention the fact, that when I was at the château on the 11th ult. Majesty had left for Paris, in order to purchase a picture at the Universal Exhibition, fit to be a companion picture to one already placed. From the windows of these splendid rooms a beautiful view of immense extent is obtained, with the richly flowered private gardens underneath for a foreground. Hence also the Queen may see, at the summit of the slope, the lighthouse built by the first Napoleon, which used to be lighted whenever he slept at the château.

I may inform your readers, on authority, that the wonderful fête of Versailles will not take place before Saturday the 29th instant. At Versailles the preparations are being carried on most vigorously. The Salle des Glaces is being hung with chandeliers; plafonds for orchestras are being raised in its four corners; and the theatre is in the hands of the Opera decorators, to be prepared for the supper, which is to be served at a number of tables, each table receiving twelve persons. Three dining-rooms for the Imperial host and hostess and the Royal guests are being fitted up. At the Trianon, also, there are a few private dinners given on Tuesday next, at twelve o'clock, the Queen will reach the beautiful gardens decorated with the name of Marie Antoinette, and wander beneath the poor Queen's abandoned bower, to the Swiss cottage on the borders of the lake, where the illustrious party will breakfast. The illuminations before the front of the Palace will include a beautiful representation of Windsor Castle, and the fireworks—to be arranged on a grand scale—are to be beyond the lake, at the extremity of the Salle des Glaces, whence they will be observed by the French and English courts.

HER MAJESTY'S STATE BED-CHAMBER, IN THE PALACE OF ST. CLOUD

HER MAJESTY'S VISIT TO NOTRE DAME.

THE Royal visit to this sacred edifice formed part of the very interesting proceedings on Monday; when the Queen, the Emperor, Prince Albert, and the rest of the party, after inspecting the Sainte Chapelle, with its treasures, and entering their carriages proceeded to the Cathedral of Notre Dame.

The whole population of this quarter appeared to have left their workshops for the occasion, and were massed on each side of the Queen's passage. They saluted her Majesty with the loudest acclamations. On the steps of the Hôtel-Dieu were assembled the holy women belonging to the establishment in their white dresses of the order of St. Augustin. It was a moving sight to behold these ministers of religion and charity, leaving for an instant the sick pillows of their patients to take part in the great event of the Queen of England's visit, and the mind involuntarily referred to their sisters in the Crimea, attending without any personal thought the sufferers from the evils of war.

The Queen was received at the grand portal of Notre Dame by the Archbishop of Paris and his clergy. After having saluted her Majesty, the Archbishop expressed his gratification at seeing her, and assured her that his clergy and himself called down on her the blessings of Heaven. Her Majesty then entered the church, and was evidently struck with the solemn beauty of the noble building, and seemed almost unwilling to quit it. We have devoted a page to the illustration of the stupendous fabric of Notre Dame, which is especially interesting on account of the many restorations recently made in the structure.

Few of the historic edifices of Europe are so rich in eventful story as the Cathedral of Notre Dame, in the most ancient part of the city of Paris, its oldest edifice—and its architecture dating from the commencement of the eleventh to the middle of the thirteenth century. It may be considered as among the boldest and the most successful existing specimens of the Gothic architecture. The west front, the portion illustrated by our Artist, was finished by Bishop Maurice de Sully, in 1223, during the reign of Philip Augustus. This is stone the finest and most remarkable feature. Three ample portals lead into the nave and aisles. Each forms a series of retiring arches, with angels, saints, &c., in the intermediate mouldings. The portals are bisected by square pillars; that of the central one was removed on Jan. 1 1852, on the occasion of the thanksgivings for the return of the President's powers, but has since been replaced. The tympana of the three ogives are richly sculptured. The same style exists in all three portals, and also those of the transepts; the central portion of the western front was sculpted by Soufflot, in 1770, who formed it into a pointed arch. But it has just been restored to its original form, according to the designs of it, which were preserved. The subjects of the sculpture which adorn these portals, are vividly treated in Victor Hugo's "Notre Dame de Paris," which is the stupendous fabric is sketched in one of the most picturesque episodes of descriptive writing extant.

The ogive of the middle doorway represents the Last Judgment, in three parts. Among the sculptures of the arch are figures of Moses and Aaron; the Saviour treading beneath his feet the wicked, whom Satan is dragging to hell; the rider on the red horse, at the opening of the second seal, the blessedness of the saints, &c. The sides of this entrance have twenty-four bas-reliefs: twelve virtues, and as many vices. Beyond these are four other bas-reliefs illustrations of the lives of Abraham and Job. On the doors are carved: Christ bearing his cross, and the Virgin as the veiled mother of sorrows. The statues of the twelve Apostles, which filled the niches of this portal, and were destroyed in the Revolution, in 1793, have just been replaced by new ones, copied from the original drawings; the Patriarchs and Kings of the Old Testament, that adorned the other two portals, were also replaced. We have not space to detail the several Scriptural sculptures which adorn this front. Among the most interesting are bas-reliefs of the twelve Signs of the Zodiac; the agricultural labours of the twelve months of the year; and the Life of Man in six stages, from youth to decrepitude. The two lateral doors are ornamented with much-admired ironwork, executed by Biscornette, about 1580. The buttresses on each side of the doors have each a niche, in which were statues of Religion, Faith, St. Denis, and St Stephen. Immediately above the three doors is a gallery of small pillars, supporting trefoils, called the Galerie des Rois, which formerly contained twenty-eight statues of the Kings of Judah, as crowns of the Virgin. All these—executed in the thirteenth century—were destroyed in 1793, but are to be replaced. A second, but open, gallery is called Galerie de la Vierge, from having formerly had a colossal statue of the Virgin. Above the gallery is the large rose-window between the towers, and in each of the latter are pointed arches, over which is a lofty gallery of slender shafts, called the Galerie des Colonnes, and continued round the sides; above rises the last division of the towers, each side occupied with coupled windows, and rich buttresses at the angles crowned by an open work of battlement of quatrefoils. They are reached by a staircase of 380 steps from the Rue du Cloître. The Cathedral formerly possessed a fine peal of bells, of which only one remains, in the southern tower. It was baptised Emmanuel Louise Thérèse, in 1712 in the presence of Louis XIV. and his Queen Thérèse. It is called the *bourdon*, weighs 32,000 lb., and the clapper 976 lb. The other bell, named Marie, weighing 25,000 lb., was broken and melted down in 1792, as were eight bells of the northern tower. In the latter tower three bells for the clock were placed in 1512; they are now in the southern one, and their place in the northern tower is to be occupied by a new bell, weighing 54,000 lb. The mechanism of the clock is very curious.

The towers of Notre Dame afford one of the finest views of Paris that can be imagined, and the Cathedral is much visited for the enjoyment of this imposing scene. The height of the western tower is 204 feet, or about the height of the London Monument.

In Stanford's "New Guide to Paris" (a well-compiled volume, just published) the panoramic view of Paris from the towers of Notre Dame is described as inferior to the prospect from the top of the Panthéon. This volume, by the way, contains an excellent account of the Universal Exhibition.

THE whole of Paris seemed suddenly to have acquired a knowledge of the English language, for there was scarcely a shop in which the passer-by was not informed that "English is spoken." This notice of the possession of the vernacular was occasionally of the quaintest kind, or amusingly odd, worded as the *dicta* of the Delphic oracle. The Englishman who thought through the elements of the tongue may guess the meaning by the help of the corresponding translation in French. But it was not rare to see new arrivals horribly puzzled when they saw on the windows of an eating-house in one of the back streets such notices as this: "Biftecks, Rosbiff—*English spoken*, et cuit à point." Or, again, in a Magasin de Modes, "Dentelles et blondes—*English spoken*, avec de broderies superbes." Or, again, "Drap bon marché, presque pour rien—*English spoken*, à 75 centimes le litre," &c.

HER MAJESTY'S VISIT TO THE CATHEDRAL OF NOTRE DAME.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little 198, Strand, aforesaid.—Saturday, August 25, 1855.

SEVEN YEARS!

THE festivities or festivals of which Paris has been the scene for ten remarkable and glorious days will mark an era in the history of the two greatest nations of modern times—nations which in the nineteenth century fill the place of the Greece and the Rome of ages long since past, and which rival those mighty States in all things, and surpass them in most. Who would have said, seven years ago, that such events were possible? Or who, having said or thought them, would not have been set down as a dreamer of vain dreams and an idle prophet, the sport of his excited and too utopian imagination? Yet Queen Victoria has been to Paris, and been received with the utmost enthusiasm by the whole French nation without a dissentient opinion; and the alliance of Great Britain and France—an alliance which is the shield of civilised Europe against encroaching Barbarism—has been affirmed and proved and celebrated with an emphasis, a completeness, and a magnificence to which history offers no parallel.

It is well, at such a climax of events, to look back a little, and measure the circumstances which have immediately preceded if they have not caused it. We need not in this case look too far into the

THE QUEEN'S VISIT TO FRANCE.—HER MAJESTY'S SALON, IN THE PALACE OF ST. CLOUD.—(SEE NEXT PAGE)

obscurity of past or contemporary history. As the oak of to-day is the production of the first-created acorn, so, in like manner, the roots of the great events of our time are to be found amid countless generations of mankind, and to be traced through the whole stratum of history. But, without attempting to carry either our reasonings or our imaginings into such remote periods, we may be permitted to recall the more immediate incidents of the great drama in which the men of the present generation are the actors; and to draw from them for our future guidance such warning or such consolation as we may;—or such hope and courage as they may be calculated to afford.

It is not yet eight years since a King sat upon the throne of France whose character was supposed to guarantee the peace of Europe as long as he lived. He was a man of venerable age, of almost unrivalled sagacity, and of vast experience in the trying arena of adversity, as well as in the still more trying school of prosperity. Everything seemed to favour him: but his throne was built upon an unstable foundation; and, knowing its insecurity, he attempted to strengthen it, not by truths and acts of honesty, but by lies and trickeries, and meannesses almost too base and indecent to mention. He attempted to rule a brave and generous nation by the arts of corruption and intrigue. The consequence was that his unsubstantial throne melted in the heat of popular displeasure, like an icicle in the sun. His power was literally whiffed out by the breath of the national disgust; and he disappeared, leaving no traces behind him, except the disgreeable odour of his political turpitude, and his personal greediness. The French, in dismissing this unworthy Sovereign, vindicated their imprescriptible right of choosing their own form of government. They asserted in the face of the world the paramount principle of civilisation—and took another step towards the completion of their great Revolution of 1789. In this sense their act was understood by themselves, and by every people in Europe who either were in the enjoyment of constitutional liberty, or aspired to the overthrow of some existent and intolerable despotism. The upheaving of the waters of democracy in Germany, in Italy, and in Austria—wherever there was a people impatient of a foreign yoke, or of the fetters imposed by a domestic tyranny—was sudden and simultaneous. But the time was not ripe for the constitutional freedom which the nations desired. They themselves were not ripe for it; and in the reaction consequent upon the too hasty destruction of all law and authority except that derived from the wild impulses of wayward and furious mobs, they mistook License for Liberty, and installed Anarchy in the place of Monarchy. This was not only the case in France, but in every country that had followed, or striven to follow, its example. The work of repression immediately began. The Sovereigns of Germany, Austria, and Italy—relying upon their armies, and upon the aid of Russia—the Power which had most to fear from the establishment of strong and free States in Middle, Western, and Southern Europe—took comfort from the disgust which anarchy inspired amongst millions who had no affection for despotism, and commenced the re-establishment of the order of things which had been so rudely overthrown. They withdrew, in their peril and perplexity, the concessions which they had made to their people; and, encouraged by the support which had either been actually promised by the Czar Nicholas, or on which they knew they could calculate in the hour of extremity, restored by the red hand of battle the ancient misrule under which their people had groaned so long. In some instances the mere restoration of the old corruption and tyranny was not sufficient to satisfy the fear or the vengeance of the Sovereigns. They thought it necessary to augment the burdens, to darken the prisons, and to draw tighter the bonds and shackles of the people. In this state they have remained for seven years: the nations on their part yearning for deliverance; the despotic rulers on theirs trembling with anxiety lest the sword, on which they have relied as the only instrument of government, should snap in their hands, or be wrested from, and turned against, them. In this condition they still exist, hoping for the triumph of Russia and the system of irresponsible and anti-popular rule of which that Power is the representative and champion, and praying for the discomfiture of those who have taken up arms to restrain and to punish her.

In France the course of events has been in one slight respect similar, but in all others the reverse. There, too, the sword has been appealed to; not to restore a yoke that is hateful to the people—not to invite the co-operation of foreign armies to repress the national sentiment;—but solely to combat licentious anarchy, and the wild passions of impracticable theorists and utopians, and to give a great and noble people the liberty and the leisure to decide for themselves what their form of government shall be, and who shall be the man to represent and to administer it. Out of this struggle has emerged, in a blaze of glory, the throne of Napoleon III.—a man who is the chosen delegate of the universal manhood of France; —the elect of eight millions of peasants, artisans, traders, merchants, and workers with head or hands; a Sovereign whose title is denied only by a few pragmatics, who love a visionary Red Republic, and by those fewer still, who live in the past and its traditions, and cherish a romantic attachment for a perished name and an effete family.

Thus the revolutions of 1848 have stopped short of their natural issues in every case but one. In France alone has the vindication of the great principle that every people has a right to choose its own Government been complete and satisfactory. France and England are each the representatives of that principle. England completed her dynastic Revolutions long ago, and Queen Victoria sits upon the throne by the same right the concurrence of a great and civilised nation—as that which placed Napoleon III. in his high position and maintains him there. Hence the sympathy between these nations; and hence the reason for, and justification of, their intimate, and, let us hope, their indissoluble, alliance. If England have preceded France in constitutional liberty—if England enjoy more freedom at the present moment than is accorded to France, let us remember that our institutions in the time of William III. were not so liberal and comprehensive as they have since become: that national freedom is the growth of time; and that France, in giving to herself the man and the dynasty of her choice—even at the expense of some present liberty—has laid the basis of her future development, and vindicated herself against the imposition of the greatest of all tyrannies—that which is implied in the possession of the throne by one whose right is denied by the great mass of the people.

The nations of Europe see and feel that this is the real strength and bond of the English and French alliance. The Emperors of Russia and Austria, and such bad Kings as he of Naples, and such weak ones as he of Prussia, feel and know it also. For this reason the splendid welcome given to Queen Victoria in Paris, and the well-founded hope which it inspires that the alliance dictated by the reason of the two peoples, and strengthened by the personal affection of their Sovereigns, will be as lasting as it is pure and noble, is hailed throughout Europe with exclamations of delight.

And what conclusions are to be drawn from this? That England and France are to be the champions of all oppressed nations and peoples, who desire freedom but cannot obtain it? By no means. France and England sympathise with such nations; but the time has not arrived—and perhaps never may—when they can be called upon to take up arms for any such principle. That for which they combat Russia is wider and grander. Russia flattered herself with the idea that in the confusion prevalent in Europe, in consequence of the events of 1848, she might disturb, to her own advantage, the equilibrium of States, and blot from the map an independent Power, whose territories and seaboard she coveted. In that attempt she has been foiled by the united might of France and England. With the right of nations to choose their own form of Government they have not sought to meddle; but, if the war shall be much longer continued;—if, instead of being confined to the original combatants, Russia shall induce Austria and Prussia, or their dependent sovereignties and dukedoms, to aid her directly, or indirectly, in extending the flame of war, and in protracting its unutterable miseries and horrors, England and France will know where to seek and to find many natural allies, to whom they have not yet held out the right hand of fellowship. The work they have in hand is a work that needs to be done thoroughly. Already the signs of the extension of the war are apparent. There is a small cloud on the horizon of Italy that betokens a coming storm. When it bursts, Austria more especially, will have reason to deplore that she was not wise in time, and that she leaned to Russia and encouraged war, when she might have leaned to the Allies, and extinguished it. Thus, the revolutions of 1848 are not quenched. They are existing facts, and await their development. If in the course of events they receive it from France and England, every Sovereign in Europe who did not aid them in repelling the ambition of Russia will have himself to blame for his blindness or his obstinacy. France and England, on their parts, will have nothing with which to reproach themselves in the eyes of the present or of any future time.

HER MAJESTY'S APARTMENTS IN THE PALACE OF ST. CLOUD.

IN our Journal of last week, page 247, we fully described the superb Apartments prepared for the reception of her Majesty at St. Cloud, omitting the principal salon, which is engraved upon the preceding page. This apartment lies beyond the study: its conspicuous ornament is a fine Correggio. Amid the ornaments of the walls little clocks and barometers, &c., are let in. The furniture is covered with the richest Beauvais tapestry. The walls are white, ornamented with the richest gilt carvings. The mantelpiece is supported by bronze Egyptian figures, and the curtains are of white watered silk, trimmed with red and gold fringe.

NAVAL AND MILITARY INTELLIGENCE.

OF the Foreign Legion 357 arrived from Halifax, North America, at Spithead, on the 21th ult., on board the sailing-transport *W. M. Rogers*. They were raised in various parts of North America, and are expected to go to Shorncliffe.

THE war in the Crimea is very popular among the soldiers in Jamaica. The *Tyne* mail-packet, which arrived from there this month, brought a number of volunteers from the artillery force, and news reached by the last Jamaica packet that several companies from the West India regiments had also volunteered to proceed to the Crimea.

DRAUGHTS from the depôts of Highland regiments in Scotland have received orders for embarkation at Liverpool this week, to join the reserves in the Mediterranean. The 92nd are to send 2 officers and 188 men to Gibraltar, and the following draughts are to proceed to Malta:—2 officers and 71 men from the 42nd at Stirling, 2 officers and 66 men from the 71st at Perth, 2 officers and 61 men from the 79th at Aberdeen, and 1 officer and 46 men from the 93rd at Dundee.

THE coast of South Wales has been surveyed by the Board of Ordnance for the purpose of selecting sites on which to erect batteries of heavy guns, and other permanent defences, for the better protection of this portion of the coast. The attention of the authorities has long been drawn to this matter, the shore being entirely defenceless, for from Milford Haven up the entire length of the Bristol Channel there is not a single battery of guns. The harbour of Swansea is to be provided with heavy metal, and the important roadsteads under Penarth are also to be duly guarded by a heavily-armed fort or battery on the height.

THE Government has agreed to grant a pension to the mother of Dr. James Thompson, of the 44th, who distinguished himself so signally in waiting upon the Russian wounded after the battle of the Alma.

TWO HUNDRED men of the 1st Somerset Militia, which is now stationed in Taunton, have been allowed to proceed to their homes, in order to afford them an opportunity of assisting the agriculturists in the gathering of the crops.

A YOUNG OFFICER, who has lately returned to Lancashire, badly wounded when on duty in the trenches before Sebastopol, declares that he has travelled across England free of expense: for neither hotel-keepers nor railway clerks would take a penny from him when they found he was "a poor and wounded soldier."

MR. VARLEY and a staff of ten assistants have arrived in the Crimea to regulate the field telegraphic establishment. On their arrival they were placed under the orders of Sir Harry Jones, commanding the Royal Engineers.

A DETACHMENT of forty non-commissioned officers and privates of the Sappers and Miners are under orders to proceed to the Crimea. They are to embark in different vessels about to ship the soldiers' huts, so as to undertake their safe and speedy delivery on arrival there.

THE Government have authorised Sir Joseph Paxton to organise another body of 1000 men, to augment the Army Works Corps now in the Crimea. The additional 1000 will be composed of mechanics and artisans, and a certain number of navvies, with superintendents and foremen; and will be accompanied by their own surgeons, and by a chaplain and scripture-reader. The principal duties of the corps will consist in erecting huts, constructing and repairing roads, and providing in other ways for the health of the troops at the seat of war.

ON Tuesday morning a large quantity of military stores, including 2400 Minié rifles and rifled carbines, in cases containing twenty stand each, Victoria carbines, revolvers, cavalry sabres, picket posts, &c., were shipped at the Tower-wharf for Woolwich, to be transhipped to vessels proceeding to the Crimea. Above 100 tons (measurement) of clothing in bales were forwarded by railway to Portsmouth, for conveyance to Balaclava.

THE Government having determined to place Yarmouth in a state of defence, a vessel laden with guns, traversing platforms, &c., has arrived from Woolwich, and the Norfolk Militia Artillery were engaged last week in removing them to their destination. The guns are 24-pounders—eight of which are to be placed on the North Star Battery, four on the Town Battery, and nine on the South Battery.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

READERS, you must really forgive me if I serve you up a *richaufs*—but, indeed, there is nothing else to offer. The Queen's visit, with all its details and anecdotes, its events and episodes, is the only topic of any sort of interest the town can furnish, even though it be past away like the empty pageant of a dream; and dismantled *arcs de triomphe*, displaying nought but skeletons and scaffolding, and used-up decorations of various descriptions, remain tangibly to attest the fêtes and splendours of the past week.

Flattery and form apart, there is no doubt but that the Queen's visit throughout has been a source of cordial, warm, and genuine enthusiasm, and has, to the fullest extent, realised all the expectations that were formed as to its influence and results, and has gone further than any incident that has yet occurred to bring the civil portions of the two greatest nations of the world into acquaintanceship and cordiality. And this was a triumph which had yet to be achieved: for not all the goodwill, fellowship, and intimacy, blood, spilt in a similar and a righteous cause, had already established between the two armies, had yet brought the non-combatant, that is to say the larger portion, of the two nations completely and familiarly together. The urbanity, intelligence, and keen appreciation of all attempts to do them honour, of all the objects of interest displayed to them, evinced by her Majesty and Prince Albert, have been thoroughly understood, and have produced the best effect on the minds of all.

An amusing symptom of the general sympathy is the manner in which the Royal patronage is invoked upon *les industries* of all classes. *Cafés chantans, théâtres ambulans*, dancing-dogs, gingerbread-stalls, beer and tobacco shops, &c., all are specially dedicated, under various formulas, to the Queen of England. It is computed that the places hired in balconies, terraces, windows, &c., to see the Royal cortége pass, must have brought in to their proprietors as much as 150,000 fr. The bouquet offered to the Queen on her arrival at the station was gathered and made up on the spot at the moment the train was expected to arrive, from the plants brought to decorate the Court; the flowers it contained were worth 300f. (£12).

The spectacle at the Opera, when "God Save the Queen" was played, and all the audience rose, was indescribably brilliant. Her Majesty displayed much emotion, which was shared by the whole house.

On the Queen's visit to the Exhibition, M. Elwart, Professor at the Conservatoire, obtained permission to have executed a composition prepared for the occasion, in which were introduced "Que de grâces! que de majesté!" of Glück; "C'est ici le séjour des grâces," of Boïeldieu; and "God Save the Queen"—the three airs intermingling with a singular and graceful effect in the conclusion. The words of the latter, translated into French, were sung to this *morceau*.

Extreme dissatisfaction has been felt, as well by the French as by the foreign public, at the measures adopted to prevent its entrance, during the Queen's visits to the Exhibition; and yet more at the manner in which these measures were carried out. Many of the French papers draw comparisons between the system of administration here and in England, on similar occasions; comparisons entirely in favour of the latter.

Rossini is about to quit the sea-side to return to Paris, where it is probable he will pass the winter.

The *Sports de Longchamps* are about to open with a new wonder, a Spanish pedestrian, who engages to beat any horse that can be brought against him, for the length of the course. He offers 2000 francs against each horse.

Madame Ristori is about to leave Paris for Vienna, whence she proposes, it is reported, to proceed to St. Petersburg to pass the winter. Here there is a complete lull of theatrical activity, which will, doubtless, last till the commencement of the winter season.

DISTURBANCES ON THE COAST OF SENEGAMBIA, AND LOSS OF LIFE.

On the 17th July last the natives of Sabbagee, a town within the British settlements on the River Gambia, broke out in open rebellion. The affray arose in consequence of a man named Fodey, who was living at Sabbagee, having, accompanied by an armed party of seven or eight men, gone to village named Jeswong, also within the British territory, and there forcibly seized and carried off a man and his wife as slaves, and kept them in irons at Sabbagee. The husband, having succeeded in making his escape to Bathurst, went to the police-court there, and lodged his complaint on oath before the magistrates, who thereupon issued a warrant for the apprehension of Fodey. The police-magistrate went with several constables to apprehend him, supported by a small military force. The police-magistrate explained to Fodey the nature of the charge against him, and that he must go to Bathurst and answer the complaint. This he refused to do. The constables endeavoured to take him prisoner, when his supporters attacked the police, fired upon the soldiers, and drove them back—wounding Lieutenant Armstrong severely in the right arm, and making prisoners of two of the soldiers. On the afternoon of the same day the natives of Sabbagee, joined by the Marabuos of Gounjone and Burport, burnt and destroyed the English villages of Jeswong, Cotto, and Basconconco.

The Governor immediately mustered his small force, which, with the assistance of the Militia, only numbered 260 men and officers, and proceeded to Cape St. Mary's, in the hops that, by prompt measures, the rebellion might be quelled. The natives, however, had collected in large numbers, and waylaid this small party on their march about a mile from Sabbagee, where, after fighting for two hours, the British troops were driven back, with a loss of thirty killed and forty-three wounded. Governor O'Connor received two wounds on the right arm and one on the shoulder. The rebels, joined by the Marabous, and emboldened by their success, took possession of the road between Bathurst and the military quarters at Cape St. Mary's, and threatened to invade the former place. The Governor applied to the authorities at the French settlement of Goree for assistance, who at once came to his support with a French man-of-war, the *Entreprenant*, and 150 white troops. On the 3rd instant a second expedition was made by Governor O'Connor against Sabbagee, and, after a desperate resistance, the stockaded town was carried at the point of the bayonet, the French troops gallantly leading the advance; and the town was totally destroyed. The French lost a non-commissioned officer, of long service, and one rank and file killed and five wounded; the British troops and volunteers, 35 wounded. The natives lost about 200.

INDIA AND CHINA.

The steamer *Calcutta* arrived at Trieste on Monday morning with advices from Calcutta of the 17th of July; Bombay, 30th of July; Canton, July 8; Hong-Kong, July 10

An insurrection had occurred among the Santals in Rajmahal, in Bengal, the district adjacent to which has been overwhelmed by the sudden descent of several thousand mountaineers in the night, evidently determined to take the life of every European and native of influence; several of the police and two ladies were murdered and other excesses have been committed. One account speaks of the insurgents numbering about 20,000 men. Troops have been sent to quell the disturbance, which is not likely to be put down without considerable bloodshed. The Thibetians are said to be suing Nepaul for peace, and there is to be a conference of some of the Hill chieftains, to arrange the terms of a treaty.

There is no truth in the reports appearing in the home papers, and fabricated in Bombay, that an army of 15,000 men was about to proceed with twenty armed steamers and gun-boats to Persia from Bombay. The latest accounts from Persia state that the Shah was most friendly to us

The Governors of Madras and Bombay have been invited to meet the Governor-General at the Neilgherries in October, immediately after which it is rumoured that Lord Dalhousie proposes returning to England to join the Cabinet.

The rebels are losing ground in the north of China. At Canton there has been much bloodshed. Some ten or twelve thousand prisoners have been killed off, at the rate of 600 a day.

BATTLE OF THE TCHERNAYA,
OR, TRAKTIR-BRIDGE.

(From our Artist and Special Correspondent.)

BEFORE SEBASTOPOL, August 17, 1855.

The dull roar of cannon, mingled with the sharp *fioriture* of musketry was heard yesterday morning in a quarter where the enemy was not expected to attack in force. The battle which was then fought fulfilled the predictions of those who were confident that before the Allies again opened fire on Sebastopol, they would be attacked by the enemy in force. It had been said, as far back as Monday the 13th, that large reinforcements had arrived near Sebastopol, consisting of 35,000 men, commanded by one of the Princes of the Imperial house. Some went as far as to name the Grand Duke Constantine. More than one of those whom experience had taught to doubt the coming of these continual reinforcements disbelieved the arrival of the Grand Duke and his army but on the evening of the 13th doubts were no longer possible, when large masses of Russians were seen in movement in the principal works opposed to us. The appearance of the enemy was indeed so threatening, that shortly after midnight our divisions were ordered out under arms, as well as the three brigades of cavalry; and the force of the Russians seemed so imposing as to cause General Simpson to believe that something more than an attack in front was meditated. He therefore ordered Colonel Peel's detachment at Baidar to be recalled, which was done, much to the astonishment of D'Allonville and his corps, which remained quietly in the vale after our squadrons had left it.

Notwithstanding the show of force the Russians attempted nothing that night; the regiments turned in at daybreak, and the Camp resumed its wonted aspect. It is probable, however, that General Simpson had not acted, in this instance, on the mere evidence of the eye, but had had information which led him to anticipate an attack. Be that as it may, there is no doubt that the Russians must have been busy in preparations for an attack on our field position as early as Monday; and this I judge merely from the quantity of implements which they carried with them, and which were found after their defeat. On Thursday before daybreak they attacked the positions of the French and Piedmontese overlooking the Tchernaya, taking the former by surprise at first, but meeting with a resistance which they were utterly unprepared to encounter. The positions of the Allies at the moment of the attack were these:—The division lately commanded by General Canrobert occupied the position on the extreme left, facing the vale in the direction of Inkerman. The position of this division extended from Traktir-bridge to a ford where the river expands to a considerable width. On the hills nearer the centre, and covering the Traktir-bridge, was the 2nd French Division, consisting of weak regiments—like the 2nd Zouaves, the 20th and 22nd Light Infantry—removed a short time ago from before Sebastopol in consequence of the losses they sustained there. The Third Division having moved on the previous day, was at a considerable distance in the rear, where it occupied the position of a reserve corps. The spurs on the right were occupied by small parties of Piedmontese, detached from the main body near Kamara; whilst the slopes in the centre of the position, forming gentle declivities down to the left bank of the Tchernaya, held the encampments of four regiments of Chasseurs d'Afrique. The stone bridges of Traktir were defended by a breastwork in front, and occupied for the night by a detachment of the 2nd Zouaves; the aqueduct and bridge of Tchorgoum being held by the Sardinians. In order to understand the position thoroughly, it must be borne in mind that two watercourses meander through the plain, and separate the position of the French from that of the Russians. At Tchorgoun bridge the river flows through and takes the lowest level of the plain, running amidst old but stunted trees, too thin to give the enemy cover, but with a feeble mess of water on account of the great drought, which had rendered the watercourse fordable in every part. The second stream flows from the aqueduct at Tchorgoun, and takes an artificial level. In some places it is imbedded in the slope; in others it approaches steep portions of the hills on which the French lay, and flows on a highly-raised incline. The difficulty of crossing the canal stream was consequently greater than that of crossing the Tchernaya itself; and indeed it was not practicable for artillery, unless at Traktir, where the bridge crosses both canal and stream. The Tchernaya vale, however, being of slight breadth, batteries of artillery were in range from the hills on both sides of the river.

It was to attack and storm this position that the Russians marched on the morning of Thursday, the 16th. Their number amounted to upwards of 40,000 men which formed before daylight in the gorge, through which runs the road from Traktir-bridge to Sebastopol, and deployed under cover of the batteries of Gringalet, Bilboquet, and a host of others, erected to defend the passage of the road against our approach. A new fieldwork hitherto unarmed, was hastily made into a battery of four embrasures, which enfiladed Traktir-bridge and shelled the men in the breastwork. A large body of infantry was massed in the vale of Soulion, threatening the Piedmontese right. The first intelligence of the enemy's movements was received before daylight, by the hasty return to Traktir-bridge of a half-squadron of the 1st Chasseurs d'Afrique, which had stumbled on the enemy in the dark as it reconnoitred the ground round Bilboquet. This small body was beset for a few moments by enemies, but succeeded in breaking away with the loss of four men. They had scarcely given the alarm when the movements of the Russians began to grow distinct in the grey of dawn. Extending to their left, their columns in deploying fell upon the Piedmontese who held the most advanced spur on the right bank of the Tchernaya. Two companies of Bersaglieri, and two companies of the 9th Regiment of Piedmontese infantry, lined the breastwork when the Russians advanced upon them in three divisions, one of which attacked in front, whilst the rest bore away to the right and left, to overlap it. For three quarters of an hour the Piedmontese held their ground, protected by their breastwork, and inflicting much loss on the enemy; but they were forced to yield to numbers, and, as the Russians leaped up on the parapet, they retreated, losing few men from the fire, which, as usual with the Russians, was too high. Four companies of Piedmontese had in the meanwhile reinforced those who originally held the breastwork, and these retreating in a body formed on another spur above the Tchorgoun aqueduct, where the Russians did not follow them. In the meanwhile the latter, having obtained possession of the high ground required for their artillery, placed some batteries on the summit, whilst a great quantity was ranged lower down the slope, where a favourable movement of the ground enabled them to give their guns the necessary elevation. Then commenced the main attack on the French positions. The divisions which had carried the heights held by the Piedmontese moved down the slopes into the vale and crossed the river, breaking up into parties as they spread, and offering a fair prey to the cavalry had it cut in at that moment. Two divisions at the same time moved up to the attack of the Traktir-bridge, rushing on from under the cover of their batteries and redoubts, whose fire supported them. They advanced at first in a swarm of skirmishers thrown out exactly as I have seen them at Inkerman, and in an imposing line, which stretched from Traktir to Tchorgoun bridges. Behind them came men carrying portable bridges of wood. The river and canal were forded almost simultaneously, the former giving no difficulty. But the main attack on the bridge of Traktir, was not so. The small band of Zouaves held the breastwork for a time, and were only thrown back by enormous superiority of numbers. Driven from the breastwork, they stood at the bridge on the river; then at a small low tower near the bridge on the canal; and then slowly yielded ground through the bushes which here, as at Inkerman, cover the steep slopes. As the first pickets fell back from the bridge they were supported by the whole of the 2nd Zouaves, and by the 20th and 22nd Light Regiments, which moved against the enemy, without succeeding in making him fall back. Several batteries had by this time taken up a position not only to rake the advancing Russians, but to damage their batteries on the opposite hills. One of these was a battery of the Imperial Guard, which came up speedily, and was preceded by a considerable body of these choice troops. The Sardinian artillery, supported by its cavalry, busily plied their shot against the Russian artillery on the heights, and did terrific execution on the soldiers as they crossed the valley. They were assisted in this by an English battery from Balaclava, hastily ordered out. At the same time our three brigades of cavalry jumped to their horses at the call, and took a position in reserve in the ground so celebrated by the charge of Balaclava, while the French cavalry were formed up till the moment for using them should appear.

The Russians, by their first onset, occupied Traktir bridge; and whilst one division attacked the regiments occupying the hills on the extreme French left, another mounted the slopes held by the Second Division. The whole line of the canal they crossed on the wooden bridges they had carried with them. A small number of them who had passed the canal at the least disputed parts, forced their way up towards, and almost into, the Camp of the Second Zouaves; but these were comparatively a small number. As the reinforcements came up to the French from the reserves, they were led against the advancing masses of the enemy who were struggling up from the bridge, and a terrible conflict took place. Hand to hand, with the bayonet, whilst the roaring artillery plied its dreaded missiles, the Frenchmen and the Russians fought. An old Russian General, forward and urging on his men, was taken prisoner and deprived of his sword; and when he had lost it was still asking for a general officer to give it up to. Two Russian generals and numerous officers were killed. The contest was too terrific to last long; the Russians, having the disadvantage of ground, yielded and re-crossed the bridge—the French killing or bayoneting them as they attempted the passage of the canal. Hundreds of wretched souls perished or were grievously wounded as they rushed through the water and clutched the reeds or weeds on the farthest bank. Those who got over were killed in great number before they reached the Tchernaya, and many continued to drop after they had passed that stream. The Russians were then in full retreat. Whilst these scenes were occurring on the left and in the centre, the Piedmontese had not suffered their losses to remain unavenged, but again scaled the heights and drove the Russians out of the work which they had taken a few hours before. The Russian artillery still held its ground, however, on the slope, at no great distance, covering as best it could its retreating legions.

At ten o'clock Traktir-bridge was held by a detachment of the Imperial Guard, whilst a rear guard of about 10,000 men, drawn up under the protection of Gringalet, covered the retreat of the Russians. The French Third Division, returning to its old camping-ground, covered the crests of the hills towards the Tchernaya, and parties of Chasseurs d'Afrique crossed the river near the Tchorgoun aqueduct, and patrolled the ground. The loss of the French during this sanguinary engagement I was unable to ascertain. I should think, from the number of dead and wounded on the field, that the loss of the Russians must have been little short of 5000 men killed and wounded; whilst the number of prisoners made by the French nearly reaches a thousand.

On a visit to the field after the engagement I saw many moving scenes, but I also saw much truly compassionate conduct of the French to the Russian wounded. Some of the latter were ghastly objects to behold. Most of them, as indeed most of the dead, were struck in the head: and suppressed moans were often heard issuing from a face which had partially lost the aspect of humanity. The soldiers, as usual, were rifling the dead, taking off the boots, garters, and pockets of those around. But so long as life was not extinct in a body it was respected and left untouched. Looks of longing were cast especially towards one group where a poor young officer lay shot through both knees, and begging with his hands clasped that some one would take him to a hospital. A rich medal and locket were dangling from his neck, and exciting the cupidity of more than one swarthy soldier around—who knew too well, however, the penalty attached to the crime of robbing the wounded not to pause in his desire. After seeing the ground by the bridge, where the French were no longer occupied in anything save the transport of the wounded Russians, I left the spot; and, after a call was sounded which roused the Imperial guard to close the bridge, stragglers made off, and the Russians began a continual shell practice on the spot. This conduct, had it been the Russians, caused no surprise, and only led to a cessation of attention to the wretches who were suffering on the ground from their wounds, and who but for this barbarous and untimely cannonade would speedily have been brought in and comfortably housed in hospital. I returned homewards along the banks of the canal which was strewed with dead bodies dragged out from the stream, and lined with wretched, wounded men, huddled together. At one spot, where a large party had crossed, they had found a marsh at the other side of the high embankment, on which the water flowed, and a precipice to climb. They had all been killed or wounded where they lay, having had no chance of advancing further. The day throughout was a splendid one; but the wind sent masses of white dust into the air, and by these clouds we marked the retreat of the Russians as they wended their weary way back into Sebastopol.

You will not fail to have remarked that on this occasion, as at Inkerman, there was hardly any opportunity for the use of cavalry, and that none was employed on either side. On our part we had about 8000 horse in readiness, whilst the Russians had in a hollow on their right no less than sixty squadrons drawn up in beautiful order. The battle, in truth, was a very simple one; there was no great manœuvring genius shown in it. It was a preconcerted affair, carried out in a preconcerted way. It was Inkerman over again, minus the energy of the soldiers, for it is the opinion of all who saw them that the Russians fought ill and without vigour

I regret to say that General Montevecchio, of the Piedmontese army, who was shot with a musket-ball at the approach of the Russians, has since died.

General Manrico, who commands the Chasseurs d'Afrique, was so sick of cholera that he was obliged to give up the command before the day was over.

BEFORE SEBASTOPOL, August 18, 1855.

Yesterday morning at two a.m. three mortar-shells gave the signal for the recommencement of the bombardment of Sebastopol; and at that signal the whole of the guns in the English works broke out in one loud roar, followed by a tremendous hurrah from our men, who from that moment piled their muskets with enormous rapidity and execution. The Russians, undismayed by the attack, replied with energy, and the contending parties were soon enveloped in curtains of red smoke, chiefly from the explosions of mortars on both sides. In about two hours after the commencement of our fire two guns in the new Quarries Battery were dismounted, as well as a large mortar; but, as the day advanced, the effect of our fire was easily perceptible in the destruction of the Russian works, and the ragged appearance which they began early to present. The Russians fired occasionally from the Malakoff with mortars, and heavily from the Redan and Garden Batteries; but their fire was very strong from a new battery behind the slope of Malakoff, which periodically sent out salvos of shells with tremendous vigour. Towards evening the fire slackened a little on our side, and sensibly on the part of the Russians The Malakoff had a continual cloud of dust and smoke hovering over it as our shells ploughed up the ground about it; and as for the Redan, it had three embrasures knocked into one, and looked as woeful as possible in aspect. Still the Russian fire continued and their volleys of shells and round-shot continually ploughed up the ground in our trenches. At half-past six a volley of shells from one of our batteries fell into one of the advanced works of the enemy, and exploded a magazine there with a terrific crash, amidst the enthusiastic hurrahs of our soldiers. Shortly afterwards another explosion took place of almost equal magnitude, and a gun on the Redan was observed to jump into several pieces in the air. During the whole of this time the French works on the right were silent; but, profiting by their respite from the enemy's projectiles, our allies were actively engaged in completing their preparations for opening fire at midnight. This they did with terrific effect, thus giving the Russians no time to repair the damages done to their works. I shall have, doubtless, to record some losses on our side, but am as yet unable to gather many details.

P.S. Aug. 18, 1855.

The bombardment continues, but the French have not as yet opened. Captain Oldfield, of the Royal Artillery, is among the killed. Young Lieut. Dennis, of the 3rd, has had his two legs shot away. There are other casualties which I have not heard. Our fire has proceeded all night without intermission. The loss of the Russians must be very great. They have burial parties permanently at work on their burial-ground of the north side, and numbers of boats ply continually across the harbour.

The General who commanded the Russians on Thursday was Prince Gortschakoff, and Liprandi led the attack on Traktir-bridge. The Russian General who was killed is General Ribde. The number of dead on the field amongst the Russians is 1200; therefore, my estimate of loss—5000 killed and wounded, including prisoners is about correct.

Commander Bammett, of the *Albion*, was killed yesterday; and Captain Henry, of the Royal Artillery.

The *Moniteur* of Sunday last contains the following letter from the French Emperor to General Pelissier:—

General, The fresh victory gained at the Tchernaya prover, for the third time since the commencement of the war, the superiority of the Allied armies over the enemy in the open field; but if it does honour to the courage of the troops, it evidences no less the good arrangements you had made. Address my congratulations to the army, and receive them also yourself. Tell your brave soldiers, who for more than a year have endured unheard-of fatigues, that the term of their trials is not far distant. Sebastopol, I hope, will soon fall beneath their blows, and were the event delayed, still the Russian army, I know it through information that appears positive, would no longer be able, during the winter, to maintain the contest in the Crimea. This glory acquired in the East has moved your companions in arms here in France; they all burn to have a part in your dangers Accord ngly, with the twofold object of responding to their noble desire, and of procuring some repose for those who have achieved so much, I have given such orders to the Minister of War, that all the regiments remaining in France are to be placed in due succession to reserve in the East others which will return. You know, General, how afflicted I have been at being detained away from that army, which has again added to the fame of our eagles; but at this moment my regrets diminish, since you enable me to perceive the speedy and decisive success destined to crown so many heroic efforts. Wherefore, General, I pray God to have you in his holy keeping.

Written at the Palace of St. Cloud, August 20, 1855. NAPOLEON.

A telegraphic despatch from Prince Gortschakoff, dated the Crimea, the 28th ult., states that nothing of importance had occurred up to that date. The following important success, which General Pelissier mentions in a despatch dated the 24th, was not deemed worthy of notice by the Russian General:—

Last night we carried an ambuscade on the glacis of the Malakoff; 500 Russians made a sortie to retake it, but were brilliantly repulsed with a loss of about 300 men. The work has been turned, and remains definitively ours. General MacMahon has arrived. The health of the army is excellent.

A despatch of General Simpson, August 20th, 3 50 p.m., states that "Our works, and those of our allies, are making satisfactory progress."

THE WAR IN ASIA.

Affairs at the seat of war in Asiatic Turkey begin to look more encouraging. The Russian army has retired from before Erzeroum, and Omer Pacha has left Constantinople to assume the command of the Turkish army in Asia. Twenty-five battalions are to be taken by English steamers to Trebizond. Abdi Pacha left Constantinople on the 16th ult. for Varna, from whence he will proceed to Sallstria and Rustchuk, to form a division, which will be marched to Varna and Kustendjeh, and embarked in Turkish men-of-war and foreign steamers. A second division, that of Osman Pacha, is likewise to be embarked at Balaclava for Trebizond. It is composed of 11 battalions and 600 cavalry, with two batteries. The Egyptian Contingent, under Menekli Ahmed Pacha's command, is to be transferred from Eupatoria to Batoum, and will be replaced in the Crimea by the Turkish Contingent, which was to leave Constantinople for its destination about the latter end of this week.

THE BALTIC FLEET.

Since the English and French Admirals returned to Nargen on the 13th ult., with the whole of the ships, nothing of importance has been done. As soon as the weather moderates the fleet will proceed to Seskar, to await orders. No further operations on a large scale are likely to be undertaken this year.

The Stockholm papers report an engagement off Riga on the 10th ult. Seventeen Russian gun-boats, it is said, came out of Riga and fought for two hours with the screw steam-ship *Hawke* and the screw corvette *Desperate*. The action was kept up with great spirit, and the gun-boats were withdrawn, some of them with considerable damage. On board the *Hawke* one man was severely wounded, and the *Desperate* received six cannon-balls in her hull. On the afternoon of the same day the above-named two ships bombarded the fortifications of Riga. Later accounts from Faro Sound mention the arrival of the *Hawke*, which had put in there to repair damages.

Her Majesty's cruisers have visited Ulealborg, Simo, and Windau, and destroyed Government ships and stores.

BERLIN, Aug. 29.—The Allied fleets have retired from immediately before Cronstadt, and have taken up another position.

KIEL, Aug. 28.—Five English gun-boats have arrived here from Sveaborg, on their way home.

The *Russian Invalide* of the 21st ult. contains at last a detailed account of the bombardment of Sveaborg. It is clear that the conflagration did great damage. The loss of life is set down at 300

The *Geyser*, which arrived at Dantzic on the 30th, states that authentic information has been obtained in the fleet that the Russians lost upwards of 2000 men.

THREATENING ATTITUDE OF AUSTRIA TOWARDS PIEDMONT.

A large camp is forming at Somma, near the Piedmontese frontier, at the foot of the Lago Maggiore. The excuse given for the large number of troops in the Italian provinces is this camp, which is an annual affair. So far there is truth in the apology; but last year the camp was not formed on account of the cholera, which is worse this year than it was last in the country towns of Lombardy.

The Austrian Government of course opposes the formation of our Italian Legion by every means in its power. The rich are threatened with sequestration; the poor are refused passes to move from one province to another, and, if very much suspected, are shut up in gaol

The news of the battle of the Tchernaya was of course received in Milan with enthusiasm by the Constitutional party—and that may be said now to embrace nine-tenths of the population, for Mazzini's followers have dwindled to a handful

MR. WENTWORTH BEAUMONT, M.P. for South Northumberland, has sailed in his celebrated screw-yacht for Balaclava, accompanied by Mr. Ruplake, the well-known author of "Eothen."

ASHBURTON, DEVON.—The Prince de Joinville and suite spent Friday week in visiting the beautiful scenery on the river Dart, and through the Buckland Woods, the properties of Sir B. P. Wray, Bart., and R. P. R. Bastard, Esq. A circuitous route of ten miles through these woods is kindly allowed by the above gentlemen to all visitors: it is the most picturesque that possibly can be of rock, river, and woodland scenery.

AN GRAND EXHIBITION OF POULTRY, consisting of upwards of 1000 pens of Domestic Fowls of all kinds, took place at the Ancrley Gardens this week, which proved very attractive. The arrangements were excellent; and upwards of £300 were distributed in prizes. Amongst the exhibitors we found the names of most of the well-known breeders. Silver cups of the value of £5 5s. were awarded to the best birds in the various classes; and no less than three of these were carried off by H. D. Davies, Esq., of Spring Grove House, Hounslow, to whom was also awarded the First prize Challenge Cup, value £15 15s., for the best general collection of poultry. The collection comprised Spanish, Dorking, Brahma, white Cochin, and Rangoon fowls, and white Aylesbury ducks and geese. The other Challenge Cup, for the second-best collection, was awarded to George Botham, Esq., Wrexham Court, Slough.

FOR SATURDAY NEXT, SEPTEMBER 8TH, 1855,
WILL CONTAIN

The Royal Procession Passing the Arc de l'Etoile. (Two-page Illustration.)
Arrival of her Majesty at the Palace of Versailles. (Two pages.)
The Supper in the Theatre.
The Grand Trianon.
The Hôtel de Ville, Illuminated.
Court Louis Quatorze, Hôtel de Ville.
Grand State Procession: Her Majesty's Departure. (Two pages.)
Her Majesty leaving Boulogne, &c., &c.

*** We regret to be again compelled to defer the Illustrations of the Bombardment of Sveaborg. They will appear next week, with other Sketches from the War.

THE ILLUSTRATED LONDON NEWS

LONDON, SATURDAY, SEPTEMBER 1, 1855.

QUEEN VICTORIA having returned in triumph to her own dominions—after invading and conquering the hearts of the French people—Paris is, it appears, to be visited by our brave ally, the King of Sardinia, who is certain of a Royal welcome; and by the Kings of Bavaria and Wurtemberg, whose welcome is not quite so sure. The objects of these three visits are not yet known. That of the first is certain to be connected with the great war in which the western nations are involved; that of the two others is likely to have reference to the same all-engrossing and important subject. Italy and Germany are both on the move; and events in those parts of Europe are ripening to a conclusion which many foresaw to be inevitable on the first outbreak of hostilities. At present, however, the main interest centres in Italy; and when that is stirred, Germany—quiescent and slumberous as she is, and would like to remain—must share the motion, spite of her *vis inertia* and her pedagogy. The signs and portents of great events in Italy are apparent wherever we look. It is not only the imperishable renown which the excommunicated Piedmontese have won on the Tchernaya—and which has caused many an eye to sparkle and many a heart to throb in the Papal, the Neapolitan, and the Lombardo-Venetian States, where the people are not yet excommunicated or at feud with the Pope,—but the enlistment of an Italian Legion, and the blundering tyranny of the King of Naples, which have conspired to excite the imagination of the Italians, and to arouse in them the dormant but never-extinguished hope of independence. The Piedmontese have exalted the Italian character in the eyes of the world; and the Italians in Milan, in Venice, in Florence, in Rome, in Naples, in Palermo, and many another city, have begun to take heart, and to see with clearer eyes the prospect that will open out before them if Russia still resists, and if the Allies persevere—as they most undubitably will—in attacking her wherever she is most vulnerable. Austria—who knows and confesses that the Allies are in the right and that Russia is in the wrong, but who lacks courage to act upon her convictions—begins to feel uneasy. Six months ago, when it seemed probable that she would make common cause with the Allies, old Marshal Radetzsky wrote to the Emperor to say that he could spare half the army of Lombardy; but now that a shameless neutrality finds most favour with the anti-English Count Buol, it has been judged expedient to double her forces in those provinces. Her alarm is not without cause. With such neighbours as the Sardinians, the Austrian government in Italy has reason to dread the influence of the generous and chivalrous ideas which their bravery has excited in Italian minds; and with such Sovereigns as the well-meaning but silly and most mischievous Pope, and the insane King of Naples, whose conduct may at any moment light up a blaze which it will not be easy to extinguish, the situation of Italy is critical in the extreme. It is therefore on no ordinary occasion that the King of Sardinia goes to Paris; and Europe will wait with anxiety to know more of a visit so remarkable, and of the policy which has dictated it. Nor are the visits of the two German Sovereigns—if the rumour of their intention should turn out to be correct—much less significant. Bavaria and Wurtemberg aspire to be something greater than mere dependents of Prussia or Austria. They claim a right to think for themselves; though in the cold shadow of their preponderating neighbours their voice has hitherto been without influence. But as when straws whirl we may know the wind blows, so when such powers as Bavaria and Wurtemberg presume to stir, we may be confident that there are powerful agencies at work somewhere, though we may be unable to guess their tendencies and *modus operandi*.

DETAILS, official, as well as private, of the battle on the Tchernaya have now been received, and so far from diminishing in the slightest degree the estimate which had been placed upon the affair, they tend to increase its value, both as a military success and as a moral demonstration. They show, in the clearest manner, that the enemy had resolved upon a grand venture for a great object, and they also show that, taken from behind his walls and earth-works, the Cossack has no chance against the soldier of the west.

The battle-story may be told in very few words. Prince Gortschakoff (who commanded in chief), determining to make one more effort "to drive the haughty assailants into the sea," brought out nearly 70,000 men to perform that exploit, upon Thursday the 16th of August. The assault which he made, General Martinaloff leading the columns, was directed against the French and Sardinian position: one English battery being the only port on of our force that actually shared in the work of the day, though we had cavalry ready and only too eager to engage, had Pelissier forgotten Lord Lucan. There had been numerous warnings that the attack was coming, spies and deserters alike announcing it; but it would seem that so many false alarms have been given that the tidings failed to impress the Allies with a conviction that the Russians were actually bent upon serious battle. It is hardly fair to say that there was a "surprise," but assuredly the preparations for receiving the enemy were not so complete as they should have been. The Sardinian picket, assailed before daybreak, was driven in with loss, and the *tête de pont* was also forced from the French; but the gallant Zouaves stood stubbornly to their duty, and held the assailants in check until the artillery came into play, and the Russians were beaten back with much slaughter. Day broke, and the Allies, now fully prepared for the foe, had not to wait long, for as the sun rose in its glory, two enormous columns of infantry hastened down to the river, crossed it, and rushed up to the attack. But the Piedmontese artillery, "which had got the range to an inch," opened upon them, and again they were put to rout—this time with hideous carnage, for to the slaughter wrought by the guns was added death by drowning, the wounded rolling down the hill-side, and perishing in the aqueduct below the Sardinian position. Rallied and reinforced, the Russians were brought up for a third attack, which was made with desperation, and a backward move of the French was supposed to indicate a retreat. But it was merely a manœuvre, adopted in order to give the enemy the benefit of the fire of the whole line, and this was suddenly hurled upon them—musketry, artillery, and rockets all coming into play; and then the Russians, staggering under this storm of death, were charged by the French and utterly routed, the merciless artillery of Piedmont cutting up the fugitives. The Russians finally retreated towards Mackenzie's Farm and among the hills, leaving at least five thousand men behind them.

This sanguinary repulse was sustained by an army of some 70,000 men, who attacked a force of less than one quarter of their own number. It appears, too, that the assailants were, to a considerable extent, new men, who had not undergone the trials and privations of the Crimea; and, moreover, the infantry, according to the Russian custom, had been infuriated by liquor—the artillerymen, from whom steady and skilful service was required, being prudently kept upon their usual rations. Everything, therefore, including the half-prepared condition of the Allies, was in favour of the enemy; and yet, with all these fearful odds on his side, Prince Gortschakoff has but to add another to his list of disgraces. From a document found upon a Russian General who fell, it appeared that this attack was but a part of the Prince's scheme of action, which was to have assaulted, in full force, each of the keys to the position of the Allied armies; but either prudential motives, or a want of strength, compelled him to confine himself to the single operation in which he has so miserably failed. The battle of the Tchernaya, or of Traktir, which latter will probably be its historic name, is another name to be graven on the tablets of History. Piedmont claims a noble share in the glory of the day; of England, upon this occasion, it is enough to say that she did all that was sought of her, and was ready to do more. We learn that on the 17th the English opened a very active fire from our right and left attacks against the Redan, and that the Mamelon had opened a new battery upon the Malakoff; and the journal of the siege, closing on the night of that day, adds 'the bombardment of the Redan and its associated works has been kept up all day." Telegraphic news has since apprised us that the French have got upon the *glacis*, and, after a fierce struggle and the slaughter of 300 Russians, maintained their hold.

Turning once more to the Baltic, it may be remarked that our Sveaborg exploit, whose mere material efficacy it will do the Russians little good to undervalue, has caused a burst of joy throughout such of the northern States as dare speak out. Sweden, especially, is exultant at the blow, and pants to see it followed up. Whether it will or can be pursued this year is almost a problem. Sir Charles Napier, in a letter which the Baltic news not unnaturally elicited from the indignant old Admiral, shows that it was struck in despite of the culpable shortcomings of the authorities at home; for that though Admiral Dundas had more appliances for the purpose than had been placed at Sir Charles's disposal by the Admiralty that affected to send him out to conquer, even the present fleet is miserably deficient both in gun-boats and in mortars. Other evidence proves that, in the latter respect particularly, gross neglect has been manifested, the authorities having made no provision for supplying the place of such mortars as must be damaged by working. Whether Dundas can do more is uncertain, but Sir Charles's letter clearly shows why *he* could do little; though his careful exploration of the scene of action—a survey of which the present Commander reaps the advantage—does not deserve so disparaging a qualification. It would seem a work of surpassage to bring fresh proof of the hypocrisy of Sir James Graham, who poured his libations for the success of an expedition which he took care should not succeed. Napier wanted a hundred gun-boats; Sir James, in magniloquent liberality, declared that he ought to have two hundred; but how many did he give him? Then, leaving the Admiral powerless, the Russian First Lord of the Admiralty insults him for inaction. Had Sveaborg been attacked and this letter published before Sir James Graham openly avowed his hostility to the war, the nation would have regarded the Russian Baronet's conduct as merely of a piece with his usual jesuitry; but now that the late First Lord has deliberately joined the Russo Quaker ranks, his behaviour in the matter of the Baltic fleet will be read by a light which throws its rays backwards as well as forwards, and which not only makes it plain that Sir James Graham is never to be trusted for the future, but which makes it far from improbable that he may be called to account for the past. It is true that at moments of national triumph there is usually an amnesty for culprits, but an exception is usually made in the case of those who have sought to impede such triumph, and out of his own mouth let Sir James Graham be judged.

It will be seen by reference to an announcement from the General Post-office, which appears in our advertising columns, that the Newspaper Stamp, which a recent Act of Parliament rendered optional and not compulsory, has just been declared by the Lords of the Treasury and the authorities of the Post-office to be a matter of internal arrangement only, and not applicable beyond the limits of Great Britain and Ireland. For the future, stamped and unstamped newspapers are, as far as regards foreign countries and the British Colonies, to be absolutely indistinct in the eyes of the Post-office. But, for circulation within the limits of the British Isles, the difference between stamped and unstamped newspapers is to be maintained. In other words, an *unstamped* copy of the ILLUSTRATED LONDON NEWS will be transmitted *free* to France, Belgium, Switzerland, and various States of Germany, subject only to such postage as the French, Belgian, German, and Swiss Post-office may impose upon it for transit in their territories. A stamped copy sent to the same places would enjoy no greater privilege. But for transmission and retransmission within the limits of the British Isles the paper must be stamped; or, if unstamped, must have postage-labels affixed, according to the weight, under the regulations of the Book-postage Minute—four ounces for a penny. In like manner to the Colonies: either a stamped or an unstamped copy of the ILLUSTRATED LONDON NEWS may be transmitted to Australia, Canada, Nova Scotia, the West and East Indies, and other places, of which we have elsewhere given the list, for one penny. We advise such of our readers as have friends or correspondents in the Colonies or elsewhere abroad, to whom they forward our Journal, to keep the list by them for purposes of reference, and to bear in mind the distinction drawn by the Post-office between the internal and external conveyance of newspapers.

THE COURT.

The Court arrived off Osborne at nine o'clock on Tuesday morning, in the Royal yacht *Victoria and Albert*, after an excellent passage from Boulogne. Her Majesty and the Prince Consort, with the Prince of Wales, and the Princess Royal, landed shortly afterwards.

The Marquis of Breadalbane remained on a visit to her Majesty, and returned to London on Wednesday.

The Hon. Beatrice Byng has succeeded the Hon. Mary Bulteel as Maid of Honour in Waiting.

The Court will remain at the Isle of Wight until the 5th instant, when they will come to Buckingham Palace. On the following morning the Queen and the Prince Consort, with the Royal children, will take their departure for Balmoral, travelling by special train on the Great Northern line from King's-cross. The Court will sleep at Edinburgh one night, and on the following morning proceed by rail to Banchory, whence the Royal carriages will convey them to Balmoral. The return of the Court to Windsor will be between the 9th and 14th October next.

Their Royal Highnesses the Duchess of Cambridge, the Hereditary Grand Duchess of Mecklenburg-Strelitz, and the Princess Mary, returned to town on Monday from visiting Lady Marian Alford, at Ashridge-park, near Berkhampstead.

His Excellency Count Persigny, invited to come to St. Cloud during the Queen's visit, by a direct and personal despatch from H.I.M. the Emperor, left town at the close of last week, and is expected to return to Albert-gate to-day.

The Marchioness (Dowager) of Londonderry, previous to leaving Wynyard-park for her seat in Ireland, laid the foundation-stone of a new church at New Seaham, in affectionate remembrance of the late gallant Marquis, her husband.

The Earl and Countess of Shaftesbury have, we regret to learn, sustained a domestic bereavement by the death of their second son, the Hon. A. Maurice Ashley. He was in his nineteenth year.

CHURCH, UNIVERSITIES, &c.

CONSECRATION OF A NEW CHURCH AT BRAMPTON-BIERLOW, NEAR WATH-UPON-DEARNE.—This beautiful church was consecrated by his Grace the Archbishop of York, on Tuesday week. To the liberality of the Earl Fitzwilliam the district is chiefly indebted for this handsome edifice, as the principal part of the cost (nearly £4000) has been defrayed by his Lordship. The church will accommodate 500 persons. The Rev. Mr. Hayes (the incumbent) read prayers; and the sermon was preached by the Rev. H. Partington, Vicar of Wath.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev J. B. Deane, to St. Martin Ontwich, in the city of London: the Rev. Henry Heming, to East Farndon, near Wellingborough. *Vicarage:* The Rev. M. Mitchell, to Newton Kirk, Northumberland. *Incumbency:* The Rev. J. Fry, to Longfield, near Godstone, Surrey.

NEW CHURCHES.—The thirty-fifth Annual Report of the Commissioners for Building New Churches, issued last Saturday, states that, twenty-seven churches, containing accommodation for 15,375 persons, including 11,774 free seats, have, by aid of grants, been completed since the last report, and twenty-one new churches are in course of erection.

On Saturday, the 25th ult., the ladies of the congregation of St. John's Church, Angell-town, Brixton, presented the Rev. Matthew Vaughan, LL.B., the much-respected Incumbent of the district, a full set of robes.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 30

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100

The reading of the barometer increased from 29.72 inches at the beginning of the week, to 30.09 inches on the 26th; decreased to 29.75 inches by the 28th; increased to 30.25 inches by the 30th; and decreased to 29.72 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.95 inches

The mean temperature of the week was 60°9—being 1°3 above the average

The range of temperature during the week was 34°0—being the difference between the highest reading, 75°5, on the 28th; and the lowest, 45.5, on the 30th.

The mean daily range of temperature during the week was 21°9. The least was 16 8°, on the 24th; and the greatest, 30 2°, on the 30th

Rain fell during the heavy thunderstorm on the night of the 23rd, to the depth of rather more than two-tenths of an inch.

The weather during the week was fine throughout, and the sky nearly free from cloud

Lewisham, 31st August, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, the births of 1540 children were registered within the metropolitan districts: of these 755 were boys, and 785 were girls: exceeding their respective averages by 71 in the last ten weeks. Similar births were registered in the week during the week were 1615 ; 476 being males, and 577 females. This number is a decrease of 7 on that of the previous week, and although in the present mortality is as low as it was, at the same season, in those years when the public health was best. The deaths from diarrhœa are decreasing, the number this week being 127; while to cholera 10 deaths are attributed. To diseases of the tubercular class 187 deaths are referred To diseases of the heart, &c., 37: of the respiratory organs, 88: and of the digestive organs, 68. To old age, 31 deaths; and to violence, cold, privation, and intemperance, 41 are attributed—being 15 above the average number

CLEANSING OF THE THAMES.—A document is now lying for signature at various places in the City, addressed to the Lord Mayor, urging that, inasmuch as the Metropolitan Commissioners of Sewers are in possession of plans and money available for the dispollution of the Thames, a committee be appointed to take all necessary steps for watching such proceedings as may be taken, so as to secure the prompt execution of the necessary works.

HAILEYBURY COLLEGE. By an act of the late Session (18 and 19 Vic., c. 53), the East India Company are to be relieved from maintaining Haileybury College. It is to be closed from the 31st of January, 1858. No person is to be admitted as a student after the 25th of January next.

ON Friday (yesterday) the British Museum was closed for the annual autumnal vacation. The Museum will be reopened to the public on Monday, the 10th of September.

THE annual six weeks' vacation at the National Gallery, Trafalgar-square, and the Vernon Collection of Paintings, Marlborough-house, Pall-mall, is appointed to commence on the 11th of September. They will be reopened to the public on the 29th of October.

KENSINGTON GARDENS.—In consequence of the great number of persons attracted to there gardens by the band on Sunday the 12th ult., and the great increase of visitors on Monday the 13th, the Right Hon. Chief Commissioner of Works gave orders that the number of visitors last Sunday should be taken down, and on entering the gates persons might be seen actively engaged in this duty. The gardens presented a gay scene, all enjoying themselves, and the whole spectacle was one of a most gratifying character There was nothing in the demeanour of this vast multitude to offend the fastidious eye of the most refined, and the police arrangements has also taken place in the accommodation offered to the public as regards chairs and movable seats. Until lately these were furnished by one person, now sometimes of a rickety character, and the exercise of patience was threepence each. The chairs are now nearly all new, and provided by different parties; and a notice appears on the trees to the effect that the charge for movable seats is not to exceed one penny. Every chair was let, and hundreds were seated in little groups upon the grass, listening to the music and witnessing the gay scene, which was much heightened by the beauty of the weather. Most of the nobility and gentry, and many members of the *corps diplomatique* remaining in London, appeared to be present; and Sir Benjamin Hall was seen moving about in the crowd arm-in-arm with the Dean of Durham, apparently enjoying the scene.

PRELIMINARY measures have been adopted for founding in Edinburgh a "Scottish Meteorological Society." The Duke of Argyll is the provisional president, and Mr. A. K. Johnston the honorary secretary.

THE HAIR TRICK.—A tall, dark-complexioned man, named LOTEN LUCAS, described as a bricklayer, was brought up at Thames-street, on Monday, every sixth sessions, charged with committing a most singular offence. Tryphena Nice, a young woman in the service of her father, who keeps an oil and colour shop at No. 47, High-street, Shadwell, and a baker's shop next door, said the prisoner came into the oil shop, in which she was serving, after the gas was lighted on Saturday night, and asked for a penny worth of soap, with which she supplied him, and he put down a sixpence on the counter, and she returned him fivepence change. He then asked her if she sold snuff, and she replied in the negative. He next asked her for a farthing's worth of salt, and as she was about to weigh it out, said, "Never mind, give me a halfpenny worth. She washed the salt, and handed it to him, but he gave her a penny. She had to give him a halfpenny change, and to do so opened the till, when the sixpence, the only silver in the till, mysteriously disappeared. He left the shop immediately, and she called out that he collected he was the same man who had robbed her father before, and went after him The prisoner went into the next shop, in which her father was serving, and was about to ask for something, when she called out, "That's father, here's the man with a sixpence with a hair to it; he has taken it out of the till." The prisoner immediately ran away; but he was followed and overtaken. Mr. Yardley: Has the till been found? Miss Nice: No; she closed after you put the sixpence in it How on earth, then, could he get the sixpence out without putting his fingers in?—Miss Nice: Very easily, Sir. There was a hair attached to the sixpence, one end of which remained in his hand, and when I opened the till a second time to give him a halfpenny, he began talking, and the sixpence went out of the shop along with him. Mr. Liveing (chief assistant) here put the sixpence on the magistrate's desk, and drew it off again by a very fine light hair about four feet long, one end of which was firmly attached to the sixpence. Mr. Yardley: Oh, I see. It is a most ingenious piece of roguery. The hair would be scarcely discernible by gas-light over a counter. Mr. Niner said the prisoner first began to patronise him two years ago, and came almost every night, tendering a shilling or a sixpence in payment of some trifling purchase, but the silver he laid out somehow or other always disappeared with him. At last he discovered the hair trick, about eighteen months ago, and the prisoner never came back again till last Saturday night. Several other shopkeepers gave similar evidence. Mr. Cooke, a baker, of Devonshire-place, Commercial-road East, said: Your worship, I know the prisoner well. He paid me a hundred visits at least, commencing three months before Christmas last, and ending one month afterwards He used to come into my shop regularly every night, carrying that bright brass tube which was taken from him on saturday night. I know—at least, I have good reason to believe—he got change for 2s. every night, and took the same 2s. away with him. He used to flourish the brass tube, ask for a penny loaf, and put down 1s. Just as I was getting the change he would ask for something else, which compelled me to turn my back, and that would give him an opportunity of abstracting the shilling from the till it he had a hair fastened to it. He would then put down the same shilling a second time, and when he got the change ask for another penny-worth of bread, and extract the shilling from the till a second time while my back was turned. He always had a bundle with him, which he placed before him on the counter to facilitate his operations, and had such odd ways that I thought he had a loose tile.—Mr. Yardley: A loose tile! Explain that metaphor.—Mr Cooke: I thought he was cracked (Laughter). We used to call him "the man with the loose tile."—(Increased laughter)—until I found out the trick, and detected a shilling moving out of my till with a hair to it. The next night I had a policeman and a strong man in readiness to secure him, but he did not come. On the following night he did come. My girl was cautioned and on the alert, and she put the shilling with hair fastened to it on the counter, and the end of the hair reeled off the brass tube. The prisoner knew he was found out, and never came afterwards. After a long investigation the prisoner was fully committed for trial.

OFFICIAL DESPATCHES.

BATTLE OF THE TCHERNAYA.

War Department, Aug. 29.

Lord Panmure has this day received two despatches and their inclosures, of which the following are copies, addressed to his Lordship by General Simpson:—

Before Sebastopol, Aug. 18.

My Lord,—In my despatch of the 14th inst. I informed your Lordship that I had reason to believe that the Russians would attempt, by a vigorous attack, to force us to raise the siege. Thus they endeavoured to do on the morning of the 16th, but the result was most glorious to those of the Allied troops who had the fortune to be engaged. The action commenced before daylight, by a heavy column of Russians, under the command of General Liprandi, and composed of the 6th and 17th divisions, with the 4th and 5th divisions in reserve, attacking the advanced posts of the Sardinians. The ground occupied by them is on the commanding hills on the right of the position, on the left bank of the Souhnia river, where it forms its junction with the Tchernaya, with two advanced posts on the opposite side. These were held with very determined gallantry for a considerable time; but the heights which rose precipitously on each side of the river: their success was but momentary they were driven back across the river, leaving the ground covered with dead and wounded

The Russian General, in no way daunted by the failure of his two attempts, ordered a second column, of equal force to the first, to attack; they advanced with such impetuosity, covered by the fire of their numerous artillery, that a third time the bridge was carried, and the heights above it crowned, but they were again repulsed and retired in great confusion into the plain, followed by the bayonets of our gallant allies. The general officer who commanded the Russian column, who was it is supposed General Read, was killed, and in his possession was found the order for the battle, signed by Prince Gortschakoff, who commanded in person. From these it would appear that it was a most determined attempt to force us to raise the siege. Had they succeeded Balaclava was to have been attacked by one portion of the army, whilst the heights on which we now are were to be stormed by the other; at the same time a vigorous sortie was to have been made from the town, on the French works on our extreme left, from the Quarantine, and another on the works on our extreme right on Mount Sapoune

The action which I have endeavoured to describe is most glorious to the arms of the French and Sardinian troops. To meet the force of the Russians the former had but 12,000 infantry, and four batteries of artillery engaged; the latter had 10,000 men in position, 4500 actually engaged, and 24 pieces of cannon. The Russian force consisted of from 50,000 to 60,000 men, with 160 pieces of artillery, and cavalry to the amount of 6000. This disparity of numbers will readily explain to your Lordship the difficulty that would have been experienced had an attempt been made to follow up the advantage by a pursuit. The Russian retreat, moreover, was protected by the fire from the heavy guns in position on the Mackenzie heights. The loss sustained by the Russians is estimated at between 6000 and 8000 men, including 600 prisoners whilst on the part of the Allies it does not amount to more than 1000 men.

This brilliant affair has caused the greatest delight amongst the ranks of the Allied army, and while it adds fresh lustre to the gallant achievements of the French arms, it is with the utmost pleasure that I have to record the high judgment conduct and gallant bearing of the Sardinian troops, under General Delia Marmora, who have for the first time met, conquered, and shed their blood against our common enemy, who is now disturbing the peace of Europe Captain Dowbraya's battery of 32-pounder howitzers was placed in advance with the Sardinian troops, and did most excellent service in preventing the advance of the enemy's artillery. Our cavalry, under Lieutenant-General Sir J. Scarlett, R.C.B., was placed in the plain of Balaclava, prepared to take advantage of any circumstance that might present itself, but the opportunity did not arise for calling upon their services. I regret that I am unable to give a more detailed account of the part performed by the Sardinians, as up to this time I have not received General Della Marmora's report.

I have, &c., JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

Before Sebastopol, August 18.

My Lord,—General Pelissier having announced to me his intention of attacking the Malakoff and adjacent works were prepared to open fire, arrangements were made that a steady fire should be commenced yesterday morning against those works and the Redan. This continued throughout the day, and the effect produced was much as was anticipated. The Russians did not at first answered briskly, became by the evening feeble. In the afternoon a shell from one of our batteries ignited and caused the explosion of a great number of shells in one of the enemy's batteries, doing apparently much damage

I regret to have to report the deaths of Captain Oldfield, of the Royal Artillery, and Lieutenant Hamilton, of the Royal Navy, am regret also to mention [illegible] Lieutenant Bagnold, of the Scots Fusilier Guards, of the Royal Artillery, received a severe wound, and has had his right arm amputated. he is, I am rejoiced to add, doing well. I inclose a list of the casualties. I have, &c., JAMES SIMPSON, General Commanding.

To Lord Panmure, &c.

OFFICERS, NON COMMISSIONED OFFICERS AND PRIVATES KILLED AND WOUNDED FROM THE 10TH TO THE 17TH AUGUST, INCLUSIVE.

KILLED.

Brevet Major and Adjutant H. Drummond, 1st Battalion Scots Fusilier Guards.

Aug. 13—3rd Battalion Grenadier Guards: Private John Stamford, Thomas Dobson

1st Battalion Scots Fusilier Guards: Private William Sanders—3rd Foot: Privates John King, Patrick Hagarty, Patrick M'Carvey. 19th: Privates Jeremiah Reily, Thomas Mackean. William smith, William Doyle. 21st. Private Hugh Toual nam. 31st: Sergeant John Thompson. Private Edward Neil. 42nd Private Robert M'Donald. 49th: Private James Feagan. James Patterson. 72nd: Private Donald M'intosh 79th. Private George Dean

Aug. 14. 3rd Foot. Privates Edmund Ryan, James King. 4th: Private James Wallis 17th Private John Boyle. 20th. Private James Martin

Aug. 15. 23rd Foot: Private James Gough. 46th. Private John Bowers. 77th: Private Arnold Smith. Royal Engineers: Private Alexander Weir

Aug. 16. 3rd Battalion Grenadier Guards: Private Richard Richardson 42nd Foot: Private [illegible] Clarke

WOUNDED.

Captain H. D. Ellis, slightly; Lieutenant R. B. Prescott, severely, 33rd Foot

Lieut. A. C. Ward, slightly; Ensign W. D. Reddish, slightly, 41st Foot

Aug. 13.—3rd Battalion Grenadier Guards: Privates Robert [illegible], slightly, Thomas Williams, severely; James Bachelor, dangerously. 2nd Battalion—Private M'Coughlan Keane, slightly. 3rd Foot: Privates Alexander Potts, Patrick Lovely, Thomas M'Gann, James Donahan, John M'Crowley severely; George Homes, dangerously; Owen Mahony, Patrick Hennery, James Darragh Hugh Macolm, Edward Lockhard slightly. 4th: Privates H. Hennegan, Caroline, J. Lennan, H. Robinson, slightly. 20th: Corporal C. Cooper, slightly. Private J Chambers, J. Noonan, slightly. 17th. Privates John Kennedy, Daniel Smith, severely; John Connon, slightly. 39th: Private Francis Gorman, severely. William Lynch, John Barker, Thomas Murphy, John Kelly, slightly

Aug. 14.—3rd Foot: Privates [illegible] Ryan, [illegible] Kelly, Thomas M'Mahon, Murphy, dangerously. Thomas Phelan, James Quinn, severely. William Mitchell, Michael Russell, slightly. 30th. Corporal James Hastings, slightly; Private Joseph Tipe, severely; 2nd Battalion Rifle Brigade: Privates James Macdonnell, dangerously; Matthew Cooper, [illegible] Scott, Arthur French, severe

Aug. 15.—3rd Foot: Privates T. M'Grath, Andrew Stewart, Thomas Parsell, John Green, [illegible] 8th. Private Thomas Hagan, severely. 20th Corporal Jacob Smith, slightly [illegible] Daniels M'Coughal, Jeremiah Gosney, Robert Armstrong, William Hilal

Aug. 16.—3rd Foot: Private [illegible] Hay, slightly. 41st. Private Timothy Cashman, slightly. [illegible] Sergeant Smythson White, slightly. 46th: Private William Howe, severely. [illegible] Johnson, severely; Privates George Parker, severely; William Knight, slightly [illegible] Joseph M'Loughlin, slightly. 77th Privates John W. Wright, slightly. [illegible] severely. 88th: Privates [illegible] Mahon, severely. 1st Battalion Rifle Brigade: Privates [illegible] Mullins, severely; Bengal Artillery: Acting Bombardier John Grant, slightly; Driver [illegible] severely

Aug. 16. 3rd Battalion Grenadier Guards: Sergeant William Gamble, severely; Private William Hocking, Thomas Platt, Michael [illegible] John Calhon, Charles Ferguson, slightly; 1st Battalion Scots Fusilier Guards: Private [illegible] Lewis, Henry Harvey, slightly 2nd Foot: Private William Thomas, slightly. 4th: Private Patrick Brannick, William Hilal. Privates Daniel Sullivan, George Martin, severely. 18th: Private Terence Smyth, dangerously. 20th: Private Thomas Mackeman, slightly. 30th: Private Thomas Cloak, John Boodler, William Midhurst, slightly. 33rd: Privates Matthew Parris, Michael Ryan, Peter M'Grath, Edward Neill, James Shaw, slightly; Jesse Lockhart, Patrick Murphy, severely. 39th: Private Thomas Jones, Samuel Hunter, slightly. 41st: Private William Banbury, Maurice Brennen, Robert Bundy, John Byrne, slightly. 43rd: Private [illegible] Gulbrisk, dangerously; Hugh Connell, severely, Robert Brown, James Jack slightly. Privates Thomas Sweeney, severely; James Garman, dangerously. 48th. Private Ir[illegible] Privates Peter Quinn, severely. 49th: Private John Kenny, severely. 68th: Private John Riley, [illegible] Private George M'Millan, slightly. 79th. Private Peter Brodie. [illegible] Private William Hatchey, slightly. 93rd. Private William [illegible] [illegible] John Meedie, severely 95th: Privates Thomas Cooper, severely; John [illegible] slightly

[illegible] Foot: Corporal James Dawson.

A LIST OF CASUALTIES IN THE ROYAL NAVAL BRIGADE, 17TH AUGUST.

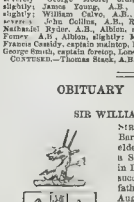
KILLED.—Commander Leon U Hammet, Albion. Richard Nyzbe, leading seaman, mr.; Henry Wackerall, ord., Rodney. William Barry, A.B Albion

WOUNDED.—John Gregg, A.B. London, mortally wounded. Edward Lee, ord Queen, severely George Moore, ord., Queen, slightly; Feanney Ayre, ord., Queen, slightly; James Young, A.B., Rodney, slightly, John Carmichael, A.B., Rodney, slightly; William Calvo, A.B., Rodney, severely; James Holmes, A.B., Rodney, severely; John Collins, A.B., Rodney, severely; John Daly, A.B., Albion, severely Nathaniel Ryder, A.B., Albion, severely; William Ellen, A.B., Albion, slightly; Henry Feney, A.B., Albion, slightly; Mr. F. R. Lucas, Second Master, Queen, slightly; Francis Cassidy, captain maintop, London, slightly, William race ord., London, slightly George Smith, captain foretop, London, severe y. John M'Cathy, ord., London, severely.

CONTUSED.—Thomas Stack, A.B., Rodney, slightly.

OBITUARY OF EMINENT PERSONS.

SIR WILLIAM A. CHATTERTON, BART.



SIR WILLIAM ABRAHAM CHATTERTON, second Baronet, of Castle Mahon, county Cork, was the elder son of Sir Charles Chatterton, the first Baronet, a Serjeant-at-Law and Keeper of the State Papers in Ireland, and was born the 6th August, 1787; he succeeded to the Baronetcy on the death of his father, the 9th April, 1806. He married, on 3rd August, 1824, Henrietta Georgina, only child of the Rev. Lascelles Iremonger, Prebendary of Winchester, and niece of Lord Gambier. Sir William Abraham Chatterton died on the 7th ult., at Rollspark, Essex; and, as he has left no issue, he is succeeded in the title and estates by his only brother, Major-General James Charles Chatterton, K.H., late of the 4th Irish Dragoon Guards, and at present commanding the Limerick district. Major-General (now Sir James) Chatterton, the third Baronet, was at Waterloo, and for some some time represented the city of Cork in Parliament.

SIR RICHARD BOURKE, K.C.B

LIEUT.-GENERAL SIR RICHARD BOURKE, K.C.B., of Thornfield, in the county of Limerick, one of the most distinguished military officers of his time, was a descendant of the Bourkes of Dromsally, in Limerick, and the son of John Bourke, Esq., of the same county. He was born the 4th of May, 1777; and entered the British Army in 1793, as Ensign in the 1st Foot. His subsequent long and active career was marked by great gallantry, skill, and practical utility. In 1799 Richard Bourke served with his regiment in Holland at the Helder, and was there severely wounded in the face, after having valorously participated in the actions of the 27th of August, the 10th and 19th of September, and the 2nd and 6th of October. On his recovery he was placed on the Staff in England, and was for a short period Superintendent of the Military College at Marlow. In 1806 he was appointed Quartermaster-General in South America, and was present at the actions of the 19th and 20th of January, 1807, at the siege and storming of Montevideo, and in the expedition against Buenos Ayres. He also served with the British army in the Peninsula in 1809, 1812, 1813, and 1814. In 1825 he commenced that portion of his public service which has even outshone his military distinction, and made his name for ever famous in the annals of the Cape and of Australia; in that year he was appointed Lieutenant-Governor of the eastern district of the Cape of Good Hope. There, with singular talent, for four years he conducted the government and preserved the peace of the colony. In 1831 he was appointed Governor-in-Chief of New South Wales and Van Diemen's Land, which he held up to December, 1837. With his wise administration in New South Wales the prosperity of the colony may be said to have begun. He it was who first drew the serious attention of the mother country to these lands of mighty promise, and induced the inhabitants to that system of industry and enterprise which is likely to eventually make a mighty empire of the Cape. His nature at Sydney, and his name being given to an Australian county, mark the estimation of the colony for what he did so effectively for its future greatness. He was knighted, and created a C.B. in 1835, in consideration of his eminent military and civil services. Sir Richard resigned government in 1837, and then obtained the Colonelcy of the 54th Regiment, which he held till his death. He became a Major-General the 19th July, 1841; a Lieutenant-General the 10th December, 1851; and a General the 11th November, 1851.

Sir Richard Bourke was in his early youth a frequent visitor at the seat at Beaconsfield of the Right Hon. Edmund Burke, with whom he claimed relationship, and his name appears as one of the witnesses of the great orator's will. Sir Richard, a few years ago, in conjunction with Lord Fitzwilliam, edited a very popular collection of the "Correspondence of Edmund Burke," which has gone through two editions

Sir Richard Bourke married, in 1830, Elizabeth Jane, youngest daughter of the Right Hon. Edmund Burke's intimate friend and associate, John Burke, Esq., of Carshalton, Surrey, Receiver-General of the Land-tax for the county of Middlesex; and by this lady, who died at Paramatta, New South Wales, the 7th May, 1846, he was survived by two sons and three daughters: of the latter, the eldest is wife of Dudley Montagu Percival, Esq., fourth son of the Minister Perceval, the second is married to Edward Deas Thompson, Esq., Colonial Secretary, New South Wales; and the third is married to the Rev. John Jebb, eldest son of the late Judge Jebb

Sir Richard Bourke's demise occurred on the 12th ult., at his seat Thornfield, in the county of Limerick

MAJOR-GENERAL TORRENS.

MAJOR-GENERAL SIR ARTHUR WELLESLEY TORRENS, the Queen's Military Commissioner to the Court of the Tuileries, was the second son of the late Major-General Sir Henry Torrens, K.C.B., by his wife Sarah, daughter of Colonel Patton, Governor of St. Helena. He was born in 1809. He was an early age page to George IV.; and, after receiving his education at Sandhurst, obtained his commission as Ensign and Lieutenant in the Grenadier Guards in April, 1826, and remained some years in that regiment (in which he was Adjutant from 1829 to 1838), until he exchanged into the 23rd (the Royal Welsh Fusiliers), of which he obtained the command in 1841. He served with that corps during the rebellion in Canada, and subsequently in the West Indies, where he was given the command of the Governorship of St. Lucia. In 1851 he retired from the command of the 23rd Regiment, and in January, 1854, proceeded with the Commission to investigate the military economy of the armies of France, Austria, and Prussia. On his return he was appointed Deputy-Assistant-Adjutant-General at the Horse Guards, and in March, 1854, he had until he was named Brigadier-General of the Fourth Division, commanded by Sir Geo. Cathcart. He arrived at Varna just before the embarkation for the Crimea, and was at the Alma. At Balaclava he was at the head of his brigade, and acted in support of the cavalry: his horse was wounded by a cannon-ball, and killed by the enemy. At the battle of Inkerman that Torrens, while charging with the 68th, received a severe wound at the same time Sir George Cathcart was slain. In consequence he returned to this country in December last, and on his recovery he was again placed on the staff as Deputy Quartermaster-General, and about six weeks back was sent to Paris as Queen's Commissioner. He died there on the 25th ult., and on the 27th following was interred at Père la Chaise. Sir A. Torrens became a Colonel the 11th Nov., 1851, and Major-General the 12th Dec., 1854. At the recent Chapter of the Bath he was nominated a Knight Commander of that Order

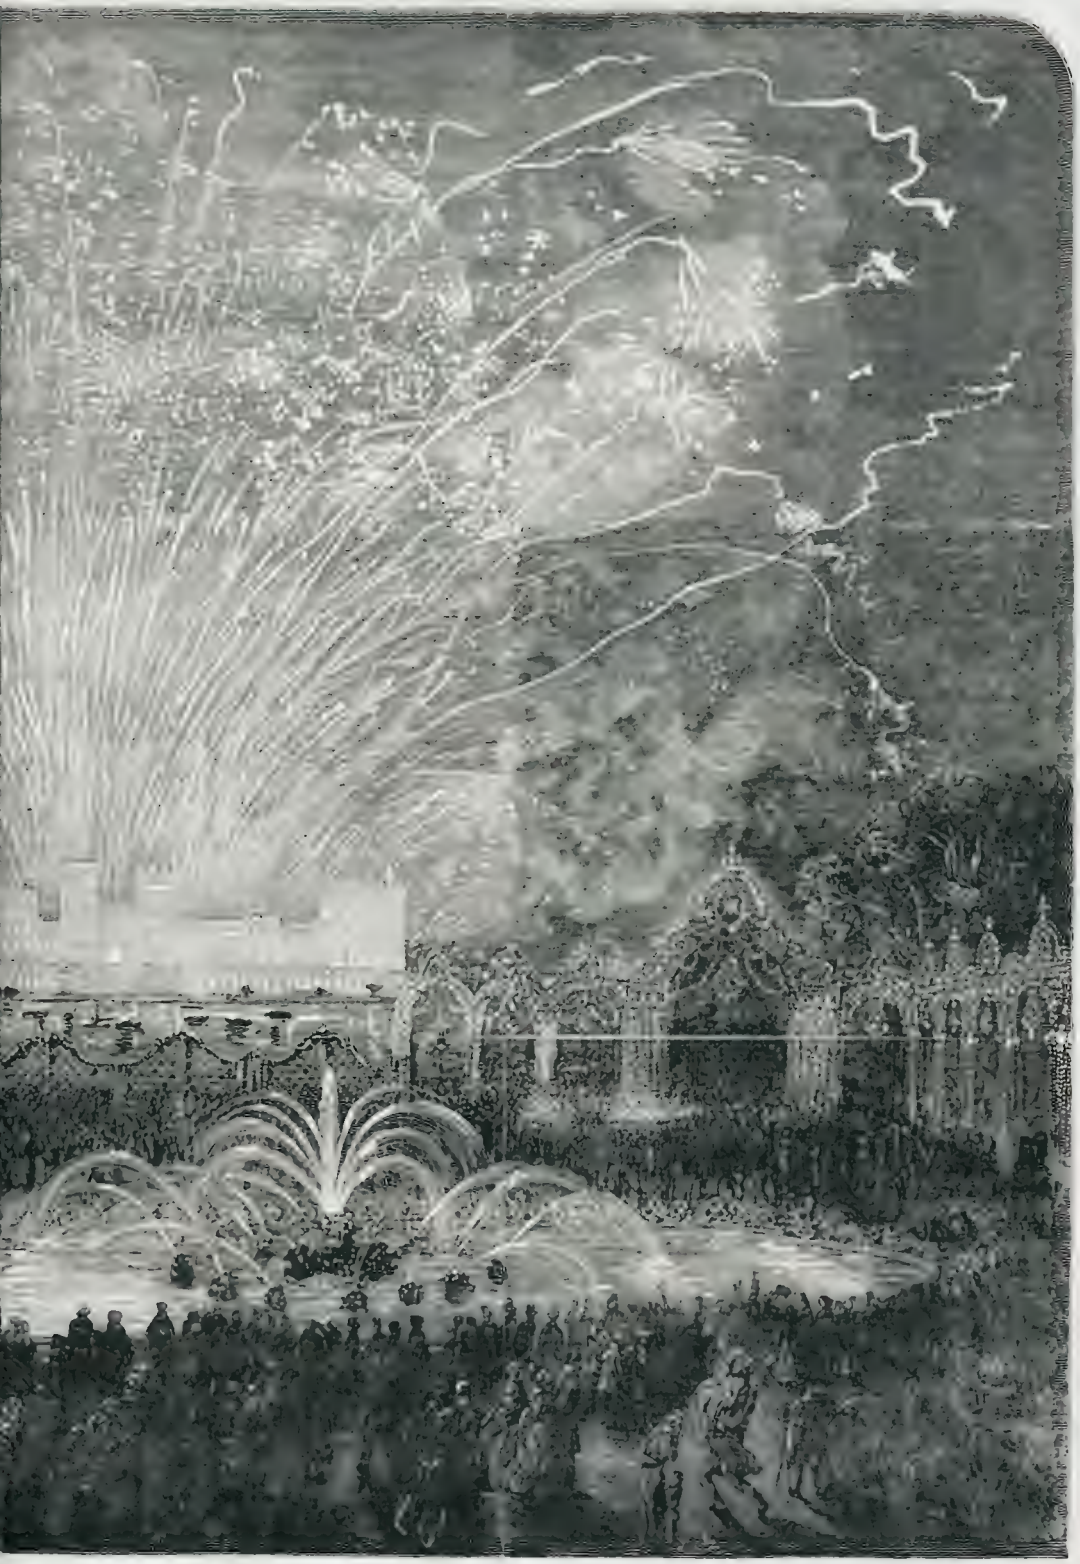
---

WILLS.—The will of Admiral Sir John Acworth Ommanney, K.C.B., Commander-in-Chief, Devonport, was proved in London under £35,000 personalty: Rear-Admiral Sir William Edward Parry, Lieut.-Governor of Greenwich Hospital, £7000 personalty: Henry John Shepherd, Esq., Hyde-park-terrace, and Rose-hill, Berks, £25,000: John Walter Anderson, Esq., Hamburg merchant, £20,000: Miss Ellen Langton, of Folkestone, £8000, and the residue to each of the following institutions a legacy of £100, viz.—The Church Missionary, Pastoral Aid, Propagation of the Gospel in Foreign Parts, Irish Church Missions, and the British and Foreign Bible Society.

PHOTOGRAPHS AT THE CRYSTAL PALACE.—The Crystal Palace has lately received an additional attraction in the shape of a "Crimean Court," furnished with models, charts, and pictures of the seat of war. A number of relics from the field of battle have been deposited in the room. Among the collection are several copies of pictures of wounded officers and other distinguished individuals, which Mr. Mayall has had the honour of taking for her Majesty

THE ORDER OF THE BATH.—Her Majesty the Queen of England has bestowed on H.H. Prince Napoleon the grand cordon of the military order of the Bath. Her Majesty has conferred the same order on General Canrobert. It is well known that this decoration, which is the first order in England, can only be conferred on foreigners for eminent military services. Her Majesty wished by this favour to give both to the Prince and the General a testimony of her satisfaction for the services rendered in the common cause. H.I.H. Prince Jerome Napoleon, whose health has prevented him from taking part in the festivals given by the Emperor to the Queen of England, will come to Paris on Sunday in order to present his homage to the Queen before her departure.—*Monsieur*

HER MAJESTY'S VISIT TO FRANCE.—TH



IREWORKS AT VERSAILLES.—(SEE PAGE 258.

THE QUEEN'S VISIT TO PARIS.

(From our Special Correspondent.)

HER MAJESTY has left golden opinions behind her. On all sides the English visitor is stopped to listen to rhapsodies on the graces, the virtues, but above all, the domestic qualities, of his Sovereign. "Bonne mère de famille" is the universal title by which Queen Victoria has become known to the people of France. The French papers have dwelt upon this title with particular emphasis; and the Parisians have been treated to descriptions of the Queen of a great nation occupying her leisure moments in reading the daily letters she received from her children. The delight with which our neighbours contemplate this maternal devotion proves that they have a tendency to imitate that domesticity which is the most peculiar feature of the British nation. Indeed, "home" is becoming a French word; just as "comfortable" has been transplanted to Paris and become the rage leading enterprising tradesmen to advertise "comfortable pastry," and literary men to write a "comfortable review." "Le home" is now advancing to public favour—may that which it represents also grow, and become a presence among our lively allies! Turning from her Majesty's popularity as a mother, we may add that Parisian ladies have been very busy with the Royal bonnets, the general opinion being that they were not perfect specimens of millinery. A toilet as simple as that generally adopted by the Queen could hardly please a people who are now conspicuous for over-ornament in dress; who trim flounces with feathers, and would hardly think Messrs. Halphen's Star of the South an extravagant shawl-pin. From her Majesty we turn to Prince Albert, who has returned to England, carrying off thousands of female hearts. On all sides new epithets are evinced to describe his figure and the expression of his face. He is "doux," "charmant," of course "noble," "plein de bonté." "A man with that expression," said an excited Frenchman to me as the Prince passed, "*must* be a good man." Of the Prince of Wales stories float about everywhere; but their general tendency appears to be to connect his name with that of the Emperor. Thus we have anecdotes of the lively conversation that went forward between the Emperor and the Prince in the gardens of the Elysée while the Queen and Prince Albert were receiving the Corps Diplomatique on the return of the Courts from the Universal Exhibition of Fine Arts. The Emperor was enjoying his cigar while he laughed with the young heir-apparent. The subsequent drive of the Emperor and Prince of Wales, alone, through the streets of Paris—the Emperor driving—is a subject of conversation even now in every café. It is generally allowed to be a clever move; and of course all kinds of political meanings are attached to it. Another point of gossip, having reference to the visit to the Little Trianon, is in extensive circulation although, I believe, it has not yet been made public. It appears that the Emperor had reserved a surprise for her Majesty at the back entrance. When the two Sovereigns entered this interesting building alone, and, when her Majesty was seated, her Imperial host informed her that he had ordered Marie Antoinette's old furniture to be recovered from the Garde Meuble, and restored to the place it occupied during the unfortunate Queen's time. Here the two Sovereigns sat alone for some time in conversation. Another incident in the history of this memorable visit, with which the active tongues of Paris have been busy, is the pass-word given one morning at the gates of St. Cloud, viz.—"Villeneuve-Victoria;" Villeneuve having been the residence of their Imperial Majesties during the Queen's visit. It would be possible to fill columns with the anecdotes, rumours, &c., which float about Paris, at the present time, now that the festivities are over, and people are compelled to amuse themselves with rentals of the excitement that have lately been. With this preliminary gossip I resume my narrative of her Majesty's visit at the point where I concluded last week.

THE VISIT TO THE EXHIBITION.

On Wednesday, Aug. 22, her Majesty, accompanied by the Emperor and Prince Albert, paid her first visit to the Universal Exhibition. The time for closing my narrative, last week, having arrived while the Queen was on the point of leaving the Palace of Industry, I could not then afford to communicate to your readers many points of interest in the Royal and Imperial progress, which have been touched upon by the press. The weather on the occasion of this first visit (as it has been, indeed, throughout the fêtes, with the exception of Friday evening, when her Majesty went to the Opéra Comique) was beautiful. The Champs Elysées were crowded; a guard of honour was stationed at the great northern entrance—within the arch of which a canopy of velvet and gold was stretched, that utterly destroyed the architectural beauty of this, the finest part of the building. Under the windows of the Viscount de Rouville, and of the Imperial Commissioners, were folds of crimson velvet, embazoned with the arms and initials of the Allied Sovereigns, over the money takers' tents waved the popular oriflammes. Within the inclosure rows of brilliantly green orange-trees, relieved the scene. Under the principal entrance, and along the avenue leading to the transept, a rich carpet was spread. At the Palace windows were elegantly-dressed ladies, and at the sides of the main entrance, rows of excited visitors might be seen hurrying into the building, having paid twenty-five francs for a season-ticket, expressly to see her Majesty. Single tickets only being admissible on the occasion. To prove to your readers the interest people took to obtain a glance at her Majesty, I may state a fact which I owe to the courtesy of the Viscount de Rouville, viz., that on the day of her Majesty's first visit, 1368 season ticket were sold at the door.

The Royal party drew up at the principal entrance to the Palace, amid really hearty cries of "Vive la Reine!" a little past eleven o'clock. They were received here by Prince Napoleon, President of the Imperial Commission; M. Fould, Minister of State; the members of the Imperial Commission, accompanied by M. Arlès-Dufour, the Secretary-General. Mr. Henry Cole, C.B.; Mr. Redgrave, and Captain Fowke, of the English Commission, Baron Rothschild, of the Austrian Commission, &c. The party consisted of her Majesty the Queen—who entered the Building, between banks of splendid flowers, leaning upon the arm of the Emperor, and was received by Prince Napoleon—Prince Albert, the Princess Royal, and the Prince of Wales. The Emperor led his illustrious guests next to the Transept, that they might examine the general effect of the building and its contents. To the left her Majesty perceived the majestic outline of the Dutch pulpit, Elkington and Mason's fine bronzes, Cain's bold eagles; and, towering beyond all, the great naval trophy of England, and the St. Gobain glass. To the right lay the great lighthouse, ornamented by Jerome; the great sheet of glass from Belgium, the gilt altars of France, the Austrian terra-cottas, and the Bohemian glass. Opposite the Royal party were the princely contributions of the United States. After pausing here for some moments, the Emperor led the way to the right, past the brilliant series of nave stalls covered with the bronzes, the jewellery, and millinery of Paris, to the bright display of the celebrated Clemens-Heurtes. Behind this stall run the courts devoted to the French bronzes, which, according to many, are the most remarkable series of contributions in the entire Exhibition. Having examined the fine series of contributions from Elkington, Mason, and Co., some French furniture; the wonderful series of English ormulu manufactures, including those of Rose and Co., Copeland, and Wedgwood, the illustrious visitors paused, I believe a considerable time, before the stands of Messrs. Hinton and Co. Here were two candelabras in Parian, etc., presented by the Emperor to her Majesty the Queen; and among other contributions likely to attract the Royal attention, Nieuwerkerkes bust of the Empress in Parian, a facsimile of a toilet-service presented to her Majesty by his Royal Highness Prince Albert; and the jardinière of majolica presented by the Queen. The Royal visitors next examined the contributions from Sheffield and Manchester, that crossed the Nave to the French department. Here, before the beautiful stall of printing, &c., exhibited by the Emperor's printer, M. Henri Plon, his Imperial Majesty was the first to notice a splendid expanse of white satin. Drawing towards M. Plon, his Majesty at once inquired whether this satin, upon which were verses to the Queen by Barthélemy, was intended for presentation to her Majesty. At this moment the Queen came up; whereupon the Emperor presented the verses, then directed the delighted printer to roll up the satin and give it to a member of the suite. From M. Plon's stall the Royal party proceeded past the splendid bronzes of Barbedienne, the furniture of Tahan and Jeanselme, to the outer circle of the Panorama Building. Here the party were for some time engaged examining the wonderfully various furniture which fills it, including the splendid-carved buffets, and the Bordeaux bookcase; the French pianos, paperhangings, arms, cutlery, &c., which fill the space. Hence the Royal way lay into the Panorama Building itself upon the walls of which are the tapestries of Gobelins and Beauvais, and the carpets of Aubusson. The central point of attraction is the raised case, filled with the Crown jewels. Here are the jewels which have belonged to the State many years, the chief one being the Regent—a stone celebrated for its brilliancy. It now forms the apex of the crown destined to be worn by Napoleon III. Having examined these jewels, the Royal visitors paid attention to the Sèvres porcelain, including the portraits of the Emperor and Empress; and to the fine series of electro articles (including the service of one hundred covers made for the Emperor) contributed by Christofle and Co., of the Boulevards. Here them to lunch at the Tuileries. After lunch the illustrious party separated. The Queen went to the Embassy, and Prince Albert went to the Palais Royal to visit Prince Napoleon. On the return of her Majesty and the Prince to the Tuileries, the Emperor joined them, and all returned to St. Cloud to dinner. The day was wound up by the performance of the "Fils de Famille," by the actors of the Gymnase, assisted by M. Bressant, in the little theatre (about the size of the Strand) in the Château. Although the piece was excellently well played—Mdlle. Lavarenne, in the unavoidable absence of Madame Rose-Chéri, taking this lady's part—the performance went off coldly. The actors felt the restraint of the Court: there was no applause. The Queen laughed good naturedly, and the Emperor *alone* applauded when the curtain fell.

PRINCE ALBERT'S VISIT TO THE EXHIBITION.

All Thursday morning the Queen and the Emperor and Empress remained at St. Cloud, resting from the fatigue of three days' incessant amusement; but the Prince Consort was up early, and on his way to the Universal Exhibition, in a char-à-banc, attended by the Marquis of Abercorn and Colonel Phipps. The Prince arrived, without escort, at the great northern entrance, where it was received by the Prince Napoleon, M. Fould, M. Le Play, Mr. Cole, and Mr. Redgrave. On this occasion his Royal Highness made a business like examination of the buildings; coasting here and there with the people about him, with the Prince President at his side, and with the exhibitors. He minutely examined the contents of the Nave, and some of the side galleries; he made the entire tour of the outer circle of the Panorama Building; and then he ascended to the galleries, where he remained a long time. It was obvious that his Royal Highness had made up his mind to master the contents of the various buildings. Throughout this protracted visit, the crowd never inconvenienced his Royal Highness, as it had obstructed the Royal progress on the previous day; and the Prince may congratulate himself upon the opportunity thus afforded him of mastering the remarkable features of the Universal Exhibition, one so different in most respects, from that great gathering of the nations over which he presided. From the Exhibition the Prince proceeded to the Tuileries, where he joined the Queen and the Emperor.

THE LOUVRE.

The afternoon was spent in a hasty examination of the treasures of the Louvre. Hours only could be spent where days were needed. The illustrious party were received in the Louvre, as they entered it by the connecting gallery from the Tuileries, by M. Fould, Minister of State, the Count de Nieuwerkerke, Director of the Imperial Museums, and various gentlemen officially connected with the great collection of art, &c. In the course of the inspection the party arrived at a point where they could see the vast works going forward in the Place du Carrousel. Here a pause was made; and Napoleon III. at one point with just pride to the grand results growing up here under his vigorous administration.

THE BALL AT THE HOTEL DE VILLE.

But the great event of Thursday was the ball given by the City of Paris to the Queen of England. Never had the Hôtel de Ville been so splendidly prepared. And last general company presented a variety of costume worthy of the great occasion. Municipal silver contrasted with military gold; decorations sparkled upon every breast; plumes of feathers waved from under every arm; bouquets glowed in every female hand. The crimson entrance hall displayed thousands of the square envelopes in which the invitation tickets had been inclosed.

It was by the count of Louis XIV. that the Queen, leaning upon the arm of the Emperor, and followed by Prince Albert conducting the Princess Mathilde, Prince Napoleon, and Prince Adalbert, entered the throne-room. I ventured into this room just before her Majesty's arrival. It was crowded from one end to the other with toilets and representatives, varying from the gay Spanish dress to the sombre colours of the Russian. In the excited throng were the Arab Sheiks, splendid in white and scarlet. Although specially observed by everybody, their wonderful costume never deserted them for a minute. As for the Lent, which resulted in fainting fits in many parts, the Arabs appeared to enjoy it. The Queen entered into a crowded room, without inconvenience, the visitors forcing themselves into denser masses to make a passage for the Royal cortège. Seats were arranged in rows at one extremity. Here, in the front row sat her Majesty, the Emperor, Prince Albert, the Prince Mathilde, and Prince Adalbert. On the second row were the Marchioness of Ely, Lady Cowley, the Marquis of Breadalbane, Lord Alfred Paget, and other members of the Royal and Imperial suites. Here a few presentations unavoidably took place. But the heat was too intense for ceremonies, and so the accustomed scenes at once tuned his hand for the Quadrille of Honour, in which the Queen danced with the Emperor, and Prince Albert with the Princess Mathilde. The Prince Napoleon and Adalbert, with Lady Cowley and the Prefect's wife, also formed part of this quadrille. Here a word or two may be added on the Queen's dress, which consisted of white silk, covered with lace, embroidered with geranium flowers, &c., enriched at every possible point with diamonds. Around the Queen and the Emperor were the insignia of the Garter. It was remarked that her Majesty's costume was most gracious to all people who attracted her notice; and, among others, to Horace Vernet. There were no less than 8000 people present at this splendid entertainment. Her Majesty left by the staircase of honour about half past seven o'clock, returning at once to St. Cloud, amid the cheers of the thousands of people who lined the Rue de Rivoli. I am assured that no less than 57,000 applications for admission to this ball were sent into the Prefect.

SECOND VISIT TO THE EXPOSITION.

Having rapidly examined the points of historic interest, the party regained the carriage, and thence their way back to Paris through the Quartier St. Antoine, of revolutionary notoriety, to meet the Queen, and pay a second visit to the Universal Exhibition. The preparations here made to receive the illustrious visitors for the last time effectually prevented her Majesty from the slightest annoyance. Her Majesty personally perceived people who had paid a large sum for admission from seeing the Exhibition, even many hours before the Royal arrival.

I may remark that her Majesty and the Prince have made several purchases during their visits, including a bronze cast, executed by M. de Labrone, from "The Lion in Love" by M. de Geefs; and a fan, price £40, by Duvelleroy, the painting upon which describes "The Thursdays of the Empress," representing her imperial Majesty, as a child, distributing alms, according, it is said, to her infantile custom. I may add that the Emperor also presented an immense Sèvres vase to Prince Albert.

THE REVIEW.

On leaving the Exhibition the Queen, the Emperor and Empress, and the Prince proceeded to the grand review in the Champ de Mars. (*See page 266.*

On saturday morning the Royal guests, with their attentive host, set off for St. Germains, where a long day was spent by the illustrious party, who returned to St. Cloud, to prepare for

THE VERSAILLES FETE.

For weeks past the papers had been publishing paragraphs from day to day, describing feats of splendour in the great festival. It was to surpass anything achieved by Louis XIV. The fountains were to pour forth streams of illuminated fire, the amphitheatres were to produce a fairyland under the guidance of the Imperial architect. Accordingly, people who could not watch the Royal progress to the Hôtel de Ville who had not been present at the review—who had not had the opportunity of seeing her Majesty at the Opera—had made up their minds to be comforted for previous disappointments by the splendours of Versailles. Early on saturday afternoon I went to the Paris station of the Versailles Railway, to proceed on my way to the scene of these wondrous festivities.

At Versailles the excitement was decidedly moderate; and had it not been for the Arab sheiks, who promenaded in the town in their ball-dresses, and subsequently entered a café to dine, I should have imagined that I had reached the little town on a Sunday when the waters did not play. The avenue leading from St. Cloud to the Palace was prettily decorated with flags; the only guardians along the kerbs being cocomerchants and venders of gingerbread, who were plying their trade with commendable activity. At six o'clock we saw the crowds quietly pressed out of the park by a semicircle of soldiers. This unpleasant duty was so delicately and so ingeniously performed that the people retired generally with a laugh, after having in vain endeavoured to escape the vigilant eyes of the men. These crowds then pressed into the cafés of the town to await sunset.

While yet the western sky was red the crowds of people poured along the side of the palace, and turned towards the borders of the Lac des Suisses. Lights seemed to fly along the lines of architecture upon the palace; dragoons took up their position in a strong body before the entrance to the Cour d'Honneur; and lights began to glance from all the upper windows. From this beginning the illuminations, the crowd, and the excitement continued to increase; endless lines of carriages approached the palace, set down ladies glittering with diamonds, and gentlemen blazing with orders; celebrities of all kinds, from Carpentier and Carroty-sin to Horace Vernet and the Arab Sheiks, who entered the splendid halls of Louis Quatorze as calmly as they had scrambled up the dark little staircase of their *restaurant* an hour or two earlier.

About ten o'clock the grand apartments, blazing with the light of innumerable wax candles (said to have cost no less than 60 000 francs), displayed an unknown wealth of diamonds and glittering regimentals from every friendly nation—amid which, however, the red of the English army was the most frequent. It was amusing to notice many of the guests contemplating their exclusive attention upon the means of preserving a dignified equilibrium upon the polished floor; still more so to speculate upon the possibility of dancing in rooms where the guests were packed like oranges. The rooms, as the reader who has visited the State apartments of Versailles in the daytime may imagine, were magnificent, brilliantly lighted, and ornamented with flowers. The Hall of Mirrors was, of course, the point towards which every guest endeavoured to make his way—peeping over the diamond ornaments of a Duchess, or over the solid epaulets of a general. In the centre of this noble room were two rows of chairs, slightly elevated; upon which, in front, sat the Queen, the Emperor, the Empress, Prince Albert, and the Princess Royal; the Prince of Wales standing by, dressed in tartan. The Queen and Empress were literally blazing with diamonds; the Princess Royal, on the contrary, was simple in her dress as a school-girl, having a white robe on, and a wreath of roses for her head-dress. The Queen and the Emperor, with the Prince Albert, Prince Adalbert, and the Princess Royal, formed the quadrille of honour, which was danced with great spirit. Later the Emperor waltzed with the Princess Royal; and praises of the dancing of the Prince of Wales were buzzed about. But turning from this, perhaps the finest ball-room in Europe, and its attractions, the guests presently thronged the windows, to see the fireworks go off beyond the Lake des Suisses. About the lake fairy boats were gliding with illuminated sails; and the banks were thronged by a dense mass of people, among which there arose a wild, hoarse murmur as a cannon announced that the fireworks were about to be opened. Then into a deep blue sky flew innumerable rockets, like angry snakes, pouncing presently their jewelled heads into the hissing lake. Then bouquets rose into the air, then columns of fire like frosted silver arose to a great height, then came a pause—and then, from a dense mass of smoke that continually rolled in yellow masses before the silver moon, the faint outlines traced by a golden pencil grew upon the horizon. In a few minutes we recognised Windsor Castle. At this moment a distant band struck up the National Anthem! The delight of the tens of thousands of people assembled knew no bounds as this golden castle broke up into a glorious bouquet. The fireworks over, the crowds rushed to the railway stations. The favoured people who had been stationed in the Orangery threaded its dark groves; while hundreds lingered about still to watch the gorgeous illuminations of the fountains and terrace before the grand apartments. A literal wall of variegated light, surmounted by the crown of England, inclosed the fountains, which reflected also tasteful figures represented by exquisitely-arranged lamps. Even trees were wonderfully imitated with little lanterns. But it is impossible to describe the grounds of Versailles as they appeared on this memorable night; but as it is impossible, I am sure, for the reader, by printed words, a picture of the Champs Elysées on the 15th August, after sunset. I accordingly leave the task to the able hands of M. Gustave Doré. (*See the large Illustration upon the two preceding pages.*)

The supper in the splendid State—rooms, at which the Queen, the Emperor and Empress, Prince Albert, &c., supping in the Imperial box—the gold service sparkling in the flood of light—was a scene that will linger in the minds of all who witnessed it. Supper over, the Royal and Imperial guests soon departed, amid the cheers of the people still assembled outside the Palace, for St. Cloud. And then crowds of carriages began to move off; while those people who had travelled to Versailles in their Court dresses by the railway might be seen wandering about in a pitiable state of suspense lasting, it was possible, all night, between the town and that of getting to Paris. At last, people scrambled into any carriage, or rented a late café, where the absence of horses was compensated by the presence of wine; and the train that left Versailles at seven o'clock on Sunday morning was that in which the last guests of the Emperor reached Paris.

THE DEPARTURE.

The above splendid fête, concluded the festivities held in honour of her Majesty's visit to Paris. Sunday was given up to rest; and on Monday morning, at ten o'clock, her Majesty entered the splendid State carriage drawn by eight horses, loaded with golden trappings—each horse held by a footman in gorgeous livery—for the terminus of the railway that would convey her to Boulogne, on her way home. The State carriage was preceded by a company of mounted Chasseurs, a brilliant staff (General Canrobert figuring among the Generals), the band of the Guides, squadrons of the Guides, the Cent Gardes: State carriages drawn by four horses, conveying the high officers and ladies of the Royal and Imperial households: State carriage and six horses, in which the Prince of Wales, dressed in Highland garments, was the chief personage. In the State carriage with her Majesty were the Empress, the Emperor, and Prince Albert. As the cortège—the rear of which was brought up by the Cent Gardes—passed along the line of route, loud and hearty cheers were given for the Queen, which her Majesty acknowledged by very low bows and very gracious smiles, appearing to be highly delighted with the splendid pageant which concluded her visit. On all sides people were astonished: for this departure was much more stately matter than the Royal entry. And thus, while the carpenters are at work the length of the Boulevards, hauling down flags, and carting away the wreaths of triumphal arches; while her Majesty is reviewing the troops at Boulogne, and the lamplighters of the great city are preparing to send her Majesty away, at eleven o'clock at night, amid a splendid display of fireworks and torches, we bring our rapid chronicle of this most memorable visit to a conclusion.

BOULOGNE AND THE VOYAGE HOME.

Shortly after twelve o'clock, the special train left the station for Boulogne, and arrived there at five, when her Majesty was conducted by the Emperor to the hotel where rooms were prepared. A review of the troops took place shortly afterwards on the Sands, and the Queen returned to the hotel soon after eight o'clock. At a few minutes past eleven the Emperor conducted her Majesty on board the Royal yacht, *Victoria and Albert*, amid the roaring of cannon and a blaze of fireworks from the cliffs. The most cordial adieus were exchanged between her Majesty and the Emperor. The magnificence of the scene was most effectively increased by a brilliant display of flambeaux, which were held by soldiers, who formed a line for a considerable distance, upon the heights on both sides of the river. The town was beautifully illuminated, particularly the houses in the leading streets, and the public buildings. As the Royal yacht receded from the shore, a continuous firing of rockets and *feux-d'artifice* was kept up. Her Majesty was favoured by the most beautiful weather.

The full moon shone during the night with the greatest brilliancy, and the wind almost sank to a calm, which lasted from one on Tuesday morning in unclouded beauty. Circumstances more conducive to an agreeable voyage could not have occurred. The Royal yacht *Victoria and Albert* was followed by the *Osborne*, the old yacht, and the *Fiud* steam despatch vessel, the *Fairy*, tender to the yacht, and the *Trinity* steam-yacht. At half-past seven the hull of the Royal yacht became visible at Portsmouth, and at ten minutes past eight she passed the Nab. On passing through Spithead, a few minutes later, the garrison battery at Portsmouth fired a Royal salute, announcing the Queen's return. The Royal yacht arrived off Osborne at about a quarter to nine. At ten her Majesty landed and proceeded to the Palace.

THE ILLUSTRATIONS.

THE BALL AT THE HÔTEL DE VILLE is described above as are also THE FIREWORKS AT VERSAILLES.

HER MAJESTY'S VISIT TO THE EXPOSITION DES BEAUX-ARTS was fully described in our Journal of last week, pp. 230 and 243. The Pavilion is a temporary building devoted to the annual exhibition of the works of

living artists. It has a concave façade, with seven entrances, and pedimented abutments, the whole decorated in a tasteful style; its existence is likely to be protracted until the completion of the new rooms in the Louvre

THE PROCESSION ON THE BOULEVARDS is described at page 260

THE FRENCH GUIDES took a prominent part in the recent Imperial reception, more especially in the Grand State Procession on Monday, which we shall engrave next week. The Guides are a fine Cavalry regiment; their uniform closely resembles that worn by the English Hussar, but is divested of the pelisse.

THE QUEEN'S MESSAGE TO THE CITY OF PARIS.

Her Majesty has expressed to the Prefect of the Seine, through Lord Clarendon, her Majesty's sentiments on the occasion of the reception given her by the City of Paris. The following is Lord Clarendon's letter:—

St. Cloud, Aug. 24, 1855.

Monsieur le Préfet,—The Queen orders me to express to you and the municipal corps her sincere thanks for the fête given to her yesterday. The magnificence of the arrangements, the splendour of the edifice, and the courtesy of the numerous guests, have made an indelible impression on the mind of the Queen, and they will always be present to her memory as one of the most agreeable incidents of her visit to Paris

In replying to the address which the Queen received with so much satisfaction from the municipal corps, her Majesty has assured you, Monsieur le Préfet, that she could never forget the reception given to her by the inhabitants of Paris. She also desires here to renew the assurance of her deep gratitude for the very kind feelings she has everywhere met with during her passage, when visiting with her illustrious ally and friend, the numerous edifices in which are collected in such profusion memorials attesting the success of the French nation in arts, sciences, and war

But the satisfaction and gratitude of the Queen are enhanced by the conviction that her own subjects take part in the benevolent manifestations of which she has been the object. She sees in them the ratification given by France to the alliance now existing, not merely between the two Sovereigns, but between the peoples of the two countries. She is convinced that the two nations, who have learned mutually to appreciate each other in a war undertaken for a cause both just and equitable, and who are now no longer rivals, save for attaining the object they desire in common, will always remain united by the bonds of interests henceforth become inseparable. This union has been the ardent wish formed in the heart of the Queen, and her visit to the magnificent capital of France has inspired her Majesty with a profound personal interest in the welfare of this great nation.

I profit by this opportunity to offer to you, Monsieur le Préfet, the assurance of my most distinguished consideration. CLARENDON.

A BRITISH GROWL.

I AM more than ever convinced that England and the English were made for each other. I am almost ashamed to own it, but, like a great many other fools, I went to Paris during the visit of the Queen, and glad enough I am to find myself again in Bedford-row. I have spent a great sum of money, lost a great deal of time, and damaged an excellent temper, and I am determined to have my grumble. My cry is, Eng land for Englishmen, and he is a fool that leaves it as I did. I will say nothing of the horrors of the middle passage between Folkestone and the French coast, except that I wish to ask if any one was ever annoyed by sea sickness in the British half of the Channel? Certainly not. It is not until you get into French waters that you are seriously troubled by that most horrible of sensations. Very true that in returning the effect is reversed; but then you have been in France, living upon all sorts of strange messes, which fully accounts for the nausea you experience. You land—what can be more annoying to a free-born Englishman than the way you are marshalled on by those *douanes*, I think they call them. I know nothing of the language, and mean never to learn it. It is true that we have a Custom-house on our side of the water; but then you are not indecently hurried through *that*, having generally an hour or so to wait for your luggage, which gives you time to recover yourself after the torture you have undergone on board the steamer. The journey to Paris by rail is positively aggravating. Five minutes' stoppage here; five minutes' stoppage there; and full twenty minutes allowed for dinner at Amiens! Why, it's as bad as the old coaching times. I would not encourage such proceedings, and took a biscuit only and a pint bottle of Bass (I did know what *that* was made of). Give me railway travelling in England forty miles an hour, and three specials of hot soup in a day's journey. When you arrived at Paris, what was it? Granted, it was gay enough, with its million bright-coloured flags, triumphal arches, flowers, evergreens, statues, and smart soldiery. What of that? What were the flags?—Cotton. The triumphal arches?—Painted boards. The flowers?—Artificial. The statues?—Plaster of Paris. The soldiers?—Policemen. Should we have done so? No, of course not. We should have hauled up some time-stained union jacks on the flag-staves of our church steeples, set the bells a-ringing, and given the use of the police new Berlin gloves

Then this *Exposition* as they call it (why could they not call it Exhibition as we did?) The building is large and imposing enough; but, as I was sure that the contents could not equal ours of 1851, I did not trouble myself to inspect it. I went to see the pictures, and very grateful the artists ought to be to the Hanging Committee, whoever they may be; for all the pictures (and I forget how many acres there are of them) are hung in such a capital light that you see every defect of the paintings. As to their public buildings, statues, monuments, *Places*, of which we have heard so much—they have nothing to compare with our National Gallery, or Buckingham Palace or St. James's (little, or great?) Square (vulgo Trafalgar), with the Place de la Concorde?), George III., in Cockspur-street; or William IV., in the City; or the Duke of Wellington, on Grosvenor Gate. I see some of the English papers have written a great deal about Paris improvements—the Rue Rivoli, for instance. What is it? A mere street about ten times as long as Regent street; and they have been three years building it! Why, we are to have London drained, and the Thames made wholesome, in five. The Thames naturally suggests the Seine, the river which runs through Paris. I own that it is perfectly clear, but what use do they make of it? Do they employ it to boil bones and offal, or purify gas, or assist in dye-works, or to drain the city? No, they actually drink it, and reserve part of the river for baths and swimming-schools. How can, O Puddlesdockians!

Every Englishman visiting Paris must be struck by the various modes of employing the fairer part of creation. You find women serving behind the counters of nearly every trade in the "London Directory." What the father or husband makes, the daughter or wife sells; and all affect—I say affect—to appear cheerful and contented. Is it not perfectly unnatural to employ women in such ways? They were never intended to take part in the active duties of life: they are to

Suckle fools, and chronicle small-beer;

or to dawdle away their lives, or mope in idle solitude, if they have those who are willing and able to provide them with the means of existence. If not, in England at least, women have the needle or domestic servitude to depend upon, and we all know how productive those pursuits are; and I do not believe that there would be less vice and misery, as some suppose, if there were more ways open to women of gaining an honest living. I say nothing of governesses, because they are generally overpaid and underworked, and—over-estimated, if one may judge by the advertisements in the newspapers.

The labouring population are certainly more sober and cheerful than ours. So they ought to be. They have so many holidays that they are not required, like the English workman, to crowd as much enjoyment as possible into one day, and so commit excess because the opportunity is rare. Besides, the French workman is not drunk enough to make his wife and children companions of his pleasure; and they dance and sing in the open air, not having the advantages of warm and well-filled taprooms, whence our women are very properly excluded. There are people in England insane enough to contend for more holidays for the people, and are desirous to give them the same opportunity as the French for contemplating the beautiful in art and nature. Let the advocates of such changes be warned in time. The revenue is none too large at present; and, depend upon it, that whenever the day arrives that the labouring man has other resources than the public-house, the Excise receipts will be seriously lessened

There are many cheap amusements in Paris to which the lower orders have access, and though some, such as the *cafés chantants*, are in the public thoroughfare, use has made the people tolerant, and nothing is ever done to disturb the harmony of the evening. Fancy a dozen elegantly-dressed women of good musical abilities seated in a large orchestra in the Regent's-park. Do not you think that some of our fellow-subjects would be disposed to display the national wit, called "chaff," at the expense of the fair vocalists? No doubt of it; though, in time, they might be taught to respect those who were employed to afford them a rational pleasure.

I have nothing to say against the French theatres: the actors are not quite so good as our own, and the appointments are extravagant—perhaps appropriate to the occasion. As to the dramas I am ready to admit their superiority over the sober productions of our dreary old dramatists, or still more dull modern ones. There is in most of the French dramas such lively intrigue, such improbable incident, such glozing over of vice that the most modest mind may be corrupted without knowing it.

I say again, England for the English. Let us bulldoggedly stick to our own way of doing things. Let us do as our fathers did before us. Believe roast-beef and plum-pudding to be the food of the gods, and that the temple of wisdom is the Bank of England. JAMES BULL.

CHESS.

TO CORRESPONDENTS.

DERBYON, M P; MAJOR; J. P, GUERNSEY; ANDLE, HAVRE.—Your solution of the two-move Problem is correct.

J. BUSBECK, Shrewsbury; C. W.; M.P.; and others.—We have just received a communication from Herr C Bayer, of Vienna, expressing much regret that, by an inaccurateness on his part, the Problem No. 593 was wrongly described on the diagram forwarded to us. As the Problem is too good to be lost, we shall give it, according to the author's amended copy, on next week

CHILDE HAROLD; G. W.; BIRTHRATER; J. F. C.; R. B., jun. They shall be examined, and reported on next week

TURKIN.—See "The Chess-Players' Handbook," page 78.

ORLANDILL, ANDERSON; and others.—You appear to have overlooked the correction of Problem 595, which appeared in the following paper (Aug. 11th).

AN OLD SPECTATOR.—There has been a great increase of third and fourth rate players of late years, but a serious falling off of the higher grades. Mr. Penn, in his entertaining little book, called "Maxims and Hints for Anglers and Chess Players," expresses an opinion that, at the time he wrote (some twenty years ago), there were not forty players in all England to whom a first rate would not give the odds of a Rook. This certainly could not be said now, but we believe it would be found that there are not above three players in the United Kingdom to whom a first rate player could not give a Pawn and move, and not more than a dozen to whom he could give the Pawn and move without a considerable chance.

F. W., Bristol. If, in the opening variation, Black, as he may, takes Pawn with Pawn, White can advantageously play the King's Pawn to King's 5th.

M. N. Leicester. The match contested at the Leamington gathering between Worcester and Birmingham has terminated in favour of the former club. That between Manchester and Oxford is still pending, each having scored one game

BY TURNS.—No, we are not surprised. The player named was much superior to any France has since produced; but he left the course, and in Chess, as in everything else—

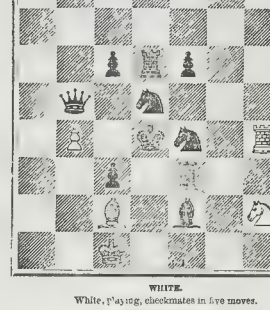
"The hare alone, by leaving, lives to run."

Quite out of limbs, like a rusty mail,
In unsuccessful mockery

SOLUTIONS OF PROBLEM NO. 600 by J. S., Pickwick, André, Havre; C. W., The Fiddler, A. M., Birmg. Rurik, Retreater, J. P., Guernsey, Dereven, Anderson, are correct.
SOLUT ONS OF PROBLEM NO. 601 by Alpha, Derwent, J. S., Falmouth; T. J., Hanwell; Courteerd, F. P., Norwich; (F. ?), Exonien, F. G., Wells; W. Z., Anderson, Fiddler, W. H. J. Kent, Doubleagent, J. P., Guernsey; M. D. P., are correct.
SOLUTIONS OF ENIGMAS by E. P., Dereven, C. W., Tamkin, Simon, D.D., R.B., F. N., G. P., A. Z., Beta, are correct. All others are wrong.

PROBLEM No. 602.
By HENRY TURTON, Esq.

BLACK.



WHITE.

White, playing, checkmates in five moves.

NATIONAL SPORTS.

THE principal feature of next week's racing is the Warwick Meeting, with its Leamington Stakes on Tuesday, and its Cup on Wednesday, as well as some twelve other races in the two days' programme. On Monday small meetings will be held at Beccles, Cheadle, and Sunderland; and on Monday and Tuesday at Hartlepool. Wilmslow stands for Tuesday. Totnes and Bridgetown, and Weymouth, for Wednesday; Rochester and Chatham, the Western Meeting, and the revived one at Stockton-on-Tees (which held its own so well in the days when the "black and pink stripes of Raby were seen in front), for Thursday and Friday; while Thursday will furnish the cockneys with a merry little tryst at Barnet, which can boast of a hurdle-race, two flat races, and a "The Welshman's Race for a Saddle." The hard worked Hospodar is in one or two handicap stakes at Stockton: and Roxana (half-sister to Wild Dayrell) is also in a two-year-old race there. This latter horse made a brilliant display of Quilston at York: and the latter looked very fine drawn, and little calculated for the high-pressure of a St. Leger race, under eight stone seven! Rifleman defeated Fandango, who made a desperate effort to cut him down so cleverly in the Great Yorkshire Stakes, that "the Squire" and the public (including Nat) took on his St. Leger laurels as gathered already. The York Meeting gave us a glimpse of a great many St. Leger candidates (although the Clementina colt was not allowed to start), and was wound up by a brilliant "bit" on the part of Mr. Marson, which sent the Tykes into ecstasies. Aldcroft had completely defeated him on the Ellerdale colt, and was winning the Colt Sapling Stakes, "hands down," when Job, who was on the outside, gave Gilbert a slight pull, and, as a forlorn hope, actually darted in between his opponent and the rails, and got to his head so instantaneously, that it was all Aldcroft could do by severe whipping to save the race. We never saw such a dashing piece of horsemanship.

Wisden's score at Sheffield, which had reached 132 when we last heard of it, is one of the "great facts" of cricketing annals, and will go down side by side in the records of the season, with the Militia Eleven, who were got out lately with an "0" score. The list of great matches is not yet exhausted. All England play Seventeen of Nottingham Forest district on Monday, and the Men of Leeds on Thursday. The U. A. E. have a blank week of it, but they have five more Twenty-twoes to meet before they lay down their well-worn willows for the season.

The horse-racing yachtsmen are beginning to turn to "the white shores" again; but the list of regattas and matches to come furnishes materials of sport to the more enthusiastic for at least another month. On Monday the Richmond crew and Kelly's crew row the Thames Regatta Course, and Weedle's Annual Regatta is held on the same day. "Gravesend and Milton" have fixed theirs for Tuesday; and the Birkenhead Model Yacht Club sail their £50 Challenge Cup Race on Wednesday

DERBY RACES.—TUESDAY.

Maiden Plate.—Fanny Gray, 1. Cigarette, 2.
Grand Stand Stakes.—Harriott walked over.
Tradesmen's Plate.—Saucebox, 1. Gamelad, 2.
Derwent Stakes.—Sacrifice filly, 1. Emma, 2.
Foal Stakes.—Berezina, 1. Gamelass filly, 2.

WEDNESDAY

Sudbury Stakes.—Roving Betsy, 1. Cigarette, 2.
Chatsworth Plate.—Saucebox, 1. Game Lad, 2.
Selling Stakes.—Merry Monk, 1. Alma, 2.
Chesterfield Plate.—Leamington, 1. Stork, 2.
Innkeepers' Plate.—Berezina, 1. Miss Hatch, 2.

EGHAM RACES.—THURSDAY.

Betting Stand Plate.—Freckle, 1. Swalcliffe, 2.
King John Stakes.—Seaweed filly, 1. Merope filly, 2.
Runnymede Stakes.—New Brighton, 1. Bordeaux, 2.
Surrey and Middlesex Stakes.—Mr. Sykes, 1. Pulbeck, 2.
Railway Stakes.—Englemere, 1. Swalcliffe, 2.

FRIDAY.

Baron Stakes.—Libellist, 1. Maid of Mona, 2.
Egham Stakes.—Lady Alicia, 1. Freckle, 2.
Town Plate.—Gossip, 1. Hurt Royal, 2.
Queen's Plate.—Winkfield, 1. Bataplan, 2.
Magna Charta Stakes.—Jane Shore, 1. Pretty Girl, 2.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has authorised the municipal authorities of Paris to give her name to the new line of communication opened between the Place de l'Hôtel de Ville and the Place du Châtelet

His Imperial Highness Prince Jerome (says the *Moniteur*) went on Sunday at two o'clock to the Palace of St. Cloud, to present his homage to her Majesty the Queen of England.

We hear that by desire, and at the expense of the Queen, her Majesty's domestics are to proceed to Paris, to see the Exhibition.

The King of Prussia has renounced the idea of his journey to Konigsberg, in consequence of the appearance of cholera in that city.

The Countess de Neuilly and the Duke and Duchess de Nemours and family have left Beaumaris for Claremont, and the Duke and Duchess d'Aumale, the Princess Salerne, and suite, for Orleans-house, Twickenham.

It is now said that the King of Sardinia, whose expected visit to Paris was postponed, will arrive on the 15th inst.

The Right Hon. Sir George Grey, it is expected, will attend on her Majesty on her journey to Scotland, and, shortly before the Queen's return, will proceed to his seat in Northumberland, to pass a few weeks, and will then come to town for the autumn

The Emperor and Empress of Austria were to remain at Laxenbourg to the end of August, and then only go for a very short time to Ischl; thence the Emperor will join in a chamois hunt at Berchtesgaden, to which he has been invited, and will leave afterwards for Italy with the Empress.

Prince Louis Lucien Bonaparte has arrived in London from Paris, whither he had gone for the purpose of paying his respects on the occasion of the fête of his cousin the Emperor of the French.

The King of Wurtemberg is travelling in Switzerland, under the name of Count de Teck. He intends going by Zurich, Lucerne, and Berne, to Interlaken.

It is rumoured that the Marquis of Clanricarde will be the new Postmaster General.

The King of Portugal arrived at Lisbon on the 14th ult., and was very cordially received by the people

Prince Wilhelm of Orange is at Malta, and proposes visiting the principal ports of Sicily next week.

Cardinal Viale Prela, the Papal nuncio, has been decorated with the Grand Cross of the Order of St. Stephen.

Her Majesty has been pleased to appoint the Right Hon. Robert Lowe to be Her Majesty's Paymaster-General.

The King of Piedmont admitted to a private audience, on the 16th ult., the Hon. General Percy, who is charged with the organisation of the Anglo-Italian Legion.

On Sunday last the Princess, wife of Don Miguel, gave birth to a daughter, in the Palace of Hesbach, in Germany

Lady John Russell is not so seriously ill as was represented and her Ladyship's condition excites no alarm.

The Duke of Modena arrived on the 18th ult. in his capital, from his country residence at Pavullo, and visited the cholera hospitals, where he addressed words of encouragement and consolation to the patients

At the last meeting of the Imperial and Central Horticultural Society of France, Sir W. Hooker, Dr. Forbes Royle, Mr. G. Bentham, and Mr. Wentworth Dilke, the deputation from the Horticultural Society of England, were elected corresponding members.

Permission has been given to a number of gentlemen, with Baron Rothschild at their head, to form a company for the supply of the different towns in the Austrian empire with gas

The formal ceremony of inauguration of the statue of the late Sir Robert Peel took place in Birmingham on Monday morning in the presence of at least 15,000 persons—as many, in fact, as could find standing places near the spot.

The Archduke Karl Ludwig, the newly-appointed Governor of Tyrol, has arrived in Vienna from Lemberg. He has taken up his residence at Schönbrun.

With the exception of Captain Bouverie, and perhaps a medical attendant, the new Governor-General of India proposes not to take out any staff with him, but to select its members from those services in India.

It is said in Berlin that M. de Pourtalès will, in a few days, proceed to Paris in order to open negotiations with the French Government relative to the affairs of Greece

The editorship of the *Quarterly Review* is now said to be in the hands of the Rev. Arthur Penrhyn Stanley, the biographer and son-in-law of the late Dr. Arnold, who for some time has been one of the chief contributors.

M. de Negrelli, Councillor of State of Frankfort, has recently been sent to Paris to take part in the conferences about to be held on the projected cutting through the Isthmus of Suez

A letter from Parma, of the 18th ult., states that on the preceding day the Duchess of Parma visited the Hospital set apart for cholera patients, and conversed with the sick, addressing to them words of encouragement and consolation.

The Hon. C. Langdale has withdrawn from an agricultural society in Yorkshire, in offence at Lord Londesborough's proposal, at a late meeting of the society, of the toast, "The Archbishop and Clergy of the diocese." "I could not," he says, "consistently as a Catholic, assent to the sentiment implied by such distinction of the Established Church."

A sort of Zouave mania seems to exist in Paris. Some battalions of the National Guard are said to have petitioned for the creation of a body of "Zouaves of the National Guard."

It is the intention of the lessees of the Limerick and Ennis Railway to suspend the works during the harvest month, which will set free a large number of labourers.

The *New York Courier and Enquirer* estimates the wheat crop of 1855 in the United States at 175,200,000 bushels, against 100,479,100 in 1850, and 114,245,500 in 1847

The Duke of Northumberland has engaged a swimming master to teach that valuable means of self preservation to the fishermen at the various fishing stations in Northumberland.

The *Moniteur* contains a decree promulgating the convention recently concluded between France and Holland, for the reciprocal protection of literary and artistical works.

The North-Eastern Railway Company have made arrangements for giving the clerks in their various offices a fortnight's holiday each year. Their pay is to go on during their absence, and they may have a free pass over all the company's lines.

There were 300 deaths in New Orleans during the week ending August 11th, of which 222 were from yellow fever

Active preparations are, it is said, being made by the Liberal party to contest the representation of Dublin at the next election.

The Concordat which was signed on the 19th ult. between Austria and Rome has been already sent to the latter city in order to be ratified.

The *Christian Guardian*, one of the cheap papers which came into existence on the recent alteration in the Newspaper Stamp Act, made its last appearance on Saturday, having issued eleven numbers.

The Governments of Prussia and Russia have concluded a convention in virtue of which the Warsaw and St. Petersburg Railway is to be connected with the Great Eastern Railway of Prussia

The steamer *Clyde*, from Syria, has landed, at Marseilles, six Arabian horses intended for the Emperor of the French. These horses unite great purity of breed with a size very unusual in Oriental horses

It is estimated that the damage caused by the late earthquake in the Valais does not amount to less than a million of francs.

The *Belfast Mercantile Journal* speaks of a direct communication being opened between London and Belfast, *viâ* Fleetwood.

Notwithstanding the diminution of the emigration from Ireland to the United States, the influx of American money to the sister island is on the increase. The amount of money sent home by Irish emigrants last year was £1,730,000, against £1,439,000 in 1853.

A plan of Mrs. Chisholm, for the erection of shelter sheds on the roads to the mines, at from five to nine miles apart, has been adopted by the Australian Government, and a supply had been ordered for the first eighty miles out of Melbourne.

The *Presse* of Vienna announces that trains direct between Vienna and Paris, by Prague and Strasbourg, are about to commence running.

Black game are selling in Scotland at 6s. a brace, grouse at 4s. a brace, and hares at 2s. each. The supply was very small at first, but got considerably larger during last week, which may be accounted for by the fact that many parties did not shoot before the 20th ult., in consequence of the backward condition of the birds.

The centre of the Isle of Wight was the only place in England where much damage was done by the thunderstorm of last week. Great pieces of jagged ice fell there six and seven inches in circumference. Hundreds of wild birds were killed while roosting. Garden crops of fruit, vegetables, and flowers were utterly destroyed.

HER MAJESTY'S VISIT TO PARIS.—THE PROCESSION ON THE BOULEVARD ST. DENIS.—(SEE PAGE 266.)

MUSIC.

BIRMINGHAM MUSICAL FESTIVAL.

Birmingham, Wednesday Evening.

The Festival has begun very auspiciously, and promises to be attended with even more than usual success. The Festival of 1852 was considered an extraordinary one, both as regarded the magnificence of the performances, and the sum realised for the charitable object of the celebration. In that year the net profit amounted to something above £4000. On Monday last the amount of the receipts exceeded by £1200 the amount received on the corresponding Monday of the Festival of 1852; and it is expected that, eventually, the difference will considerably exceed that sum. This is highly gratifying, for there is no charitable undertaking in England which (independently of its artistic value) does a greater amount of good than the Birmingham Festival.

It began yesterday morning with Mendelssohn's "Elijah," which was performed with unparalleled magnificence. The principal part—that of the *Prophet*—was sustained by Weiss in a manner that will enhance his reputation. The other principal singers were Madame Viardot, Madame Castellan, Miss Dolby, Madame Rudersdorff, Reichardt, and Sims Reeves.

This morning Costa's new opera, "Eli," the most remarkable feature of the Festival, was performed with unbounded success. Of this work I can only say at present that it has raised its author to a place in the first rank of the great sacred composers. Its reception, by an immense audience, was of the most enthusiastic kind.

With this hasty notice I must close my present communication. Next week I shall be able to furnish you with fuller details of the Festival and its results.

THE THEATRES, *&c.*

ADELPHI.—A new piece was produced on Monday, an eccentric affair in one act, to furnish Mr. Wright with a new part. It is entitled "How's Your Uncle?" The scene is laid in a court, the houses of which on each side are numbered and named, and the *dramatis personæ* are nearly all residents of this court—nine of them being ladies, and three only males. Of the latter *Richard Wiggs* (Mr. Wright) is the hero, and a barber, once a schoolmaster. We would here remark that his previous occupation had not taught him to speak grammatically; such solecisms as "it is her" continually occurring in his discourse. Indeed, the piece is poorly written, and, except as a vehicle for Mr. Wright's humour, was nearly worthless. *Wiggs* makes love to all the ladies of the court save one, because he hears that one of them is likely, by the death of an uncle, to possess seven hundred pounds. Of course, that one whom he has neglected is the lucky heiress. The mercenary general lover is set upon by the remaining ladies, who shave and powder-puff him, and tear his coat from his back. The general conception is coarse, and the treatment crude, but it was, nevertheless, applauded by the actor's admirers.

HAYMARKET.—"The Stoops to Conquer" was acted on Monday, Miss Reynolds impersonating the heroine.

THE WIZARD OF THE NORTH AT THE LYCEUM. Magic under a new phase of its development is to replace, at the Lyceum, the scenic displays of Mr. Beverley and the clever acting of Mr. Charles Mathews. The opera opens on Monday next, and the new lessee is our old friend Mr. Anderson, the well-known Wizard of the North. We understand that he contemplates producing varied and very novel attractions. First among these will be his own extraordinary performances, now rendered more extraordinary than ever by the introduction of new feats, and by an improved method of accomplishing the more wonderful of those with which we are familiar. Great preparations are in progress to render the Lyceum fit for this peculiar and interesting class of entertainment. Mr. Anderson is famed for his enterprise, and his spirited manner in which he carries out all that he attempts. On the present occasion he is about to be more adventurous than formerly, and to execute his magic on a scale surpassing any of his previous displays. The most curious part of his present performance is the thirty-minutes' lecture-and-talk-rapping. In the United states the Wizard caused a "sensation" by exposing the manner in which table-rapping is effected; and his exposures were productive of some benefit to the cause of common sense against charlatanism. We fear that *spirits*, "rapping, tipping, and feeling deep" of the Wizard's magic profundity, will be found in every part of the Lyceum Theatre; that they will rap out replies to interrogatories from any person, on any subject, in any part of the house; that they will occupy the most amusing positions, like the two fairies in Mr. Noel Paton's "Marriage of Oberon and Titania," they will be found frolicking and lurking in every position pendent from the ceiling, crouching beneath the seats, uttering their oracles invisibly in the very middle of the audience, supplying correct responses on tables, chairs, benches, windows, and doors. The Wizard's attendants have usually been apparent on the stage, about and around him, but from that which we are told they will this time be "airy nothings," present everywhere, but with no "habitation." Among the various other entertainments with which London has recently been entertained, we believe that there has been nothing like that which is now promised. We have no doubt that the Wizard will succeed in attracting large audiences.

THE LION-SLAYER. On Thursday we were favoured with a private *séance* of Mr. Gordon Cumming's lecture and illustrations of his surprising adventures in South Africa, in pursuit of the lion, the elephant, and the hippopotamus. The illustrations consist of panoramic scenes, painted by Messrs. Harrison Weir, Leitch, and Phillips. These are all admirably done—the lions, in particular, are full-like, majestic, and terrible. Equally startling are the revelations of the lecturer himself, who, in his details of his wild sports, abounds in anecdotes and descriptions that thrill and enchant the hearer. The exhibition of trophies with which the museum in Piccadilly is adorned, is altogether superb; and, indeed, it may be stated that the effect of the whole is magnificent. We think that these stirring lectures, with their most imposing picturesque accompaniments, are calculated to do a great deal of good, and invite the public to that manly energy which is now so sternly demanded by the exigencies of the times, and the mission of the age.

COUNTRY NEWS.

THE ENDOWED SCHOOL COMMISSION. The Marquis of Kildare and his brother Commissioners have already elicited sufficient evidence to justify the late Act of Parliament under which they are holding their inquiry into the state of the endowed schools in Ireland. In too many places they have ascertained that the bequests of benevolent persons for the use of local schools have been misapplied, or applied to purposes very different indeed from those intended. In short, abuses of the most unwarrantable character appear to have become established in these institutions. The Commissioners continue their inquiries in Canada still in Cork, where their presence was certainly much required. A comprehensive measure for the better regulation of endowed schools in this country ought to be founded upon the evidence now taken.

DONNYBROOK FAIR.—The "glories" of Donnybrook Fair have passed away for ever. Sunday was what used to be called "walking Sunday," the chief day of the orgies there; but, thanks to the efforts made by the gentry and clergy of all parties, with the Lord Mayor of Dublin at their head, the fair has been finally suppressed; and the orders for the purpose were effectually carried out by the police on Sunday.

EMIGRATION FROM THE NORTH OF SCOTLAND.—The exodus of agricultural labourers from the North of Scotland to the Canadas still continues. The second fleet of American traders will carry out above 600 emigrants from Aberdeen and neighbouring ports, making the total number from the North of Scotland and the County of Moray about 1000 persons. Agricultural labour has advanced in value, and good hands are now getting scarce.

SCARCITY OF AGRICULTURAL LABOURERS.—The provincial journals complain of a great scarcity of labourers for harvest purposes. "Scarcely a gang of Irishmen," says the *Nottingham Review*, "is to be seen, and the recruiting sergeant has thinned off the young men in the villages, and the youthful labourers and frame-work-knitters of the town. The result of this is, that wages have risen greatly. Up to the last season about 12s. was the full rate of letting the cutting of an acre of wheat to Ribstaff harvesters: this year 15s. per acre has been refused, nd 20s. per acre and upwards given."

THE REPRESENTATION OF HUNTINGDONSHIRE.—The *Cambridge Chronicle* states that at a meeting of the Conservative party, held at Huntingdon last week, Lord Hinchingbrook, who has long acted as Chairman of Quarter Sessions, consented to become a candidate for the representation of the county, to supply the vacancy occasioned by the accession of Lord Mandeville to the peerage.

FREE PUBLIC LIBRARIES.—Mr. J. D. Fitzgerald, M.P., has offered the contribution of £100 towards establishing a public library in Ennis, under the new Act for Promoting Free Public Libraries and Museums in Ireland. To Mr. Marcus Talbot on the subject, he says: —"I will myself present £100 for the purpose of some standard scientific works, or books of reference, and I will undertake the supply of a complete set of Parliamentary papers, and promise an annual subscription.'

DURING the prevalence of the electric storm of Thursday week, while some workmen were relaying the rails in the Watford tunnel, on the North Western Railway, the continuity of the rails was thus broken:—Two men, adjoining one another, were placing upon the new rails iron chairs, when a current of electricity passed up one line, and through the man's arms, connecting with the other man's arms, and so parallel rail. The iron chairs, weighing about 25 lb. each, were jerked out of the men's arms, and a benumbing sensation experienced in the arms of both and the side of one, which lasted for a few minutes. The cause, it is thought, was the dry state of the ground and materials, which induced a sort of comparative insulation, as well as the ready conductibility of the iron rails. During the storm the electricity frequently dashed down the large centre shaft of the tunnel, driving the men away who were at work at its base. The electric telegraph through the tunnel was, as usual, much affected.

THE CHILD'S EDUCATOR.—Edited and conducted by John Cassell. London: W. Kent and Co.—The first monthly part of this work is before us. After looking through the multifarious contents, it struck us that a more appropriate title would have been "The Youth's Educator," or "The Family Educator." Not that the lessons are not suited to the capacities of children—they are, in this respect, singularly lucid—but because we are of opinion that its contents are calculated to be of positive service to persons of riper years and advanced age, at the same time that they attract, entertain, and educate the more juvenile branches of the family. "The Popular Education" recently completed, was projected and conducted by John Cassell; and what that work proposed to do for the more adult portion of the population, the "Child's Educator" proposes to do for the rising generation. In the compass of twelve of these monthly parts, lessons are to be given on botany, natural history, geography, astronomy, the wonders of creation as revealed by the microscope, anatomy, physiology and health, French, English, arithmetic, and Common Things. As we have intimated, the lessons are written in a clear and comprehensible style, and are admirably calculated to create an ardent thirst for scientific knowledge, and to instil into the pupil or, rather, pupils, the highest attainments. The interest, as well as the intelligibility of the lessons, is materially increased by the very numerous illustrative engravings and diagrams. In the department on botany, and on arithmetic, this is remarkably the case, so that studies generally considered dry are rendered actually attractive and entertaining. We had this effort, therefore, as another contribution to a most important end—the making *home* the centre of education, and that education attractive and efficient.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

THE actual purchases of Money Stock this week have been comparatively small; nevertheless the prices of all National Securities have exhibited firm. It must be satisfactory to the friends of the agreement to know that the supply of Stock in the Exchange is still limited; hence there does not appear to be any reasonable grounds for the supposition that we shall shortly have a considerable decline in the quotations, the result of the large withdrawals of capital on account of the various Loans.

The demand for money has not been to say active; and the Discount-market has ruled nearly upon the same terms as last week. However, it is difficult to obtain discounts in Lombard-street under the Bank rate. The supply for commercial purposes is still good.

Our advices from Australia and California, in reference to the produce of gold, are still favourable; and steady importations of that metal may be pretty safely calculated upon. The import of this week have amounted to £1,685,000 from New York, £400,000 from Australia, and £600 from other quarters, including several large parcels of silver from the Continent. The exports have reached £1,124,000, about £120,000 of which, however, is destined for the Continent, notwithstanding that most of the foreign exchanges are unfavourable.

The Corn-market on Monday was steady, and the quotations had an upward tendency. The Three per Cents Reduced were 91½ to 92½; the Three per Cent Consols, 91¾; Consols for Account, 92; the New Three per Cents, 92¾; Long Annuities (1860), 4 1 16. Ditto (1885), 19¾; India Bonds marked 3os.; and Exchequer Bills, 12s. to 17s. prem.; Exchequer Bonds, 1903, £. Very little change took place on Tuesday. The Three per Cents Reduced realised 91½ to 92¾; the Three per Cent Consols, 91¾; both for transfer and time; and the New Three per Cents, 92¾. Long Annuities (1860), were 4 1-16; Ditto (1885), 19¾; India Stock, 216; India Stock, 241. Exchequer Bills, 12s to 16s prem.; Exchequer Bonds, 1903, £. Delightful on Wednesday was the day were devoid of interest. The Three per Cent Consols, were 91¾ ¾ at the New Three per Cents, 92¾. Exchequer Bills, 12s. to 15s. prem.; Exchequer Bonds, 100¾ ¾. The dealings on Thursday were limited, and prices ruled nearly the same as before. The Three per Cents both for Money an. Time, were 91¾ to 91¾; the New Three per Cents, 92¾; and the Reduced, 91¾ to 92. Exchequer Bills, 15s to 16s.; and India Bonds, 3os. to 35s. Long Annuities, 1860, 1 16.

In the foreign-house a numerous transactions have taken place in Turkish Scrip for Cents at from 6 to 6 per Scrip at 2 to 2 prem. Other securities have been steady. Ecuador Bonds were 30¾ to 31; Granadas, 19¾; Mexican Three per Cents, 21¾; Peruvian Four-and-a-Half per Cents, 83; Portuguese Five per Cents, 84¾; Ditto, Three per Cents, 40; Sardinian Five per Cents, 86; Spanish Three per Cents, 37¾; Ditto, New Deferred, 18¾; Ditto, Passive, 4¾; Venezuela Four-and-a-Half per Cents, 42; Belgian Four-and-a-Half per Cents, 94¾; Brazilian Four-and-a-Half per Cents, 65¾; and Russian Five per Cents, 101¾. There has been a good business done in Joint-stock Bank Shares, as follows:—E glish, Scottish, and Australian Chartered, 17; London, 59¾; Ex-hange Bank, 34; London and Westminster, 4¾; London and South Wales, 3½; Oriental, 42; Union of Australia, 29; Union of London, 29.

Miscellaneous Securities have been tolerably firm:—Australian Agricultural have realised 30; Australasian Royal Mail, 4¼; Canada Company, 94½; Crystal Palace, 3½; General Screw Steam Shipping Company, 1¾; Peel River Land and Mineral, 2¾; Royal Mail Steam, 80; South Australian Land, 8¾; Ditto, New, 8; South Australian Land, 9¾. A few transactions have taken place in Railway Shares and Oldham Canal Shares, as 130; Coventry, 209; Loughborough, 57½; Oxford, 110; Regent's, 14½ ex div.; and Stratford and Worcester, 23. Waterworks Shares have been very dull. Realm, 6¾; East London, 103¾ ex div.; Grand Junction, 70; Kent, 79½; Southwark and Vauxhall, 80¾; West Middlesex, 91; Ditto, New, ¾ prem. London Gas securities have made 1¼ and 1¾ ex div.; and Sun Buildings 36.

The market for Railway Shares has been very quiet, and prices have shown a tendency to give way. The "calls" for the present month amount to £761,000.

The following are the official closing prices on Thursday:—

ORDINARY SHARES.—Caledonian, Aberdeen, Newcastle, and Berwick, 4¼; Bristol and Exeter, 91; Caledonian, 63¾; Eastern Counties, 11¾; Great Northern A Stock, 72¾; Ditto B Stock, 128¾; Great Western, 57; Lancashire and Yorkshire, 107; London and Brighton, 98¾; London and North Western, 95¾; Ditto, Eighths, 1¼; London and South-Western, 84¾; Midland, 71; North Eastern—Berwick, 74; South Wales, 81¾.

LIBERS LEASED AT RECENT RENTALS.—Lowestoft, Four per Cent, 89¾; Shrewsbury and Hereford, 6¾.

PREFERENCE SHARES.—Eastern Counties, 1¾; Great Northern Four per Cent, 111¾; Ditto, Four-and-a-Half per Cent, 107; London and Brighton, 117¾; Manchester, Sheffield, and Lincolnshire, 13; Midland, 124¾; Ditto, 1874, 6¾.

FOREIGN.—Antwerp and Rotterdam, 9¼; Eastern of France, 33¾; East Indian, 24¾; Great Western of Canada Shares, New, 6¾; Northern of France, 36¾.

Mining shares have been flat. On Thursday Cornish and Cuba were done at 3¾; Cobre Copper, 63; Fortuna, 1¾; New Granada, ¾; South Australian, ¾. United Mexican have been done at 3¼ ¾.

Friday Evening.

Very little business has been transacted in the Consol Market to-day. The Three per Cents are 91 to 91¾; the Three per Cents Reduced, 91¾ ¾; and the New Three-and-a-Half per Cents, 92¾ ¾. In Foreign Bonds and Railway Shares very few transactions have taken place.

THE MARKETS.

CORN EXCHANGE (Friday).—The present week's arrivals of English wheat, coastwise, have been very limited, viz., 600 quarters. By land-carriage, from up-the-country, the receipts were limits., and the show of samples was small. Although the demand was by no means brisk, a steady business was transacted, at full Monday's advance on the quotations. The imports of foreign wheat have been limited, and the supply of that grain on offer was somewhat small. Both free and secondary sorts, and Monday's currency was well supported. Floating cargoes were tolerably firm. The few samples of barley in the market realised extreme rates. Malt was quite as dear as on Monday. Good fresh oats were rather dearer, and inferior parcels ruled steady. Beans, peas, and flour were firm.

Arrivals this Week.—English wheat, 8,0; malt, 7,0; flour, 6,0. Irish barley, 230; oats, 1270. Foreign wheat, 3,10; barley, 4,0; oats, 6,30; flour, 1,80 sacks, 2120 barrels.

English.—Wheat, Essex and Kent, red, 68s. to 76s.; ditto, white, 75s. to 81s.; Norfolk and Suffolk red, 70s. to 78s.; ditto, white, 78s. to 84s.; Yorkshire red, 70s. to 74s.; ditto, white, 78s. to 82s.; rye, 48s. to 52s.; grinding barley, 28s. to 30s.; malting ditto, 40s. to 44s.; Lincoln and Norfolk malt, 65s. to 67s.; brown ditto, 62s. to 64s.; Ware, 72s. to 80s.; chevalier, 70s. to 75s.; Yorkshire and Lincolnshire feed oats, 25s. to 27s.; potato ditto, 27s. to 29s.; Youghal and Cork, black, 24s. to 26s.; ditto, white, 26s. to 28s.; Sligo, Limerick, and Derry peas, 37s. to 42s.; maple, 40s. to 42s.; white, 42s. to 44s.; boilers, 44s. to 46s. per quarter. Town-made flour, 65s. to 70s.; Suffolk, 58s. to 60s.; Stockton and Yorkshire 57s. to 60s. per 280 lbs.

Seeds.—All new seeds have sold steadily, at very full prices, but old qualities are neglected. Linseed and cakes support previous rates:—

Linseed, English, sowing, 62s. to 67s.; Mediterranean and Odessa, 60s to 62s.; hempseed, 45s. to 50s. per quarter. Coriander, 20s. to 24s. per cwt. Rapeseed, 39s. to 40s. per last. Carraway seeds, 32s. to 38s.; per bushel. English rapeseed, new, £40 to £42 per last. Linseed cakes, £10 to £10 10s.; Mediterranean and Odessa, £10 15s. to £11 5s.; Baltic, £11 5s. to £11 10s. per ton. Canary, 44s. to 52s. per quarter.

Bread.—The prices of the 4lb. loaf in the metropolis are from 10d. to 10½d.; of household ditto, 8d. to 9d. per four-pound loaf.

Imperial Average.—Wheat, 73s. 7d.; barley, 36s. 8d.; oats, 27s. 6d.; rye, 49s. 6d.; beans, 48s. 4d.; peas, 49s.

The Six Weeks Averages.—Wheat, 70s. 6d.; barley, 34s. 7d.; oats, 28s. 8d.; rye, 44s. 6d.; beans, 46s. 7d.; peas, 42s. 5d.

English Grain Sold Last Week.—Wheat, 71,10; barley, 3684; oats, 9335; rye, 315; beans, 2596; peas, 347 quarters.

Flour.—The demand for all kinds is quiet; yet prices are well supported. Common sound qualities is selling at from 58s. to 63s. per 1.

Smithfield.—A very active business has been transacted in our market, at a further advance of 1s. per cwt. Best sides has realised 3os. 6d. to 4os. 6d.; Jamaica, 32s. to 34s.; Mauritius, 32s. 6d. to 43s.; tiny qual. 30s. to 42s. per cwt. Head-quals, offal, has realised 20s. per cwt. Pickled pork is 5s. 6d. per cwt. Brown lumps, 47s. to 50s.; and low to fine grocery, 50s. 6d. to 58s. per cwt. Crushed is rather dearer.

Hops.—We have had rather an active inquiry for this article, at an advance of from 3d. to 6d. per cwt.

Provisions.—All kinds of Irish butter have sold heavily, and the quotations have been with difficulty supported. The best foreign is rather dearer. English qualities are dull, and next to unsaleable. Good parcels of bacon move off steadily, at full prices, but fat or lean qualities are very dull and rather easier. All other kinds of provisions, especially hams, are quite as dear as last week.

Spirits.—We have to report a fair demand for rum, at full prices. Proof Leewards is 2s 3d to 2s 4d; Mauritius, 2s. 6d. to 2s. 7d.; and foreign proof is 1s. 9½d. Brandy moves off slowly, at 2s 5d per gallon. Brandy is tolerably firm. Sales of cognac, best brands of new, at 2s 5d to 2s 7d; ditto, 5s 9d to 6s 4d, per gallon.

Wool.—The market exhibits a good degree of firmness, and the quotations are almost nominal.

Potatoes.—The supplies are very extensive, and a full average business is doing at from 50s. to 70s. per t n.

Hay and Straw.—Old meadow hay, 45 lbs. to 65 lbs.; new ditto, 44 lbs to 65 lbs.; old clover, 84 lbs. to 98 lbs.; new ditto, 45 lbs to 60 lbs.; and straw, £1 4s to £1 6s per cwt.

Coals.—Friday.—A few packets of new hops have sold at from 29 to £10 10s. per cwt.

Tallow.—Friday.—There was an average business in tallow, at full prices. The following are the imports into London for the week ended August 25:—Petersburg, 1,200 casks; Archangel, 1,000; Hamburg, 1,000; Germany, 1,000; Holland, 1,000; Denmark, 1,000; France, 1,000; Russia, 1,000; Australia, 1,000; Port Phillip, 1,000; Sydney, 1,000; Van Diemen's Land, 1,000; Port Adelaide, 1,000; Swan River, 1,000; New Zealand, 1,000; Cape of Good Hope, 1,000; Mauritius, 1,000; Bengal, 1,000; Madras, 1,000; Bombay, 1,000; China, 1,000; United States, 1,000; Chili, 1,000; Peru, 1,000; Valparaiso, 1,000; Monte Video, 1,000; Brazils, 1,000; Sundries, 1,000; total, 30,200 casks

In the case of all cases be prepaid, otherwise the Newspapers cannot be sent

SISAL CIGARS at GODRICH'S Cigar, Tobacco and Snuff Stores, 116, Aldersgate-street [illegible] Box, containing 1 dozen Cigars, 1s. 6d., with stamps or cash. None are genuine unless [illegible] H. GODRICH.

THE LONDON PRINTING and PUBLISHING COMPANY.—At the SECOND ANNUAL MEETING OF SHAREHOLDERS, held this day at the Company's Offices, Bisecourt-buildings, the Report and Accounts were adopted, and a Third Half-Yearly Dividend at the rate of Eight per cent per annum, was declared, which will be paid on the 15th September next.

By order,
G. EDMONDS, Secretary

Bisecourt-buildings, London 25th August, 1855

WHITECHAPEL UNION.—SCHOOL-MASTER and SCHOOLMISTRESS.—The Guardians of the Poor of this Union will meet at the Workhouse in Mile-end-road, on Saturday, the 8th September next, at Six o'clock in the Evening precisely, to receive written Applications from Candidates for the situations of Schoolmaster and School-mistress to the Children of this Union at their Industrial School, Forest-lane, West Ham. The persons to be appointed must be men and wife, without incumbrances, and members of the Church of England; and they will be paid salaries amounting to the clear yearly value of £70 per annum, besides the use of the establishment. The age of neither candidate is to exceed forty-five years. The applications, accompanied with testimonials of character and ability are to be delivered at the Board-room previous to the hour appointed, and the candidates are also to attend personally if required. Further particulars may be known on personal application at my office.

By order,
60, Leman-street, August, 1855. Clerk to the Guardians.

BY HER MAJESTY'S ROYAL LETTERS PATENT for a valuable and extraordinary Improvement in the most powerful and brilliant TELESCOPES, Camp, Raccoon-ar, Opera, and Perspective Glasses, under the patronage of JAMES and B. SOLOMONS', Opticians, 39, Albemarle-street, Piccadilly, opposite the York Hotel. They possess such extraordinary power that some, from 3s to 6 inches, with an extra eyepiece will show distinctly the Georgium with its seven satellites, the solar system, saturn's ring, and the double stars. With the same Telescopes can be seen a person's countenance from three and a half to six miles distant, and an object from sixteen to twenty-five miles, for the waistcoat pocket, and are of larger size all sizes, with increasing power. The Royal Exhibition, 1851. Valuable very small powerful waistcoat-pocket glass. Use size of a sixpence, by which a person can be seen and known one mile and a half distant; country scenery and ships are clearly seen at twelve to fourteen miles. They are invaluable for shooting, horse-training, yachting, sportsmen, gentlemen's use. Also a new and Newly-invented spectacle lenses of the greatest transparent power. The valuable discovery derived from this invention is, that vistings becoming impaired is preserved and strengthened, and very aged persons are enabled to employ their sight without the least change or exposition can see with these lenses of a much less magnifying power, and they do not require any of the frequent changes to the destructive effects of further powerful assistance.

DEAFNESS.—The DEVONIC VIBRATOR, an extraordinarily powerful, small newly-invented instrument, for deafness, entirely different from all others, to restore hearing of the kind that has been, or probably never can be, produced. Being of the same colour as the skin, it is not perceptible. It entails a deaf person to hear distinctly at church and at public assemblies. The most distant sounds of singing notices in the ears is entirely removed and effectual all the assistance that could possibly be desired.—39, Albemarle-street, Piccadilly. Observe, opposite the York Hotel.

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET.—Every Evening during the Week, the New Comedy, of THE MAN OF MANY FRIENDS. Messrs. Peres Nesa, who (having recovered from her severe indisposition) will appear with the SPANISH DANCERS in the Ballets. Miss Phoebe Fann, as COURT FAVOUR. And the new spectacle, OLYMPUS IN A MUDDLE.

ROYAL PRINCESS' THEATRE.—Last Week but One of the Season, which will terminate on Friday the 7th September, 1855, when Shakspeare's Historical Play of KING HENRY VIII. will have attained the unprecedented number of One Hundred Nights. Mr. C. Kean cannot close the Theatre without expressing his gratification and of the sense of the Public Patronage which has stamped a Shakspearian revival with an attraction hitherto without a parallel on the Modern Stage.

GREAT NATIONAL STANDARD THEATRE Shoreditch. Proprietor, Mr. John Douglass This Theatre is now capable of containing 5000 persons, open every evening at 7 o'clock. A most attractive entertainment at Lowest Prices. Boxes and Orchestra Stalls, 1s. Pit, 6d. Gallery, 3d. Doors open at half-past 6 and 7. Commence at half-past 7. Children in arms not admitted. Carriages may be ordered for 10 o'clock. Acting Manager, Mr. Wilmot. Treasurer, Mr. Hall. Stage Manager, Mr. Douglass. Leader of the Band, Mr. Lavenu. Conductor, Mr. Hall. Prompter, Mr. Wilmot. Acting

THE ROYAL AND IMPERIAL PROCESSION PASSING THE BOULEVARDS DES ITALIENS.—(SEE PAGE 265.

THE QUEEN'S VISIT TO PARIS.

HER MAJESTY'S RECEPTION AT BOULOGNE.

THE fine scene represented in the accompanying illustration was fully detailed in our Journal of last week (page 246). We subjoin a brief description of the meeting of their Majesties. Opposite the Dépôt de Bagages was seen a square pavilion or small temple-like edifice, open at the sides and decorated in the style of the *loggie* of the Vatican, which, as it appeared the most conspicuous object along the quay, was correctly supposed to be the place where the Emperor awaited the arrival of his Royal visitors. As soon as the *Victoria and Albert* drew alongside this pavilion, her Majesty appeared at the ship's side, and gracefully acknowledged the salutations of the Emperor. A gangway was thrown on board, the Emperor quickly ran up the platform, and, after respectfully kissing her Majesty's hand, saluted her upon both cheeks, according to Imperial and Royal etiquette and the theory which presumes that crowned heads are all sacred and fraternal relations to each other. The Emperor then cordially shook hands with Prince Albert, the Princess Royal, and the Prince of Wales, and, giving his hand to the Queen, led her down the stage to the pavilion, within which State chairs were placed on a dais, and here her Majesty, seated, received the congratulations of the civic authorities and the English residents. After a brief pause the Emperor led her Majesty to one of the Royal carriages. The Princess Royal took her place beside the Queen, and Prince Albert and the Prince of Wales took the opposite seats, while the Emperor mounted his horse, and rode upon her Majesty's right hand.

It is not generally known that the Emperor had a most miraculous escape from destruction on the morning of the day of the Queen's arrival. Some time before the Royal squadron was sighted, his Imperial Majesty, accompanied by Marshal Baraguay d'Hilliers, galloped up the heights for the purpose of having a better view of the approach of his august visitor. While his horse was standing quietly upon the most elevated ground within a very short distance of the overhanging cliffs, he permitted the reins to hang loosely upon the animal's neck, his hands being occupied holding a double opera-glass to his eyes. The Emperor's attention being wholly absorbed with the contemplation of the *Victoria and Albert*, which in the distance he saw approaching, and, while at the same time conversing with the Marshal on the subject, he was aroused to a sense of the most imminent danger by the sudden movement of his horse, who made a violent leap across a narrow trench which some labouring men were cutting in the front of where he stood. The hat of the Emperor fell off, and, throwing the glass to the ground, he seized the bridle with both hands, and most providentially, by his cool presence of mind and main strength, he was enabled to arrest the violent career of his horse, and to pull him back almost upon his haunches when within but a few feet of the yawning gulf beneath. What an escape was his? In what a simple way might *his* life be lost, upon which it is not too much to say the destinies of Europe at present hang.—*Morning Post.*

THE PROCESSION OF THE BOULEVARDS.

To the description of the magnificent reception given to her Majesty at Paris on Saturday, we add a few characteristic details to accompany the two illustrations in the present number. It was curious to observe the the intense desire displayed by all classes to make this wonderful city look its best and fairest before the eyes of our island Queen, to inspire her Majesty and the members of the Royal family who accompanied her with a due appreciation of the claims which Paris has to be considered the gayest and most brilliant capital in the world. Certainly, those claims were never more overpoweringly displayed. The great breadth of the Boulevards, and the importance of preserving the series of splendid perspectives which they present uninterrupted, prevented a series of triumphal arches; but along the route of the procession many trophies had been erected, some of them including sculpture of considerable merit, and bearing inscriptions suitable to the occasion. At one point the names and the departments inscribed in shields drew attention to the sentiment of the departments represented all France; at another it was some institution or private company close at hand, which, rushing to the edge of the *trottoir*, vindicated its importance by setting up a special sign of welcome. The one triumphal arch was really a fine piece of construction, and looked exceedingly imposing. Raised by the artistes of the Opera close to the Rue Lepelletier, it had the inside of its piers and *intrados* covered with Imperial bees, the terminal figures over each pier being formed by pairs of colossal eagles, with extended wings. At several other points chains of streamers, or cords, to bear some pendent banner of inscription, crossed the thoroughfare, but otherwise the grand series of vistas which the line of the Boulevards commands was not disturbed. Not only did the decorations extend throughout the route itself, but also along the side-streets which open up from it, and these were hung with flags and trophies of evergreens as far as the eye could penetrate down them. This was particularly observable with that noble street the Rue de la Paix, which was brilliantly ornamented.

Those who do not know Paris will have some difficulty in realising the splendid aspect of the line of Boulevards, with the bright sunlight pouring down from a sky without a cloud, the pavement and carriage-way swarming with people, the lofty houses with their jalousied windows thrown open and filled with spectators, the extensive ranges of balconies, all occupied, and in every direction that indescribable air of excitement manifest which marks the anticipation of a great public event. The road of the procession lay along the Boulevard de Strasbourg, the Port St. Denis, the Boulevards Bonne Nouvelle, Poissonnière, Montmartre, Italiens, Des Capucines, and the Madeleine, down the Rue Royale, across the Place de la Concorde and by the Champs Elysées, the new Avenue de l'Imperatrice, and the Bois de Boulogne to St. Cloud. About four o'clock the troops, to the number, it is said, of 100,000 men, half of the Line and half of the National Guard, began to take up their positions on this immense and splendid route. The former held the left side of the thoroughfare, and the latter the right; while, penned in behind them, the myriads of spectators gradually settled into their places and began patiently for the arrival of the illustrious strangers. The Prefect of Police set down the number of people assembled at 800,000 and, considering the vast accession made within the last few days to the population of Paris, it did not probably fall much short of that mighty aggregate.

At several points along the route her Majesty's attention appeared to be caught by the vociferous cheers of her own subjects. This was particularly marked opposite the house of Sallandrouze de Lamornaix, who had kindly placed his large balcony at the disposal of the foreign Commissioners now assembled in Paris on the business of the Exhibition.

LOUVRE AND RUE DE RIVOLI IMPROVEMENTS.

PRIOR to 1850 the Place du Carrousel was bordered on the south by the long gallery of the Louvre, and on the north by the unfinished parallel wing commenced by Napoleon I. Beyond these nothing was to be seen but mean and filthy streets, forming a painful contrast with the surrounding splendour—the carriage-way to the Louvre being lined with booths, in which was held a kind of rag-fair for the sale of old iron, second-hand books and clothes, and similar commodities. These have all been swept away by the hand of improvement, and their places occupied by magnificent buildings, now rapidly approaching completion. The unfinished wing above alluded to is connected with the new buildings by an elegant pavilion, and the space between the Tuileries and the Louvre forms two distinct squares —the larger still rejoicing in its old name of Place du Carrousel, and the other, encompassed by two wings from the main galleries, being designated Place Napoleon III.—a fitting compliment to the man through whose agency the improvements have been effected. The wings have corner pavilions harmonising with the Tuileries, a long line of elegant arcades being formed on either side extending to the Louvre, and adding much to the architectural beauty of the structure. The southern arcade is flanked by the Pavilion Lesdiguières, and leads to the quay, whilst the Pavilion de Rohan is constructed in the same style in front of Rue de Richelieu. The ground of the two squares has been levelled at the joint expense of the city and the State, the works are more than half finished, the girders, and joists being of iron, of which upwards of 300 tons have been used. In the new wing on the southern side will be galleries called *Ailes des Expositions*, for the exhibition of modern sculpture and painting by living artists. The northern portion of the wing is designed for the use of the Ministers of State, the Imperial Library of the Louvre, the Direction of Telegraphs, &c.; whilst in a building adjoining the Galerie du Quai and communicating by the long gallery with the Tuileries, a suite of State apartments is being constructed, including a saloon of 40 mètres (a mètre is rather more than 3 feet 3 inches English) by 20 wide, for State receptions. In the Place Napoleon III. it is designed to erect equestrian statues of Louis XIV. and Napoleon I., whilst six fine statues, many of which are completed, will adorn the exterior of the building. The lower story of the old or south gallery comprises apartments for various officials, connected with the palace, and barracks for the Cent Gardes—the body-Guard of the Emperor, which consists of picked men from other regiments, and comprises a Lieutenant-Colonel, eleven other officers, and 137 non-commissioned officers and men. The upper story of this gallery is a long arcade, extending the whole length of the building, and contains the collection of pictures belonging to the National Museum. The eastern portion, towards the Seine, has been decorated with sculpture. It approaches in its style the Renaissance—having recessed Tuscan pillars, supporting a range of mezzanini; whilst the principal story consists of niches and windows, which are alternately surmounted, and triangular and segmental pediments. That portion west of the Pavillon Lesdiguières has no mezzanini, but its pedimente rest on Corinthian pilasters, rising from a stylobate. The east end of the Place du Carrousel communicates with the Louvre, the Rue de Rivoli, the extension of which to the Fontaine de Birague—a fountain erected in 1679, by Chancellor de Birague, and restored in 1807—forms a most important feature in the general improvements of the city.

On Thursday week, their Majesties the Queen and the Emperor proceeded from the Tuileries, with his Royal Highness Prince Albert and their Royal Highnesses the Prince of Wales and the Princess Royal, to the Louvre, where the Minister of the Emperor's Household, Count de Nieuwerkerke, Director-General of the Museums, and M. Lefuel, architect of the Louvre, were waiting to receive them. Their Majesties passed through the galleries, admiring the gems of art which they contain. They stopped in the centre window of the Pavilion of the old Louvre, where the plan of the constructions on the Place Napoléon was explained to them.

THE PALACE OF THE TUILERIES.

In our Journal of last week we gave a large illustration of the Tuileries, with the arrival of her Majesty. We now engrave the Garden Front of the Palace, with a Panoramic View of the City of Paris, showing the completion of the Louvre and the Rue de Rivoli, which magnificent works are now in progress and approaching consummation. It will, therefore, be interesting to glance at the history of the Tuileries and the Louvre, as well as to detail the above improvements, which rank among the most superb embellishments ever executed in any capital of Europe.

Passing over the early history of the palace, which has already appeared in the ILLUSTRATED LONDON NEWS, we here take up the narrative at that point at which it becomes connected with that of the Louvre. In the reign of Henri IV. the palace was enlarged by Ducerceau and Duparc two other ranges of buildings with large composite pilasters and lofty pavilions at each end being erected. The gallery for connecting the Louvre with the palace was also commenced under this King, and completed under Louis XIII., who took up his residence in it. Under the directions of Louis XIV. an attic story was erected to the central buildings in order to harmonise the whole; and a spiral staircase—deemed a chef d'œuvre of workmanship, in the lower part of the central pavilion—removed. Upon the building of Versailles, the Tuileries—and, indeed, the capital—was neglected by the Court. During the minority of Louis XV. the Regent (the Duke of Orleans) took up his residence at the Palace of the Tuileries; which, from that period, was again neglected until the forced return of Louis XVI., the families of persons connected with the Court only occupying it. During the Revolution the Tuileries became the theatre of scenes now unnecessary to recall; but in 1802 it became the official residence of the First Consul, and subsequently an Imperial palace. In 1806 the northern gallery was commenced by Napoleon, to connect this Palace with the Louvre; and at the Restoration the Tuileries was adopted as the residence of the King and family. After the Revolution of 1830 it was the residence of Louis Philippe and his family until the events of 1848, which led to the abdication of the crown by that monarch, and during which it was invaded for the second time by the people. The Provisional Government of that year leased it, after ordering the Tuileries to be converted into an asylum for invalid workmen; and after the insurrection of June it was used as a temporary hospital for the wounded. In 1849 the yearly exhibition of paintings was held within its walls, but Napoleon has since restored it to its proper uses, and it is again the official town residence of the Emperor. The extreme length of the building is 1008 feet; but, from having been built at various periods, its architecture is not uniform, and is far from elegant or imposing, it being too low in comparison with the length. The interior is magnificent, and contains within it many works of art—not the least attractive of which is a silver statue of Peace by Claudet, presented by the City of Paris to Napoleon I., after the Peace of Amiens; and an equestrian portrait of the present Emperor, by Mulier. The state apartments are open to the inspection of the public on certain days by tickets.

The Garden of the Tuileries is always open to the public. It was originally laid out in 1556, and extends from the Palace itself to the Place de la Concorde, being encompassed by a parallel terrace on the north and south, running from the extreme pavilions. Its length is 2256 feet, and width 800. The southern terrace is rather more elevated, and wider than the other, and affords the best view of the Seine, which is connected with the Palace by a subterranean passage. The terrace on the north is called the Terrasse des Feuillets, taking its name from a convent in existence on the spot prior to the first Revolution, and is separated from the Rue Rivoli by handsome iron railings, surmounted with gilt spear-heads. From the central pavilion of the palace, known as the Pavillon de l'Horloge, from the clock in the centre, extends a handsome broad avenue to the western entrance on the Place de la Concorde. In front of the palace are two flower-gardens, on either side of the broad avenue, from which they are separated by the iron railings in which they are inclosed. Three circular basins and numerous statues also adorn the garden. The rest of the garden is well planted, and there is a magnificent orangery. The piers of the western entrance are adorned with two spirited groups of Mercury and Fame on winged steeds. At the corners are colossal lions copied from the antique; and on either side of the entrance are the Nine Muses and Apollo, whilst other statuary also grace the garden. From the central avenue of the garden there is a beautiful view right along the Champs Elysées to the Arc de Triomphe de l'Etoile, commenced by order of Napoleon in 1806, about a mile and a half distant. It is beautifully adorned with sculpture in commemoration of the battles of France. This beautiful work of art, standing on rising ground, is distinctly visible from the garden of the Tuileries, with which it is in a direct line—the arch being bisected as it were by the obelisk of Luxor, a magnificent relic of ancient Egypt, standing in the Place de la Concorde, immediately in front of the western entrance to the garden.

TUILERIES.—EASTERN FRONT.

The eastern front of the palace opens into a court-yard, formed under the direction of the first Napoleon. It is separated from the Place du Carrousel by a handsome iron railing with gilt spear-heads, extending the whole range of the palace. From the railings three entrances into the Place du Carrousel. The central gate corresponds with the central pavilion of the palace, and the other two have their piers surmounted by colossal figures of Victory, Peace, History, and Fame. A gateway under each of the lateral galleries also communicates on the north with the Rue de Rivoli, and on the latter with the Quai du Louvre. The Place du Carrousel is so named in honour of a tournament held upon the spot by Louis XIV. in 1662. It communicates on the northern side with the Rue Richelieu and the Rue de l'Echelle, and on the southern side with the Pont Royal and Pont du Carrousel. In the square stands a triumphal arch, erected in 1806 by Percoir and Fontaine, by the direction of Napoleon. It is 60 feet by 30 at the base, and 45 feet high, consisting of a central and two smaller lateral arches, each of which is intersected by a transversal arch of equal height. The entablature is supported by Corinthian columns of marble, with bases and capitals of bronze, adorned with eagles. The attic is surmounted by a figure of Victory in a triumphal car, and four bronze horses. Over each column stands a figure of a soldier in Napoleon's army, and on each of the smaller arches is a bas relief representing remarkable events in the campaign of 1805. This arch cost £56,000.

GRAND REVIEW IN THE CHAMP DE MARS.

THE hour of five p.m., on Friday week, was selected as the best for the Grand Review in the Champ de Mars. The heat, which had been intense for the last two days, was more supportable at that time. The air was still close and sultry, and the sky for an hour or two prior to five o'clock, as if a storm was approaching, and some drops of rain fell at intervals the troops began to move to the ground at three o'clock, and were under arms and in position about four.

The infantry was drawn up in line, with its right to the Ecole Militaire and its left to the Seine

THE HERMITAGE AT VERSAILLES.

storation. Charles X. resided at St. Cloud; and when Louis Philippe was called to the throne by the revolution of 1830, he felt that Versailles could not well exist as it had been originally designed, as a Royal palace; and he therefore proposed to consecrate it as a museum "au toutes les gloires de la France," by collecting within its walls an immense series of paintings, sculpture, and other works of art illustrative of French history. To this purpose £600,000 was expended in repairing, enlarging, and harmonising its several parts; and so well has the design been carried out that, as an historical museum, it doubtless stands unrivalled throughout the world.

The Palace is now approached by the Place d'Armes, 808 feet broad; and to the north and south were stables and coach-houses, surrounded by elegant railings; the two buildings form accommodation for 1000 horses, and have of late been converted into barracks and a riding school. The Grand Court, 380 feet in breadth, is separated from the Place d'Armes by stone parapets, flanked by iron railings, elegantly gilded. This court is ornamented by groups of figures illustrative of French victories, and marble statues of Richelieu, Bayard, Colbert, Jourdan, Masena, Tourville, Duguay, Trouin, Turenne, Segur, Du Guesclin, Sully, Lannes, Mortier, Suffren, Duquesne, and Condé. Twelve of these statues, prior to 1837, ornamented the Pont de la Concorde at Paris.

In the upper part of the court is a colossal equestrian statue of Louis XIV., which is considered one of the best statues in Versailles. Beyond the Grand Court is that formerly called the Cour Royale, and which, prior to the Revolution, was kept very exclusive—none but the carriages of Royal personages or those bearing certain arms being allowed to enter it. Beyond this is a wing and pavilion, in the Corinthian style, erected by Gabriel in the time of Louis XV.; whilst on the south are those completed under Louis XVIII. Beyond these is the Cour de Marbre, surrounded by the old palace of Louis XIII., composed of red brick, and coped with stone —consisting of a ground-floor and first story, with a high roof; the whole is crowned with balustrades and sculpture, ornamented with vases, trophies, busts, and statues—the busts, nearly all of which are in white marble, being placed on brackets between the windows. In the centre of the building is a balcony of white marble, supported by eight Doric pillars, and above is an attic crowned with two exquisitely-sculptured figures (Mars and Hercules), forming a pediment on which is supported a clock, which was formerly only used to mark the time at which the King died. To the south of this Cour Royale is a small court bearing the name of Cour des Princes, dividing the wing of Louis XVIII. from the southern one. North of the Cour Royale is the Cour de la Chapelle, the architecture of which, though extremely elegant, is remarkably florid, being ornamented with Corinthian pilasters between the windows, with sculpture, and a balustrade surmounted by twenty-eight statues. It is 148 feet in length, 75 broad, and 90 high. The northern wing comprises the Cour de la Bouche, where the kitchen formerly stood; the Cour du Théâtre; and the Salle de l'Opera, the exterior of which is plain and massive. There is next one of the great reservoirs from which the fountains are supplied. The eastern side of the wing is composed of an elegant pile of buildings, restored by Louis Philippe, to harmonise with the older portion. The Cour de la Chapelle and the Cour des Princes each lead into the gardens, and afford access to the western front of the palace, which is extremely magnificent. The wings are upwards of 500 feet in length, the front 320, and the retiring sides 240—the number of windows and doors being 375.

Among those portions of the interior shown to the public, in the central building, on the ground-floor, are the saloons of the French Admirals, illustrating the naval history of France; the saloon of Constables of France, from Alberis de Montmorency to Lesdiguières; the saloon of Marshals; the gallery of Louis XIII., the panels of which are decorated with historical subjects relating to that reign, and that of his successor; saloon

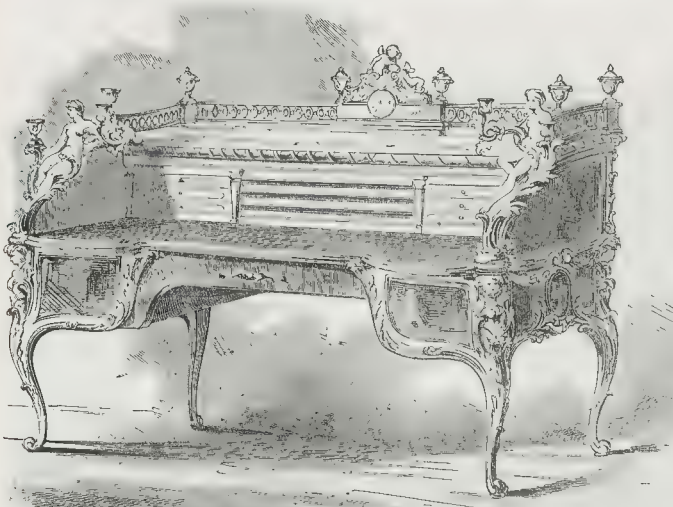
PANORAMIC VIEW OF PARIS FROM THE L



MARQUETERIE BUREAU, BY REISENER, IN THE PALACE OF ST. CLOUD.

of celebrated warriors, saloon of the Marine, saloon of the Kings France, and the saloon of Royal residences. On the first floor are the ancient salon des Gardes, filled with battle-pieces; the saloon of Louis XIV., decorated with old paintings, principally connected with the history of Alexander the Great; the apartments of the Queen Marie Antoinette, the bull's eye gallery—so called from its having been originally lighted, when an anteroom, with a bull's-eye pane of glass—now containing a valuable collection of portraits; the chamber of Louis XIV., the cabinet of Louis XV., the saloon of clocks, the hunting cabinet, the breakfast room of Madame Maintenon, the confessional of Louis XIV., the King's dining-room, the saloon of gold plate, saloon of porcelain, library, saloon of medals, saloon of Crusades, saloon of the States-General, saloon of Hercules; the grand apartments of Venus (the principal painting in which is the Three Graces), of Diana, of Mars, Mercury, and Apollo; the saloon and grand gallery of War, the saloon of Peace, the Queen's bed room, saloon and dining-room, the saloon of the Queen's Guard, the saloon of the Coronation (in which is the celebrated picture of the Coronation of Napoleon, by David), saloon of water-colour paintings, saloon of campaigns ('93 to '95), saloon of Marines, and saloon of Constantine. In the southern wing are shown, on the ground-floor, the Napoleon gallery, and the gallery of sculpture; on the first-floor the gallery of battles, the saloon of 1830 (showing the events of the revolution of that year), Louis Philippe's sculpture gallery; and on the upper story the gallery of portraits of distinguished individuals since 1790. In the northern wing may be seen, on the ground-floor, the gallery of the history of France, and the statues and tombs of the Kings of France; on the first floor, the chapel, another gallery of the history of France, and a second gallery of the statues and tombs of the Kings of France; and on the upper story a gallery of portraits until the year 1792, and a collection of French medals. The opera-house contained within the building, is also shown.

The Gardens are filled with an immense number of beautiful statues, groups, and vases, which added to the variety and effect of the plantations and the fountains, when playing, produce an effect which can only be imagined by endeavouring to realise to the mind some of the most delightful of the "Arabian Nights' Entertainments." There are close upon twenty different fountains, all of rare beauty, and adding an extreme richness to the scene: that of Neptune is the largest of the whole, and being the principal of what is called the *Grandes Eaux*, is only played occasionally. On the upper border of the basin are twenty-two large vases in lead, ornamented with bas-reliefs; and against the side are three immense groups, in the same metal. The centre group represents Neptune and Amphytrite, seated on an immense shell, accompanied by nymphs, tritons, and sea-monsters. On the east the group represents Proteus, and on the west the Ocean resting on a sea-unicorn. From these five groups issue immense bodies of water, which is added to by grand *jets d'eau* which rise from other parts of the basin and the vases.

We have engraved on page 271 two of the rustic buildings in the grounds at Versailles

MARQUETERIE BUREAU BY REISENER.

AMONG the many costly items which are contained in the Palace of St. Cloud is the wonderful Bureau, manufactured by Reisener, in 1788 for Louis XVI. During her Majesty's recent sojourn at St Cloud, this celebrated article of furniture was placed in the study in her Majesty's suite of apartments. The Bureau is an almost matchless specimen of richly ornamented marqueterie; it contains a number of secret drawers, and in the centre of the upper front is a clock, for the convenience of the writer.

DESPATCH FROM LORD CLARENDON.

(From Friday Night's Gazette.)

Whitehall, August 24, 1855

The Right Hon. Sir George Grey, Bart., has received the following despatch from the Earl of Clarendon, K.G.:—

St. Cloud, August 22, 1855

Sir,—The Queen, Prince Albert, the Prince of Wales, and the Princess Royal, arrived on the 18th instant, in the *Victoria and Albert* yacht, at Boulogne, where her Majesty was received by the Emperor of the French, amidst the salutes of the Army of Boulogne, posted on the heights, and the acclamations of a vast concourse of people assembled for the occasion

At Amiens, where the Queen stopped for a short time, and along the whole line of railway, her Majesty was received with every demonstration of respect and kind feeling.

At Paris, from the station to St. Cloud, these feelings were manifested in the strongest manner; and I can convey no better idea of the reception of her Majesty by the people of Paris than by stating that the enthusiasm was quite as great as that which greeted the Emperor and Empress on their arrival in London.

The same cordial welcome has been given to the Queen at the various places where her Majesty has since appeared in public: and her Majesty is profoundly sensible of the spontaneous and universal kindness which has been displayed towards her by the people of France

It is impossible to doubt that the Queen's visit will still more closely cement the alliance which now so happily subsists between the Sovereigns and the people of England and France.

I am happy to inform you that the Queen, Prince Albert, the Prince of Wales, and the Princess Royal, are in perfect health.

I have, &c.. CLARENDON.

Right Hon. Sir George Grey, G.C.B., &c., &c.

In the summary of the proceedings of each day since the Queen has arrived in Paris, which is given in the *Moniteur*, there is one expression which makes its appearance as regularly as clockwork, but which exceedingly puzzles the Parisian public. You are probably aware that it is the custom here to post up the official journal on the walls of the Mairies for the inspection and perusal of the people, so that the very cabdrivers who run may read. Each morning groups, more numerous than ordinary, take their stand before the Mairies, and study the paper, or one person reads aloud for the edification of the rest those sketches, which seem to inspire general interest. It is invariably said, "A une heure Sa Majesté a pris le *lunch* aux Tuileries." The word *lunch*, for which I believe there is no equivalent single word in the French, they cannot make out. *Lunch!* what is *lunch?* what can that be which the English Court so regularly takes at one o'clock each day? The mystery, however, was cleared up yesterday in the Rue d'Anjou. The reader of the morning, a worker in bronze, discovered that it was a typographical error on the part of the compositors, and that *Punch*, not *lunch*, was meant. It was as clear as noonday. The English are known to like their grog quite as intensely as roast beef, plum-pudding, and porter, of which, with tea, they make their breakfast, dinner, and supper; and it was remarked, how patriotic Queen Victoria must be, to compel her Court to adhere to the customs of old England, even when sojourning in a foreign land. It is now firmly believed that the refreshment served for the use of the Court, at one o'clock, is a bowl of punch *à l'Anglaise*. I recommend M. Fould to devote a paragraph or so to the subject, and not to allow our gallant allies to go off with the notion that hot rum-and-water is the favourite beverage of the English Court at noon. An Essay on Lunch in the *Moniteur* would be desirable. The jokes and repartees of the crowd assembled on the passage to the Hôtel de Ville were piquant, though by no means offensive. There were no cries, but hardly any one passed without running the gauntlet of their epigrams. They were particular in their attention to the ladies. "Vous êtes contente, Madame," observed a *gamin*, as a carriage laden with beauty passed. "Vous êtes contente, n'est ce pas, Madame, d'aller au bal? Oh! la jolie toilette. Oh! des beaux diamants! C'est au moins une Comtesse. Bon soir, Madame la Comtesse, amusez vous bien, et ne vous fatiguez pas trop." To a corpulent functionary—"Il fait trop chaud pour danser la polka. Prenez des glaces, mon cher monsieur!" To another functionary, whose breast was covered with orders—"Qu'il est beau, chamarré de de corations, et barriolé de croix! Ou avez-vous gagné la plaque, mon bonmonsieur?" "Tais-toi, imbecile," another replies, "parler de la sorte à un homme de sa classe; c'est un Sénateur, au moins." "Tu te trompes, bavard, ne vois tu pas que c'est un Conseiller d'Etat." "Fiche moi le camp, avec ton Conseiller d'Etat; c'est Milor Palmerston, qu'il est coquet." "C'est plus, mon cher, c'est le Lord Maycr." These and a thousand other remarks showed the good humour of the crowd.—*Times Correspondent.*

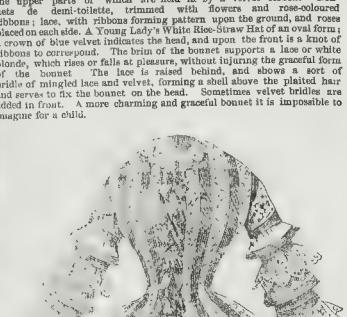
PARIS FASHIONS FOR SEPTEMBER.

AN unusual excitement has succeeded to that period of the year which is generally quiet as to fashions of a high order. The shops, ordinarily so deserted at this season, were crowded. The visit of the Queen of England has been the main cause. The Exhibition has proved to foreigners in Paris unexpectively expensive. At the splendid ball at the Hôtel de Ville, and the fêtes of Versailles, superb costumes were displayed in profusion; whilst the Palace of Industry presented an imposing array in the daytime. On her first visit to the Exhibition her Majesty much admired two objects, which on her return to St. Cloud she found in her apartments. One was a bronze group from the atelier of M. de Labroire, representing the "Lion in Love;" the other representing a scene in the life of the Empress Eugenie. At the Hôtel de Ville, we noticed, near her Majesty, a charming young lady in a white *tarlatane* robe, with a skirt of five

flounces, simpler, but smaller, volants composed the berthe, and trimmed the sleeves. A bouquet of pale *bluettes* was placed upon the front of the corsage. This toilette has been imitated in colours—rose, blue, straw, *cuisse*, and in short, of all the fine and clear shades of the season.

THE ILLUSTRATIONS.

Chapeau de Fadlle de Riz, with white roses upon the sides. **Tour de tête of *tulle blanc***, slightly heightened with white blonde, mingled with small white roses; *bouclé* long, and ornamented with long ribbons upon the shoulders, and upon the edges similarly with blonde. **Mantelet** of black taffetas fitting to the waist, and trimmed with a *ruche à la vieille*, serving as a top to a lace flounce; robe of grenadine, with three flounces, printed with patterns of flowers or colours, varied and natural. Canezou of black lace, in bands, alternately with galoons of black velvet placed lengthwise. It is closed before by hooks, hidden beneath velvet bows of the same width as the bands; on the sleeves the ornament is placed *en rond*, and forms two flounces of lace, the upper parts of which are held in by a velvet ribbon. Bonnets de demi-toilette, trimmed with flowers and rose-coloured ribbons; lace, with ribbons forming pattern upon the ground, and roses placed on each side. A Young Lady's White Rice-Straw Hat of an oval form; a crown of blue velvet indicates the head, and upon the front is a knot of ribbons to correspond. The brim of the bonnet supports a lace or white blonde, which rises or falls at pleasure, without injuring the graceful form of the bonnet The lace is raised behind, and shows a sort of bridle of mingled lace and velvet, forming a shell above the plaited hair and serves to fix the bonnet on the head. Sometimes velvet bridles are added in front. A more charming and graceful bonnet it is impossible to imagine for a child.



THE PARIS EXHIBITION.

HER MAJESTY'S VISIT.

Her Majesty having twice visited the Universal Exhibition at the Palais d'Industrie, and once the Exposition des Beaux Arts, the following notices of his Imperial Highness the Prince Napoleon, the Commissioner appointed by the Imperial Government, and of M. de Rouville, the Director of the Exhibition, and Representative of the Company which originally undertook the management of its affairs, will be read with interest:—

PRINCE NAPOLEON.

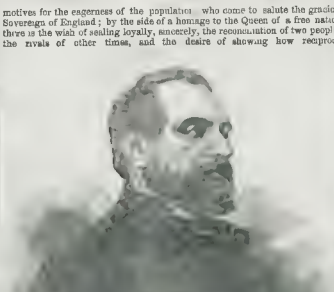
The Prince Napoleon has been President of the Imperial Exhibition Commission from the date of its organisation in 1853. During his absence in the Crimea the duties of his presidency were performed by General Morin; but on his return from the East his Imperial Highness instantly reassumed the arduous duties of the important post which the Emperor had confided to him. He found the regulations adopted by his colleagues in his absence faulty in many respects; he saw in the many and conflicting subdivisions of the great work to be accomplished, an element, not of vigorous progress towards a happy result, but one of disorder, if not of disaster. His presence at once gave new vigour to the undertaking. The plans of the Commissioners were reconsidered, and many alterations were made. If on the 15th of May the Palace of Industry presented to the public only a faint outline of the present happy effects, the delay is not fairly attributable to the Prince, nor to the Company. It was the consequence of that wild spirit of thoughtless activity—continually erecting only to destroy—commanding only to countermand—which the General had pursued. Early visitors to the Exhibition will remember the many vexatious drawcoonings which they suffered in their difficult progress through the Palace. Doors lying wide open might not be turned to account, the visitor must enter at one door, then make two or three long journeys when he wished to leave to discover the particular opening at which it was the General's pleasure to allow him to make his exit. All these wretched by regulations which invariably disgust the public [illegible] en in the finest, the most perfect exhibition, were [illegible] set aside by the Prince-President. Again, to the Prince the public owe the establishment of cheap trains from the departments and from abroad, and above all, that studious regard to the claims of working men in an industrial exhibition, which is one of the remarkable features of this exhibition. He has invited masters and [illegible] workmen—[illegible] that in the distribution of rewards the man whose skill, aided by [illegible] diligence and capacity has produced a masterpiece, may receive the acknowledgments of the French Government. As the hospitable host of the Palais Royal, where the Exhibition Commissioners from the fifty contributing nations have enjoyed the society of the learned men of the French capital, the Prince has won the respect and the good [illegible] of eminent men, who will carry back with them that social reputation which he enjoys in his own country.

PRINCE NAPOLEON, PRESIDENT OF THE IMPERIAL COMMISSION OF THE PARIS EXHIBITION. FROM A PHOTOGRAPH BY DISDERI, OF PARIS.

VISCOUNT DE ROUVILLE.

To the Viscount de Rouville the public of Paris owe the fine Palais de l'Industrie which is now the conspicuous ornament of the Champs Elysées. It was he who gave effect to the Emperor's wish that such a building should be erected; and who has conducted the affairs of the Company throughout its transactions with the Imperial Commission. The Paxton of the Paris Universal Exhibition, the story of his life claims space in our columns.

Etienne François Rouville, Viscount of Rouville, was [illegible] the 7th of August, 1808, and belongs to one of the ol[illegible] He was educated at the Lycée Charlemagne; and in his [illegible] entered as *aspirant référendaire* in the Court of Accounts. Not long afterwards we find him engaged in large industrial operations, all of which were eminently successful, promising that clear head in the matured man, which placed him in the position of one of the best-known bankers of the French capital. His excellent judgment enabled him to carry his house safely through the disasters of 1848, when banks less wisely conducted were falling to the ground around him. A devoted friend to the Bonaparte cause, he was naturally one of those men whom the rise of this illustrious house would advance upon the public scene. To him the Emperor (with that virtue only too rare in edifice to which people from all parts of the world are converging at the present time. The zeal and good humour uniformly displayed by the director—even when his efforts were misconstrued, and the consequences of blunders to which he was a stranger were heaped upon his head—won for him the approbation of his sovereign, who—the Palace terminated—elevated his faithful servant to the rank of officer of the Legion of Honour.



VISCOUNT DE ROUVILLE, DIRECTOR OF THE UNIVERSAL EXHIBITION AT PARIS.—FROM A PHOTOGRAPH BY DISDERI.

THE FRENCH PRESS ON THE ROYAL VISIT.

The *Siècle*, in its compliments of welcome to the Queen of England on her visit and sojourn in Paris, says:—

When the constitutional Queen of Great Britain leaves her capital to come and draw closer the alliance of the two bravest and most civilised nations of the world, we associate ourselves with all that is done to receive her in a manner worthy of France. The honours rendered to Queen Victoria, assume, according to divers political opinions, a different character. The one sees therein the manifestation of the monarchical sentiment in France, others a consecration of the principles of order. For our part, we see multiplied motives for the eagerness of the populations who come to salute the gracious Sovereign of England; by the side of a homage to the Queen of a free nation, there is the wish of sealing loyally, sincerely, the reconciliation of two peoples the rivals of other times, and the desire of showing how reciprocal are the sentiments of esteem and admiration for these proud Britons who, on distant shores, and for a holy cause, mingle their generous blood with that of the children of France. It is the liberty, it is the independence of Europe, it is our alliance, it is our fraternity of arms with England which are celebrated in our fêtes of to-day. There is, moreover, in the union of those flags which are displayed in union on our boulevards, in our public places, from the balconies of every house, a signification which will be comprehended by all Europe. When the standard of Sardinia floats by the side of the standard of Great Britain, by the side of the ordinance of the French revolution, it is a protestation in favour of the liberty of peoples, of the resurrection of nationalities; it is the reply unanswerable to the excommunications of Rome, to the manifestoes of absolutism. One of our collaborateurs made the sensible remark some time since, that it is of good augury for the peoples when princes travel. In effect, besides that, the travels of those who bear a crown attest the tranquility and prosperity of the States where their absence does not lead to any of the monarchical inconveniences of former times, it is impossible that from the view of the particular things and progress in different countries, there should not grow in the minds of the travellers an eclecticism of thought favourable to the peoples. Thus England, who now pays us a visit in the person of Queen Victoria and Prince Albert, possesses freedom. She does more than possess it, she does not fear it, and she extends the benefits of it every day. We give one proof of it only: it is that passage of the last speech of the Crown to Parliament, in which the Minister took credit "for having abolished the imposts which weighed upon the journals, and for having thus endeavoured to spread the lights of instruction among the masses." But if England, in coming to pay a visit to France, does not come to salute a sister in freedom, there is with us, by a singular contradiction, what there is not with the English [illegible] are, as was lately said with reason a nation of democracy and equality. With us the soldier becomes a general, the peasant a proprietor, the clerk of the bureau a minister. By preserving our equality, and in receiving liberty, with the incontestable developments which it has received in England, we should be very near the realisation of the principles of our immortal Revolution of 1789. On her side, also, England can only gain by imitating our institutions of equality. The war which she supports with so [illegible] has already proved to her that the [illegible] es of the rights of birth do not suffice for victories. From Portsmouth even to Edinburgh the necessity of the *régime* of the rights of capacity has been proclaimed. We should not be astonished if the journey of the Queen of En[illegible] into France had not for a secret [illegible] for the reform demanded. However, well as it deserves a serious attention, this point of view is [illegible] the only one which shall stay us. In effect, liberty is due to us as equality is due to England, and we have the conviction that, soon or late, the two nations, placed on the same footing by a reciprocal progress, will have nothing to envy one another. We leave aside, then, the liberty which we would have and the equality which England retains to turn to other considerations.

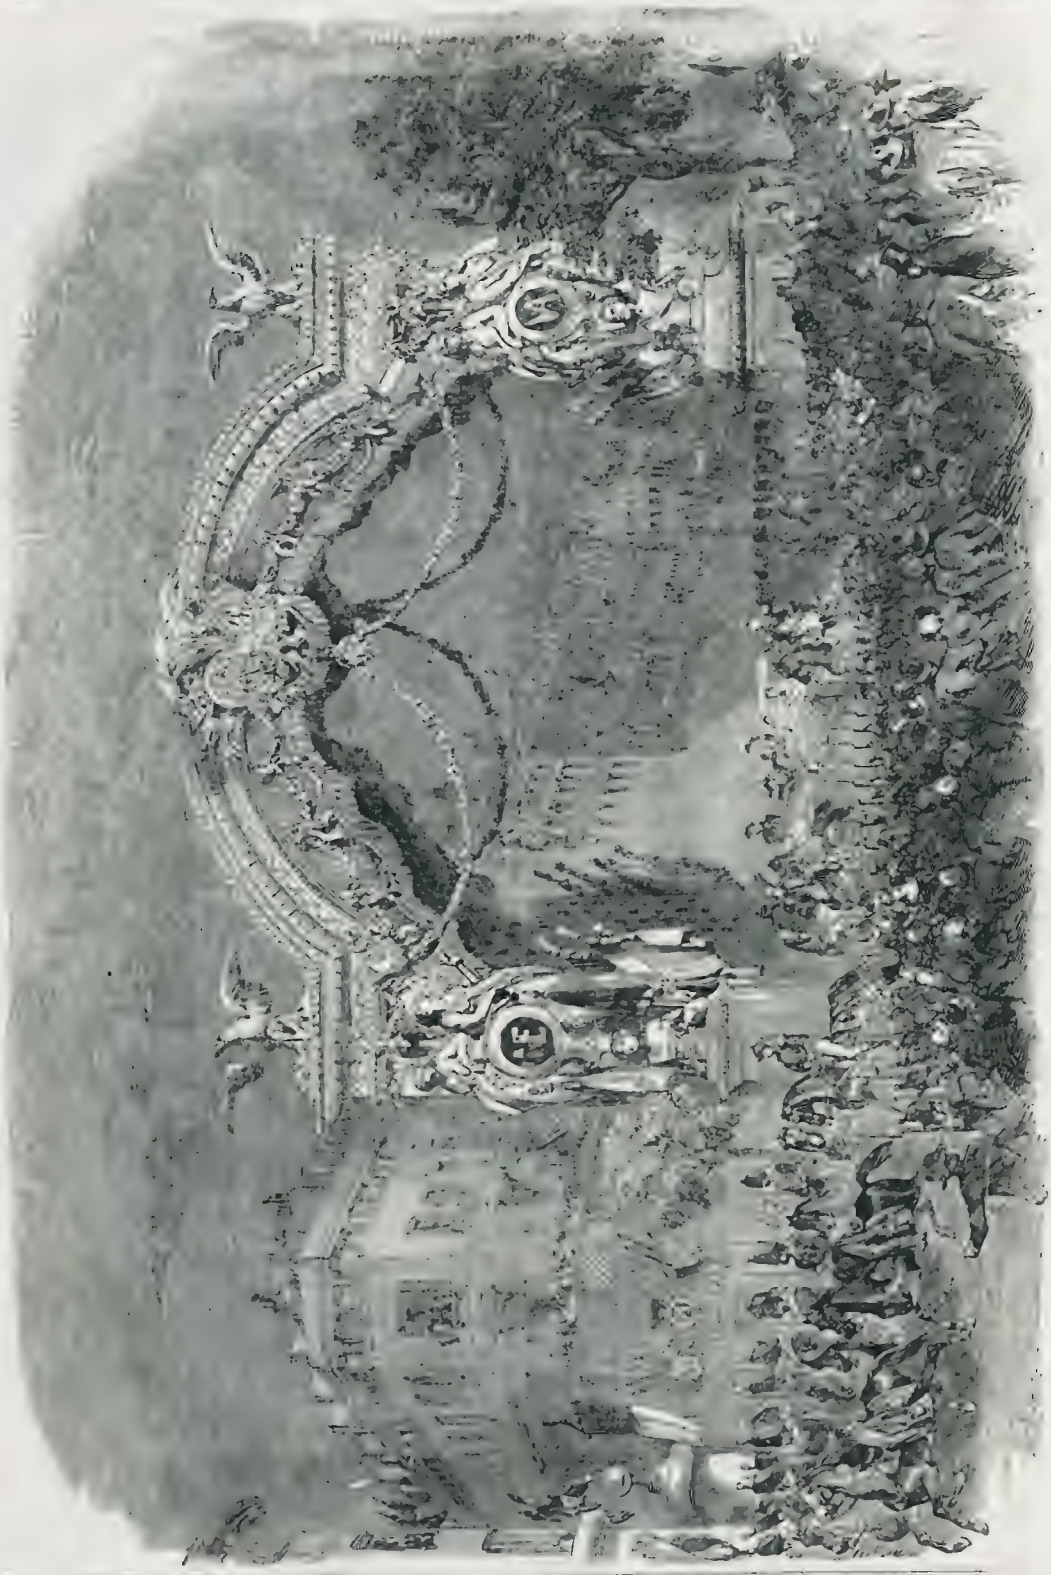
We were reading some days since a journal which allows itself acts of contempt for other papers, and which acts the most contemptible [illegible] paris by seeking to resuscitate, in the name of the religion of charity, [illegible] the hates of the Middle Ages. This journal, occupied with what was passing on the other side of the Alps, clearly threatened, not only Piedmont, but England and France, with an Austrian invasion in Italy, if Italy did not remain prudent and reasonable in presence of the despotic follies of several of her Governments, if the French Government permitted the *Patrie*, the *Constitutionnel*, and the *Pays* to publish correspondence hostile to those Governments, if lastly the statesmen of England continued to be as free as they are in their language against Rome and Naples. These fanfaronades are founded on the allocutions of the Pope against Piedmont and Spain, and upon the excommunications shall quote recent.

The visit of Queen Victoria to the Palace of Industry is the occasion for some complimentary and illustrative remarks in the *Pays*. Referring to the Universal Exhibition of London in 1851, and comparing it in various of its features with that of the Champs Elysées, it observes:

But the magnificent place in Hyde-park has not been honoured by any of those Royal visits which confound two peoples in the persons of their Sovereigns. We were in peace, maternally speaking. But war murmured in minds, in doctrines, in national rivalries, in the agitations which still threatened all Europe. Society was not settled, it sought its point of support: it was disquieted for the future; it perceived not without terror an approaching event. Policy was not free enough in its actions to be able to associate itself without reserve with the exuberants and manifestations of Labour. To-day, four years afterwards, all those causes of conflict, of terror, of inquietude, of international distrust, have disappeared without return. * * Europe is the confidence of the first visit of Queen Victoria to the Palace of Industry leaning on the arm of the Emperor of the French. She had no need of external éclat to give importance to her visit. The intimate union of the two Sovereigns, and the assemblage of the learned and the illustrates who surrounded them, bore in themselves their significatum. France and England united will give peace and union to the rest of the world.

The respectful and deferential [illegible] the Emperor to his illustrious guest has been on every occasion since her arrival in France universally observed and commended. It was first noticed at Boulogne, when, on the Queen taking her place in the carriage, the Emperor sprung upon his horse, and became [illegible] cuyer. In the same way, at all the State visits to public [illegible] in Paris, the functionaries whose duty it is to clear the way for the Royal and Imperial promenade have their instructions to omit not "La Reine!" alone; the Emperor thus studiously disclaiming all share in the courteous greetings with which a succession of brilliant crowds have received his visitors.

Count Crotti, who had been charged by King Victor Emmanuel to come to Paris to compliment Queen Victoria and Prince Albert in his name, was presented to her Majesty at St. Cloud, on Tuesday week. He was accompanied by the Marquis de Villa Marina, the Sardinian Minister. The Queen and Prince Albert made some very flattering remarks to the Count relative to the brave Piedmontese army in the Crimea.



TRIUMPHAL ARCH ON THE BOULEVARDS — THE ITALIENS.—(SEE PAGE 265.)

THE ILLUSTRATED LONDON NEWS.

No. 760.—VOL. XXVII.] SATURDAY, SEPTEMBER 8, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

COMING EVENTS IN ITALY.

It was long ago foreseen by every man of common sense that the longer the war lasted the more it would extend. Hence it was the hope and demand of the British and French nations that it should be "short, sharp, and decisive," not for the sake of vengeance against Russia, but for the sake of peace, the necessity and dearest wish of every civilised State in Europe. If such has not been the result, every one knows who has been to blame. It certainly is not the people of this country nor of France, who have begrudged neither their treasure nor their blood, in a cause which they have believed to be both just and generous, as well as necessary; nor is it, we must add, the fault of the French Government that the war has lingered. The blame lies entirely with the unhappy Administration that had the management of the affairs of this country at the time when war was declared. Their hearts were not in their work. They were unequal to the task which they undertook, not so much for want of capacity, though in that respect they had nothing to boast of, but for want of will and energy. They hoped for peace, when there was not, and could not be, peace; and trusted to diplomatic chicanery to accomplish a task which defied all other agencies but those of sword and gun. We have seen the results. The war, which might have been brought to a satisfactory and honourable close in two years, or even in less time—if strong-minded men had had the management of it—bids fair to last, with its various complications and ramifications, for a dozen years at the least, and to involve the whole of Europe.

Among the most remarkable of the signs of its extension is the actual condition of Italy. The portents of the coming storm in that country increase from day to day. The straws blow from all points of the compass at once. Austria is sorely disquieted, and sees, in no distant futurity, the Lombardo-Venetian provinces—which are, without exception, the most precious jewels of her Imperial crown—loosened in their settings, and ready to slip out as soon as the King of Sardinia shall stretch forth a hand to transfer them to a nobler diadem. The poor Pope is in as evil a plight. His Cardinals, while they prepare to receive among them a brother of the House of Bonaparte—whose friends avow that he has but small care for Religion, but that he enters the Church with much ambitious craving for the Papal Chair—are unable to draw comfort from that fact, or from any other in the whole circumference of their vision. The King of Naples—worst tyrant of all, because none of the considerations that influence the actions of sane men seem to govern his conduct—carries misgovernment to its highest possible pitch of extravagance, and outdoes the Reign of Terror itself by the horrors which he not only sanctions in his agents, but which he from day to day, and from night to night, commands in his own person. To be suspected of sympathising with the cause of the Allies, and of wishing the discomfiture of Russia—a sympathy which is very common in his States, and becoming more common every day—is to be transferred to a dungeon, without form of trial, and in some cases, to be subjected to the lash. And, as if to prove in a still more remarkable manner the truth of the old adage, that those who are foredoomed to destruction prepare by their stupidity or madness the way for their own downfal, the King has needlessly insulted and outraged a British Consular agent. Apology or redress being refused, he may thus within a few days or hours find himself at war with this country. That the Neapolitans will immediately rebel against the atrocities of such a system, and the wicked folly of such a King is possible, though not probable, for long mis-government has degraded them; but that the Sicilians—a far nobler and more generous people—will much longer endure the manifold abominations and oppressions of this fanatic Sovereign is not possible to believe. Already the match has been thrown into close proximity to the powder. The proclamations of Prince Murat, circulated in every direction in spite of the efforts of the police and the spies of the King, are doing the work, and preparing the minds of the Sicilians for the inevitable explosion. But what we take to be the most serious circumstance in the state of Italy at the present moment, and far more provocative of the high thoughts which precede great actions, is the glory acquired by Sardinia, in fighting side by side with Great Britain and France for the independence and liberty of Europe. Towards Sardinia the thoughts and the hopes of every other State in the Peninsula are directed. Italy for the moment exists in Sardinia alone. In that small State the fire of Italian freedom is kept burning on the altar. To that bright spot—the brighter from the density of the surrounding darkness—all eyes are turned; and Italians, disgusted with gloomy and jealous tyrants like King Bombs, with well-meaning simpletons like the Pope, with blinded obstructives like the College of Cardinals, and with the stern, unrelaxing, vulture-like grip of the Austrians, see that what Sardinia is they too might become, if they had but courage to make the effort.

It may be asked whether Great Britain and France foresaw this state of things, or aided in it, when in the first place they accepted the alliance of Sardinia; and when, in the second, this country determined to form an Italian as well as a German Legion? Possibly, if Austria had been cordially with us, an Italian Legion might never have been spoken of; but, whatever may be the ultimate results of the step which has been taken, in throwing such a ball of fire into Italy, the Italian rulers who are likely to suffer from it will have themselves to blame for not having been on better terms with their people. At all events, Great Britain, who wants soldiers, is not to be deterred by the jealousies or the fears of Austria from seeking them in Italy. If Austria, or Naples,

THE BOMBARDMENT OF SVEABORG.—ROCKET-BOATS.——SKETCHED BY J. W. CARMICHALL. (SEE PAGE 283.)

or Rome, by its own misgovernment, or the hatred which its rule imposes, is in a position to catch fire from sparks which would fall harmlessly on better built houses, the fault lies with its rulers for not having been wise in time. The sensation created in Italy by the recruitment for the Italian Legion, while it punishes Austria for her cowardly paltering with the Allies, will show both France and England how much they may yet do in the same and in a similar direction. If the Governments of Europe are not with them, it is evident that the nations are. The German Legion will do its work in Germany as well as in the Crimea; the Italian Legion will not only fight against Russia before Sebastopol, but against Russian influence and Russia's friends in Central and Southern Europe: and if German and Italian legions are thus useful—beyond the limit of their merely physical strength—in combating Russia by the national ideas and aspirations of which they are the representatives—why should there not be a Polish Legion? Is there any reason why our Government should not immediately organise such a force? Is there any objection in justice or sound policy to such a course? And, having sufficiently broken with Austria on the Italian part of the question, is there any necessity for humouring her any further on the Polish part of it? or for holding back, in fear of wounding the susceptibilities of Prussia, who is also a sharer in Polish plunder, and as a natural consequence, an ally in spirit, if not in fact, of the Emperor of Russia? We believe that the mind of the public has long been made up on this subject; and that if a Polish as well as an Italian Legion had been formed a twelve-month ago, peace would have been much nearer than it is now. Austria and Prussia, seeing that we were in earnest, and knowing that in such a temper we should inevitably conquer, would have joined us in fear—if not in love and would have formed with us too powerful a league against Russia to permit the Czar to persist in insane opposition to the wishes and the arms of all Europe.

Perhaps this may be done even yet. In the meantime it is evident that the war is about to extend, and that the approaching winter will witness important events in parts of Europe which have hitherto lain beyond the immediate influence of the hostile armies.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

THE troubles at Trélazé and Angers form the principal subject of interest at present, and assume the more importance from the fact that all the light thrown upon them goes to prove that instead of being, as was at first supposed, simply the result of the natural discontent caused in the working-classes by the dearness of provisions, they partake far more of the character of political disturbances, being headed and conducted by some of the most dangerous and violent of the demagogue party, affiliated with the secret society La Marianne. The promptness with which the progress of the insurrection was arrested, and the success of the measures adopted to prevent its spreading, seem much to have disconcerted the malcontents, who counted upon gaining sufficient ground before the authorities could act, to set them at defiance.

The King of Sardinia and the son of the Grand Duke of Tuscany are expected to arrive in Paris in the course of the present month.

A few more anecdotes of the incidents of the Royal Visit may be recorded: The Empress at the moment of the Queen's departure presented her with a porte-bouquet, set with diamonds of great value. M. Eugène Lami the graceful and beautiful productions of whose pencil have already gained him a European celebrity, and who, during a somewhat prolonged residence in England, after the Revolution of 1848, exercised his talents in the service of the Queen, and of several members of the aristocracy—is engaged in executing an album representing all the fêtes and ceremonies which took place during the visit of her Majesty, to whom, on its completion, the collection is to be offered. Among the objects that most amused the Queen, and especially the Royal children, was a toy, representing a Grenadier de la Garde, who held the Malakoff Tower between his knees. Every now and then he opened his mouth and drew a deep inspiration, whereat a tiny Cossack was sucked up from the tower, and disappeared down the yawning abyss of the soldier's throat, who swallowed him with a grimace of satisfaction, and then prepared for a fresh mouthful. During her stay in Paris, the Princess Royal on various occasions appeared in dresses presented to her by the Empress under the following circumstances:—During her visit to England, her Imperial Majesty secretly obtained from the Princess's dresser an exact measure of her figure, and on her return to Paris ordered a doll to be made precisely according to these measurements. For this doll she caused to be prepared by the Court milliner, dressmaker, &c., a complete *trousseau* of the most exquisite description; dresses, mantles, bonnets, *coiffures*, boots, gloves, *lingerie*, trinkets—everything appertaining to a lady's toilet—and dispatched doll and *trousseau* as an offering to the young Princess. And here permit me to mention a significant fact, *en passant*. Previous to the fête at Versailles, the jewellers of the Crown received an order that the *ceinture* of diamonds which the Empress proposed to wear on that occasion should be enlarged thirteen centimètres. General Canrobert, after appearing at all the fêtes offered to the Queen, has retired to Tulle, to spend some time in reposing from the fatigues of his late campaign.

Considerable attention was excited, and some severe comments passed, on the absence of M. de Hubner, the representative of Austria at the French Court, from the fêtes of the Hôtel de Ville and Versailles, and many conclusions, drawn therefrom. The fact was, however, that, so far from this non-appearance being intentional, M. de Hubner, who was suffering from the effects of a severe fall, had been so anxious to be capable of presenting himself on these occasions that, instead of going in person to greet the arrival of the Archduke Maximilian at Toulon, he had dispatched an Attaché of the Embassy to represent him; and it was only the impossibility of his going out, despite this precaution, that hindered his taking his place on these occasions. A good deal of disappointment has been experienced that the Archduke has not visited the capital, where his presence was confidently looked for. A somewhat singular circumstance was remarked in one of the last dinners at St. Cloud: namely, the place given to the Archbishop of Paris between Lord Cowley, the representative of a Protestant nation, and the Marquis de Villamarina, Minister of an excommunicated Government. This may, indeed, be called the general *entente cordiale quand-même*.

It is a subject of remark that an extraordinary number of religious polemics, and other works of a devotional character have, of late, appeared before the public. Apart from the discussion of the *Univers* and its opponents, whose attacks and defences speak little for the supposed unity of the Romish Church, various pamphlets and more important works are constantly being brought forth, many of them bearing signatures which, in themselves, call for attention. Among these is a *brochure* by M. Dupin *aîné*, entitled "Jésus devant Caïphe et Pilate," in refutation of one of M. Salvador, "Jugement et Condamnation de Jésus;" "La Femme Chrétienne;" and a new edition of "La Raison Philosophique et la Raison Catholique" of Père Venture; and a remarkable volume, of a liberal tendency, by M. Bordas-Demoulin, "Les Pouvoirs Constitutifs de l'Eglise"—the latter work, tending to the pure origin of Christianity, is far from being welcome to the clerical party. Besides these publications of an entirely religious character, appear a new edition of "La Conquête de l'Angleterre par les Normands," with the addition of many valuable documents by M. Augustin Thierry, and "L'Histoire de César," by M. de Lamartine, published in the *feuilleton* of the *Presse*. Mdme. George Sand has just brought before the public a new novel, "Mont-Revêche," which promises to have much success. The first edition consists of 20,000 copies, which are rapidly selling off. M. Alexandre Dumas fils, who is reposing from his literary labours, at Dieppe, has just completed a new comedy, to be represented at the Gymnase, entitled "Le Père Prodigue."

A set of highly-interesting contemporary autographs, owing their origin to a singular trick, has just been sold. An individual composes a set of letters, painting his moral condition in the most piteous terms, expressing his desire to commit suicide, but appealing to the celebrity addressed, as to his or her opinion on the justifiableness of the act. A reply arrives, which our *désespéré* sells for what it will fetch. By this *industrie*, carried on for some years, a set of letters signed by most of the remarkable names of Europe, has been obtained. Although originally sold separately, the collection, or the greater part of it, by a train of circumstances we have not here space to detail, has been brought together by a celebrated collector, and amounts to the number of forty-five epistles, the interest of which may well be imagined.

FRIGHTFUL STATE OF AFFAIRS IN NAPLES.

Lord Palmerston's remark, that Russian influence reigns supreme in Naples, is the only key to the conduct of the wretched King of that unhappy State. It is now some years since Mr. Gladstone, in a letter to Lord Aberdeen, called the attention of England to the revolting cruelties exercised upon Italian patriots by the Neapolitan Government; but the doings which he exposed had much more apparent excuse than those which King Bomba has lately resorted to. For some months past his wretched agents of police have so strained their *rules*—or rather have so exaggerated their *caprices* of restriction, repression, examination confiscation, imprisonment, and penalties of all kinds—that a veritable reign of terror exists throughout the kingdom, and more especially in the capital. From the highest of the aristocracy to the lowest of the lazzaroni, no one seems a moment safe in any part of their persons or proceedings from the King's surveillance and interference

A recent letter from Naples remarks that punishment with the stick is getting more and more into fashion. A gentleman at Potenza lately received fifty blows, and was then sent to trial; at its termination he was declared innocent. What remedy? None. At Castellamare two gentlemen were punished in a similar manner for having *fischiato* too strongly at the theatre. In fact, any pretext is seized on as an excuse for arrest and imprisonment. At Castellamare, where the King is now residing, the names, surnames, length of residence, and the motive of residence both of natives and foreigners are taken down, and the keepers of cafés are compelled to send in weekly a particular reports of those who frequent them, as also the subject of their conversations

The Duke of Bivona, a Spanish nobleman and a Carlist, resident in Naples, has been distinguished rather by his association with the Royalists; yet police spies have been openly and permanently established before his residence, and have even penetrated into his house. The Duke went directly to the king to complain of the grievance, when he was informed that on a certain night, in the corner of a window in his drawing-room, the affairs of the East had been discussed in a sense favourable to the Allies. Bivona was astonished, but on a profession of strong attachment to the King, he was liberated from this public espionage. The Duke di Pallano, of the house of Colonna, has a villa at Capodimonte, where he receives once a week. His receptions have been attended by the Royal Princes, the Count of Aquila, and the Count of Syracuse; sometimes by the Royal Princesses; by various diplomatists, as the Apostolic Nuncio; by some of the most distinguished personages in the country, as the Cardinal Archbishop, Prince Ischitella, and others—yet for some time persons of a vulgar appearance, well known to be police agents, have been found in the gardens. Strict orders were given to exclude every one from the grounds but those who were specially invited. On the 19th ult., however, when a fête was to have been given, those persons seated themselves early near the large iron gates of the grounds, with paper and pencil in hand. The names of all who entered amongst others, the Count of Aquila and Prince Ischitella—were noted down; and when the name of the arrival was not known, tickets were used to extort it from the servants. This happened in the case of the Countess of Casamaggiore. The commissary of police for the quarter of Capodimonte had received his orders to watch over the watchers, and see whether they performed their strange duty. The object of this espionage, which was doubtless to put a stop to those social réunions, will be probably accomplished, as the Duke is about to go to Rome, which, by universal admission, is a paradise of liberty compared with Naples. The Prince Torella has also closed his house, where the most distinguished foreigners and natives once met. The object is, of course, to appease the anger of the Government, which has been recently poured out against his son, the Marchese Bella, for having attended the funeral of Dr. Cesare

Whilst such is the disposition of the Government towards the Allies, and such the manner in which it is at this moment displayed, the masses of the people are body and soul with us. There is not a house in Naples where in its inside the affairs of the war are not discussed both day and night; nor is there a single individual beyond a corrupt circle who does not rejoice at the success of the Allies. Indeed, such is the effect produced by the recent victories, that even this people, depressed and trodden in the dust as they are, hold up their heads with hope, and in the prospect of deliverance seem no longer to fear the prison or the stiletto. The same reckless feeling exists as sprang up before the revolution of 1848. There is the strongest indisposition on the part of sound-thinking men to push matters to the extreme, but it would seem as if there was a desire to drive them to it.

AMERICA.

The steam-ship *Baltic*, which left New York on the 22nd ult., arrived at Liverpool last Sunday morning. The news is not of much importance. Baltimore has been the scene of a desperate encounter between several fire companies. It seems evident that the combatants were prepared for the contest, as for some minutes there was a sustained discharge of fire-arms that would not have disgraced a battle-field. The fight lasted only about five minutes, during which time not less than fifty pistol-shots were heard, but no lives were lost.

The case of Colonel Kinney, being a charge of violating the neutrality laws, was brought up in the United States District Court of Philadelphia on the 21st ult. An affidavit was read by George M. Dallas, Esq., setting forth the Colonel's proceedings subsequent to his arrest, and expressing the belief that he would return and take his trial for the offence charged, whereupon the Court ordered that his recognizances should be forfeited and respited until the 1st day of February, 1856.

Letters from Kansas to the 7th ult., contain an account of the excitement created in Atchison by the whipping of an Abolitionist from Cincinnati, named Kelly. A public meeting had been called, at which resolutions were passed declaratory of an intention to rid the territory of all Abolitionists. A committee was appointed to warn Kelly to leave the territory within an hour, but when the committee waited upon him he was not to be found, having gone to parts unknown during the previous night. A bill of a very stringent character in relation to Abolitionists is now before the Kansas Legislature. It provides that every person who shall be convicted of raising a rebellion of slaves, free negroes, or mulattoes, or doing any act in furtherance thereof, shall suffer death.

Hopes were entertained that the yellow fever at New Orleans had spent its force, and that an improvement in the public health would soon be experienced. A despatch from New Orleans, however, shows that the epidemic was raging with increased virulence, as many as 594 having fallen victims in one week.

From Mexico and South America there is no news, except a contradiction of the statement that the Mexican insurgents had captured a convoy of Government treasure.

MELANCHOLY ACCIDENT AT PLYMOUTH. Mr. Dent, Storekeeper of the Dockyard at Plymouth, was drowned on Monday evening last by the upsetting of a boat in which, with two of his sons, he was fishing between Mount Edgcumbe and the island. The eldest son, a Lieutenant in the Royal Navy, was the only one of the party sensible when picked up. The second son, a clerk in the establishment, though resuscitated, lose in a precarious state.

THE SIEGE OF SEBASTOPOL.

General Simpson's despatch, which we give below, shows that he also believed in the probability of an offensive movement on the part of the Russians As regards the statement about reinforcements of Guards having been conveyed in carts from Bagtcheserai and Simpheropol, the correspondent of a Polish paper denies that that portion of the Russian army has yet been forwarded to the Crimea. After referring to a rumour that 24,000 men of the Russian Grenadier Guards were stationed between the Alma and the Belbec, he says:—

The corps of Grenadiers forming the reserve, has not yet entered the Crimea, and will only go there to take part in the first offensive operation of the Russians. It is an error that the garrison of Sebastopol has been doubled, and it is scarcely possible to find a reason why it should be, inasmuch as for several months the garrison has been sixty thousand strong. The corps of Prasutin no longer bears his name; it is at present called the corps of Gortschakoff, from the name of its new chief. The report that two divisions of the Guards are preparing to embark in Finland and Lithuania towards the Crimea, and that they are to be replaced by militia, gains credit. Public opinion in Russia demands that the troops of the Guard and the Grenadiers, which have not yet seen the enemy, shall be employed in the war. The people imagine that the Allies cannot resist those corps united with the militia.

There is only throwing dust in the eyes of the Russian people. What chance would either Guards or Grenadiers have against the English, French, and Sardinian troops now lying before Sebastopol? A few inches taller or shorter is a matter of very little importance when all are wretched slaves, who cannot fight without brandy and the stick

All the accounts relating to the condition of the Russian army agree in describing it as suffering greatly from scarcity of provisions. The *Fremden Blatt* learns from Odessa, Aug 22, that General Lüders has just returned from a visit of inspection to Nicolaieff and Cherson. The health of the troops is improving, "but cholera and typhus still carry off thousands of men." The transport of stores to the Crimea gets to be more and more difficult, and it is with the greatest difficulty that "draught oxen" can be procured. "The soldiers suffer terribly." The *Ankalt Gazette* has private advices from the German colony at Asaania Nova, near Perekop, that the effects of the war are more and more felt. Great numbers of troops pass, and conflicts sometimes occur between them about the water, which in that neighbourhood can only be drawn in small quantities from the wells

A telegraphic despatch, in the third edition of the *Post* of Thursday, dated Hamburg, Sept. 5, says:—

Prince Gortschakoff writes from Sebastopol that the fortifications have been greatly damaged, and that the garrison has suffered heavy losses

A letter from St. Petersburg of the 27th ult. says —"Prince Gortschakoff's despatch of the 24th has caused great uneasiness here, on account of the words 'Our fortifications suffer.' For those who know with what reserve Russian bulletins and despatches are drawn up, these three words have an immense signification. Hitherto, none of either Menschikoff's or Gortschakoff's despatches had announced anything similar."

The Vienna correspondent of the *Independance Belge*, a semi-Russian organ, says

It appears that the besiegers are daily approaching closer to the first line of fortifications, but it is beyond doubt also that the besieged have not remained idle, and that they have added to the old works of the Karabelnaia, of the city properly speaking, and of the Northern Citadel, other defences, which appear completely to paralyse the works of approach of the Allies It was inferred from the circumstance that the Generals of the combined armies would abandon the project of storming the Malakoff Tower, because they succeeded in gaining possession of it at the cost of immense bloodshed, they could not maintain themselves in it under the concentrated fire of the second line of defence. According to one report their plan would be to raise the siege for the present; to place their guns under cover behind the ramparts of Kamiesch, and to concentrate all their forces at Eupatoria, in order to operate against Simpheropol and Bagtcheserai According to another version, the officers of engineers of the Allies have chosen Kamiesch as the base of their offensive operations. From thence they intend, with the co-operation of the fleet, to obtain possession of all the points along Quarantine Bay, and push their approaches against the Bastion No. 6, which would require the whole autumn and winter.

DESPATCH FROM GENERAL SIMPSON

War Department, Sept. 5

Lord Panmure has this day received a despatch and its inclosures, of which the following are copies, addressed to his Lordship by General Simpson.

Before Sebastopol, Aug. 25.

My Lord,—Having been engaged since daylight in a careful observation of the position in front of Balaclava, I am unable to address your Lordship at any length this day

The enemy have been concentrating troops at the Mackenzie, Tasova, and Karalee, their left extending as far as the village of Makoul: and are supposed to have collected considerable reinforcements, which probably consist of two divisions of Grenadiers, which have been conveyed in carts from Bagtcheserai and Simpheropol

The bridge across the Great Harbour is nearly completed, and large bodies of men are employed in erecting earthworks on the north side of the harbour. Intrenchments have been thrown up on the Stevernaya Hill, extending from the sea-coast to the site of the first Lighthouse, facing the north

From various sources we learn that the enemy's cossacks on the right bank of the Tchernaya are held in perfect readiness for an offensive movement.

Our siege operations progress steadily, with, I regret to say, heavy casualties on our side, as your Lordship will see by the accompanying lists

I have, &c., JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES KILLED AND WOUNDED FROM THE 20TH TO THE 23RD OF AUGUST, INCLUSIVE.

KILLED

Aug 20 30th Foot Private James Dunn. 47th. Private Michael Kelly, John Dooley.
Aug 21. 47th Foot Private John Hall. 77th Lanc Corporal John Despard. Royal Artillery. Gunner William Barnes.
Aug 22 [illegible] Private John Wire 1st Battalion Coldstream Guards Sergeant George Bolton. 1st Battalion Scots Fusilier Guards Private Thomas M'Roberts. 2nd Battalion 1st Foot Private P Dudley. 19th Foot Private [illegible] 30th Private Arthur Ingram. 47th Private Henry Richardson. 2nd Private [illegible] 93rd Privates James Ferguson, Peter Williamson. 1st Battalion Rifle Brigade Private Roger Bedford.
Aug 23. 3rd Bn 1 Private Henry Brown 21st Colour-Sergeant Peter Duncan, Privates Joseph Kennedy, Patrick Reynolds. 34th Privates Edward Mahon, Thomas Browne. Royal Artillery. Gunners William Lambert, William [illegible]

WOUNDED,

Lieutenant and Adjutant E. O. Harris, contusion in shoulder, 68th Foot. Lieutenant J. T. Campbell, slightly, 72nd Foot. Lieutenant D. H. M'Barnet, slightly, 79th Foot. Captain D. Johnson, slightly, Royal Artillery. August 20

Lieutenant and Adjutant E. S. R. Smyth, slightly, 28th Foot. August 21

Lieutenant [illegible] slightly, 1st Battalion Scots Fusilier Guards. Lieutenant H. Wall [illegible] 1st Foot

[illegible] slightly, Royal Artillery. August 21

Aug 20 30th Foot Private Thomas Carthy, slightly. 55th Private Thomas Symonds, slightly. 47th Private Edward Armstrong slightly 31st Privates Solomon Beckett, slightly. 77th Private Thomas Hunter, slightly Privates Patrick Cawley, James Riley, severely, Thomas Turney, William Murphy, dangerously. 19th Private Arthur Ingram, slightly. 93rd Privates Francis Tuthill, Michael Griffin, John Reilly, slightly. 68th Sergeant James Hanford, severely Privates John Baxter, William Emmerson, slightly. 1st Battalion Rifle Brigade Private Charles Ahern, Robert Jory, Richard Underwood, Thomas Johnson, slightly; Michael Joseph, Philip McDonald, Joseph Hall, severely. 97th Privates William Sargeant, William Pratt, James Mulvenny, severely, John Kennally Patrick Delahunty, slightly. 2nd Battalion Rifle Brigade. Acting Corporal Isaac Hall, slightly. Royal Artillery. Gunners Henry Lund, William Gough, Robert Coles, slightly; William Fawlyn, severely

Aug 21. 34th Foot Privates Maurice Glamsee, severely; Richard Keefe, slightly; Robert Walsh, dangerously. 34th Private Martin Hogan, slightly. 34th Private Robert Hartigan, slightly; William Cooper, severely 49th Private Jeremiah Donovan, slightly; [illegible] severely 68th Private Hugh Keogh, slightly. 89th Corporal Michael Mooney, slightly. 97th Privates Edward Barker, George Fitchett, slightly. 1st Battalion Rifle Brigade Private John Hall, severely; Julius Evans, slightly 2nd Battalion Rifle Brigade Privates Henry Banks, James Balantine, slightly. Royal Artillery Gunners William Hodges, severely, George Pearson, William Mumford, Lorick Fry, slightly. Royal Sappers and Miners Lance Corporal William Jenkins, slightly

Aug 22 [illegible] slightly. Private James Hayes severely John Harrison, corporal 30th James Lamson Assistant Patient 47th Israel slightly 1st Battalion Coldstream Guards Private James Hall. Robert Hobbs. 2nd Battalion Scots Fusilier Guards Private Thomas Tapper, James Welsh, slightly. 1st Battalion Rifle Brigade Private William Hall, severely 30th Private Thomas Dyke severely. Royal Artillery Gunners Thomas Mahon, slightly; James Alexander, John Lawrence, Francis Wakefield, Angus M'Lean, severely; Alexander Cant dangerously. 2nd Battalion Rifle Brigade Private Patrick Dwyer, James Daly, severely. 97th Private Edward Hall severely. William Mackenzie, 2nd Foot, sergeant, James Ramsay slightly. Private James Jackson, 30th Harper, [illegible] slightly. 34th Private Thomas Sheehy, severely. 47th Private Edward Tyrrell severely. Private James Anson, Patrick Quinn, severely; Henry Green, slightly. 31st Privates Thomas Connolly, James Dickens, severely. 55th Privates Thomas Brown, John Sullivan, slightly. 72nd Private Malcolm Newman, slightly. Thomas M'Laren, dangerously. 77th Private Thomas M'Coe, slightly. 79th Corporal John Brown, slightly. 93rd Private William Hampton, dangerously. 93rd Privates John M'Culloch, Roderick Matheson, slightly; Henry Jarrett, James Ismail, John Sally, severely. 93rd Private Thomas Johnson, slightly; James Pinches, severely. 1st Battalion Rifle Brigade Private Charles Cooper, slightly. Royal Artillery Gunners Thomas Wood, James M'Mann, John Stewart, Samuel Mottershall, slightly

Aug 23 1st Battalion 1st Foot Private John Campbell, slightly 3rd Privates Thomas Kilcourse, Thomas Fitzgibbon, Denis Bracken, slightly. 7th Privates Henry Farmer, severely, Vincent Cassidy, slightly 34th Sergeant Patrick Collins, severely. 49th Privates William Hayes, William [illegible] severely. [illegible] corporal, Fred. Morris, dangerously. Private Wm. Mackenzie, dangerously. 90th Privates Joseph Baird, Edward Howcroft, severely; George Butcher, slightly 93rd Privates David Hay dangerously; Terence Johnson, Michael Kelly, slightly. 95th Private Patrick Walsh, slightly. 30th Private George Heaff, slightly. 47th Private William Newman, slightly. 55th Privates Patrick Rutridge, James Barker, slightly. 68th Private S. Hamilton, dangerously. W. Carr, B. Lodge, severely; W. Roe, slightly. 77th Privates Patrick M'Carthy, severely; Brian M'Guire, slightly; John M'Gillam, John Naughton, dangerously. 90th Corporal Henry Hoot, slightly. Privates Dennis Lynch, Patrick Martin, slightly 97th Private James M'Coe, severely. 2nd Battalion Rifle Brigade, Sergeant Thomas Farrell, slightly. Privates Thomas Boyle, severely; Green, William Hine, Henry Hannan, Joseph Nugent, William Hudson, [illegible] John Walton, Edward Keat, slightly; Thomas Hillier, Alfred Lodge [illegible] Samuel Goodard, Enoch Coles, James Brent, John Burton, John Clarke, severely. [illegible] Brent, John Parkinson, dangerously. Royal Artillery. Gunners James Cooper, severely; James Smith, dangerously, Thomas Read, John Lenton, slightly.

THE WAR IN ASIA.—REPULSE OF THE RUSSIANS.

The latest intelligence from the seat of war in Asia is more satisfactory than that previously received. A despatch from Kars, dated August 17, states that "though the Russians still intercept communications with Erzeroum, and have burnt the villages round about, they have no means of attacking either Kars or Erzeroum." Should this prove to be correct, it only confirms what has been apparent for some time, that General Mouravieff is acting on the offensive, simply in consequence of imperative orders from St. Petersburg, or under the pressure of approaching famine, like Prince Gortschakoff.

The following letter from Trebizond, of the 14th August, which appears in the *Triests Zeitung*, contains some information regarding the recent proceedings of the Russians :—

"On the 7th a messenger arrived from Erzeroum with a letter addressed to the manager of a Greek house, in which it was stated that the Russians were in the plain of Pasin, not far from the above-mentioned capital. Some Turcs came reading at Erzeroum also forwarded to same quarters to their Trebizond friends, but their accounts of the force of the advancing enemy differed greatly. According to some the Russians were 15,000; to others, 8000. The Erzeroum Consuls, in letters written on the 7th to their colleagues at Trebizond, made no allusion to the advance of the Russians to Pasin, but on the following day a "Tatar" brought intelligence from the Erzeroum authorities, which was communicated to the Trebizond Consuls in the following words:—"The garrison of Kars, under the command of Kerim Pacha, having made a successful sortie, the Russian forces at Pasin, near Erzeroum, had been quickly withdrawn." It was further said that Kerim Pacha had put several thousand Russian *bons de commission* to the sword, and captured fourteen guns. The conclusion of the despatch was, that the brave men of Kars were returning, and would, "God willing," soon be on the other side of the Arpatchai. Twenty-one guns were fired at Trebizond in honour of the victory; but the Consuls in that city, instead of hoisting their flags, shook their heads in doubt. Two days afterwards the regular weekly mail arrived from Erzeroum with letters containing the following news:

"At the beginning of the month of August, Vely Pacha, the Governor of Erzeroum, received authentic intelligence that a column composed of Russian infantry and cavalry was advancing under the command of Prince Tschatschawadze, from Bayazid to the valley of the Aras. As soon as the news reached him the cautious Turkish commander ordered a body of troops, which was stationed at Kerpi-Keuy, for the defence of the great bridge over the Aras to retire to Erzeroum as speedily as possible. On the 5th the enemy, meeting with no opposition, crossed the Aras, took possession of Kerpi-Keuy, walked into the fort or stronghold of Hassan-Kurch, and finally encamped in and around Kurdshuk, which is about three hours' march from Erzeroum. In that capital the greatest consternation prevailed; and on the 7th the Consuls, with their archives and the persons under their protection, were fully prepared to beat a retreat. It seems, however, that the Russians in Kurdshuk had only reconnoitred, for they soon fell back on Kerp. Keuy, where Prince Tschatschawadze has his head-quarters. The Russians forming the vanguard of the column took possession of all the corn magazines in the plain of Pasin, and set the standing corn on fire. It is said that the corps in question intends to act against Erzeroum from the road between that city and Thortum and Olti, as by so doing it will be able to turn the Deve-Boyrun, a mountain about 4800 feet high, which has been fortified by the Turks, as it commands Erzeroum. According to the latest reports, the Russians are in Erzeroum have refused to obey the military authorities, and some of them have even emitted such excesses that the bazaars have been closed. Yesterday, the 13th August, another 'Tatar' arrived from Erzeroum, and the Turks again spread the report that the Russians were retreating. It is, however, possible says the correspondent—that the reports of the advance of the Russians on Erzeroum may prove to be much ado about nothing.'"

A private letter from Constantinople, of the 23rd ult., speaks of the plan of campaign of Omer Pacha in Asia. It says that the Ottoman General will not go to Kars; but, immediately on landing at Batoum, will move on straight to Tiflis, with the twofold object of menacing the communication of the Russians with Georgia, and cutting off their retreat, and also of presenting an opportunity to the Circassians and other mountain tribes to aid him if they are so disposed.

PROJECTED NAVAL OPERATIONS IN THE BLACK SEA.

From the preparations going forward there is good reason to believe that some important movement in the Black Sea is about to take place. The *Athlar*, in its account of the movements of the Imperial Navy in the port of Algiers, from the 24th to the 30th ult., states that the *Dasper*, carrying the western mail, had arrived at Algiers, having in tow the two gun-boats *Etincelle* and *Eclair*. On the 26th, the sailing-frigate *Andromache* reached Algiers from Toulon, and, nearly at the same moment, the steam-frigate *Mogador*, towing the floating battery *Lave*, entered the port. The gun-boat *Flamme* sailed from Algiers for the East on the 26th. In the morning of the 29th the steam-frigate *Albatros*, towing the floating-battery *Devastation*, arrived at Algiers, and towards noon the steam-frigate *Mogador* and the floating-battery *Lave* cleared out for the East.

The floating-battery *Devastation* (says the *Athlar*) will shortly follow them, and those three formidable engines of war will soon bring their guns to bear upon the forts of Sebastopol. One may easily imagine their destructive effects. The entrance of the port of Sevastopol is defended by three stockades, through which passages have been left open. Should the three floating batteries succeed in entering it, which they can easily do, thanks to their light draught of water and their screw, the Russian fleet, sheltered behind the cliffs, cannot escape them, and their enormous guns will powerfully assist our land artillery. The *Devastation* justifies the name she bears. She is armed with twenty-four guns. The *Tonnante* and *Lave* only mount fifteen each.

The *Athlar* adds that every day English steamers of all sizes are signalled, passing within sight of Algiers and steering eastward or westward.

Letter from Constantinople say that the large quantities of war matériel, which has reached the Black Sea lately is destined for the Russian fortresses on the Danube. A number of English and French gun-boats are said to have appeared at the mouth of the Danube, and three floating batteries were daily expected. If these preparations really are intended to assail the enemy on that vulnerable side, they will make some impression. The Russians are naturally alarmed at what is going forward, and stop all merchant-vessels at Ismail.

THE BALTIC FLEET.

The following from Hamburg, dated September 1, gives the most recent intelligence regarding the Allied fleets in the Baltic :—

The English bomb-vessels, ordered to England by Admiral Dundas, are still lying at Elsinore, awaiting further instructions from the Government. They cannot be employed again this year in any operations, being completely unserviceable. Their construction as ships of war is deficient in solidity, and professional men who have inspected them cannot conceive how the Admiralty could send such slight vessels to so dangerous a sea as the Baltic. The French transport *Marne* had arrived at Nargen, with the war material destined for the squadron of Rear-Admiral Penaud, The two French gun-boats *Arquebuse* and *St. Barbe* are still at Kiel waiting the orders of their Government. The number of days favourable to naval operations in the Gulf of Finland is rapidly diminishing, and the Allied fleets will soon be compelled to retire by the equinoctial gales. The English ship of the line *Sanspareil* lately arrived at Kiel, with an enormous cargo of provisions for the English fleet, weighed anchor yesterday to return to England, with her entire cargo, on receipt of a telegraphic despatch to that effect. Admiral Dundas will not consequently receive those munitions of war, which he had so earnestly applied for. It may be inferred from this fact, that no other operation is contemplated in the Baltic before next spring.

THE RUSSIAN JUSTIFICATION OF THE HANGO AFFAIR.

The *Journal de St. Petersbourg* of the 21st publishes the following letter, which, it appears, is to close the correspondence between the Russian Minister of War and the Allied Admirals in the Baltic, on the subject of the Hango affair :—

Monsieur l'Amiral,—I had the honour of receiving your letter of the 10th of July. The explanations which it contains on the affair of Hango Udd, far from modifying our opinion, have only served to confirm the evidence of the principal fact, and prove that Lieutenant Genese, of the Royal Navy, landed without waiting for his character of flag of truce to be legally admitted and recognised by our authorities. This fact remains established in such a manner as to render any further discussion superfluous. I regard it as closed between us, and the more so as the most detailed particulars of the affair have been directly made known to the English Government by the Danish Legation, whose friendly interference it had requested. As far as regards Lieutenant Genese personally, you will allow me to observe that a more attentive perusal of my communication of the 13th of July will prove to you, Monsieur l'Amiral, that it does not contain the slightest reflection on the honour of that officer. The confidence which we place in the veracity of our officers is equal to that which you give to your subordinates. With this observation I shall conclude our correspondence.—I take the opportunity, &c. DOLGOROUKI.

As the *Times* justly remarks :—" Prince Dolgorouki's note may be considered as the termination, on the Russian side, of the Hango affair. It is the solemn acceptance, on the part of a powerful nation, of one of the most disgraceful acts of cruelty and perfidy to be found in the annals of warfare. The young Czar and his counsellors have adopted the foul deed of their subordinate agent, and made it their own. To a certain degree, no doubt, they have been successful; but their triumph is that of a band of cut-throats who have sprung from an ambush upon a passing traveller, deprived him of life, and who for the moment have escaped the hands of the police."

THE ORGANISATION OF THE BRITISH EMPIRE. —(No. I.)

DURING the Parliamentary recess a convenient opportunity presents itself to the journalist, who then has ampler space at his command, to investigate imperial and social problems. We propose, therefore, to inquire into the principles on which our Colonial Government is conducted, and to present to our readers the substance of the speech of the Hon. Joseph Howe, delivered in the Legislature of Nova Scotia, in which he unfolds a scheme for the organisation of the empire; and also the opposing views of the Hon. Frederick Hincks, late Inspector-General of Canada—an office which corresponds to that of Chancellor of the Exchequer in England. Both are gentlemen of eminent abilities and of large and varied Colonial experience; and as the strength of the United Kingdom is materially derived from her transmarine possessions, it is desirable that we at home should make ourselves acquainted with the opinions of North American statesmen, who have held the highest political offices in the North American provinces. Nor is the reasoning they have brought to bear on the Colonial problem confined to the territories which they have administered; it applies, so far as great principles are involved, to Australia, New Zealand, the Cape, and the West Indies; though the peculiar population of British India may exclude that most magnificent appendage to the Crown from the sphere of representative institutions. However, the subject on which we propose to comment becomes invested with profound interest when we reflect that our national flag floats over 260,000,000 of people, while all the States of Europe contain about 233,000,000 of people—the latter living under different forms of government, while the former obey a single Sovereign.

From year to year the more considerable of our transmarine possessions are increasing in wealth, numbers, and power. All the arts and sciences of Europe are at their command. Their race is the same as our own; their love of liberty as intense; their energy as indomitable. Then arises the question will their allegiance to the central authority, represented by the British Crown, be permanent? If the answer be in the affirmative, it may be asked what are the grounds on which such a hope can be sustained? History teaches a different lesson, and points to an opposite conclusion. Brazil separated itself from Portugal; Mexico and Peru threw off the yoke of Spain; St. Domingo emancipated herself from France; the United States declared themselves independent of England. While these facts cannot be denied, it may be urged that all these disruptions resulted from bad government. This may readily be granted, but still it may be asked what are the grounds on which such a hope can be sustained? History teaches a different lesson, and points to an opposite conclusion. Brazil separated itself from Portugal; Mexico and Peru threw off the yoke of Spain; St. Domingo emancipated herself from France; the United States declared themselves independent of England. While these facts cannot be denied, it may be urged that all these disruptions resulted from bad government. This may readily be granted, but still it may be asked what privileges or rights ought to be conferred on our Colonies to attach them permanently to the mother country? or, in other words, what is the best organisation for the empire?

Let us briefly refer to the past, for one of the best modes of arriving at truth is to review our errors. Ancient and modern colonisation proceeded on principles diametrically opposed. The Egyptians, and after them the Greeks, founded a colony that it might be complete in itself; Europeans that it might be a dependency on the parent State. The former had only in view the welfare of the colonists; the latter the advantages of the mother country. In the heroic ages the sons of Kings, and, at a later period, the Eupatrides or citizens of the most illustrious birth, were the leaders of those who founded new settlements in unoccupied countries. They took with them their arts, their industry, their religion. When poetic fable recognises Neptune as the donor of the horse, common sense, lifting up the veil of allegory, at once perceives that the animal was brought by sea by immigrants. Thus, also, strangers introduced the three great cultures of wheat, the olive, and the vine, which mythological fiction has ascribed to the beneficence of Ceres, Minerva, and Bacchus. The ancients, far from envying the prosperity of their colonists, exulted at it; and Corinth, which founded Syracuse, rejoiced at its riches and power. The whole south of Italy took the name of Græcia Major, because it surpassed ancient Greece in the extent and number of its cities. How different the plan of the moderns! Marauding adventurers, chiefly impelled by avarice, seized on distant lands, plundered the natives, taught them to drink ardent spirits, and introduced among them some of the most baleful diseases of Europe. Other territories we have converted into penal settlements, filling them with hardened criminals—the surplus of our hulks and gaols. In 1665 Lords Clarendon, Albemarle, and other noblemen, obtained a grant of the two Carolinas; and, in two years afterwards, of all the lands now included in the States south and west, and actually extending far into Mexico. Locke and Shaftesbury prepared a constitution and scheme of government. To the extent of two-fifths the lands was to be inalienable, the property of barons, caciques, palatines, and other members of an ennobled class. The lest men were to be lest men for ever. A grand council of fifty, of whom fourteen only, holding their seats for life, represented the commons, was mixed up in the scheme with courts of heraldry, of ceremonies, and pedigrees; and at the time it was believed that this absurd scheme contained all the elements of immortality. Virginia was granted to the noblemen, gentlemen, and merchants of London, under an Act of Incorporation. What they wanted was rent without work; and the whole scheme failed, except in one respect; it established slavery, which has ever since continued in the Southern States; and it has been said with bitter truth, "had there been no aristocracy in England to covet the proprietorship of transatlantic soil, there would have been no slavery in America." However, the Revolution broke out, and Washington achieved the independence of his country.

The Anglo-Saxon race will never repeat the errors of the past, of which we have recent evidence during the short Derby Administration, when Sir John Pakington proposed the insane scheme of introducing an hereditary house into the Australian Legislatures, rejected amidst the ridicule of the House of Commons. Exclusive constitutions are not easily transplanted: and even where violence makes the effort, the roots quickly decay, and the tree falls and rots, as in the case of Locke's Constitution for the Carolinas How, then, shall we provide for the future government of our Colonies? How organise this mighty empire that its population of 260,000,000 of people shall remain linked together by the ties of mutual interest and reciprocal aid? That is the problem which Mr. Howe desires to solve. Before we quote any of his curious and instructive statistics, we shall cite a passage from his favourite statesman, Governor Pownall, who foresaw the American Revolution, and sought to avert it. Addressing the rebels and the loyalists, the colonists and people of England, he said :—

You are one family; the ocean divides you; you must have different forms of Government, but that is no reason why you should not be a united family: arbitrate on disputed points, keep the peace, have distinct forms of Government, if you please; but establish a Zollverein, and let there be perpetual amity and free-trade between the British races on both sides of the Atlantic.

It may be as well to state at once the leading demands of Mr. Howe. He claims a constitutional right for every colony to be represented in the Imperial Parliament, and to participate in the public employments and distinctions of the empire. These points conceded, he considers the organisation would be complete. If we rightly understand him, the Colonial representatives are only to have a consultative voice in the Imperial Legislature—the right of speech, but not the right of vote. They would advise the House on Colonial matters from local knowledge, and thus prevent injuries that might arise from ignorance. When it is considered that the Secretary for the Colonies has to superintend forty dependencies, it may be affirmed, without casting odium on any one, that no man is competent to so herculean a task; and however intelligent the clerks may be who render him assistance, it is notorious that they are the creatures of routine, and never deviate from the file of precedents. On these grounds it really seems a very unobjectionable proposition that the Colonies should elect delegates to sit in the Imperial Parliament, exercising the limited functions we have described.

What is British North America? We are about to quote Mr. Howe's geographical measurements. These give an area of 4,000,000 square miles; while all Europe contains only 3,708,000, or 292,000 miles less. The area of the United States is 3,330,572 square miles, or 769,428 less than British America. The whole globe contains but 37,00 ,000 square miles, and of this grand total British America contains one- . . At present but a fractional part of this immense area is settled, cultivated, and peopled. Nevertheless the province of Canada alone is equal in size to Great Britain, France, and Prussia united. The lakes of Canada are larger in volume than the Caspian Sea, and the Gulf of St. Lawrence equals the dimensions of the Euxine. Roll into one channel the Po, the Rhone, the Thames, the Rhine, and the Tagus, and you then only have a stream equal to that of the St. Lawrence. If we pursue these comparisons still further, it will be found that New Brunswick is as large as Sardinia, while Nova Scotia is somewhat larger than Switzerland. The maritime provinces of British America covering 86,000 square miles of territory, are as large as Holland, Greece, Belgium, Portugal, and Switzerland put together, and half as large again as England and Scotland united.

These statistics show the future capabilities of this gigantic colony, destined to become the seat of a mighty empire, and if, at the present moment, the population is small in proportion to the area, let it not on that account be undervalued. Some of our politicians are alarmed at the magnitude of Russia, but there also the inhabitants are sparse and scattered, and the country wants that compactness which imparts real strength. Under this view, though of course in a very inferior degree, there are points of comparison between Russia and British America. The chief power of the Muscovite empire is in the centre. In the government of Moscow, the most densely-peopled of all, there are forty-eight inhabitants to the square verst—the verst being two-thirds of an English mile; but in the government of St. Petersburg the density of the population is only about seventeen souls to the same space. In the government of Novogorod it is less than nine; in that of Archangel there is but one inhabitant in three versts · and, at the other extremity of the empire, in the government of Astrican, each verst contains but two at the most. If in British America the population of the towns is thin, this also is the case in Russia, comparing the urban with the rural population, for it is stated in the archives of Hermau, for the year 1845, that the entire population of all the towns and boroughs of any importance was 4,956,310, while the total population of the country was 60,000,000.

We shall now place before our readers the area, and population to area, of the five settled divisions of British North America. :—

	Square Miles.	Population.
Canada	400,000 ...	1,842,264
New Brunswick ...	28,000 ...	300,000
Nova Scotia	19,000 ...	300,000
Prince Edward's Island ...	2,000 ...	175,000
Newfoundland	37,000 ...	100,000
	486,000 ...	2,517,264

The population is small. Granted; yet these numbers are not merely the germ of a nation, annually advancing with giant strides, but, comparing them with some of the States of Europe, they are sufficient to constitute, even now, an independent kingdom. The population of Scotland is 3,620,000; of Saxony, 1,757,000; Wurtemberg has about as many inhabitants as Saxony: Denmark, 2,212,674; Greece, 936,000. In South America we find the following independent States, not one of which has a population of two millions :—

Venezuela	1,000,000 people
New Granada	1,878,000 ,,
Equador	600,000 ,,
Peru	1,373,000 ,,
Bolivia	1,700,000 ,,
Chili	1,200,000 ,,
Buenos Ayres	675,000 ,,

From these comparisons it it plain that, were the five divisions of British North America united together, they are sufficiently populous to constitute an independent State; nay, Canada alone could claim that position, compared with any of the South American kingdoms referred to, or compared with Saxony, Wurtemberg, or Greece.

From the area and population of British North America we pass to its sources of wealth. The soil of Canada is admirably adapted to the culture of wheat, and the acreage available for that purpose round the Lakes is almost boundless. In the other provinces, if the fertility be inferior, it is still highly productive. The copper mines of Lake Superior are considered to be the depositories of almost fabulous wealth. Iron and coal are plentiful in the lower provinces. Timber for ship-building abounds. Noble rivers form the highways of commerce, the St. Lawrence, the Ottawa, the Richelieu, the Saguenay, the Micamichi, and the St. John. In Nova Scotia the harbours are open throughout the year. All the materials of wealth are present in North America. The people are industrious, hardy, and intelligent, and it is expected that at the close of the present century the population will be not less than ten millions. But here we must pause.

THE "BULLDOG" AND "STARLING" INTERCEPTING RUSSIAN TRADING-VESSELS.

THE Engraving in page 284 represents the gun-boats *Bulldog* and *Starling* briskly engaged in routing a large body of Russian troops, a small peninsula at the head of the bay near Jukscrol Point, in the Baltic. The latter had been placed there to protect the coasting trade of the locality; and, as the object of the Allies was to put down that trade as effectually as possible, the two gun-boats found it necessary to adopt offensive measures against the protecting force. The Russians, who compiled the rising ground to the left, made an attempt at resistance for a short time; but the fire of the *Bulldog* and *Starling* very soon made both horse and foot take to their heels. All they gained by their show of opposition was the causing several houses to be destroyed by the fire of the gun-boats.

BOMBARDMENT OF SVEABORG.

WE this week engrave three of Mr. Carmichael's Sketches of this destructive Bombardment, the leading incidents of which are described from his notes at page 235, where also are given the plan of attack, together with ample details of the operations.

The first of the Illustrations, engraved upon the front page, shows the boat attack with rockets.

The French Mortar Battery was commenced on Abraham Island on the night of the 7th ult. The site having been fixed, the men begun work at half-past eleven, and at half-past two in the morning, just as daylight was breaking, they left off, without the Russians having found out what they were about. Next evening, again favoured by the details, a number of boats were sent to the island by Admiral Penaud with strong parties of sailors, bags of earth, and war matériel. The men worked hard till three in the morning, by which time they had finished the battery, and thus taken up an advanced post much nearer than any mortar-vessels could have been placed without being too much exposed. The Russians were greatly annoyed when they saw the French flag floating so near the "Gibraltar of the North." For a long time they directed their fire at the mortar battery; but, strange to say, although the rock was covered with splinters of stone and fragments of shells, not a single man was wounded.

The French vessels and the Abraham battery threw on the citadel or into the arsenal 4156 projectiles, of which 3238 were shells. During the nights of the 11th and 12th ult., all the matériel which had been landed on

THE BOMBARDMENT OF SVEABORG.—FRENCH GUN-BOATS GOING TO THE BATTERY WITH SHOT AND SHELL.—SKETCHED BY J. W. CARMICHAEL.

the Island of Abraham for the establishment of the battery was re-embarked on board the French vessels.

"In the course of these operations," says Admiral Penaud, "the movements of the English vessels and our own were nearly the same; it might have been said that they had both been commanded by the same chief, so admirable was the *ensemble*. The success of the one was enthusiastically applauded by the other."

Some very narrow escapes occurred on board the French vessels. A ball struck the carriage of a gun on board the *Tempête* gun-boat, and the splinter which flew from it knocked down Lieut. Lefort. It was thought that he was killed; but when some men hastened to pick him up, he rose by himself, without appearing to suffer from the blow he had received. On board the gun-boat *Aigrette* a red-hot shot, passing through the deck, fell into the powder magazine between a copper case and the partition, to which it set fire; but it was immediately put out by the loose of the fire-engine being directed to the spot, and no further mischief ensued

Our Artist has sketched the great French mortar and gun battery, two thousand yards from the batteries of Sveaborg, with French boats supplying shells and powder. Time, 12.15 p.m. When the French left this battery to re-embark, they painted on the large platforms, &c., "Left behind—being Russian property taken from Nargen."

HER MAJESTY'S VISIT TO FRANCE.

THE great success with which the Artists of the ILLUSTRATED LONDON NEWS have commemorated the above grand international event, induces the Proprietors to announce the continuation of the magnificent series of Engravings, together with Illustrations of

THE PARIS UNIVERSAL EXHIBITION,
for several weeks

The Back Numbers containing this series of Illustrations may be had without extra charge.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 8, 1855.

SOME correspondence—the character of which is at least as singular as the publication—has just been given to the world. Sir Charles Napier, upon whom the bombardment of Sveaborg has naturally produced a very disturbing effect, has not been satisfied with his own letter, in which he explained why he could not "blow that place to the devil" (as the gallant Admiral phrased it), but has proceeded to empower the editor of a daily paper to publish the correspondence between Sir James Graham, as First Lord of the Admiralty, and Sir Charles, as Commander of the Baltic Fleet. We deem it right to remark, at the outset, that we have no sympathy with the feeling which appears to exist in some quarters, as to newspaper license. The same rule of honour which binds a gentleman in private life, binds the honourable journalist; and this is understood and acted upon by those who have the direction of the respectable London press. When an unlucky and pretentious personage like Lord John Russell, annoyed at writers who exposed his political tergiversation, talked of a "ribald press," the impertinence could be borne very calmly, the character of our journals being well able to endure such a blast. We regret any departure from the strict rule alluded to, and in the absence of permission from the writer of letters marked "private" (as are Sir James Graham's), we should assuredly have felt precluded from becoming the instrument of the well-merited castigation administered to Sir James by this publication. In justice to the press generally it should be said that all the journals that have quoted the articles embodying the correspondence, have done so with a protest, express or implied.

Thus much for the mode in which these documents have come before the public. Perhaps, of all public men, Sir James Graham, for ancient reasons taking their rise in St. Martin's-le-Grand, is supposed by the world at large to be the least sensitive upon the question of using other people's letters, and, while adhering to our protest, we fear we cannot promise him any very large amount of sympathy upon this occasion, here, or even where certain Italian brothers perished. There is a kind of poetical justice in the Nemesis which has overtaken Sir James Graham. A more cruelly damaging series of letters has seldom been paraded for the discomfiture of a plausible gentleman. One had supposed that in his Russian orations the late First Lord had sounded the bass string of humility, or rather of humiliation. To listen to him when delivering the pleas for Russia, showing that the Allies had obtained all they had demanded—and more—from the penitent Cossack; declaring that the latter had been completely converted from the error of his ways, and would be a truly benignant tyrant for the rest of his time; glozing over the treachery and cruelty of his *protégé*, and whining over the misfortunes which the speaker had discovered to arise from the war into which he had helped to bring us;—all this was painful in the extreme, and people tried to dismiss the recollection as a degradation they had witnessed, and hoped would never be repeated. But who, while reluctantly listening to sentence after sentence of pitiable special pleading, and feeling that it involved a double insincerity—being a wrong wittingly done to England for the sake of injury to her Government—could imagine that in Sir Charles Napier's despatch-box lay letters that would convict this very ex-Statesman and special pleader of ignorance, arrogance, and cowardice?

Yet so it was. These letters, which have been issued in reversed order, and have led us backwards through the tortuous labyrinth of Grahamite convictions, comprise an indelible record that Sir James Graham was utterly unfit for his office, or any other in which the larger interests of England, and the honour of her servants, could be compromised by his conduct. The series begins at the time of the original offer of the Baltic command to Sir Charles Napier. At that very time and let those who, like ourselves, are not blind believers in Napierism, or always disposed to take it at its own self-valuation, do the Admiral the justice to note this—Sir Charles knew the kind of work "cut out" for him in the Baltic, and knew also that the splendid fleet of England was not capable of doing it. He made no secret of his knowledge, and Sir James wrote him a characterise letter, implying a taunt that he did not hasten to avail himself of a glorious opportunity of adding to the renown of England, and giving intimation that "other arrangements" can be made, if the fighting Admiral is afraid to go. Sir Charles was not afraid, and went—distinctly explaining his views. Sir James seemed to have been only too eager to get him off, and thenceforth all was smooth water between the two, everything that the Admiral did being the "wisest, discreetest, and best" course in the world. Nothing was done to damage Russia, and Russia's present advocate expressed his entire satisfaction—some of his compliments, indeed, were almost strong enough to displease anybody but Napiers, whose powers of bearing flattery have never yet been overburthened.

But the tide turned. The nation—at whom Sir James had pleasantly scoffed, admonishing Sir Charles not to be turned from his prudent course by the ignorant clamour of the public—began to speak out, unmistakeably. Not that Sir James loved Russia less, but that he loved Graham more, he changed his tone, and, knowing that the Admiral could do no more than he was doing, began to profess impatience that no more was done; nay, to suggest, off-hand, plans which were impossible of execution. Without protracting our summary with detail, it is enough to say that Sir James is convicted by these letters not only of not knowing the real state of the affairs with which he meddled, but of writing authoritatively in the absence of such knowledge. The false news of the fall of Sebastopol is assigned by Sir Charles as one of the causes which set Sir James at work to chide and gird at the naval men who could strike no similar blow. Be this as it may, it is evident that the First Lord, instead of helping Sir Charles to new weapons, contented himself with taunting him for not making other use of the old—having, up to a certain time, expressed his perfect satisfaction that all was done that was wise, or even practicable. The indignant Admiral retorted, astonished at the petulance of his chief. More correspondence followed, in which Sir James's usual dexterity partially deserted him; and, in the end the fleet came home, little having been accomplished; the Admiral was insulted and dismissed; and next year his successor, sent out with the very means in vain besought by Sir Charles, accomplishes one of the very feats unreasonably demanded of the former by Sir James the successful bombardment of Sveaborg.

Such is the last episode in Sir James's career. And yet, almost while we write, comes another, though a smaller incident. Even the Peelite cannot be true to Peel. At a railway gathering in the north we find Sir James presuming to declare—or rather, *more suo* to imply—that had Sir Robert Peel lived to witness the present crisis he would have acted as the Peelites have done, and "gone in" for peace, because war injures commerce. The nation will angrily vindicate the character of the statesman to whom, for his large views and daring courage, they are now erecting statues; and the one cry of all who read the Carlisle speech will be—"Peel was no Peelite."

We regret to observe the endeavours that are made to depreciate the merits of the bombardment of Sveaborg, efforts which are the more unfair in the absence of the brave men who commanded and fought there. It is folly—if not worse—to say that a victory is no victory, if it be bloodless. It is quite true that the English heart throbs with sympathy for the brave men who live and die for their country in the Crimea, but the same people will not cry down men equally brave, who have achieved such a triumph as that at Sveaborg, because it happens that few lives were lost on the occasion. These noble fellows were fifty hours under the fire of the enemy's batteries; and if, in consequence of the skilful manner in which they veered and hauled with the mortar-boats, they baffled the enemy's aim, they deserve all the greater glory. To kill is the unfortunate necessity of war; but the defeat of a foe without destruction of life is a result that does not diminish, but which enhances, the splendour of the achievement.

The French and English vied with each other in the work; and that their work was no trifle, might be seen from the huge fires which commenced on the Thursday at eleven in the morning, and continued to burn furiously until the Sunday night, and were still burning on the Monday, when the fleet took its departure. If growling and unreasonable critics will but take a good chart before them, they will at once see how impossible it was for the fleets to have effected more—and how much was in reality done by the small working means at the disposal of the Admirals. If the nation will only give its officers and sailors in the Baltic the means, they will prove that they are the same true and brave hearts as British sailors have always proved themselves to be. When, next year, they have a large and better supply of gun and mortar-vessels, there is little doubt that Cronstadt, if not St. Petersburg, will be laid in ashes if either place shall by that time contain anything that will burn.

WE have lately heard nothing of the Association for the Vindication of Scottish Rights. We suppose it has been quenched by the war, for the true Scottish heart sympathises more with the gallant Sir Colin, and the equally gallant Sir James Campbell, in the Crimea, than with the wrongs of the Scottish Unicorn, or the melancholy condition of the palaces of Holyrood and Linlithgow. Or perhaps it has collapsed from sheer lack of vitality? But, whatever be the reason, it seems to have disappeared from the social horizon, and to have faded into the historical page, alongside of Bannockburn and Preston Pans. Yet such an association, if useful for nothing else, might have done good service, on a point upon which Scotchmen used to be, and on which Englishmen still are, extremely sensitive—the right of way. Annually, as soon as the grouse-shooter hies him to the moors, and the tourist to the lovely lochs and magnificent mountains of Caledonia, we hear of some attempt or other on the part of Highland proprietors to shut out the public from the highways and by-ways. The most pertinacious of these offenders is his Grace of Atholl, whose name has been made famous—we might, perhaps, more justly say notorious—for the closing of Glen Tilt; and who has in his time hunted tourists with dogs and gillies, as other men have chased the red deer. This year, as usual, the Duke has "turned up," as we learn from the following paragraph in the *Dundee Advertiser*:—

> Visitors to Dunkeld during the present summer have been much annoyed to find one of the most delightful walks in that beautiful locality, and which had previously been open to the public for many years (for anything, indeed, we know to the contrary, from time immemorial), barricaded off and closed against them. The footpath to which we refer is that down by the steps, at the toll-house on the bridge, and leading on the west bank of the river from Dunkeld to Murthly. There are few more charming walks in the three kingdoms than it is. If, however, you propose to take that walk now, the toll-keeper informs you that "You'll no get far that way;" and you find, in fact, that the west bank of the Tay is blockaded. We have inquired of the people in Dunkeld who has done this, and they say "the Duke"—of course the Duke of Atholl. He has a great deal in the Glen Tilt case, but has evidently gained no laurels. The more charitable say that he is not to be disposed to be ill-natured. If it were that may be, it is unfortunate his name should be so continually coupled with attempts to deprive the public of privileges (if it is to say no more—which they deem beyond the local control. Everyone must see a marked difference between the Duke and his neighbour, the Earl of Murthly, we could not ascertain why this path had been interfered with, and as the cause of such a great grievance to tourists, it is to be hoped that it will be made known to the public. No doubt there are disagreeable tourists now as when there was a toll-bar, but it was manfully forced in spite of Sandy M'Alpine; and we are certain that this attempt to deprive the public of one of the finest strolls in Scotland will, if necessary, be courageously and resolutely resisted

But the Duke of Atholl is—unfortunately for the credit of Scottish landlords, whose conduct in this respect is in such marked and unfavourable contrast with that of the owners of parks and lands in England not the only proprietor who wilfully and systematically endeavours to exclude the public from the pathways of the land. At Oban—one of the loveliest spots within the British Isles—the same system of exclusion prevails; and not only the pathways, but the hill-tops, whence splendid views of mountain, sea, and island are to be obtained, are jealously shut from the foot of the tourist. In Perthshire, Argyllshire, Inverness-shire, and in some of the Hebrides, the same dog-in-the-manger spirit animates too many of the owners of the soil. Even the sea-shore does not escape the monopolising grasp of the lords of acres; some of whom, we verily believe, would levy a rent for the sunshine and for the fresh air, and for the very waves of the sea, if Scottish or any other human nature would bear the infliction. If the Scottish Association for the Vindication of National Rights will but take up this cause, they will not lack sympathy and aid both in Scotland and England. The pathways of the people are the people's inheritance, and those are unwise as well as unjust landlords who venture to interfere with them.

THE COURT.

HER MAJESTY'S DEPARTURE FOR SCOTLAND.

HER Majesty having enjoyed a few days' rest at Osborne, after her visit to France, returned to London on Wednesday afternoon, and on Thursday started for Balmoral by a special train on the Great Northern Railway. Ample accommodation was made by the directors of the railway for all who desired to witness her Majesty's departure. The spacious station was well filled; and the New-road, along which the Royal carriages passed, was crowded with persons anxious to catch a glimpse of their Sovereign. At a few minutes before eight o'clock Prince Albert, the Prince of Wales, and the Princess Royal, arrived at the station, and were loudly cheered. They were conducted by Mr. Beckett Denison, M.P., the Chairman of the Board of Directors, to their carriage, which was surmounted by a crown; and the other members of the Royal party were shown into other carriages specially provided for them.

Sir George Grey, Bart., M.P., was the Secretary of State in attendance upon her Majesty; and Lord Leveson Gower, M.P., also accompanied the Royal party. Punctually at eight o'clock the bell rang, and the train, consisting of six or eight carriages, moved out of the station, and her Majesty was in a few moments afterwards proceeding at full speed towards her Highland home.

Her Majesty duly arrived at York at 11.30; passed Berwick at 5.15; and arrived at Edinburgh at 6.38. She was to leave St. Margaret's Station at 9 o'clock on Friday, reaching Perth at 11.15, Forfar, 12.22, Aberlessa, 2.0, and Banchory, 2.45—the whole distance from Edinburgh, 176¾ miles, being accomplished in five hours and three-quarters. After lunching at Banchory the Royal party intended to proceed to Balmoral.

Viscount Palmerston, Lord Panmure, and Baron Liebig were amongst the visitors during the last week of the sojourn of the Court at Osborne.

His Excellency the Ambassador of France and the Countess Persigny have arrived at Albert-gate House—the former from Paris, and the latter from the Isle of Wight.

The Duke of Somerset has arrived off the north of Scotland in Mr. Bentinck's yacht, from a cruise in the Baltic. His Grace will be in town towards the end of the week.

The Earl and Countess Granville arrived in town on Monday from Paris, after a sojourn of four days.

NEW MASONIC HALL AND CHAMBER, NEWPORT. The ceremony of laying the foundation-stone of a new Masonic Hall took place at Newport, on the 29th August, with all the éclat which the Freemasons know so well how to give. The ceremonials attracted a great concourse of Brethren and strangers from the neighbourhood, as well as from Bristol, Bath, Oxford, Monmouth, Swansea, &c. The Grand Lodge having been opened by Colonel Tynte, the Right Worshipful P.G.M., and John Sallé, Esq., proceeded in procession to the Town-hall, where the Silurian Lodge was assembled. The procession, amounting to nearly 500 Brethren, was then arranged, and proceeded to St. Paul's Church, where an excellent sermon was preached by the Rev. G. Roberts, B.A., of Cheltenham, inculcating and defending the principles of the Craft. The procession was then re-formed, and proceeded to the site of the new building. On arriving at the foundation-stone, which was surrounded by banners and devices of every sort, and enlivened by at least 3,000 ladies, in their gayest dresses, for whom a gallery had been built, the Master of the Silurian Lodge delivered an appropriate address. The plans having been produced and approved of, a bottle with a scroll and coins was deposited, and an inscription-plate was laid over the whole, and the upper stone then slowly descended to the music of the bands. The Grand Chaplain then offered up a prayer. The usual Masonic ceremonies were performed; the procession returned to the Town-hall, and the lodge was closed in due form. A banquet was afterwards held at the King's Head Inn.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

Despatches from the East (coming through Trieste) state that it is expected that the Russians will be compelled to act again on the offensive.

The *Invalide Russe* publishes the following extracts from Prince Gortschakoff's diary of the siege from the 14th to the 18th of August:—

The fire of the enemy before Sebastopol, from the 2nd to the 6th (14th-18th) of August, which was very heavy at times, became almost incessant after nightfall. The besiegers threw in a great quantity of hollow shells against the works of the town. On the 4th (16th) the fire against the town was slack. On the 5th (17th), at 4 o'clock a.m., the enemy opened a new cannonade and bombardment. They had succeeded, for this object, in placing a large number of mortars in their nearest trenches. The fire of the besiegers was directed against the Karabelnaia and the works which defend that part of the town. On our side, despite the violence of this bombardment, the artillery of the town replied with constant success, and with no less energy than that of the enemy, and, by a well-directed fire, silenced in the 5th (17th) some of their batteries, and destroyed the embrasures of others. The serious damage done to our fortifications was repaired by us as well as possible, although the incessant fire at short range of the besiegers considerably delays the works. Our losses, which were moderate during the first three days, were considerable on the 5th (17th)

THE BALTIC.

The *Vulture* arrived at Dantzic on Thursday the 6th inst. She is not to seriously injured as was at first supposed. There is not any news of importance. The weather is very bad. The fleets are healthy.

CIRCASSIA.

A letter from Anapa, July 29, says: The place is now occupied by 80 Frenchmen, 100 Turks, and a large body of Circassians, who are coming down from the mountain with their women, children, and flocks. The French are busy haymaking; that is to say, they are employing the Circassians in mowing and fetching the hay in the valleys, which they are stacking in the principal square in the town, and intend to remove it to the Crimea in a short time.

DINNER GIVEN TO MR. ROACH SMITH, F.S.A., IN THE ISLE OF WIGHT.

It having been resolved to resume the exploration of the early Anglo-Saxon Cemetery on Chessell Down, in the Isle of Wight—from whence Mr George Hillier derived the interesting collection of personal ornaments and other antiquities exhibited at Lord Londesborough's soiree, and now, we believe, the property of his Lordship, the leading people of the island seized the opportunity of testifying their respect to Mr. Roach Smith, that eminent archæologist, who is a native of the Isle of Wight, by inviting him to a public dinner at Newport, on the 28th ult. On the morning of that day a party of about a hundred gentlemen and ladies (the latter forming by much the majority), assembled on the Down, among whom were Sir John Simeon, Bart., the Hon. Mr. O'Court Holmes, and other principal gentlemen of the island, with their ladies and families; Sir Charles and Lady Fellowes, Archdeacon Wilberforce, Messrs. Apsley Pellatt, M.P., Roach Smith, Thomas Wright, English, and other scientific visitors from London; and a lunch was given on the Down by Mr. Holmes. Several graves were opened, and furnished the usual accompaniments of personal ornaments, arms, irons, &c.; and, in conclusion, Mr. Wright delivered an extempore lecture on the collection of Anglo-Saxon antiquities situated to the cave which had been brought to the Down, and were exhibited on the occasion. The weather was extremely propitious

In the evening about fifty gentlemen sat down to a sumptuous dinner at the Eagle Inn, in Newport; Sir John Simeon, Bart., presiding. After the usual toasts, and the health of the Governor of the island Lord Heytesbury (which was responded to by his son, Mr. Holmes), the Chairman gave the toast of the evening, the "Health of Mr. Roach Smith," in a very appropriate speech, in which, after tracing Mr. Smith's literary career, and dwelling on the honour which the island derived from the reputation which he individually had gained, he spoke of the progress of archæology, which, from being a mere plaything of amateurs and a common object of ridicule, had been raised by the labours of Mr. Smith and others to the respectable position of an important science. He spoke of Mr. Smith's valuable museum of antiquities, and expressed a wish that it might be secured for the country. Mr. Smith, in returning thanks, said he felt that, in the proceedings of that evening, the gentlemen of his native island wished not only to testify their respect to him personally, but to do honour to a principle—the study of archæology. He dwelt at considerable length on the progress of that science, and on the objects which it contemplated; and, in conclusion, expressed his regret that so little had hitherto been done for it by the Government. He pointed out the many valuable lessons which might be taken from the study of antiquity; instancing, among others, the qualifications of the Roman soldier, worthy of imitation in modern times, among which was that of road making, and said that if the troops sent into the Crimea had been Roman legionaries, their first care would have been to construct a road; and they would thus have avoided much of the suffering undergone by our men.

The Mayor of Newport, C. W. Estcourt, Esq., who occupied the vice-chair, next proposed the health of the scientific guests on this occasion, coupling with this toast the name of Mr. Wright, who returned thanks.

Other toasts followed, and the whole course of the proceedings was distinguished by an enthusiastic display of good feeling.

On the following day (Wednesday, Aug. 29), the Philosophical and Scientific Society of the Isle of Wight held an extraordinary evening meeting at Ryde, in honour of Mr. Roach Smith, at which about seventy gentlemen (members and visitors—attended, among whom were Colonel Vernon Harcourt, M.P. for the island, who presided; Lord Downe, Sir Augustus Clifford, and other distinguished residents in the neighbourhood, as well as some from more distant parts of the isle. In the course of the evening Mr. Roach Smith, and after him Mr. W. Wright, gave extempore lectures on the Antiquities of Britain during the Roman and Early Saxon periods.

ALUMINIUM.—THE NEW METAL FROM CLAY OR BRICK.—At the Royal Polytechnic Institution, Regent-street, Mr. Pepper is now exhibiting, and lecturing upon, a large bar of aluminium graciously presented to him by his Imperial Majesty Napoleon III. This precious and rare gift, made from clay or brick or porcelain, evokes the admiration of all who see it, not only on account of the external silvery appearance, but also from its extreme lightness, toughness, malleability and ductility, perfect fusibility, and absolute resistance to that destroyer of metals, oxygen; a stern resistance to the action of water and a chemical contempt of that bane of large cities, sulphuretted hydrogen. Aluminium, it is reasonable to expect, will form all our culinary vessels; no more copper and brass pans to poison our nice sauces, pickles, condiments, and confectionery.

THE BALLISTERS AND THE WAR.—In one respect the public ought to know that there is a very marked improvement in the administration of the war over that which obtained last year. We have at least gained so much by the change of Ministry that we are now in grim earnest, straining every nerve and taxing every faculty to the utmost in the struggle to an end. A consciousness of the Cabinet meets, we understand, every Tuesday, to superintend more immediately the operations of the war.—*Times.*

THE BALACLAVA RAILWAY.—Mr. Betts, of the firm of Peto, Brassey, and Betts, writes that since the opening of the Balaclava Railway to the heights, the line has been in constant use, with the exception of the stoppage of thirty-six hours, arising from the watersport which covered the approaches to the harbour, and drowned upwards of thirty Cossack and Turkish horses. Since the formation of the line it has been doubled, and is now being effectually drained and ballasted for the winter work.

DUKE OF AUCKLAND FLORAL AND HORTICULTURAL FETE.—On Friday (last week) this fête was held in the park of Auckland Palace, which the Bishop of Durham had kindly thrown open for the exhibition of fruit and flowers. The fineness of the weather and the beauties of this episcopal residence attracted many visitors from the country around; and not less than 5000 persons were congregated round the tents in which the plants were exhibited, or had dispersed themselves in every direction over the beautiful grounds. We rejoiced to see that not only were the several prizes contended for by numerous competitors from the gentlemen's gardeners, but the cottagers' class was well contested; and the specimens of flowers and vegetables exhibited by them were highly creditable, and elicited much admiration. Altogether, the day was one of great enjoyment to the neighbourhood, and at the conclusion a vote of thanks was proposed to the Bishop for his kindness and liberality in offering his beautiful park for their day's amusement.

THE GENERAL BOARD OF HEALTH OFFICER OF HEALTH.—The short Act of renewal obtained by Sir B. Hall at the end of the Session, gives power to the President of the General Board of Health to appoint an officer of health, whose whole services will be required, and whose salary will be £1000 per annum. There are two gentlemen mentioned in connection with it—viz., Dr. Simon, Officer of Health to the City of London, and Dr. Sutherland, Sanitary Commissioner, now on his way from the Crimea.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 6.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain Inches.
	Inches.	°	°	°	°			Inches.

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer varied during the week, from the highest reading, 30.30 inches on the 1st, to the lowest 29.92 inches on the 4th. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30·14 inches.

The mean temperature of the week was 58·7°—being 1·8° below the average value.

The range of temperature during the week was 33·6°—being the difference between the highest reading, 72·3°, on August 31; and the lowest, 42·6°, on September 6

The mean daily range of temperature during the week was 21·0°. The greatest was 31°, on August 31st, and the least 15·0°, on September 2nd.

The weather throughout the week was cold and cheerless, and slight rain fell occasionally, but no appreciable depth.

For the month of August the mean reading of the barometer at the level of the sea was 30·046 in., the range during the month being 0·661 in. The highest reading of the thermometer by day during the month was 81·2° on the 18th, and the lowest by night was 45·2° on the 31st; the range of temperature during the month was, therefore, 36°. The mean of all the highest readings by day was 73·4°, and of all the lowest by night was 51·8°; the mean daily range of temperature during the month was, therefore, 21·6°; the mean temperature of the month was 61·2°, being 0·2° above the average of thirty-eight years. The mean temperature of evaporation for the month was 58.9. The mean temperature of the dew-point was 57.2. The mean degree of humidity was 87 (complete saturation being represented by 100); and the fall of rain during the month was 0.9 inch (nine-tenths of an inch).

Lewisham, 7th September, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1671 children were registered in London: of these, 840 were boys and 831 were girls—exceeding their averages by 133 and 145 respectively. The number of deaths during the week was 1091—a rate of mortality which is not high for London at this period of the year: 310, or considerably more than half, occurred below the age of twenty years, and 19 above eighty. To diseases of the zymotic class, 317 deaths are attributed, 124 being caused by diarrhœa, and 18 by cholera. Of the other diseases, 192 of which 124 are due to consumption; to diseases of the respiratory organs, 109—40 being caused by bronchitis, and 41 by pneumonia; to diseases of the digestive organs, 55; to old age, 31; to sudden deaths, 5; and to violence, cold, privation, and intemperance, 26 deaths are referred.

THE NEW SHERIFFS—ELECTION OF LORD MAYOR.—The Sheriffs elect—Alderman Kennedy and Alderman Rose intend to give their inauguration dinner at the London Tavern on the 1st of October, in a manner worthy of the high office they have been selected to fill. The newly-appointed Sheriffs will convene the livery of the City of London on Saturday, the 29th instant, for the election of a Lord Mayor in succession to Sir Francis Graham Moon, Bart., whose term of office will expire on Nov. 9th. The following are the Aldermen who are eligible for the high office, in the order in which they stand behind the chair—Mr. David Salomons, Mr. T. Q. Farnis, Mr. W. Lawrence, Sir R. W. Carden, Mr. D. W. Wire, Mr. J. Carter, Sir W. Cubitt, M.P., Sir H. Muggeridge, Mr R. B. Kennedy, and Mr. W. A. Rose. In the ordinary course of events the vervymen will return Alderman Salomons and Alderman Farnis to the Court of Aldermen, who may select Alderman Salomons as being the senior, in which case, for the first time in the history of this country, the Lord Mayor of London will be a Jew.

THAMES WATER.—THE METROPOLIS WATER SUPPLY ACT. On Saturday last two clauses in the Metropolis Water Supply Act came into force. The preamble states that it is expedient to make provision for securing the supply to the metropolis of pure and wholesome water. The clauses now in operation are the 1st and 2nd, providing that it shall not be lawful for any company (except the Chelsea Waterworks) to take water, for domestic use, from any part of the Thames below Teddington-lock, or from any stream below the highest point where the tide flows. Further, all reservoirs within five miles of St. Paul's are required to be roofed in or otherwise covered. In December next another part of the Act, which was passed in 1852, will take effect with respect to open aqueducts, and requiring all companies to filter water for domestic use. Next August the Chelsea Company must supply water from the new source.

ALL THE THAMES WANTED FOR LONDON CONSUMPTION.—The supply of water to the population of this metropolis, at the rate of fifty gallons for each individual daily, would amount to four or five feet in depth of a stream as wide as the Thames at Twickenham, flowing at the rate of two miles an hour; therefore, if the whole supply of London and its dependencies were taken from the river above Twickenham, the average reduction of the volume of water, leaving other circumstances aside for the moment, would be between four and five feet, and at low water a mass of slime and vegetation formerly immersed would be for long exposed to the sun's rays, and emit noxious vapours in great abundance.

KENSINGTON GARDENS.—In consequence of the state of the weather last Sunday, there being a cold north wind and threatening of rain, the numbers in these gardens were not so great as during the warmth of the previous Sunday. The band commenced, as usual, as five, but discontinued playing at half-past five, when the rain commenced, and the great concourse of people took shelter under the trees. After the shower had passed off, the crowd dispersed to various parts of the gardens. Notwithstanding the inclemency of the weather, the number of persons who attended was 48,981.

ROBBERY ON WATERLOO-BRIDGE.—On Monday afternoon, during the passing of the competitors for the Lambeth Regatta, under the Middlesex arches of Waterloo-bridge, the clerk of the Bridge Company, (Mr. Powell) was robbed of his watch, seal, and Albert chain, of great value. Hundreds of persons were near at the time, and one man was taken on suspicion, but the property was not found.

THE LATE MR. FERGUS O'CONNOR.—The remains of Mr. Fergus O'Connor are to be interred in Kensal-green Cemetery on Saturday next, at two o'clock in the afternoon. The funeral will be public, and is expected to be attended by a large number of the workinglasses who are admirers of Mr. O'Connor's political views.

REFORMATION OF JUVENILE CRIMINALS.—The Quarterly Court of the Governors of the Philanthropic Society was held at their offices, Crown-court, Threadneedle-street, on Tuesday, for the purpose of hearing a detail of the working of their institutions, Redhill Farm, Reigate, for the reformation of juvenile criminals. Mr. William Gladstone occupied the chair. Since April, 1849, there have been admitted into the establishment 515, and 429 have been discharged from it; so that the present number on the farm is 187. Of the 429 discharged, 402 have been sent out as emigrants to the Colonies, chiefly to New Brunswick, where there are at present at least sixty of them.

FIRE AT ROSHERVILLE.—Last Saturday morning a frightful explosion of gas took place at the mansion of Mr. Temple, situate at the corner of Chapel-street, Park lane. Mr. Temple (who has recently laid out £4000 in repairing and beautifying the building, which was said to contain pictures of the estimated value of £30,000) had quitted town for Cheltenham, leaving the mansion in charge of the housekeeper, another female servant, and a footman. Some time after returning to rest the housekeeper smelt the escape of gas very strongly, and having aroused the footman, he went down to the drawing-room, and, on opening the back drawing-room door, he was nearly overpowered with the vapour. Notwithstanding this he foolishly entered the apartment, and lighted a lucifer. In an instant a most terrific explosion took place, which prostrated the footman. So great was the concussion that the windows were blown into the street, the house of the Hon. E. T. Yorke, M.P., opposite, injured, and scarcely a picture or piece of furniture in the whole house that was not destroyed or seriously damaged. The women were rescued, and took refuge in an adjoining house for safety, as the house was momentarily expected to fall in. The loss to Mr. Temple is estimated at nearly £40,000.

EXTENSIVE PLATE ROBBERY AT SIR GEORGE HAYTER'S.—Information of an extensive burglary and the carrying off of a large quantity of plate from the residence of Sir George Hayter, No. 18, Blandford square, was sent round to the whole of the metropolitan police-stations on Thursday, together with a description of a man who is suspected to have been the thief. It appears that on the servants rising on Thursday morning last they discovered that the plate chest and other parts of the house had been ransacked, and a large quantity of plate carried off. The police are actively engaged in endeavouring to trace the thief. Information was given to the police at the same time of another robbery of plate and jewellery from the premises of Mr. Perrin, 3, Churchyard row, Newington, during the absence of the family at church on Sunday evening last.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

HER MAJESTY, as we announced nearly two months ago, has been pleased to bestow a pension of £50 a year on Thomas Dick, Esq., D.C.L, of Broughty Ferry, near Dundee, "in consideration of the eminent services which he has rendered to literature and science." The amount is not much, nor, indeed, are Mr. Dick's services to literature of a very remarkable kind; but the grant, though wretchedly small to a man eighty years of age, is graceful for being unaccompanied by those hard and unnecessary words, "distressed circumstances," which Lord Aberdeen was wont, during his administration, to introduce into every warrant. We have now, thanks to Lord Palmerston, got rid of that scandal to which Lord Palmerston's distribution of the annual allowance of twelve hundred pounds. He could not copy a better example than Sir Robert Peel, or a worse than Lord Aberdeen. A great nation should give (what it can well afford to give) pecuniary rewards to men who have rendered eminent public services, and who are in a position to require such assistance. Our literary and scientific pensions should not assume the shape of alms-giving.

ROSA BONHEUR'S celebrated picture of the "Horse Fair"—the Art-wonder of the London season—was exhibited to her Majesty and Prince Albert, at Buckingham Palace, on Wednesday. This marvellous painting is still in the hands of Mr. Gambart, the great dealer. There are plenty of gentlemen bidders, but the price is still, it is thought, too high. Mr. Gambart—so the gossip runs—is about to try Brother Jonathan with his tempting purchase. There are already offers for it, both from Boston and New York; but the dollars are not sufficiently numerous to induce its present holder to surrender so coveted an acquisition.

Lord Londesborough has accepted the office of President of the newly-established Middlesex Archæological Society. We are glad of this. His Lordship is not only an excellent antiquary, but a painstaking and liberal collector, and brings with him excellent experience for such a post from his having been for many years the active President of the British Archæological Association. The subscription to the society is, we think, too little; it is only half-a-guinea a year. With so small a sum very little is useful can be done. We hope this new society will watch with lynx like eyes the so-called restoration of churches, countenanced by Puseyite clergymen, and made by architects who cannot see anything to admire in architecture since the Reformation. Of this class of architects we have a striking example just come forth in a Mr Street, who, in an expensive volume, full of excellent woodcuts, details a tour through Italy in quest of nothing but first-pointed arches. Mr. Street can see no kind of merit in Sansovino or Palladio—in Bramante or Michael Angelo; but he is in perfect ecstacy with a pointed arch; and prefers, by many degrees, the little chapel of Giotto to that grand creation, St. Peter's at Rome. His ramble reminds us of the half-daft Scotch Baronet, whose employment was in picking up pins, and running at every fresh discovery from room to room to tell his good fortune to his persecuted wife:—"My leddy, my leddy!—I have fun a preen."

Something of moment has just turned up in English poetry—the first and finished draught of the "Hymn to Solitude," by no less a person than the author of the "Seasons." It is in Thomson's own handwriting, is dated 1725 (four years earlier than the assigned date), and differs materially, and in some places for the better, from the received text. The conclusion has in the first draught a personal turn. Here is a portion of this interesting discovery:

> Descending angels bless your train,
> The virtues of the sage and swain—
> Soft Innocence in white array'd,
> And Contemplation rears his head—
> Religion her awful brow,
> And all the Muses wait on you.
>
> O let me pierce your secret cell
> And in your deep recesses dwell!—
> For ever from the world retir'd,
> For ever with your raptures fir'd,
> For by a mortal seen, save he
> A Mallet or a Murdoch be.

Thomson refers to David Mallet, the poet, and to the Rev. Patrick Murdoch, his biographer, the "little round, fat, oily man of God," of the Castle of Indolence. Thomson's autograph is extremely rare. A letter, in his handwriting, has not occurred for sale for at least the last thirty years.

English antiquaries are expressing delight at the success of their remonstrance against the so-called restorations of the Royal tombs in Westminster Abbey, and of the admirable pedestal on which stands the statue of Charles I., at Charing-cross. The required money was voted very liberally, but thoughtlessly, last year by the House; and long before this we expected to see (without our regret) a spick-and-span new pedestal for the statue of the Blessed Martyr King Henry V., once more with a silver head; the coronation chair half a field of lilies and half a firmament of powdered stars; the shield of Edward III. a blaze of medival heraldry; the sword of the same Monarch with a grotesque handle, a burnished blade (of the time, of course); and the Pietro Cavallini Abbot Feckenham work of the Shrine of the Confessor, supplanted by some of Mr. Minton's best Staffordshire glass beads and mosaic work. Mr. Gilbert Scott, an admirable architect, and the leader in this needless destruction of what is old, is, it is said, seriously thinking that he is somewhat mistaken in the propriety of his so-called restorations. Let him reflect a little more, and he will leave the Royal tombs and the Le Sœur pedestal, for our time at least, just as they are. Protect, preserve with vigilance; but snatch back the hand that reaches destruction under the mistaken plea of restoration.

Her Majesty's visit to Paris will have, it is said, a sensible effect on the cultivation of the Fine Arts in this country. We shall be no longer a nation of shopkeepers, living in houses like perforated brick stacks. We shall have more liberal grants for the purchase of works of art; a better National Gallery than the one we talked last year of having; with new and handsome streets, and a river terraced and embanked, flowing unpolluted to the sea. The Emperor of the French learned much when he was living among us. A visit to Paris cannot but add to the knowledge of the best-informed. We are a loyal people, and her Majesty has only to will that the once silver Thames shall be silver again, and pure it will become without its present polluted tribute to the British Channel.

PRINCE'S BREECH-LOADING RIFLE.—We have had an opportunity of minutely examining this recently-invented breech-loader, and have been much struck with the simplicity of its action. Its construction, on fusion, can be produced by cheap machinery; whilst to alter the present regulation-rifle to Mr. Prince's plan can be done easily and economically. So easily is it loaded, that a raw recruit may be taught how to do so in five minutes, no matter in what position he may be placed; by night as well as by day; and without being obliged to expose himself, as he must do if he uses the ramrod or pours in the powder. Viscount Hardinge in his evidence before the Roebuck Committee, alluding to Mr. Prince's gun, states, "he had just seen a breech-loading rifle which fired with greater precision, and loaded easier, than any he had before seen." Another advantage is, there is no escape of gas at the breech, as proved and admitted by the authorities at Woolwich and elsewhere. We are informed that, although some 1000 shots have been fired from the rifle, and it has been worked many thousands of times to show its action, still the gun appears as fit for service as ever. It has an altered Enfield Rifle, supplied from the Horse Guards by order of Lord Hardinge. By the aid of a new cartridge which Mr. Prince has introduced, the shooting of the rifle does not become deteriorated after firing any number of shots, or by its being left uncleaned for days. The last shots (after Wythes (where the gun had undergone three days' shooting) were equal to the first, though 150 shots were fired during the day without wiping out the barrel. On inspection of the discharge of powder the priming, one random shot appears to have occurred. The cartridge has likewise been tried with complete success for loading at the muzzle, and firing or tearing off the end of the cartridge and pouring the powder into the barrel is unnecessary. Additional rapidity would thus be gained, and the act of loading much simplified; while the whole charge of powder would always be at the breech end of the barrel (with the ordinary cartridges not attainable, in damp atmospheres more especially), a result of great importance at long ranges. Mr. Prince has been honoured with an audience by Prince Albert, at Osborne, when his Royal Highness himself tried the shooting of the gun, and appeared much pleased with its efficiency. His Royal Highness also showed it to the Queen, and explained the principle of its action to her Majesty.

DEPARTURE OF HER MAJESTY FROM PARIS.—THE IMPER

AND ROYAL PROCESSION IN THE PLACE VE

THE QUEEN'S RETURN FROM PARIS.

(From our Special Correspondent.)

THE PROCESSION.

THE return of the Queen from St. Cloud merits a distinct and separate chapter in the history of the Royal Visit to the Emperor of the French. The progress from the Tuileries to the Strasbourg Railway station was one long triumph. The weather, which had been threatening at intervals on the two previous days—which had lowered ominously on Saturday while the lamplighters were busy at Versailles—was bright, and the sky, flaked with the white, plump clouds, known to sentimental Germans as "Heaven's lambs," was of a deep Italian blue. As a very early period the Parisians were flocking into the street, and forming into sections, all tending to some point of the long route. In every part drums beating military to quarters were heard. It got whispered abroad that the return would be a much more magnificent affair than the arrival. Yet thousands of people who had given themselves one or two holidays during the previous week, although sorely tempted take their usual stand, appear to have decided that they could not afford it. So the crowds were certainly not so dense on this occasion as when her Majesty had arrived. Again, thousands of people who had suffered all kinds of personal inconvenience in order to obtain a view of the Emperor's Royal guests, had been thoroughly cured by the extortions of lodging-house keepers and the dearness of provisions, and had made their way back to their native provinces. Still crowds of sprightly people began to form themselves behind the hedges of soldiers of the Line, Chasseurs, and the National Guard; windows were everywhere thrown up, and ladies in the elegant white morning wrapper peculiar to Parisians appeared, while gentlemen in loose morning attire, in gay morning gowns, or jackets of brilliant hue, peeped over their shoulders. The soldiers were more sprightly than usual. It was evident that every section of the people of France, divided and torn by dissensions on other subjects, were of one accord on the Royal visit; and I am most happy to add my testimony in support of the assertion of the *Moniteur*—that "all Paris has, with that tact which our heart can feel, and we regret to find themselves as the hosts of her Majesty; and the smallest shops, the humblest houses in streets which her Majesty did not traverse, and whose existence she did not suspect, have exhibited a flag, or illuminated a *transparent*. This general endeavour to do the Queen honour should be the subject of special remark in all English papers. Even the *Journal des Débats* is pleased; although it takes care, while expressing this approbation, to trace the alliance, not to the present Emperor, but to the House of Orleans. The most superficial reader of recent history will know how to dispose of such an argument; and to balance between the spirit of low chicane that governed Louis Philippe's foreign policy, and the chivalrous confidence which has characterised that of Louis Napoleon. Such unscrupulous perversion of facts ill supports the party for which it is intended; and if the Paris visitor may judge from the exterior aspect of the French capital at the present moment, such views meet with but the coldest regard of the people. Thus, on Monday, the 27th of August, the crowds of people who lined the Boulevards blocked up the windows, and invaded the house-tops, to give a fine, well greeting to the Queen, were neither hired *chasseurs* nor organised *h*yperites. They were there to give expression to honest enthusiasm, with not caring to turn back so far as the years when Louis Philippe kept the *bureau* of an *agent de change* at the Tuileries. A French crowd is not easily moved. Frenchmen seldom or never cheer in the streets. Still, on this occasion, when the report of the cannon from the Invalides came rolling along the Boulevards, loud cheers followed in its wake, to prove that when our neighbours are really and truly unanimous and in earnest, they know how to applaud, and that they begin to understand the English "Hurrah!" People now began to form an idea of the effect the Boulevards would have presented had the Royal visitors arrived in Paris before twilight, for still banners, and flags, and inscriptions decorated every house, still trophies marked the prominent points of the route, and triumphal arches spanned the splendid way. The cannon roared at eleven o'clock in the morning, announcing the departure of the Royal guests from the Tuileries. Rumours the most contradictory had been spread abroad on the subject of the cortege. According to some pretensions authorities the Queen was to pass in a royal car, and in a close carriage to the station; according to others, the departure was to be an affair of State, conducted with all conceivable solemnity. The latter rumour proved to be the correct one. As the brilliant Staff of Generals, headed by a squadron of Cuirassiers, turned down the Rue Castiglione, it became evident that a splendid show was behind them. The General in command was M. Renaud, attended by a brilliant Staff. Very imposing it looked as it moved slowly forward, backed by the scarlet uniforms of the band of the Guides. This was followed by another military band, headed by M. Molern which includes some of the most remarkable instrumental performers in France, and which has recruited its strength from abroad, as from Brussels, whence it brought the *chef de bande*, some sixty men strong. This followed the Staff, and preceded a squadron of the regiment to which it belongs. After the Guides came four Piqueurs preceding four splendid carriages, drawn by two horses, and three State carriages, drawn by six horses. The splendour of these equipages—literally covered with gold—drew the crowd to believe at first that they must contain the Queen and the Emperor. Some people took off their hats, and others made ready for a lusty cheer; but, glancing along the line, they saw that the point of attraction lay still in the distance. The cheers were only turning out of the Rue de Rivoli into the Rue Castiglione when these first State carriages were crossing the Rue St. Honoré into the Place Vendôme. In these carriages were the suites of the two Courts, and Lord and Lady Cowley. They were followed by eight splendidly-equipped Piqueurs, who were before a gorgeous State carriage, the body of which was green, richly relieved by gilt ornamentation. In this vehicle the Prince of Wales sat in the place of honour, wearing over a black velvet tunic a tartan scarf. He appeared to take a lively delight in the affair, preserving, in some apparent sense of the important part he was playing in this historical event. In the carriage with him was Prince Napoleon. Thus, preceding the Queen and Emperor, were the heir-apparent and the heir-presumptive to the throne of the two leading nations of the world; the one being a fair and delicate boy, the other a mature man, with a presence recalling to the old people who were among the throng the splendid head of the hero of Austerlitz. Opposite these two prominent figures sat Lord Clarendon and Marshal Vaillant. A few chasseurs closed the first State carriage, and this royal group had not long been followed by another, drawn by eight horses, containing the Queen of England, the Emperor, Prince Albert, and the Princess Royal. As this splendid vehicle, made for the Emperor's wedding, advanced slowly, cheers from nearly every throat greeted its occupants. The Queen bowed repeatedly, and appeared delighted with the wonderful heartiness of the cries that surrounded her. On her Majesty's right rode Marshal Magnan, Colonel Fleury (first Equerry); and Colonel de Vallabregue (Equerry); on the left hand, near Prince Albert and the Prince of Wales, were the Marquis de la Woestine, Commander in Chief of the National Guard; General Count de Colte, Aide de Camp; and Colonel Lepic, Commander of the Cent Gardes. I may here add, that General Rolin, of his Imperial Majesty's household (to whom we have been much indebted in the course of our inquiries into the details of her Majesty's visit) rode near the Prince of Wales. Among the notabilities forming part of this splendid cortege I should mention the names of General Charobert, for whom hundreds looked out with the utmost anxiety. The Imperial carriages were followed by the Generals of Division and Brigade; the Cent Gardes, and a squadron of the Cuirassiers of the Guard, preceded by their band. These picked soldiers, splendidly equipped, brought up the procession. It progressed at a walking pace only the heads of the horses in the two State carriages being held by grooms in rich liveries. Cries of "Vive la Reine" and "Vive l'Empereur!" were mingled everywhere with the hearty hurrahs of the thousands of Englishmen who occupied the windows. All went on with the orderly crowd. And so the Queen was conducted to the Strasbourg Railway cheered by every rank of the Emperor's subjects. This terminus was richly prepared, as on the occasion of her Majesty's arrival. Fresh flowers were banked up on all sides, and in one spot some brilliant dahlias exhibited the interwoven initials of Victoria and Albert. Here all the great functionaries of state were drawn up to present their respects to the Queen. Their visits made the usual wonderful inlets of the Imperial ladies in the complete a beautiful scene. As her Majesty entered the station a salvo of artillery announced to the good people of Paris that the Queen of England was about to leave their hospitable city. Her Majesty slowly bowed to people assembled immediately entered the [illegible] the Princess Royal following, assisted by the Prince [illegible]. In a few minutes the train moved forward amid the [illegible] the graceful waving of handkerchiefs—towards home!

Before leaving St. Cloud the Queen had given orders to Colonel Phipps [illegible] to the Minister of the Interior the sum of £100*l.* to be distributed among the most unfortunate in the city of Paris; but this appears to be all that was done in the way of presents or thanks for gifts before leaving, if we except the gratuities given, of course, to the Imperial servants. The announcement in the next day's *Moniteur* explained this omission. The Queen had received so many letters while at St. Cloud that it had been impossible to send replies to all of them, but replies would be forthcoming after the arrival of the Court in London.

THE ARRIVAL AT BOULOGNE.

The progress to Boulogne was performed in five hours. At Amiens her Majesty had a most enthusiastic reception; but at Boulogne a new triumphal entry awaited her. The town, which I described to your readers as prepared for the Royal arrival, was even gayer when ready for the Royal departure. The long line of white houses upon the quay was covered with flags and devices representing the alliance. Banners fluttered everywhere. Every train and every boat swelled the tide of human life in the little town. Thousands of people were determined to see the Royal embarkation at any personal inconvenience. Then a splendid review was promised upon the beach. It was clear that the Utopia for which the hotel keepers had sighed all through the summer had arrived. They could demand any price; and every hotel-keeper, placing his hand upon his heart, may declare that he was fully engaged in the elaboration of golden bay while the sun of Royalty shone for him. With this propensity it would be useless to quarrel. The proprietors of the Maison Dorée have written to the *Daily News* to contradict the assertion made. I believe, on that journal, that no parties were admitted to the private cabinets of this establishment who did not engage beforehand to spend 300 francs—showing hereby a delicacy of feeling on the subject that will infallibly earn for them the disgust of their fraternity. I could point to establishments less scrupulous, as to the Hôtel des Etrangers in the Rue Vivienne, where a notice is posted up in every room, intimating to its occupant that, during the Exhibition, all who do not dine at the *table d'hôte* will pay extra for their lodgings. Our friends of Boulogne were not, therefore, alone in the exaggerated notions of the value of space on the day when the Queen of England arrived to review the troops and dine at the Pavilion Hotel within sight of the white cliffs of Dover.

A salute of one hundred guns from the Capecure battery, taken up by the fleet off the port, announced to the people of Boulogne, and to the Camps in its vicinity, that the Queen of England was at the railway station. The Royal and Imperial party included the Prince Napoleon, Baron James Rothschild, and other directors, represented the railway company; and M. Achille Adam, the Mayor, with the Sous-Préfet, and other functionaries in elaborate uniforms, represented the town. The carriages drawn up in front of the prettily-decorated station were immediately in request. Her Majesty, the Prince of Wales, the Princess Royal, and the Marchioness of Ely occupied one carriage on one side of which rode the Emperor, and on the other, Prince Albert, both in uniform. The escort was composed of Lancers, Dragoons, Carabiniers, and a few of the Cent Gardes. The band of the Lancers preceded the cortège. As the party proceeded along the port to military music, the noble Marquis de Hastings, the yacht's owner, on horseback [illegible] mounted on horseback for a short time. There is little to describe in the review, which did not last longer than twenty minutes, save in the striking contrast it offered to those reviews held by the present Emperor's uncle in this neighbourhood to [illegible] their animosity against that nation whose Sovereign now rode side by side with the Emperor of France. After the review several new rockets were tried, one of which is said to have travelled two leagues before it burst. Some day we may hear of the possibility of bombarding Dover from Calais!

After the review, the Royal and Imperial visitors retired to the hotel, where, at eight o'clock, the banquet was served for fifty people. The company included the Marshal Baraguay d'Hilliers.

As day declined the good people of Boulogne began to display their illuminations: light sprung up in every direction, till, as the hour of embarkation arrived, the scene beneath was fully beautiful. A few minutes past eleven o'clock the Queen, accompanied by her Royal guests, left the hotel and went on board her yacht. The [illegible] between the two Sovereigns was most cordial. It was [illegible] the yacht moved forward on her way to England. As she [illegible] the vast undulations of the coast hung thus marked by brilliant lines of light. But this was not all—the port, that from the sea seemed to be like a splendid serpent, lay along the dark shore, sent up as a parting greeting to the Queen of the Sea, now upon her beloved element, a gorgeous show of fireworks. And then the yacht steamed over a calm sea, under a splendid moon, to England.

On Tuesday morning, the 28th of August, people were astir very early at Portsmouth, to catch the first glimpse of the yacht that was bearing the Queen back to England. But it was seven o'clock before she appeared on the horizon. At eight o'clock the noble vessel passed the Nab Light vessel. She then ran through Spithead, and reached Osborne at half past eight; but the Queen and Prince did not land before twenty minutes past ten, carrying back with them, we must trust and believe, only the kindest remembrances of this most successful visit to Paris.

Your readers are fully aware of the almost superstitious faith with which people talk of the Queen's weather. Her Majesty's previous experiences have been repeated throughout her French visit; for, with the exception of the evening on which the Royal party went to the Opera Comique, the most beautiful skies heightened the effect of every festival given by the Emperor in her Majesty's honour. The day after the Queen left Paris, however, the fine weather broke up, and has been showery, and even chilly at times, ever since.

AN ENORMOUS VASE. One of the curiosities of Paris is the enormous vase which ornaments the court of a house in the Rue des Marais St. Germain. It is said to have been planted there by Racine, and supposing that he did it in the best year of his life, the vase must be now not less than 156 years of age, as that celebrated writer died in 1698. It is this year in an unusually flourishing condition, and covered with fine fruit.

THE STATISTICAL CONGRESS AT PARIS.—In a few days the members of the eleven Congress assemble in Paris. Representatives of all the great Powers of Europe have been delegated to attend. On the part of England, Dr. Farr, General Register-office; Mr. Albany Fonblanque, Statistical Director of the Board of Trade; and Mr. Voisey, of the Board of Trade, have been nominated by the Lords of the Treasury, Secretary of State for Foreign Affairs, and the Lords of the Privy Council.

MONEY ORDERS.—The following order has just been issued by the General Post-office:—"That in all cases in which the payee's signature be as full as the name given by the remitter, and be not in any way inconsistent there with, 2. The payee will not be henceforth required to furnish the address of the remitter, though he will still have to give the remitter's name. Although it will no longer be necessary to enter the remitter's address in the advice, the remitter will still be required to furnish it, and postmasters must, as heretofore, enter it in their journals."

FIRST UNDER FIRE.—To say that I felt no fear on going into [illegible] a senseless boast. I did feel considerable apprehension on the first burst, and until heated to a degree of preternatural excitement. After the [illegible] fellow! There's Smith or Thompson down." The first whom I saw [illegible] in the action was a Rifleman. Just as we had reached [illegible] the hill, he [illegible] with a cry of anguish, staggering to the [illegible] a musket-ball had entered his mouth. The horror imprinted [illegible] impression on me at the moment, and the recollection of it haunted me long afterwards. After our return to the bottom of the hill from which we had started in pursuit of the enemy, the excitement of action having gradually passed away, we all felt very tired, and were soon glad to ground ourselves. The groans of the wounded men, who were collected on a plot of grass close by, and over whom [illegible] were busy during the whole night, distressed us, and prevented [illegible] At length fatigue prevailed. Next morning the regiment to which I belonged, right [illegible] Brigade 6th Infantry, had the duty assigned to us of charging the line of Cape Gate. While performing my share of this duty, I again felt [illegible] in these [illegible] allowing up all perception of personal danger, and [illegible] the ground were set. As on the former occasion, [illegible] and was succeeded by a feeling of great [illegible] observed both men and officers, certain indications of a fulness of the heart, and an inclination [illegible] to shed tears, which, indeed, in some [illegible]

THE MAI NGO PLATE.—In our [illegible] this [illegible] relay, at [illegible] omitted to state that [illegible] Thames Wild [illegible] for the season, the Pique [illegible] Fairmead of the [illegible] which was [illegible] done by the executive [illegible] Lieutenant Wilson, who, for this purpose, visited Paris in May.

NATIONAL SPORTS.

ALL the world will be flocking to Doncaster next week, to see if "The Squire" can put the seal on the most wondrous sporting career in history, by winning the St. Leger in his native county. The meeting presents a very well-filled list, and as £1755 is given to be run for, the Corporation can no longer be charged with their ancient stinginess. The principal races of the eight set down for Tuesday are the Champagne Stakes and the Great Yorkshire Handicap. To the former especial interest is attached, as Artillery (Basham), Bird-in Hand (Marson), Mario (Templeman), The Danube (A. Day), and Mary Copp (Bartholomew), will most probably go for it, while some others will be sent to try and take their measure. There has been very little betting as yet on the Handicap but Midsummer, Little Harry, and Fanny Gray, have all been backed, and the last named is remarkably well in. The St. Leger day has been reached, but the weights for the Doncaster Plate (81 subs.) are not yet out; it is said that Lord Derby's Fazzoletto will make his maiden appearance against Manganese, Kalipoge, and perhaps Maid of Masham colt, in the Municipal Stakes. Rifleman's meteor-like appearance at York has invested the St. Leger (which will bring out some very fine-looking animals) with no small interest, and we anticipate that a field of at least sixteen will be found at the post. As far as we can learn, it will be selected from the following, to wit: Noisy (Goater), Cavalier (Wells), Grenadine Enclave (Bartholomew) Paros (Rogers), The Herald (Aldcroft), Marchioness (Templeman), Mosquito (Holmes), Blooming Heather (Charlton), Rotherham (J. Marson), Lord of the Isles (Prince), Capucine, Claret (Basham), Rifleman (Nat), Lady Tatton (Osborne), Oulston (A. Day), Sanchoo, Clementina colt (Sly), and perhaps Rambling Kate (Whitehouse), Rajah (Bumby), and some four or five others, whose owners determine to run for the name of the thing on the last morning. Corobus is, we fear, a hopeless case: Capucine has not looked very well, and Fazzoletto's engagement at York is making her a very strong outsider, and we hear that Job Marson is to have the mount in case Mr. A. Johnstone and Lord Clifden forego their claims on him. Oulston is too loose and weak-framed a horse to struggle home under a high weight like 8 st. 7 lbs., and, after Rifleman's defeat of the game Fandango at York, when he himself was only three parts prepared, we do not see how he can well lose. We should not be surprised to see Rotherham and Oulston finish second and third, with Lord of the Isles and Capucine well up with them. Rajah is somewhat sorely tried as to whether the latter pair will "stay" so well as their adherents fancy. The "Yorkshire roar" from twice one hundred throats if "The Squire" wins, will be worth going many a mile to hear

On Thursday, which has six events, Artillery, despite his 7 lb. extra, has little to fear in the Two Year-Old Stakes: and The Cropper (8 st.) is it meant, capitally well in for the Cleveland Handicap. *The* race of the day is the Eglinton Stakes, in which Manganese, Chullee, Oliteritza, Leamington, Cossack, Thirsty Boy, Heir of Lynn, and Eglantine, seem among the most likely starters. On Friday the meeting concludes with seven races. Bonnie Morn, Saraband, Jack Sheppard, Frederick, Rifleman, and Lord of the Isles, are all in the Don Stakes, where the mile distance exactly suits the latter's very high turn of speed. Capucine her companion, Dame Trot, Treachery, Blooming Heather, Fanny Gray, Bianca, Mosquito, Clotilde, &c., against her in the Park Hill Stakes; while Paros, Grenadine Estriere, Herald, The Cropper, Shorcham, Marchioness, Vandal, Claret, Oulston, Sanchoo, and Lady Tatton, are in the Doncaster stakes. The Doncaster Cup promises, if rumour be true, a stirring contest between Wild Dayrell, Fandango, and perhaps Rifleman. Wild Dayrell has never yet performed in public over more than a mile and three-quarters; and even if Fandango has to face Derby and the St. Leger without her, he will require an immense deal of beating over his favourite two miles and a half—a distance at which immense horses like Wild Dayrell (who cannot take a very strong preparation) are wont to tire. If the three go, we should expect to see Mr. Wilson or Grimshaw on the Imperial bowlers at Birmingham; while on Thursday the *venue* will be Luton, and the wicket defendants 22 Bedfordshire men. Wilsher's Yorkshire score was 148; but the bowling was very weak, and he was only caught out at last.

The following are the names by which members of the London Unity Club, from Putney-bridge to Lambeth, on Monday; and Lowe and Wallinger will row their 6*h* match on the same afternoon, from Putney to Mortlake. Hastings Regatta is also fixed for Tuesday; while Thursday claims the Littlehampton and Bognor (Horsham-town) regattas, and the Prince of Wales' Club sailing-match off Erith. The yacht *Thought*, we are glad to say, only "went down off the Foreland, with all hands" in a newspaper paragraph.

Most of the partridges we have as yet seen have been small, and in some parishes shooting has, by common consent, been deferred to the 10th, though the harvest is by no means backwards. A strange case has occurred in Yorkshire, in which a band of poachers have taken the gamekeepers of a noble Lord before the magistrates, and charged them with netting partridges in a field outside their master's preserves.

Simcom, and several more of the stud of the late Lord Caledon, will be sold in Ireland on Monday; and blood-stock of every description, including Cossack's eldest born, the yearling Dundas, Charles XII., St. Martin, Gamesboy, &c., will be brought to the hammer at Doncaster. The front of the Reindeer will not, however, be enlivened with a second sale of greyhounds, like the Barnard-Bedlamite one of last year. Pigearo is just dead, at the age of eleven, but Bedlamite, Field-Marshal, and Mocking Bird, will perpetuate his memory, as he did that of his great sire, King Cob.

WARWICK RACES.—TUESDAY

Racing Stakes [illegible] Horse, 5 *st.*
Shoals Handicap. Eaglecot, 1. Barrel, 2
Leamington Stakes [illegible] Tea Caddy, 2
Castle Park Stakes [illegible] Brown Jug, 1. Goldinl, 2.
Queen's Plate [illegible] Rosalpin, 1. Dominie, 2.
Cranthan Stakes. Cardiff Lass, 1. Falcon, 2.

WEDNESDAY.

Great Warwickshire Stakes.—Illuminator, 1. Sirocco, 2.
Avon Stakes. Stark, 1. Crookshanks, 2.
Town Plate.—Mary, 1. Athenstone, 2.
County Stakes.—Lady Bird, 1. The Early Bird, 2.
Borough Handicap.—Anniversary, 1. Byrsa, 2.
Warwick Cup.—Rataplan, 1. Hornby, 2
Surry Handicap.—Ratcatcher, 1. Rataplan, 2.
Walter Cup.—Humgudin, 1. Caliph, 2.
Handicap Plate.—Swaleliffe, 1. Flageolet, 2.
Selling Stakes. Mary, 1. Athenstone, 2.
Match for 300 sovs.—Flyaway walked over

DOVER AND CINQUE PORTS REGATTA.—This regatta came off on Thursday, the 30th of August, with considerable éclat. The arrangements were excellent, the weather all that could be desired; a cloudless sky, a fine easterly breeze for the yachts, and a calm sea for the rowing matches, left nothing to be wished for. The Mayor of Dover, W. H. Payne, Esq., has for some years past kindly officiated as chairman of the committee of the sections, in conjunction with that body, have mainly contributed to raise this regatta to the first-class position it now holds; and this year it has received much additional support from the Lord Warden of the Cinque Ports, the Commodore of the Royal London Yacht-club. The first race on the cards of the day was that between yachts, over 20 and not exceeding 80 tons, for a purse of 30 sovereigns. The course, from abreast the Flag-ship lines round, formed a distance of about 30 miles. The following started.—*Adrante*, 22 tons, Wm Patterson, Esq., owner; *Napoleon*, 40 tons, H Chilton, Esq.; *Amazon*, 48 tons, A. Young, Esq. At 12 o'clock a signal-gun was fired, the start was effected; but the *Amazon* soon drew ahead and maintained the lead, leaving the *Napoleon* by 18 min. 50 secs., and the *Adrante* by 29 min. 44 secs. The second race was for a purse of 20 sovereigns, and the following yachts were entered and came to the starting-place—the course was twice round:—*Kitten*, 13 tons, R. Leach, Esq., owner; *Violet*, 10 tons, J. R. Kirby, Esq.; *Fawn*, 13 tons, F. T. Biddle, Esq. The *Violet* gave up the first round, and the *Kitten* beat the *Fawn* by twenty-one minutes. The third was a first-class galley race, open to the coast, which was won by the *Arrow* of Ramsgate. Then followed some excellent skiff races and sculling matches, and the sports of the day wound up with a capital duck hunt. [illegible] ball was held in the evening, and was attended by the rank and fashion of the town and neighbourhood

THE NEW CAMP ON WOOLWICH-COMMON.—The new Camp is progressing rapidly towards long completed. Between forty and fifty of the huts are [illegible] on the outside, and a considerable number boarded inside. A wise precaution has been taken in the erection of a number of these huts, by covering them on the outside with sheet iron, which is placed between every second wooden hut, so that if one of the wooden huts take fire, the iron one intervening would, it is thought, prevent the fire from extending. These iron huts are to be boarded in the interior the same as the wooden huts. The Camp is to be flushed by the end of this month, and then the Queen's Own Light Infantry Militia (Tower Hamlets) is to leave their present encampment, and be under their quarters in the new one.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories:* The Rev. A. Turner, to Burnham Deepdale, near King's Lynn, Norfolk; the Rev. W. Carter, to Slingsby, Yorkshire; the Rev. T. Gibbons, to St. Peter Tavey, Devonshire; the Rev. F. W. Watson, to Ickleford, Hertfordshire; the Rev. S. G. Wood, to West Keal, near Spilsby. *Vicarages:* The Rev. C. J. Camidge, to Wakefield, the Rev. P. Halton, to Sompting, near Worthing; and Cranbrook, The Rev. T. W. Jones, to Llanyeyn-y-Traucocd, Cardiganshir ; the Rev. E. Barnwell, to Bridge Sollers, near Boston, the Rev. C. J. Black, to Burley-in-Wharfedale, Yorkshire.

A testimonial was presented to the Rev. George Stokes, on his relinquishing the Curacy of St. Mary, East Bourne, Sussex.

SALE OF A CHURCH LIVING.—The advowson and right of presentation to the Rectory of Lytchett-M. travers, in the county of Dorset, was sold at Garraway's Coffee-house on Wednesday. It consists of an excellent Rectory-house, with gardens, 110 acres of glebe land, let at £114 per annum, while the rent-charge in lieu of tithes is computed at £423 per annum. The total value of the living was estimated at £607 a year, and was considered worth £7000. The competition was by no means brisk. Offers were made slowly until the sum had reached £2450 ; but at this it was knocked down.

NEW FLOATING FIRE-ENGINE.—A large vessel, intended to be fitted up with a very powerful steam fire-engine, has been built at Mr. Mare's yard, Blackwall. When completed it will replace the floating engine at present moored near Southwark-bridge, which will be removed to Rotherhithe.

THE CASE OF MESSRS. STRAHAN, BATES, AND PAUL.—According to arrangement, Sir John Dean Paul and Messrs Strahan and Bates appeared at Bow-street Police-court on Wednesday, before Mr. Jardine, accompanied by their bail. Mr. Humphreys appeared on the part of the prosecution and Mr. Lewis for the defendants. Mr. Lewis hoped that the defendants would be remanded for a longer period than a week, as it was impossible that the investigation could be gone into and it would be a great hardship if they were compelled to be tried at the September sessions. Mr. Humphreys opposed the application. Mr. Jardine said it was desirable that the case should be closed as speedily as possible, but at present he was unable to interfere with the existing arrangements. The recognizances were then enlarged, and the defendants were further remanded until Wednesday next.

TRANSPORTS FOR THE WAR. A return has been issued which shows that, between the 1st October, 1853, and the 1st March, 1855, inclusive, 252 transports were employed in carrying troops or munitions for the war in the East. Of the 169 transports 150 were steamers.

CAMP AT THE CURRAGH.—This vast Encampment is now all but finished. The troops at present encamped number 8000, and a large extent of staling is being provided in the neighbourhood of Kildare, Newbridge, and Kilcullen, for the purpose of constructing at the two latter 3000 horses for each of those stations. The accommodation has been provided for 2000 men, should it at any time be required. The foundations of the Catholic and Protestant chapels have been laid.

ADVANCE IN THE PRICE OF CANDLES, SUGAR, &c.—A general advance in the price of white and brown sugar and candles took place this week in the metropolis last Monday. For the latter article, which has hitherto been at 6½d. per lb., an advance of 1d. has taken place; and for brown and white sugar the increase has been 1d. per lb.

THE CUDHAM MURDER.—On Wednesday night, at about half-past ten o'clock, Feeling, the suspected murderer of Mrs. Bagley, was taken to the Greenwich police-station, having been apprehended at Waterlooroad, Clapham-junction, by police-constable Johnson. He was brought up to the Court [illegible] and was remanded to Maidstone gaol, where he will undergo an examination. He had in his possession a bundle of clothes which were known to have been on Mrs. Bagley's body.

MR. JOSEPH SAMPSON GAMGEE, one of the surgical staff of the Royal Free Hospital, left London for Novara, on the evening of Saturday, last Sept., as First-class Staff Surgeon and Chief of the Medical Corps to the Anglo-Italian Legion now assembling in the North of Italy under General Percy.

A REPUBLICAN RIOT.—An insurrectionary movement has taken place in Ar ges, the chief town of the department of Mayenne. It would appear that Republican songs and cries were used, and that nearly 1000 persons were led on by two exiles, political prisoners, named Chauvin and Guerry, with the intent of attacking the town. General d'Angeli, in command of the district, was obliged to call out the troops, and it was not until the cavalry charge d the rebels that they dispersed. The two ringleaders named above, who had not long since been summoned by the Emperor, were taken prisoners, and several others. A cart was seized containing gunpowder, balls, and muskets. The precise nature of the manifestation is not known, but some declare it to be an attempt to proclaim the Republic, whilst others affirm that the secret societies had nothing whatever to say to it, but all was caused by the dearness of provisions.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Owing to the continued decrease in the stock of gold in the Bank of England, the enhanced rates of discount, and the prospect of money becoming scarce in the Corn Market has been pretty tight this week, and prices have fallen half one-half per cent. There is no doubt whatever but that the next two or three returns from the Bank will show a further considerable falling off of bullion, as the whole of the gold received from New Zealand and Australia has been shipped to the Continent, and over £1,000,000 has been forwarded to Constantinople on account of the Turkish Loan. Under these circumstances numerous sales of stock have been made by the *Bear* party, and those on account of the public have been trifling.

On Monday scarcely any Money business was transacted, as the settlement Account were concluded, and prices were, consequently, drooping. The Three per Cents Reduced marked 91¾ down to 91½ ; the Three per Cent Consols, 91½ to 92⅜ ; and the New Three per Cents, 92. Long Annuities, 1860, were 4 1-16 ; Ditto, 1885, 17 1/16. India Bonds 16/6 heavy at 50s. ; and Exchequer Bills, 11s to 15s. prem. The Common Stock was 91¾ prem. Exchequer Bonds were done at 100¾. The dealings on Tuesday were limited, but no further decline ; and another quotation for Consols Stock was 216¾. The Three per Cents Reduced realised from ¾ ; the Three Per Cent Consols, 90⅝ ; the New Three per Cents, 92 ; Long Annuities 1860, 3⅞ ; Ditto, 1885, 17 1/16 ; India Bonds declined to 47s. ; and Exchequer Bills were 11s. to 15s. The Bonds sold at 100¾. The account prices for Consols was 90⅝. On Wednesday prices fluctuated to a considerable extent with a heavy market. The leading quotations were as follow :—Three per Cents Reduced, 91½ ⅝ ; Three per Cent Consols, 90½ to ; New Three per Cents, 92⅜ to 91½ ; Five per Cents, 117 ; Long Annuities 1860, 4 ; Ditto 1885, 3⅞ ; Ditto, 1885, 17 1/16 ; Exchequer Bills, 11s. to [illegible] and India Bonds, 50s. premium. Exchequer Bonds were 100¾ to ¼. The dealings on Thursday were small, and the Directors of the Bank of England advanced the minimum rate of discount to 4½ per cent. In consequence of this step there was a corresponding rise took place. The Three per Cents were from 90⅝ to 90⅞ ; the New Three per Cents, 91½ to 92⅜ ; and the Reduced, 91½ to 91¾. Exchequer Bills, 10s. to 14s. ; India Bonds, 52s. prem. ; Exchequer Bonds, 100¾ to 100⅝.

The imports of bullion have been nearly 500,000 dollars from Mexico, and about 300,000 dollars from Valparaiso. [illegible] Owing to the large export of gold to Turkey already noticed, about £200,000 has been sent to France, and about £993,000—£111,000 being in gold—to India, China, Manilla, &c.

[illegible] gave the leading quotations :—Brazilian Five per Cents ; Ditto, Four-and-a-Half per Cents, 84 ; Chilian New Six per Cents, 87 ; Ecuador Bonds, [illegible] Mexican Three per Cents, 20 ; Peruvian Five per Cents, [illegible] Russian Five per Cents, 108 ; Ditto, Four-and-a-Half per Cents, [illegible] Spanish Three per Cents, 34 ; Ditto New Deferred, [illegible] Three per Cents, 93¾ ; Ditto, Four per Cents (New Scrip), 18 prem ; Venezuela four-and-a-half per Cents, 80 ; Ditto Two-and-a-Half per Cents, 65¾ ; and Dutch Four per Cents, 96.

[illegible] in Joint-Stock Bank Shares have been less extensive, yet prices [illegible] Agra and Masterman's Bank were realised 34 ; English, Scottish, and Australian, 17¾ ex div. ; London, 53¾ ; London and Westminster, 43¾ ; London and South-Western Bank, 13¾ ; Union of Australia, 73 ; Union of London, 29¾.

Miscellaneous Securities have ruled heavy, and the quotations have the whole undergone a further decline. [illegible] were Six per Cents, 114¾ ; Crystal Palace, 2¾ ; General Screw Steam Company, 1⅝ ; London Docks, 103 ; Victoria Docks, 80 ; North of Europe Steam, 14 ; Peel River Land and Mineral, 1 ; Scottish Australian Investment, new, ¾.

Canal Shares have been dull, and almost nominal. Derby, 84 ; Oxford, 110 ; Regents, 14¾ ; Rochdale, 60 ; Stourbridge, 290 ; Wilts and Berks, 44.

Railway Shares have ruled heavy, and the quotations have given way. The Bank Stock Shares were [illegible] 13¾ ; Vauxhall, 21¼ ; Waterloo, 3⅝.

All Railway Shares have been heavy, and the quotations have given way. The following are the official closing prices on Thursday :—

ORDINARY SHARES AND STOCKS.—Aberdeen, 25¾ ; Ambergate, Nottingham, and Boston 43 ex div. ; Caledonian, 68⅜ ; Eastern Counties, 10⅜ ; Edinburgh, Perth and Dundee, 11 ; Great Northern, 87¾ ex div. ; Great Southern and Western (Ireland), 101 ex div. ; Great Western, 65¾ ex div. ; Lancashire and Yorkshire, 81⅜ ; London and Blackwall, 6⅜ ; London and Brighton, [illegible] London and North-Western, 93⅜ ; [illegible] ; North British, [illegible] ; North-Eastern, [illegible] ; North Staffordshire, 10 ; [illegible] ; South Australian, [illegible] ; South Wales, 32.

LINES LEASED AT FIXED RENTS.—[illegible] ; Lancaster and Carlisle, 17 ; Midland, [illegible] ex div.

PREFERENCE SHARES.—Great Northern, Five per Cent, 109 ex div ; Ditto, Half per Cent, 104 ex div. ; Midland Consolidated, 19¾ ; Ditto, Half per Cent, 9 ⅝ ex div. ; North Eastern (Berwick), 84 ex div. ; Oxford, Wor cester, and Wolverhampton, 106 ex div

FOREIGN.—Antwerp and Rotterdam, 9⅝ ; Belgian Eastern Junction, 2¼ ; East Indian, 5¼ ; Grand Trunk of Canada (A issue), 10¾ ; Great Central of France, 15¾ ; Great Luxembourg Shares, 3⅛ ; Ditto, Obligations, 3 ; Great Western of Canada Shares, 23⅝ ; Ditto, 6⅝ ; Lyons and Geneva, 17⅝ ; Royal Danish, 31.

Mining Shares have been heavy, and the quotations have ruled almost nominal :—On Thursday, Cocaes and Cuiaba were done at 3⅛ ; Great Polgooth 2⅝. Santiago de Cuba have marked 4⅝ ; Tin Croft, 3⅝ ; and United Mexican, 3⅛.

Friday Evening.

Compared with yesterday, the Consol Market has been steady to-day, and prices have an upward tendency. The New Three per Cents are 92¾ ⅞ ; the Three per Cents Reduced, 91⅝ ¾, and the New Three per Cents, 92⅝ ¾. Bank Stock, 217¾. Most Foreign Bonds and Railway Shares are firmer.

THE MARKETS.

CORN EXCHANGE (Friday).—Since Monday we have had a slight increase in the arrivals of English, with an upward tendency. The 1200 quarters of the country left us on Tuesday, up to-day was [illegible] The show of samples was, therefore, trifling. For all kinds the demand ruled steady, and, in some instances, the old wheats produced a little more money than on Monday. The supply of foreign wheat was but moderate. Holders held most kinds above the rates of buyers, consequently, only a limited business was done. We were well supplied with foreign barley, but the show of English was limited. The trade was steady, and full quotations [illegible] Malt moved off steadily, at full prices. Although the imports of oats have been large, the oat trade was steady, at Monday's currency. Beans, peas, and flour supported former rates.

Arrivals this Week.—[illegible] wheat, 1390; barley, 490, malt, 3940; oats, 7000; flour, 1600. Foreign: wheat, 12 ; barley, 11,440; oats, 47,910; flour, 6750 sacks.

English.—Wheat, Essex and Kent, red, 62s. to 72s ; ditto, white, 70s. to 84s.; Norfolk and Suffolk, red, 56s. to 70s ; rye, 40s. to 42s ; grinding barley, 30s. to 32s.; distilling ditto, 33s. to 35s ; malting ditto, 45s. to 52s ; Lincoln and Norfolk malt, 66s. to 68s ; brown ditto, 62s. to 64s ; Kingston and Ware, 67s. to 70s ; Chevalier, 72s. to 75s ; Yorkshire and Lincolnshire feed oats, 25s. to 27s ; potato ditto, 27s. to 28s ; Youghal and Cork, black, 24s. to 27s ; ditto, white, 25s. to 28s., Sligo ditto, 26s. to 28s ; Longprog, 29s. to 33s ; maple, 31s. to 33s., white, 31s. to 37s ; beans, 36s. to 39s. per qr. Town-made flour, 65s. to 70s ; Suffolk, 54s. to 56s ; Stockton and Yorkshire, 54s. to 56s. per 280 lbs.

Seeds.—Canary has advanced 2s. to 4s per quarter, and Rousted is again dearer. New white mustard seed has realised 10s. to 15s. per bushel. Cakes command very full prices, with a moderate supply on sale.

Linseed, English, sowing, 73s to 80s ; Baltic, crushing, 64s to 67s ; Mediterranean and Odessa, 76s. to 78s ; hempseed, 40s. to 50s. per quarter. Coriander, 15s to 24s. per cwt. Rapeseed, new £20 to £23 per last. Linseed cakes, English, £12 to £13 10s ; foreign, £10 15s to £12 5s ; rapecakes, £6 10s. to £6 15s. per ton. Canary, 51s to 54s. per quarter.

Flour.—The prices of wheaten bread in the metropolis are from 7d. to 9½d. per 4lbs. loaf. Households ditto, 7d to 9½d. per 4 lbs. loaf

Imperial Averages.—Wheat, 72s. 7d.; barley, 34s. 9d.; oats, 20s. 3d.; rye, 42s. 7d.; beans, 40s. 9d ; peas, 38s. 8d.

Scotch Market Averages.—Wheat, 78s. 11d.; barley, 34s. 7d.; oats, 23s. 10d.; rye, [illegible] beans, 40s. 1d.; peas, [illegible] 8d.

Irish Market Averages.—*Week.* Wheat, 72,038; barley, 3814; oats, 6631; rye, 141; beans, 2203 ; peas, 534 quarters.

Tea.—Several speculative purchases having been effected, the values of common sound congous have advanced to 9d. per lb., and are quite as dear as last week.

Sugar.—The business doing in our market is less extensive, yet the late improvement in the quotations is supported. Barbadoes has realised 30s. 6d. to 43s 6d. per cwt. for white, and 37s. 6d. to 42s. 6d. for yellow. Mauritius, 37s. 6d. to 41s ; Bengal, 42s. to 44s. 6d. per cwt. Floating cargoes of foreign are steady, and fair to good grocery for refining goods is mostly disposed of at 36s. 6d. to 37s. 6d. per cwt.

Coffee.—Linseed oil is in good request, at 42s. 9d. to 44s. 6d. per cwt. All other oils support former terms. Turpentine is steady, at 36s. 6d. to 38s. 6d. per cwt. For spirits, and 7s. 3d. for rough.

Spirits.—Rum is in fair request, at full prices. Proof Leewards, 2s. 8d. to 2s 9d : East India, 2s. 9d. to 2s. 9½d. per gallon. There is a fair demand for brandy at fully late rates. Malt spirits, 5s. 6d. per gallon. Cognac, 17 under proof, 2s. 3d., and 18 to 19, 2s. 6d. per gallon.

Provisions and Straw.—Mondlow hay, £4 0s. to £6 6s.; clover, ditto, £4 6s. to £6 16s.; and straw, £1 16s.

Coals (Friday).—[illegible] Newcastle, 8s. 6d ; Lambton, 8s. 6d ; Russell's Hetton, 21s 6d ; South Kelton, 21s. 6d ; Tees, 22s.; West Hartlepool, 22s. 6d.

Wool.—Prices [illegible]

Hops (Friday).—About 50 pockets of new hops have come to hand, and the duty has been fixed from £7 to £8 per cwt. Picking will be general in a few days. The value of yearling and two years is difficult to name. The plantation accounts are favourable, and the duty is called £800,000.

Metropolitan Cattle Market (Friday).—The show of beasts here to-day was moderate as to number, and very deficient in quality. For most breeds the demand ruled inactive, at barely previous quotations. Although the supply of sheep was extensive, the mutton trade was heavy, at a decline in price of 2s. per 8lb. We had a very slow sale for lambs, the value of which was with scarcely supported. Calves were in moderate supply and steady request, at the late advances. Pigs were tolerably firm. Milch cows met a slowly sale, at £14 to £18 each, for middling to prime quality.

Per 8lb. to sink the offals. Coarse and inferior beasts, 3s. 10d. to 4s. 0d; second quality ditto, 4s 2d to 4s 4d; prime large oxen, 4s. 8d to 4s 10d; prime Scots, 5s. 0d to 5s. 2d; coarse and inferior sheep, 4s. 4d. to 4s. 6d ; second quality ditto, 4s. 8d to 4s. 10d ; prime large woolled sheep, 5s. 0d. to 5s. 2d ; small coarse Scotchdown ditto, 4s. 8d. to 5s. 0d ; Large hogs, 3s. 6d. to 3s. 8d., neat small porkers, 4s. 0d. to 4s. 6d ; lambs, 5s. 6d to 6s. 8d ; suckling calves, 22s. to 30 s ; and quarter-old store pigs, 18s. to 21s each. Supply to-day, 270 beasts, 700 sheep and lambs, 2,600 calves, 300 pigs, 660 pigs, 660 Foreign beasts, 330 sheep and lambs [illegible] calves, 240

Newgate and Leadenhall (Friday). The trade ruled inactive to-day, as follows—

Per 8lbs. by the carcass :—Inferior beef, 3s. to 3s. 8d.; middling ditto, 3s. 10d to 4s. 0d.; prime large ditto 4s 2d to 4s. 4d ; ditto small ditto, 4s. 6d to 4s. 8d.; large pork, 3s. 8d. to 4s. 0d.; prime ditto, [illegible] to 4s. 6d.; middling ditto, 4s. 8d to 4s. 10d ; prime small ditto, [illegible] to 5s. 0d ; veal, [illegible] to 4s. 10d.; small pork, 4s. 0d. to 4s. 6d ; lamb, 4s. 2d. to 5s. 0d.

ROBERT HERBERT.

BIRTHS.

On the 30th ult., at 5b, Upper Seymour street, Lady Roberts, of a son.

On the 30th ult., at Ryde, the wife of [illegible] of a daughter.

On the 1st inst., at Upper Clapton, the Hon. Mrs. I. Keeler, of a son.

On the 31st ult., at Woolwich, the wife of Mr. Charles Philcox, of a daughter

MARRIAGES.

On the 28th ult., at Thusbury, Somerset, by the Rev. [illegible] C. Trelawney, of Ham, near Plymouth, Arthur G. Boodle, Esq., of Ham, to Emma, youngest daughter of the late Rev. John C. Boodle, of Thusbury.

On the 30th ult., at Whippingham, Isle of Wight, Major [illegible] W. L. Hancock, R.H.Bpdr. Whitby, Yorkshire, son of the late Rear-Admiral Hancock, C.B., to Clara, widow of R. Macdonald, Esq., 74th H. grenadiers, and youngest daughter of [illegible] Trotter, Esq., of Ashes-green, Newcastle-under-Lyme.

On the 30th ult., at the parish church, Huddersfield, by the Rev. F. Smith, Mr. Robert Whitley, Junior, to Mary, daughter of the late Mr. John Senn, woolstapler, all of Huddersfield.

On the 1st inst., at St. Pancras Church, by the Rev. F. T. Atwood, M.A., Vicar of Hornsey-rise, Mr. [illegible] Hammersmith and of Great Grimsby, Lincolnshire, Thos. Hill, Esq., of the Royal Fusiliers, to Mary [illegible] daughter of the late Mr. [illegible] of Lambeth, Lincolnshire.

On the 30th ult., at Eastbourne, Sussex, by the Rev. Dr. Crosse, assisted by the Rev. Charles Caius Wilson, Vicar, the Rev. Daniel Parr Sandford, Curate of St. John's Church, Edinburgh, and [illegible] Chaplain [illegible] to Mary Elizabeth, [illegible] Harcourt, eldest daughter of the late Archdeacon Sinclair.

On the 1st inst., at [illegible] Ernest James Hallam, Esq., of Liverpool, to Catherine [illegible] daughter of the late Andrew Mellis, Esq., merchant, Leith.

On the 1st inst., at [illegible] Mr. [illegible] to Miss [illegible] Aug. 30, at Dublin, Mr. [illegible] Lagg, to Sarah, only daughter of Mr. [illegible]

DEATHS,

On the 25th of August, at Ladbroke-terrace, Notting-hill, Susan, the beloved wife of Robert Cocks, Esq., after long suffering borne with exemplary patience and resignation, aged 40.

On the 30th ult., the Hon. A. W. Chichester, fourth son of the late Lord Templemore, aged 30.

On the 31st ult., in Modena, Ina Rozella, only child, Count de Sells, Privy Councillor and Chamberlain to the late and present Duke of Modena.

On the 28th ult., Henry Forster Godfrey Plumer-st., only child of the Rev. Henry Godfrey Plumer, Incumbent of Lutterworth, Warwickshire, aged seven months.

On the 30th ult., at Tunbridge-wells, of apoplexy, in the 70th year of her age, Sarah N. Ash, the beloved wife of Daniel Bush, Esq., of York-villa, Regent's-park, and third daughter of the late William Chowne [illegible] of Norfolk-island.

On the 2nd inst., at his residence, Packington House, Staffordshire, Thomas Thanet, Sir R. Burton, aged 80.

On the 2nd inst., at Wandsworth-common, Lucy, wife of the Rev. W. H. Tucker, Rector of Burton Bowes.

On the 6th May last, at West Maitland, Australia, whither on a visit to Henry Vindin, Esq., William Kennedy, Esq., of Bellevue, Ayr, N.B., aged 30 years, deeply regretted by his surviving relatives and a large circle of friends, in whom his was endeared by his amiable disposition and many excellences.

On the 30th ult., at Boxlands, near Dorking, Louisa, eldest daughter of the late General Sir James Duff, in the 83rd year of her age.

FIRST TRIAL OF THE MORTARS FITTED ON CAPTAIN JULIUS ROBERTS'S PLAN, AGAINST SEBASTOPOL.

THIS important experiment was made on the 16th ult. At eight o'clock in the morning, the ships all dressed in colours in honour of the Fête de Napoleon—the two French ships firing a salute at noon in the ships. The French had a boat-race; and there were amusements of various kinds on board the *Montebello* and others of their ships during the day. But to the British the most interesting event was the trial of the three new mortar-vessels against Sebastopol.

The day was most favourable, a light air from S.W. just rippled the water along shore, and was the fairest possible for taking the vessels from their anchorage off Kamiesch up to Sebastopol; while there was none of that swell which is so frequent in harbours which would have interfered with their operations more than anything else.

At about eleven o'clock, the vessels weighed and stood up towards Sebastopol (where buoys had been laid for them off the batteries the day before by Captain Wilcox, of H.M.S. *Odin*) and anchored off Picamon Bay, to the westward of Sebastopol: here they remained until two p.m., when they weighed, and stood in for their buoys under direction of Captain Wilcox, by whom they were placed in their position. The *Flamer*, taking her position first, was followed by the *Firm* and *Hardy*—the three vessels being arranged at nearly equal distances from each other; the *Flamer*, being the innermost and nearest to the batteries, was distant about 3600 yards E.S.E. from the Quarantine Battery, which was principally the object of their attack.

The first shell was fired by the *Flamer*, and at once showed that the Quarantine Battery and Fort were within easy range, by falling right into the battery. The first shells from each of the other vessels struck the face of the battery: and the first three shells fired from the *Flamer* [illegible] and all three [illegible] short line (the shells began to [illegible] the centre and range at high into the air). In reply, the Russians at first fired mortars; but finding the shell fall considerably short, they fired two guns at a great elevation, their muzzles pointed into the air like mortars; there were two in the Quarantine Battery which fired principally, and an occasional one from the Quarantine Fort, which is beyond the battery. These guns were directed chiefly on the *Firm*, the shell falling at times falling short—then over and beyond her, or ahead and astern. The greater number of the shells from all the vessels were thrown with remarkable accuracy and precision, and the firing excited general admiration. The shells from the *Flamer* fired twenty rounds, the 8-inch from the Quarantine battery, the next five-and-twenty; the shells from the Quarantine Fort Alexander fifteen, and about 4200 yards, which, with the increased charge from 14 lb. to 16 lb. of powder, she reached as easily, and struck with the same certainty, as she had before done the Quarantine; the shells for parting shell was fired at the Quarantine Battery. At about six p.m. the vessels discontinued firing, and, slipping their buoys, made sail and stood out: as they did so, the Russians began to fire most vigorously from the Quarantine Fort and Battery, and dropped one or two shot very close to the *Flamer*, their precision seeming to increase when they perceived that the vessels had ceased and were preparing to move out; however, they did not succeed in hitting either of the vessels, which made sail very deliberately and standing out with the light breeze, were soon safely at anchor beyond range

The result of this experiment with the mortars slung upon Captain Roberts's plan, has been most satisfactory; the whole of the arrangements answered perfectly, and upon examination after the firing, everything was found quite fit, and not [illegible] The vessels were quite steady and the concussion was not great.

The *Flamer* was under the command of Mr. J. B. Creagh, Mate R.N., of the *Firm* Mr. [illegible] Parrey, Mate R.N., *Pyrenean Expl.*, mortar in charge under direction of Lieutenant J. R. Brookes, R.M.A.

Hardy, Mr. [illegible] Parrey, Mate R.N., *Pyrenean Expl.*, mortar in charge under direction of Lieutenant [illegible] R.M.A.

Firm, Mr. H. K. Lee, Mate R.N., *Odin*; mortar directed by Lieutenant Festing, R.M.A.

Captain Geo. Digby, R.M.A., directed the firing generally.

The Illustration upon the next page, is engraved from a sketch by Mr. Brierly.

VALLEY OF THE BELBEK—CONVEYANCE OF RUSSIAN SUPPLIES INTO SEBASTOPOL.

THE Belbek is about three miles north of Sebastopol; and along its valley Mr. Brierly has sketched the conveyance of [illegible] supplies into the fortified town. He describes long trains of waggons coming out at the beach, and then proceeding along shore, by the road to the northern side of Sebastopol. Great clouds of dust denoted their progress, and filled the whole valley behind them. The high land to the north is the Tchadyr-Legh, or Tent Mountain.

FIRST TRIAL OF CAPTAIN JULIUS ROBERTS'S MORTARS AGAINST SEBASTOPOL.—(SEE PRECEDING PAGE.)

VALLEY OF THE BELBEC.—CONVEYANCE OF RUSSIAN SUPPLIES INTO SEBASTOPOL.—(SEE PRECEDING PAGE.)

THE BATTLE OF THE TCHERNAYA, OR TRAKTIR-BRIDGE.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

BEFORE SEBASTOPOL, Aug. 24, 1855.

It is hardly necessary to dwell upon the importance of the defeat sustained by the Russians at the battle of Traktir-bridge. Our allies think and speak of it with a complacency for which we cannot blame them. Unlike Inkerman, this was, it is true, comparatively a bloodless victory on our side, but its effects have, no doubt, been as great as those which followed the hard-won field of the 5th of November. It discouraged and demoralised an enemy whose spirits had not been high, and showed them in a more striking manner than before, that whether they encountered the British and French, or whether they fought the Piedmontese, they could expect nothing but disgrace in the open field. The failure at Traktir-bridge must have been the more disheartening for Russian soldiers, as they were led on under the most glittering promises of brilliant results from victory. Once possessed of the heights of the Tchernaya a few steps would lead them into Balaclava, which must be unprepared for defence; and thence to Kamiesch was but a few hours' march; after which the Allies would be driven into the sea and the fruits of all their labours for a year wrested from them

CROATS' CAMP AT BALACLAVA.

Then would follow the enjoyments of plunder; and the soldiers were told that they would fatten on the plenteous stores of the English at Balaclava and revel in the French wines stored at Kamiesch That the Russian Generals had not fed the hopes of their soldiers without sharing in the delusion which they had so carefully spread amongst their men was evident from the instructions which they had issued, and which, as was discovered in the pockets of General Rüde, went so far as to make provision for every possible contingency of victory. But all these hopes were doomed to disappointment, and the Russians alike frustrated in their hopes of victory and the certainty of plunder. In one great point which did not appear to form part of the openly-expressed expectations of the enemy, the Russians must have been seriously annoyed. There seems to be little doubt at the present time that the numerous reinforcements lately received by Prince Gortschakoff had seriously taxed the powers of the Commissariat to feed them and keep them supplied with water. The position of the Tchernaya, if won, was such as to afford every facility for encamping large bodies of cavalry, where water would be plentiful enough to afford a supply not easily attainable in the summer months from the fountains in the sunburnt mountains of this portion of the Crimea. The men who were found on the battle-field of Traktir bore the marks of severe privation, and although most of them were of the favoured corps of the Imperial Guard, they were thin and worn in flesh, and showed, not only by their physical appearance, but by the feeble manner in which they fought, that more than one fatal influence had been at work to deprive them of stamina and vigour. How else one could account for the Russian loss of 8000 men killed and wounded, when that of the Allies did not reach that of 1000 men, it is difficult to conceive; but whatever may have been the cause of the Russian defeat, there is no doubt that it has caused a degree of despondency amongst them, corresponding to the elation which is felt and expressed by the French at their victory. On one point connected with this battle-field it is necessary to dwell as it involves the honour of both English and French in the moments of elation caused by victory. The Russians, who left about 1400 dead, and a comparatively large amount of wounded on the field, strewed the ground in their retreat with trophies of various kinds. These, consisting of muskets, swords, money, rings, and valuables of various kinds, were indubitably the property of the victors; and there is no doubt that the Zouaves, who are as expert plunderers as they are brave soldiers, lost no opportunity, even in the heat of the action, of taking from the enemy, and especially from the officers, all that they carried about their persons. Thus it was that in the very heart of action General Rüde's sword, his rings, purse, and other things, and in general the money and ornaments of officers, were carried off and concealed. But besides these first prizes of the field there were others which had a value, and which strewed the ground for many hours after the battle had been fought. The Russians had no sooner retreated when the plain was invaded by followers of the English army, by sellers and sutlers of every nation, who carried off indiscriminately muskets, swords, bayonets, boots, and other things to which they had been entitled by no exertion, and which they had no right to remove Unfortunately the lower class of plunderers had had before them examples of similar conduct on the part of officers in our own army, who thought it no harm to carry off a musket here, a spade there, as trophies of the fight in which they had taken no part; so that it was difficult to blame the former without casting some animadversion on the latter. The mischief, however it arose, did not fail to encourage our allies, whose complaints were loudly expressed on the field, and were echoed by the Commander-in Chief, and finally the loss of the most valuable part of the plunder, the disappearance of the swords and effects of officers—most of which, after they had been taken by the French, were sold to the English—gave colour to the assertion that the entire field had been deprived of its relics by strangers who had not a particle of right to them. In consequence of this a general order was issued by General Simpson, of which the following is a copy, stigmatising the offenders on the occasion, at the same time that it exposes the custom indulged in by the French of selling plunder to strangers, when the whole should be reserved for general distribution:—

The great want of consideration shown by officers and other persons attached to the army in visiting the scene of action, and plundering the dead, or purchasing plunder from others, has been the subject of grave remonstrance on the part of our allies. All property whatever on the field belongs to the victorious nation. To appropriate anything is dishonest. To purchase from those who have done so is to encourage their dishonesty and to share their guilt. The Commander of the Forces hopes that this caution will be sufficient to deter those to whom it is addressed from a repetition of such thoughtless conduct. Followers of the army are reminded that they are amenable to its rules and discipline. The police and provosts will in future receive orders to punish offenders on these occasions in the most summary manner.

Before this order was issued more than one officer of the French army had taken the disputed matter into his own hands; and in more than one instance, within my own knowledge, trophies of the field purchased at a high price were taken away by force from their purchasers, notwithstanding their protests that they were entitled to keep what they had paid for. These instances exhibited practically the results of buyers not inquiring into the title of sellers of these articles. But the examples and the orders of the General-in-Chief have not stopped the traffic of trophies, which are now brought to Balaclava in bags; muskets being freely sold at eight to ten francs, swords at five to six francs, and rings at prices considerably above the intrinsic value of the metal in which they are made.

On the subject of the action of Traktir there are other points to notice also, which are worthy of a passing word. There is a party in the French army whose opinion is loudly expressed, and which blames the Piedmontese for not holding their ground longer in the advanced breastwork which formed the extreme position in their front. I only mention this for the purpose of noticing the little jealousies and rivalries of camps, for there is really no foundation for any accusation of want of energy against the Piedmontese. They held an advanced position, as all advanced positions are, with a few men, forming a picket destined to fall back before an attack in force; and that the picket of 150 men in the breastwork acted with the utmost bravery is proved by the fact that they successfully opposed a Russian division for three-quarters of an hour; and, after they were forced out by numbers, retreated in good order, keeping up their front, and facing the enemy until they fell back on another position.

With regard to the siege, there is little to notice that has not reached England in the curt telegraphic despatches of the General-in-Chief. On the morning of Saturday it was observed that a long pier had been commenced on the north side of the harbour of Sebastopol by the Russians. It was suspected then that this was the commencement of a raft bridge destined to join the north with the south side at the foot of Fort Nicholas. On Sunday these expectations were realised; and on Monday the work was seen to extend into the harbour from the south as well as the north side. From that time to this it has rapidly progressed, and the two bridges are about to be joined in the centre of the harbour. The work appears to consist of a series of rafts made fast along the boom of sunken ships, alongside of which are moored the Russian three-deckers. Opinions are divided as to the objects the Russians have in view in the construction of the bridge; some supposing that it is erected to facilitate a retreat in case of disaster; others, to keep up the supplies on the south side with greater facility than is afforded by the roads, which are within the line of fire of the French works overhanging the vale of Inkerman. It is certain that there are large sheds erected at the head of the bridge on the north side, as if for storing provisions or ammunition.

Prisoners who have recently been exchanged and come from Simpheropol say that the inhabitants have been forced to leave their houses, which have been filled with sick, of whom there are no less than thirty thousand destitute of comforts and medical attendants. The state of the sick is said to be very bad. The death of General Totleben is positively declared to have taken place from cholera, after partial recovery from the wounds which he had received. Totleben, you are aware, was the great engineer of the Russians; who last year was a captain in the service, and who this year was a general and aide-de-camp of the Emperor. Totleben was a pupil at the French artillery school at Metz, and is well known by young men, his contemporaries, who are now serving in the works against Sebastopol. The liberality of the French Government, in admitting strangers into its military schools, was here turned against itself, and the education they have given used to their annoyance; a thing that vexes, at the same time that it is visibly a source of pride, to our allies

The bombardment commenced last week, and, sustained exclusively by us, had the intended effect. It enabled the French to proceed rapidly in their works against the Malakoff. Their approaches are not more than fifty yards distant from the work, and, notwithstanding that a vigorous sortie was made on Tuesday, the Russians did no damage, and were thrown back into their redoubts. The shelling has sensibly slackened on both sides since our object was obtained, and is only kept up on our part with sufficient vigour to prevent the enemy from making repairs at night. In this view the bombardment is kept up with tolerable vivacity at night; and musketry firing forms a shrill treble throughout the dark hours to the deep bass of the large mortars and small "cowhorns" (cohorns), as an artilleryman called them the other day in my hearing. Some ineffectual shots have been fired at the new bridge on the harbour, but hitherto without effect. The French have not opened their batteries as yet, and we are all anxiously waiting to see the effect of one of them on the shipping, which still keeps its position near the boom in the centre of the great harbour. As non-military men may ask how it happens that these ships remain untouched in their present positions, when they are in range of our mortars, it is necessary to explain the reasons of this fact. It is true that Fort Constantine, which is much further than these vessels from the Mamelon, fires mortar-shells into that work with ease; therefore the Mamelon works are within the range. This is true, but the range of a mortar is so uncertain, that a ship is an area too small to calculate upon; and there are 500 chances to one that shells will fall on one side or the other without hitting the object aimed at. Direct fire, therefore, is the only useful means to be employed, and this we anticipate seeing in use shortly.

In the meanwhile the Russians continue their system of firing guns at great elevations, the shot of which come into our camps. Generally these shot have done no harm; but there have been some curious escapes One of them alighted in the tent of the Paymaster of the 55th Regiment, whilst he sat with his clerk making up accounts at a table. The shot alighted on the centre of the table, and hurt neither the paymaster nor his clerk. General Markham and his staff were surveying a new stable, when a shot came and killed one of the horses, and a servant who was carrying a dish in his hand had an arm struck off and his thigh fractured by the same projectile. The guns which sent these interesting shots are buried in the manner I have described to you in a previous letter.

The presence of a numerous force such as we know the Russians possess, has kept us continually on the alert, and turns-out on alarms have been frequent, but nothing has occurred as yet to reward our vigilance.

Some changes have taken place at Balaclava, where Captain Heath relinquishes his post as chief agent for transports, his duties being taken by Admiral Fremantle, who is to be assisted by three commanders, as divisional chiefs of divers portions of the transport fleet. Since I wrote to you on the subject of transport store-ships it has been determined to send all the larger vessels home—smaller and cheaper ones to be used in their stead. This is an approach to improvements which are gradually being made under the superintendence of Sir G. Maclean, Mr. Drake, and other efficient Commissariat officers.

The 56th Regiment, which arrived here a few days ago, starts to-day for Kertch.

The new mortar-boats lately arrived from England have been tried, and found to throw far into the town the largest shells. The next general bombardment will, therefore, when all the mortars on the land side are fixed, be a terrible one.

I send you a sketch of the Battle of Traktir-bridge. (We shall engrave this next week. The view engraved upon the preceding page is from a sketch by an officer engaged.)

P.S., August 25.

Last night the rumour of an impending attack of the Russians on the right wing of the Allies was spread through our Camp; and it was supposed that early in the morning the Russians would attack the positions of the Sardinians near Tchorgoun. At one o'clock the Highland brigade turned out and marched to the Tchernaya, and every preparation was made to meet the expected onslaught. Hours passed away, however, and no enemy appeared. The Highland brigade, therefore, had its night march for nothing, and returned a few minutes ago into Camp. The Russians, though they did not make the anticipated movement, threw themselves upon the French advanced works in front of the Mamelon, where they met with no success. They were repulsed with vigour, and retired after a short struggle. The firing, whilst it lasted, was very heavy; but chiefly consisted in mortar-shells from each side.

To-day no traces of the engagement appear; there, however, like their advanced works in force. There has been but little firing during the early part of the day. The bridge across the harbour is nearly finished, and, as yet, no damage has been done to it by our shells.

Lord Stratford de Redcliffe arrived here this morning at eight o'clock, and the ceremony of distributing the honours of the Bath is at this moment proceeding.

Our Correspondent has sketched the Crosts' Camp at Balaclava, a picturesque scene. Of their activity in the Commissariat department mention is made in our Correspondent's preceding letter, at page 310.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Sir,—A fortnight ago, a question was addressed to me in your paper on the subject of an old publication on the Game of Chess. You would greatly oblige me by inserting in an early Number of the ILLUSTRATED LONDON NEWS an answer to the following effect:—

The only known printed copy of the French collection of ancient Chess Problems, commonly called "Sen Syit," is extant in the Imperial Library at Vienna. I have seen it there myself and examined it minutely. Though it bears no date, I think it must have been printed in 1530, or even somewhat earlier. It is a most curious publication, since it gives in France, at the same period "Mesrel's Schachzabel" did so in Germany, the last specimens of End-games in that old manner of play which formerly was equally practised in all countries, from the waters of the Ganges to the shores of the Atlantic Ocean. Dr. Forbes, in his highly-interesting articles in the ILLUSTRATED LONDON NEWS, has just called again the attention of amateurs to this ancient Game, but he has not yet been able to determine how it came that the different moves of the pieces were changed into our modern game of Chess.

Believe me, Sir, yours most respectfully,

Brussels, August 25th, 1855. V. d. L.

THE SCOTTISH INDUSTRIAL MUSEUM.—The Government, desirous to render the collections of the new Industrial Museum for Scotland useful to the students of the University, appointed Dr. G. Wilson, the director of the Museum, Regius Professor of Technology, or of the applications of science to the useful or economic arts. The subjects with which the professor will be chiefly concerned are glass-making, porcelain, dyeing, tanning, paper-making, colour-making, and, indeed, all the applications of physical science to the strictly utilitarian purposes of life

WILLS.—The will of Richard Blakemore, Esq., formerly M.P. for Wells, was proved under £130,000 personalty; Henry Perkins, Esq., of Hanworth park, £180,000; General Richard Tuckell, K. L. C. S., £10,000; General Walter Tremenheere, K.H., £8000; Colonel Henry Le Blanc, Major Royal Horse Guards, Chelsea, £7000; James Pope, Esq., St. John's-wood, £25,000; Frederick Dawesbury, M.D., Lower Clapton, £15,000; Rev. Benjamin Conway Conway, of Bath, £14,000; Philip George, junior, porter brewer, of Bristol, £10,000.

CHESS IN THE METROPOLIS

In his suggestive speech at the Leamington meeting, the other day, Lord Lyttelton very appositely remarked that the occasional reprint, with copious explanations, of good old games, would prove an exhaustless source of interest and instruction to the rising player. We have long been of this opinion, and should long ago have acted upon it, but that the demands made upon our space by the current chess of the day were more than it was easy to satisfy. Now, however, that there is less pressure in this respect, we shall endeavour to carry out the idea by presenting, whenever an opportunity occurs, some good examples of bygone Chess, illustrated by explanatory and critical observations, from the best works of the last twenty years.

The following well-fought game was played some years ago between Mr. STAUNTON and Mr. STANLEY, the Chess Champion of the United States—the former giving the odds of the Pawn and two moves.

(*Before playing them, the reader must remove White's K B Pawn from the board.*)

		45. K R takes P	P to Q R 3rd
		46. K to K Kt 4th	

And in a few moves White resigned.

(a) In the "Chessplayer's Companion," where the odds of the Pawn and two moves are treated of at greater length than in any other work, it is remarked that the first player, instead of advancing the P to K 5th, may gain an excellent game by taking P with P or moving P to Q 5th.

(b) This gives a safe game, but we prefer the more vigorous and attacking move of P to K R 4th.

(c) If he take the Pawn here, the first player should not retake, but march up with P to K B 5th.

(d) The play at this point looks hazardous and speculative; but, on examining it, we soon find that every move was deeply planned, and must have been thoroughly considered.

(e) His best play undoubtedly

(f) If he had taken the Kt, Black would have drawn the game at least by taking the K R P with Kt, checking, &c

(g) Had he played the more tempting move of B to K B 6th, Black would have won the game to a certainty by playing K R to K sq

(h) Pretty resolved, since White would be mated if he took this Bishop with his own.

(i) It is rare, even in the gallop days of Chess, when the present games were fought, to meet with anything more interesting than this combination, or more admirable than the play of Black.

(k) Had he given check with the Queen at K R 8th, Black would obviously have won off-hand

(l) The coup juste

(m) The student must observe that, if White had taken the K B Pawn, his adversary might have forced an exchange of Queens, by the simple process of checking first at K R 3rd, and then at K Kt 3rd

(n) We have now an End-game of singular beauty. Never, perhaps, was the power of two Rooks against a Queen so strikingly exemplified.

(o) His best move.

(p) Black's play throughout this fine termination is not to be surpassed. Every move is a study.

(q) To guard against the threatened check at Q Kt 5th

(r) Most ingenious, truly. If White take the Rook, then follows R to K Kt 4th, and, after gaining the Queen for his two Rooks, Black would win easily with his two Pawns.

CHESS ENIGMAS.

(From the *Wiener Schachzeitung.*)

No. 935.

White: K at K 2nd, Q at K B 6th, R at K B 2nd, B at Q Kt 4th, Kts at Q 6th and Q Kt 6th.

One dozen of this delicious beverage in quart bark bottles (as to the quality of which it is forwarded carriage-free to any London, hamper and bottles included, on receipt of post-office order for 30s., payable to THOMAS PAUL DE LASAUX Wine-Merchant, Canterbury.

MALT MILLS with SMOOTH ROLLERS,
as required by Act of Parliament. These Mills, of the best Description, at the Lowest Prices, are to be obtained of M. DRAY and CO., Machinists and Engineers, Swan-lane, Upper Thames-street, London-bridge. Engravings, with Descriptions, forwarded by post free.

S. MORDAN and CO.'S MANUFACTORIES,
22, City-road, London.
PATENT EVER-POINTED PENCIL.

S. Mordan and Co.'s caution the Public in purchasing this useful article to see that the Inventor's name be engraved on every pencil case. A quantity of counterfeits are constantly pressed on the public, as they yield a greater profit to the salesman, but will be found of no value in use. These remarks apply also to S. Mordan and Co.'s Patent Lancets, for replenishing the same.

PENCIL CASES.

S. Mordan and Co. beg to inform the public that they are enabled to supply a genuine pure Cumberland lead (SAWING PENCIL, without a particle of grit, or any other impurity. S. M. and Co. have no hesitation in asserting that such excellent pencils in every respect have never yet been produced; and in confirmation of the highest testimonials from the first artists, several orders of the Queen have been received. The following is an abbreviated List:—

Charles Barry, Esq., R.A.	Thomas Creswick, Esq., R.A.
C. L. Eastlake, Esq., R.A.	Philip Hardwick, Esq., R.A.
J. K. Hennel, Esq., R.A.	Sophy Fielding, Esq., P.W.C.A.
Jackson Mansfield, Esq., R.A.	W. Wyon, Esq., R.A.
Richard Westmacott, jun., Esq., R.A.	David Roberts, Esq., R.A.
P.R.S.	J. T. Williams, Esq., A.R.A.

H. G. Wilson, Esq., Director of the Government School of Design.
S. MORDAN and CO. S PATENT COMBINATION LITHOGRAPHIC and COPYING-PRESS.

By the aid of the most simple mechanical arrangements, the Patentees have succeeded in producing a most efficient and Portable Printing and Copying Machine, equally well adapted for the Counting-house, Office, or Library. With this Press every person may readily become independent of his Printer.

This combined Machine is produced at a less cost than the cheapest Lithographic Press in the market; and in addition to its capability of doing the work of a Lithographic Press, it is an excellent and perfect Copying Press, as that it may be said that this latter qualification is obtained by the purchaser gratis.

The above can be purchased of all the leading Jewellers and Stationers

COLONEL FLEURY
(FIRST EQUERRY TO THE EMPEROR).

THE career of this brilliant cavalry officer and remarkable man presents few facts of more importance than his adhesion to the cause of Prince

COLONEL FLEURY, FIRST EQUERRY TO THE EMPEROR OF THE FRENCH.
FROM A PHOTOGRAPH BY DISDERI, OF PARIS.

Louis Napoleon in 1848. Young M. Fleury inherited a considerable fortune, which he spent in those seductive pleasures so tempting to young men who combine an ardent temperament with an elegance of taste. In the course of his travels in search of pleasure, M. Fleury was introduced to Prince Louis Napoleon in London, and carried away from this presentation an impression which he appears to have preserved even in the heat of African warfare and the distractions of camp life. Having spent his fortune, young Fleury at once embraced the military profession, determined to carve his way back, with the point of his sword, to the goddess who had deserted him. He started for Africa, where he wished to serve in the Spahis—for here he was certain to find himself at the post of danger—at the post of honour. We find him twelve years later a conspicuous man. He had bravely fought; he had had several horses killed under him; he had been decorated on the field of battle. In 1848 he returned to France with the rank of Chef d'Escadron. Prince Louis Napoleon had just arrived in Paris. Commandant Fleury, true to his souvenir of the interview he had had with the Prince before his departure for Africa sought out the illustrious candidate for the Presidentship, and offered him his sword and that of his companions-in-arms. Later, when the Prince, become President, found factions creeping about him, seeking his ruin, he turned to Colonel Fleury, and confided to him the task of seeking in the army of Africa for those men who would stand by the nephew of the great Napoleon. The friend of men like St. Arnaud, Canrobert, Bosquet, and Pélissier, Fleury continued to group about the Emperor the men who had bravely fought upon the burning plains of Africa. In return, the Prince, become Emperor, made Fleury his First Equerry and Aide-de-Camp; and it is under the Colonel's guidance that the Imperial stud has acquired the fame it now enjoys. To Fleury his Imperial master also confided the formation of the Guides, which he now commands, and which, under his rule, has become splendid, an almost matchless, regiment of cavalry.

THE FRENCH MINISTER OF JUSTICE.

M. ABBATUCCI, the present Minister of Justice in France, is the member of a family long allied with the fortunes of the Napoleon dynasty. If this family is illustrious by its origin, it is still more so by its services. Three of its members in former times died Generals in the service of the Venetian Republic. Amongst these Jacques Pierre Abbatucci could count a grandfather, an uncle, and a brother. Born in 1726, inheritor of their nobility and valour, he received his education at Padua, where the consideration which his character and talents gave him excited the jealousy and balanced the influence of Paoli. After disputing with him during a year the generalship of the island of Corsica, more patriotic than ambitious, he yielded to his rival the command-in-chief, and valiantly seconded him in the war that Corsica sustained for its independence against the Genoese. When France commenced the conquest of his country in 1775, he was one of the last to yield, but when he saw that all resistance was impossible he gave in his frank and loyal submission. Nevertheless, his Republican principles caused him to be suspected, and M. de Marbeuf, the French Governor, caused an unjust condemnation to be pronounced against him. The whole island mourned, and the parliament of Provence repaired, by an acquittal, this impolitic severity. Reinstated in his grade, named Chevalier of Saint Louis, and in 1790 Maréchal of the Camp, he sustained in 1793 the part of France against Paoli and the English invaders of Corsica. He was then obliged to enter France, and resided at Marseilles as General of Division. In 1796 he returned to Corsica, which had just been evacuated by the English. Here in 1812 he died, lamented by all the inhabitants of his canton, to whom he was a father. He left four sons, of whom three have perished on the field of battle.

Charles Abbatucci, the second son, was born in Corsica in 1771. He left the School of Metz, as Lieutenant, in 1789, and three years afterwards became Captain. The first cannon-shot heard on the Rhine was fired by Abbatucci, who alone managed a piece. In this way he sank a vessel which was descending the stream. As Aide-de-Camp of Pichegru, he, with this General, made the campaign of Belgium and Holland, and became Adjutant-General. After having prepared the passage of the Rhine at Kehl, for General Moreau, he became General of Brigade, and took possession of Friburg, Donaueschingen, Stockach, and Memmingen. He displayed great courage in crossing the rapid course of the Rhine, and the brilliant feats of arms which he effected during the remainder of the campaign of Moreau elevated him to the rank of General of Division. Death tore him from his country at the moment when he was surpassing himself in ability and courage at the defence of Huningue in 1797. He expired at the age of twenty-six, having the reputation of one of the most able captains and best citizens who have figured in the history of France.

M. Jacques Pierre Charles Abbatucci, a member of this noble family, a nephew of this valiant soldier, the grandson of Jacques Pierre Abbatucci, and the subject of the present notice, was born at Zicavo, in Corsica, in 1792. The young Abbatucci, after having finished his studies at the Lycée Napoleon, and gone through a course of law at the school of Pisa, entered the magistracy, where he gave evidences of his talent and knowledge of jurisprudence as Procureur du Roi; and afterwards, in 1818, as Councillor of the Court of Appeal at Bastia.

After the Revolution of July he became President of the Court of Orleans, and was elected deputy for Corsica in 1830. Deputy for Orleans, in 1839, he put himself with the party of the Left. Exact in the fulfilment of his duties, he took an active part in the labours of the committees. He was one of those inquiring politicians, who embarrassed the Ministers by the elements of attack which they furnished to the Opposition. He was inflexible when the Civil List sought from the magistrate a judicial complaisance. Nor could the Ministers count upon him in the Chamber. Although holding these severe principles, he had a conciliating spirit. Like his old friend at the Lycée Napoleon, M. Odilon Barrot, he was a strong supporter of electoral reform. In the revolution of February he was called to the Court of Cassation. As far back as 1840 he had refused to become First President at Grenoble that he might remain faithful to his engagements with the electors of Orleans. In 1849, in his fifty-eighth year, and after thirty-three years of judicial service, he sought to retire. It was to be expected from his antecedents that he held in the Constituent Assembly the incompatibility of national representation with salaried functions.

M. ABATUCCI, THE FRENCH MINISTER OF JUSTICE.

During the continuance of this Assembly he was President of the Committee of Legislation. He voted also against the ambiguous proposition of right of work, for the diminution of the duty on salt, and for the nomination of the President of the Republic by direct suffrage.

His sympathies and the ties of family impelled him towards the Prince President, with whom he has always been closely allied. His excellent sense enabled him to see in the coup-d'état of December and in the maintenance in power of the man he esteemed, the safety of the new order of things for which he had ardently laboured.

As a reward for his devotion and his long services, he has been raised to that eminent rank for which his profound learning and his known integrity well fitted him. He has worthily performed the functions of Minister of Justice. In 1815 M. Abbatucci married Mdlle. Euphrasie Colonna d'Istria, by whom he has:—Charles Abbatucci, who has taken a part in legislature at his father's side; Antoine, once Captain of the Zouaves, now Chef de Bataillon in the 18th Regiment of the Line, three times wounded before Sebastopol; Severin, deputy for Corsica; and Mdlle. Abbatucci.

HER MAJESTY'S DEPARTURE.—THE ROYAL YACHT LEAVING BOULOGNE HARBOUR.—(SEE PAGE 290.)

HER MAJESTY'S VISIT TO ST. GERMAINS.—(SEE NEXT PAGE.)

THE QUEEN'S VISIT TO FRANCE.

We this week resume our series of illustrations of this great international event.

THE VISIT TO ST. GERMAIN'S

The Imperial cortége arrived at St. Germain's from St. Cloud at one o'clock on Saturday, with an escort of the Guides. The Emperor and Prince Albert and the Queen and the Princess Royal travelled in the first carriage. The Prince of Wales, Prince Napoleon, and other members of the Royal party were in the second carriage; and were followed by several other carriages containing the members of the suite. Fresh horses and escorts having been obtained at St. Germain's, the Imperial carriages passed rapidly through the town to the Château la Muette, about six miles distant, where a splendid hunting equipage was in readiness, but was not put into requisition. The Royal party then proceeded to the hunting lodge called La Muette, situated in the midst of the forest, at about two leagues from the town. Here they found a large crowd surrounding the building, and a body of young girls, dressed in white; also the band of the Guides stationed beneath the trees. There were a number of huntsmen and foresters of the Imperial household, dressed in their picturesque costumes of the time of Louis XV. The Royal party lunched at La Muette, and whilst they were doing so the band of the Guides played several *morceaux* from the "Vêpres Siciliennes" and other popular operas; the hunt-men also repeatedly executed brilliant *fanfares* on large French horns. After luncheon the Queen, leaning on the Emperor's arm, made a tour of the building, and was greeted with the accustomed cheers of the crowd. Her Majesty afterwards amused herself for a while in sketching some of the splendid views which the hunting lodge commands. The band, in the meantime, having advanced to the lawn, continued to play. At half-past three o'clock the illustrious party left La Muette, escorted as before by the Guides, and, after a splendid drive through the forest, went to the palace in the town. The Queen visited with much interest the various apartments occupied by the last of the Stuart Kings, and especially noticed that in which he was accustomed to pass much of his time in prayer. Both on arriving and leaving the Queen was greeted with enthusiastic acclamations of "Vive la Reine!" The Royal cortége, which continued to be escorted by detachments of the Guides, went at a walking pace through the town, and then proceeded, by Vesinet, Chatou, and what is called the route de l'Empereur, to St. Cloud.

The weather was splendid, as usual; and the party were evidently intent upon spending a quiet day in the country; but apart from the historic interest attaching to the scene of the exiled James II., apart from the circumstances that here Louis XIV. and Charles IX. were born, and that James's tomb, erected by George IV. and repaired at the expense of her present Majesty, is here situated; the park, the forest (covering 8000 acres of land), and the stately terrace (20 feet wide, and half a league in length), whence a splendid view of Paris is obtained, are attractions sufficient to tempt the most fastidious.

ARRIVAL OF THE QUEEN AT VERSAILLES.

The large Engraving shows the arrival of the Imperial and Royal party at Versailles, where the cortége entered the Palace by the central gateway in the grand front. This View shows the vast extent of the Palace seen from the town, whence it is approached by the Place d'Armes. The Grand Court, 580 feet in breadth, is separated from the place by stone pyramids, flanking an iron railing, richly charged with gilded ornaments; and the central gateway is surmounted by the ancient crown shield of France, charged with the three fleurs-de-lis. At the extremity of this railing are groups of figures in stone; those on the right representing France victorious over Austria, by Marsy, with the statue of Peace; those on the left, France victorious over Spain, by Gruyère, with a figure of Piety. The Court itself slopes from the Palace, and on each side is a plain range of buildings, erected by Louis XIV. for the use of his Ministers. In front of these stand six-teen marble statues: those on the right are Richelieu, Bayard, Colbert, Jourdan, Massena, Tourville, Duguay-Trouin, and Turenne; those on the left are Suger, Du Guesclin, Sully, Lannes, Mortier, Suffren, Duquesne, and Condé. In the midst of the upper part of the Court is a colossal equestrian statue of Louis XIV.; the figure of the monarch by Petitot, and that of the horse by Cartelier. This is one of the best statues at Versailles. We need not here recapitulate the several courts. The lofty building seen on the right is the Chapel, the architecture of which is remarkably bold and elegant. It is ornamented with Corinthian pilasters, and a balustrade crowned by twenty-eight statues. The height of the roof, richly crested with iron work, causes this building to be seen above the Palace from almost every side, and is said to have resulted from a design of the architect to force Louis XIV to raise the whole Palace another story.

The arrival of the Imperial and Royal visitors was fully detailed in the ILLUSTRATED LONDON NEWS of last week.

On the evening of the Fête, on Saturday, the vast court and its wide-extended entrance were lighted up by clusters of ground-glass globes, and the whole distance from the Place d'Armes to the Barrier of Versailles, along the St. Cloud road, was brilliantly illuminated

We took of the lighting Palace and Gardens during the fête was £6520.

THE GRAND TRIANON AT VERSAILLES,

Which was visited by her Majesty on Tuesday, is engraved at page 304. It is a villa at the extremity of the Park, and was built by Louis XIV., for Madame de Maintenon, after the designs of Mansard. It is in the Italian style, consisting of one story and two wings, united by a long gallery pierced by seven arcades, and fronted with Ionic columns and pilasters in Languedoc marble: the wings are similarly ornamented.

The garden of the Grand Trianon is laid out in a style similar to that of Versailles, and contains several fine fountains, the chief of which is the cascade, in Carrara marble. There are many excellent pieces of sculpture in various parts, and among them two portraits of Louis XV. and Maria Leczinska, in allegorical groups, by Coustou. The grounds in the rear are laid out in groves cut into labyrinths. The Grand Trianon was always a favourite residence of Louis XIV., Louis XV., and Louis XVI.; Napoleon also frequently resided in it, and made a direct road from thence to St. Cloud.

THE SUPPER IN THE PALACE THEATRE AT VERSAILLES.

The superb scene was described in the ILLUSTRATED LONDON NEWS of last week. At half-past twelve the Imperial party left the ball-room, and proceeded to the theatre, where supper had been prepared. The blaze of light here from a vast number of lustres suspended from the roof was tremendous, and the *coup-d'œil* was exquisite. The pit had been boarded over, and in the large space so formed forty tables with ten places each were disposed for the guests. These tables had been designated by the names of ladies to whom the Empress had given the mission of doing the honours of them. The ladies so appointed had the privilege of inviting whatever guests they pleased to sup with them.

THE BALL AT THE HOTEL DE VILLE.

(From our Special Correspondent.)

Already the halls of the Hôtel de Ville had become celebrated throughout Europe. Tens of thousands of people have wandered through those noble suites of rooms—here glowing with gold, and with the treasures of art—there delicately draped with the palest blue, spangled with golden bees and stars. Here the visitor finds himself suddenly in the splendid throne-room, and thence he wanders along the beautiful Galerie des Tableaux, and glances into the covered court of Louis XIV., where fountains approach cascades dance and murmur amid banks of exotics. And then the grand staircase, beautifully carpeted, brilliantly lighted, and exhibiting in its long perspective crowds of sparkling uniforms and, on a ball-night, many-coloured toilettes, is a scene which no visitor forgets. Nowhere in Europe, in short, are municipal hospitalities dispersed in saloons so extensive, and gorgeous, as in those recently relitted in Baron Haussmann's official residence. I remember clearly the grand fête given here in 1851, to celebrate the prorogation of the Great Exhibition authorities and the Lord Mayor, in Paris; but it was a private party, an unostentatious reception of a few friends, when compared with the scene of the 23rd of August, prepared in honour of the Queen of England. People who had been to the last winter balls of the Hôtel de Ville, appeared to think that it was impossible to go beyond them in point of decoration. They displayed a decided ignorance of the effects possible to French humanity and taste.

As daylight faded from the horizon crowds began to advance along the splendid Rue de Rivoli, packing themselves in all unoccupied positions likely to command a view of the Royal and Imperial cortége on its way to the Ball. Lights broke from every window through coloured paper lanterns; stars beamed over sculptured door-ways: illuminated words of welcome stood clearly forth from the gathering darkness. Then, above all, sharply marked against the deep blue sky, an electric light burst from the summit of the old Tour St. Jacques! You could read in any part of the street. The houses were white as alabaster, and, with the coloured lanterns swinging in the windows, looked like gigantic specimens of the plaster houses lit up, which Italian boys used to carry about London streets after dark. In all this light and colour the noisy crowds, which lined the streets, and almost defied the orders of the police and soldiers to keep the way clear, looked dark and sombre, and fantastic as melo-dramatic demons. I walked along the cleared space, and so had an excellent opportunity of seeing the marvellous illuminations which a mot converted the Rue de Rivoli into a long gallery to the ball-room. But even this street was dark, when compared with the square open space before the Hôtel de Ville itself. Here immense obelisks of fire gave a fairy aspect to the place, while the facade of the hall, illuminated in every part, sent back the flood of light to the centre of the square, where it fell upon the cuirasses of the mounted Municipal Guards, and lit up the gossamer dresses of ladies who were threading their way between rows of dark carriages to the entrance.

Once within the reception rooms the visitor became utterly bewildered with the endless suites of gilded rooms, the ever changing company, the long curtained corridors, the thousands of superb exotics, the mobs of Parisian and English celebrities. But undoubtedly the Court of Louis XIV., with its central staircase of honour, superbly lighted from the high glazed roof to the floor, with waters playing here and there amid flowers, was the great success of this fairy fête. This magnificent scene our Artist has represented at page 305. At the bottom of this Court a double staircase had been erected, completely of open work, in the style and design of the stairs at Fontainebleau, and resting on a vast basin, in the midst of which rose the united statues of France and England. Two other semi-recumbent statues represented the Seine and the Thames pouring out sheets of water from their crystal urns. Tritons, water-nymphs, and fairies, cast on the model of the cupids of Versailles, sported in the water, or reposed in grottoes and water-lilies. At the base of each column beds of flowers were placed. A gallery of flowers was constructed along the whole length, the roof rose-colour and gold, and from the centre of the open-worked ceiling an enormous lustre hung, containing 600 wax lights. The effect was magical. At every story a row of lustres, enclosing the Court, formed a quadruple row of lights. Crimson velvet draperies with gold fringe hung from every window, with the initials entwined of her Majesty the Queen of England and Prince Albert, and of their Majesties the Emperor and Empress. Above the gateway, in the centre of a magnificent trophy, was emblazoned a double shield with the arms of England and of France.

This superb ball is stated to have cost £12,000.

THE ARC DE TRIOMPHE DE L'ETOILE, ILLUMINATED.

In the large central Engraving is represented this magnificent monument of triumph, illuminated in honour of the Royal visit. The monument consists of a vast central arch, 90 feet in height by 45 feet in width, over which rises a bold entablature and an attic. There is also a transversal arch, 57 feet high and 25 feet wide. The total height of the structure is 152 feet; its breadth and depth are 137 feet and 68 feet respectively. The four of the building are towards the Champs Elysées and Neuilly. Each pier of the principal fronts is ornamented with a projecting pedestal, supporting groups of figures, in alto-relievo. The impost of the main arch runs in a bold cornice round the four sides; the spaces between which and the frieze of the general entablature contain compartments filled with alti-relievi. The frieze is entirely occupied with sculpture, and the cornice above, which is of unusual boldness, presents at intervals projecting lions' heads. The attic, also, crowned by a cornice and plinth, ornamented with masks, is divided into compartments by plinths, each of which bears a laureled sword, while the compartments have a circular shield in the centres, inscribed with the name of some great victory. The vaults of all the arches are cut into floral compartments with roses, and the spandrils are adorned with colossal allegorical figures. The internal sides of all the piers are inscribed with the names of victories; under the transversal vaults with the names of generals. The northern pier of the eastern principal face bears on its pedestal a group representing the departure of the troops in 1792. The dimensions of this and of all the corresponding groups are, in total height, 36 feet, and each figure 18 feet. The southern pier of the same front has the triumph of 1810, represented by Victory crowning Napoleon. Fame surmounts the whole, and History records his deeds on a polished tower at his feet. On the western front the group of the southern pier represents the resistance of the French nation to the invading armies of 1814. That on the northern pier is the Peace of 1815. A warrior is seen sheathing his sword; another, more aged, is turning a ploughshare. Agriculture and industry, while a mother and children are seated at their feet, and Minerva, crowned with laurels, sheds over them her protecting influence. The most admired ornaments of this arch are the alti-relievi of the compartments above the impost-cornice. All these groups are in antique costumes, being allegorical; these, on the contrary, are valuable, as faithful representations of the uniforms of the times.

The construction of this magnificent arch occupied several years, and cost nearly half a million sterling.

THE CATHEDRAL OF NOTRE DAME.

The view of this beautiful edifice, at page 312, shows to advantage the striking features of the exterior of the front and its vast flying buttresses, fronted by crocketed pinnacles, which rise from the outer walls of the chapels. This, the southern side, is plainer than the northern, having been, in part, blocked up by the Archiepiscopal Palace.

The portal of the southern transept, called Portail St. Marcel, is pinnacled and ornamented with bas-reliefs.

Above the porch is the great rose-window, and over it a smaller one; the gable, flanked by two turrets, supports a statue of St. Stephen. On the sides of the entrance are eight bas-reliefs, taken from the saint's life.

The fronts of the lateral canopies of the porch contain bas-reliefs representing St. Martin giving having half his mantle to a mendicant; and Christ, accompanied by two angels, carrying the soul of St. Stephen to heaven. In niches are two large statues of Moses and Aaron. Adjoining this is the new sacristy of the church, communicating by a short passage with one of the chapels of the choir. It has a splendid ogive window, flanked by niches in front; two narrower windows are pierced in the lateral walls. The eastern body has two, the western one, three. The roof is surmounted by an octagonal turret, and an open-worked parapet runs along the cornice. The corners of the building are buttressed, and crocketed pinnacles complete the design.

The grand, or water, front of the Cathedral was engraved in our Journal for August 26th.

QUEEN VICTORIA AND GENERAL CANROBERT.

The following is an extract from a Paris letter of the 1st instant:—

Her Majesty the Queen of England gave every token during her stay with us of the admiration she entertained for the noble army of France. Of this none was more grateful and gracious than her behaviour to General Canrobert, in whom her Majesty saw the representative of the army and the old General-in-Chef.

General Canrobert, who had only arrived the day before the entry of the Queen, was detained in his own apartments by fatigue and fever. He was unable to accompany the cortége that went to meet and escort her Majesty, nor could he in the evening repair to St. Cloud. The Queen deigned to remark his absence, and to express her regret. On the next day (Sunday) the General received an invitation to dine at St. Cloud by order of the Emperor. He was waiting in the drawing-room with the other aides-de-camp and guests of the Emperor, when the Queen entered, leaning on his Majesty's arm. As soon as she perceived the General she advanced to him and expressed to him, in the most handsome manner, how happy she felt in being able to thank him for the good understanding he had always maintained with her army, and to congratulate him on the great achievements of the French army under his command.

When the guests came to the dining-room General Canrobert prepared to take his seat near the spot where he happened to be; but the Queen made him sit on her left hand. During dinner she conversed a good deal with him, and seemed eager to learn from his lips any details respecting the state of the Allied armies, and the management and probable issue of the war. I think I am able to state that General Canrobert, though more alive than any one to the difficulties of the enterprise, entertains not the least doubt respecting the success of the Allied before Sebastopol.

On Monday General Canrobert was invited to the apartments of Prince Albert at St. Cloud. He had been there some time, in conversation with the Prince about the war in the Crimea, when the Queen entered without being announced. The General prepared to leave, but the Queen detained him. She sat down, and seeing that the General remained standing, she graciously requested him to be seated. She then told him that, with the sanction of his Majesty the Emperor she had conferred on him the Grand Cross of her Order of the Bath, as a testimony of her gratitude for the services he had rendered to her army. In this interview, which the Queen deigned to prolong, she again spoke to General Canrobert with the utmost kindness respecting the merits of his individual command, and of the fine conduct of the French army.

On the day of the Queen's departure General Canrobert formed part of the cortége that accompanied her Majesty to the terminus of the Eastern Railway. On his return he was recognised in the Faubourg St. Denis, and received a real ovation. The enthusiasm of the people assumed such a character that an account of it was given to the Emperor, who said, "They have acted quite right!"

À SA MAJESTÉ LA REINE VICTORIA.

WELCOME.

(A Monsieur le Redacteur de l'Illustrated London News.)

Paris, 30 Août, 1855.

Monsieur,—Si vous voulez bien donner, dans vos colonnes, une petite place aux vers ci-inclus, que j'ai eu l'honneur d'offrir à Sa Majesté la Reine Victoria, je vous en serai très-reconnaissant.

Agréez, je vous prie, Monsieur, l'assurance de ma considération très-distinguée.

LOUIS BOIVIN,

51, Avenue des Champs Elysées.

I.

Oui, Madame, chez nous vous êtes bienvenue,
En vous ouvrant ses bras, la grande ville, émue,
Inscrit au livre d'or des meilleurs de ses jours,
Un fait qu'avec orgueil nous y lirons toujours.

II.

Longtemps l'un contre l'autre en armes,
On vit deux peuples généreux
Mêler et leur sang et leurs larmes
Aux flots que la mer roule entre eux.
Un jour, enfin, de la victoire
Lassés non moins que de vos rêves,
Ils ont voulu d'une autre gloire
Donner l'exemple à l'univers.
Bientôt, de nobles pensées,
Suivant aux hautes sphères,
Aux arts de la paix s'inspirèrent,
Et des merveilles, des trésors
Étonnent, ravissent le monde.
Les deux peuples, toujours rivaux
Dans leur activité féconde,
Luttent de bienfaisants travaux.

III

Mais une agression sauvage
Trouble la paix du genre humain,
L'appel d'un peuple qu'on outrage
A retenti:—"Debout! Votre main dans ma main!"—
Soudain accourt la France à l'Angleterre,
Franchissant d'un seul bond, pour s'unir, leur détroit;
"Amis, ne saffions pas que jamais, sur la terre,
Nous devons, ensemble, être un jour!
Montrons qu'au fier jeu des batailles
Nous sommes fer à comme autrefois,
Mais que l'abat aime sanctifiés
Et meure, au besoin, pour Dunois!"

IV.

Français, Anglais, allons, courage!
A l'ennemi battre nos cris,
Oublions tous Rob... et Bouvines!
Londres et Paris sont deux sœurs.
Lorsque sous la même bannière
Ces nobles meurent nos soldats,
La Manche n'est plus la frontière,
C'est l'entrée des deux États.

V.

Une alliance qui se fonde
Sur les nobles instincts du cœur
Devra, Madame, rendre au monde
L'ordre, la paix et le bonheur
Un jour, nos neveux l'impartiale histoire,
Parqui, bon gré, mal gré, tous les rois sont jugés,
Dira, parlant de vous: "Son nom a nie *Victoire*;
Elle a vaincu la Russie, et mieux, les préjugés
Qui jadis fourvoyaient en des guerres impies
Deux nations par elle à jamais réunies."

VI.

De toutes vos grandeurs, rien n'est plus glorieux,
Madame, que d'avoir, en signant l'alliance,
Fait germer dans les âmes de justes sentiments nos aïeux
Les fruits de la concorde et de la confiance.
Certains Rois, vos prédécesseurs,
Sur leurs pas semaient les alarmes,
Ont foulé maintes fois, superbes agresseurs,
Le sol qui vous reçoit. Il leur manquait vos armes.
Aux droits que leur donne la force, vous avez préféré ceux
Sur la France d'alors ne portez pas envie.
Car vous nous avez tous plus sûrement conquis,
Madame, par la grâce et par la sympathie.

CHANCERY REFORMS.—By an Act passed in the late Session infants can, on the sanction of the Court of Chancery, make valid settlements of their real and personal estate on the occasion of marriage. The Act is not to apply to any male infant under the age of twenty, or any female infant under the age of seventeen. The sanction of the Court is to be obtained by petition.

NEW ACT ON THE OFFICE OF SPEAKER. An Act was passed in the last Session to render valid all acts done by a Deputy Speaker of the House of Commons in the absence of the Speaker. The Deputy Speaker is not to appoint to any office. This Act was rendered necessary from certain proceedings in the late Session.

AGRICULTURAL STATISTICS.—The Lords Committee, appointed last Session to inquire into the best mode of obtaining annual agricultural statistics, have made their report. After expressing their sense of the important advantages arising from the systematic collection of agricultural statistics, they recommend that occupiers of land should be compelled to make the required returns; that the Board of Trade should have the superintendence in England, the Poor-law machinery and the constabulary in Ireland, and the Highland Society in Scotland—these departments being in each case in communication as will secure uniformity in the returns; that two returns, one of facts, and one of estimates would be made annually, the former before the 15th of July, and the latter in November; that the schedules should be comprehensive, those of 1854 forming a basis, and that the inquiry should not extend to holdings under two acres in England and Wales. The Committee also recommend that the requirements of the Act for taking corn averages should be more strictly carried out in future.

THE HARVEST OF 1855.—MESSRS. Lucy and Co., of Gloucester, in their circular just issued, state that, having completed their annual tour of observation through the principal corn-growing districts of England and Scotland, their impression is that the yield of wheat will fall short of an average, but how much they are not prepared to state until more progress has been made in thrashing. Several well-informed persons in different parts of the kingdom, with whom they have conversed, expressed their conviction that the yield would probably be one-fourth less than last year. It must, however, be borne in mind that the crop of 1854 considerably exceeded an average—perhaps 15 per cent. The grain and flour imports in the eleven months ending August 1, show a large decrease as compared with the corresponding period of 1854. The imports have been 2,156,971 quarters of wheat, 954,463 quarters of maize 1,551,166 quarters of other grain, and 1,408,432 cwt. of meal and flour. The decrease is, therefore, as follows:—2,364,156 quarters of wheat, 306,300 quarters of maize, 655,407 quarters of other grain, and 2,607,073 cwt. of meal and flour.

A CONVENT ROMANCE IN BAVARIA.—There is an out-of-the-way place in the neighbourhood of Munich called the "Anger," on which stands the convent of the so-called "Poor School Sisters." A young girl entered this convent, and after a time was sent as a teacher to a branch establishment at Rannheim, where she suddenly recollected that she was the possessor of youth, health, and 9000fl. (£700). She announced her resolution not to take the veil, and was summoned to return to the "Anger." On the road she called on one of her relations, an *employé*, who, instead of giving her protection, ordered her to go to the convent. She obeyed, and for some time nothing more was heard of her. Such singular rumours circulated that the civil authorities were forced to take up the matter. It was found that the girl was well, but closely confined in the convent. She resolutely refuses to take the veil, and the trustees of her deceased parents' will is now endeavouring to get her out of the clutches of the pious sisters.—*Nuremberg paper*

THE RUSSIAN REINFORCEMENTS.—An attempt seems to have been made in the Russian army to supply the want of rifles they laboured under. A number of these new rifles were picked up, and judging from appearances, they were equally as inefficient and quite as clumsy as their old muskets; they seemed for the most part to have been old muskets, rifled and fitted with a sight after the Lodge fashion. Some of these were picked up in Europe so badly armed as the Russian. The Turkish army is immeasurably superior. The swords of the Russians seem as if made of the hoops of a barrel: one can bend them easily with the hand. The muskets are long, awkward, unwieldy things, the stocks made of deal, painted black. They have no "half-cock," and their locks are so stiff as almost to require both hands to lift the hammer. The greater part of the muskets are rifled bored, and judging from appearances, they were equally as inefficient and quite as clumsy as their old muskets; they seemed for the most part to have been old muskets, rifled and fitted with a sight after the Lodge fashion. Some of these were picked up in Europe so badly armed as the Russian. The Turkish army is immeasurably superior. The swords of the Russians seem as if made of the hoops of a barrel: one can bend them easily with the hand. The muskets are long, awkward, unwieldy things, the stocks made of deal, painted black. They have no "half-cock," and their locks are so stiff as almost to require both hands to lift the hammer. The greater part of the muskets are rifled bored, and judging from appearances, they were equally as inefficient and quite as clumsy as their old muskets; so in that branch of home manufacture they have made little progress. The greater part of their great-coats seemed to be quite new, and the Russian army seem to have marched out of Sebastopol in Crimean sun in the month of August clad in their great-coats and long boots.—*Letter from the Camp.*

The cholera is so violent at Catanzo, in Sicily, that there is a regular panic. Every one is escaping into the open country or woods, and trade is completely stagnant.

An old man, known as "Peter the Hermit," died at Ollerton, Nottinghamshire, on Saturday week, in his ninety-second year. He had led a recluse life for the last half-century, supporting himself by spade husbandry.

The *Oïdium*, which last year committed such great ravages in the vineyards of the department of the Jura, has scarcely been noticed this year, owing, it would seem, to the great heat of the summer.

MUSIC.

BIRMINGHAM MUSICAL FESTIVAL.

(From our Special Correspondent.)

THE public in general, and even the more musical portion of it, who read every three years the accounts given by the newspapers of the "Birmingham Festival," are but imperfectly acquainted with the magnitude and importance of this truly English music meeting. It may, therefore, be not uninteresting to state that the Birmingham Festival has existed for the greater part of a century; its triennial meetings having been held without interruption from the year 1768 to the present time. Like other establishments of a similar kind, it makes the cultivation of music subservient to the cause of beneficence; but it has far exceeded them all in the extent of its contributions to this double object. It has, during the whole of the above long period, been the main support of the General Hospital of Birmingham, a noble institution which is an inestimable blessing to the industrious classes of an extensive district. A conception of the value of this charity may be obtained from the fact that, in the last three-quarters of a century, the number of patients relieved by the hospital has amounted to 96,000, of whom 100,000 have been received into the House. Since the commencement of the present century the clear profits of the triennial musical meetings have exceeded £70,000; and *the whole* of this sum has been contributed to the funds of the hospital. The net proceeds of the festival of 1852 amounted to £4700; and it is already ascertained that the profits of the Festival held last week will considerably exceed that great sum. Such are the claims of the Birmingham Festival to the consideration of the philanthropist; to that of the lover of music its claims are equally high. Its performances have spread among the people the knowledge and love of the art; and its liberal yet discriminating encouragement of genius has stimulated the production of noble works which, without it, would probably never have come into being.

The Festival of last week has surpassed that of any former year in the magnitude of its scale and the completeness of its arrangements. The magnificent Town-hall has been newly decorated, lighted, and ventilated at a cost of no less a sum than £3000, defrayed partly by the Corporation and partly by the Festival Committee; and is now a building of unparalleled beauty. The instrumental orchestra numbers 140 performers, including the most eminent members of the bands of the Royal Italian Opera and the Philharmonic Society. The chorus was of unprecedented power and quality. It consisted of 324 singers, of whom nearly 200 were members of the Birmingham Choral Society, and the remainder were brought partly from Yorkshire and partly from London. Of this vocal host every individual was carefully picked and chosen; and the whole were brought into complete training by a long course of careful rehearsals. The solo singers were a brilliant constellation of talent; the list including the names of Grisi, Castellan, Rudersdorff, Viardot, Dolby, Mario, Gardoni, Sims Reeves, Weiss, Herdardt, Lablache, Formes, and Weiss. Belletti, too, was engaged; but severe illness unfortunately prevented her attendance. No solo Instrumentalists were employed on this occasion.

The Festival began on Tuesday morning with Mendelssohn's "Elijah," performed in a manner which, on this occasion at least, has never been equalled. The part of the *Prophet* was sustained by Mr. Weiss, who made good his title to be classed among the greatest singers of the day. Madame Castellan gave great pathos to the scene of the widow and her son; and Madame Viardot gave the scene, in which *Jezebel* denounces the *Prophet* to the furious multitude, with a dramatic force peculiarly her own. Madame Rudersdorff was eminently successful in the great and most arduous air "Hear ye, Israel." Never before was it sung as "then shall the righteous" with great effect; and Miss Dolby sang "Oh rest in the Lord" with her usual charming simplicity. Reichardt, too, deserves special notice for his performance of the air "If with all your hearts," in which his fine voice and pure style were shown to great advantage. The beautiful concerted pieces were sung with finish and refinement, and the choruses were grand beyond description.

The first miscellaneous concert, on Tuesday evening, presented little novelty; a remark, indeed, which may be applied to all the evening concerts. But we find no fault with them on that account. Such concerts are given for the pleasure of large provincial audiences, who desire to have the best things from the best performers; and, provided the music be good and well performed, it matters not to them that it is familiar to London concert goers. At the above concert, however, there was one piece which may be called a novelty, though it had been performed in London Macfarren's cantata "Lenora," the words of which are a translation (by Mr. Oxenford) of Bürger's well-known ballad. The subject is also happily chosen for a long and elaborate musical composition; but there are many beauties in Mr. Macfarren's work. The principal parts were well sung by Madame Castellan, Madame Viardot, and Mr. Weiss, and the piece was warmly applauded.

The most remarkable feature of the Festival was Costa's new oratorio, "Eli," written expressly for it, and performed on Wednesday morning. It excited the utmost interest, and many of the most eminent metropolitan composers set off to Birmingham in order to hear it. Nothing could exceed the enthusiasm of its reception—a reception, however, which was nothing more than what was due to a work so full of grandeur and beauty. The poem is by Mr. Bartholomew, a gentleman well known as the friend and collaborateur of Mendelssohn. The subject consists of the striking incidents narrated in the first four chapters of the First Book of Samuel. The oratorio opens with the celebration of the Festival of Feasts in the Holy Temple. A solemn strain upon the organ leads into a *fugato* movement for the orchestra, beginning with extreme softness, and rising to a climax of strength and fullness. Eli, the high priest, in a lofty strain of recitative, calls upon the people to celebrate the Festival; they answer in a grand and simple chorus; and the scene concludes with a piece of ecclesiastical harmony in the style of our Cathedral service. Phinehas and Hophni, the profligate sons of the High Priest, are represented as holding with their dissolute companions their unhallowed revels in the precincts of the Temple. A chorus in a light and dancing measure is blended with the indignant cries of the High Priest, who is unable to restrain the disorder. An inspired prophet, denominated in Scripture a "Man of God," declares the doom impending over Eli and his house. The indications of the fulfilment of this doom now present themselves. The Philistines prepare to invade Israel, and are represented as arraying themselves for war. The Philistine song of battle—sung by a chieftain and echoed by the whole host—is a composition of wonderful energy and power. The first part of the oratorio concludes with the dedication of the child Samuel by his parents Elkanah and Hannah, to the service of God in the Temple. This scene contains an aria, "I will extol Thee, O Lord," sung by Hannah, in which the mother's joyful feelings are expressed with exquisite beauty; and it terminates with a choral fugue of Handelian strength and grandeur. In the second part the infant Samuel is represented as ministering in the Temple, and pouring out his soul in a morning hymn—a perfect gem of melody and expression—which is followed by some beautiful concerted music of the same character, in which Samuel, his parents, and Eli, take part. Then follows one of the most striking passages in the oratorio, the March of the Army of Israel going forth to meet the invaders. They first march to the sound of the warlike instruments—then their choral voices join the strain, which gradually dies away and is lost in the distance. The concluding scenes represent the catastrophe, as related in the Bible. The army of the Israelites is routed, Eli's sons are slain—the Ark of the Lord falls into the hands of the Philistines; and Eli himself, who has waited the event by the wayside, on hearing the fatal tidings falls down and dies. A concluding chorus expresses the contrite humiliation of the people.

This subject, it will be seen, is not rich in dramatic incident; but it has the advantage of rising in interest as it proceeds, till it arrives at a deeply-tragic catastrophe; and it is, moreover, highly suggestive of musical ideas. Costa's music is of a very high order: it is full of grand choral harmonies, the orchestral combinations are quite new, and touching Italian melody. Its performance may almost be pronounced perfect. The principal singers were Madame Castellan, Madame Viardot, Formes, Sims Reeves, and Weiss; all of whom—and the same thing may be said of every individual in the orchestra and chorus—exerted themselves *con amore* to do justice to the work. The composer achieved a triumph such as has rarely been witnessed. During the performance the conventional restraints on the expression of feeling on such occasions were repeatedly disregarded; and, at the conclusion the hall rang with acclamations, in which not only the audience, but the whole performers in the orchestra, joined.

The concert of Wednesday evening included Mendelssohn's Italian Symphony; Beethoven's overture to "Leonora;" Mendelssohn's dramatic fragment, "Loreley," exceedingly well sung by Madame Rudersdorff; Frank Mori's new ballad, "Good-morrow," the poetry by Charles Mackay, charmingly sung by Mario, and encored; and Mrs. Mounsey Bartholomew's admirable part-song, "Philomela," which had a similar reception.

On Thursday morning "The Messiah" was performed to an immense assemblage; in the evening, the concert (which presented no remarkable feature) was likewise crowded. On Friday morning the performance consisted of Beethoven's "Mount of Olives," Mozart's "Requiem," and a selection from Handel's "Israel in Egypt." A grand ball in the evening, as usual, brought the Festival to a close.

THE THEATRES, &c.

HAYMARKET.—"The Man with Many Friends" is the title of a new piece by Mr. Stirling Coyne, successfully produced last Saturday. It is in three acts; but it cannot be fairly said that the action of the drama divides itself into more than two sections. The attempt to expand the business of the second section was a hazardous experiment, and rendered the last half of the second act and the first part of the third especially tedious. It was remarkable, too, that, whereas the jokes of the first act and half were frequent, they then suddenly ceased, and it was with difficulty that the steam was got up again in order to bring the vehicle to the terminus. This may serve to show the intimate connexion that exists between dialogue and action, and that true wit and humour have their real substratum in the actual business of a play. The drama does not admit of stump oratory, it is its vocation to expose these, but itself is a veritable product, in which Art is vitally present, whatever may be its form. This form in Shakspeare is organic, in most of the French dramatists it is mechanic. In the former there is an apparent irregularity, such as we meet with in nature, animated and reconciled, however, with a true harmony; in the latter there is an obvious carpentry, capable of being appreciated for its cleverness by the meanest judges of dramatic writing, and most appreciated, perhaps, by those who are least disposed to penetrate the soul of a composition. But, whether organic or mechanic, the drama will not permit an author to exceed his tether with impunity. Mr. Coyne's play is of the latter kind, and displays uncommon skill in the combination of a numerous corps of dramatic persons, who, whether as sketches or full-lengths, figure in his dialogue. The many friends of *Mr. Popples* (Mr. Buckstone), a retired coal merchant, have made his house their home for their own purposes. *Mrs. Popples* (Miss Reynolds) is flattered by their attentions, but is not so far befooled as to believe all they say. She is able, for instance, to read a moral lesson to the honourable *Mr. Veneer* (Mr. Farren) who, with strange hypocrisy, undermines her husband in his own favour, and brings him into ridiculous relations with a certain widow; and proves to the end that she is not only a faithful but a loving wife. The fact of her really loving her husband is the basis, indeed, of her fidelity; and Mr. Coyne deserves great credit for the manner in which he has brought the point into distinct relief. Her lovingness, too, is intensified by her being excited to jealousy by these same interested friends, whose suspicions have been fostered by the sound of a "speaking doll" in an adjoining apartment, with the construction of which, as a model artist, *Popples*, true to his old occupation, has secretly amused his leisure. He too, is made jealous by means of a portrait, which *Veneer* has filched from his wife's work table. Nothing could be better than Mr. Buckstone's acting of this same moody fit, with which the first act concluded, and gave promise of a better drama than was realised. The attenuation of the action in the following scenes served, however, to show the playwright's skill in the art of prolonging a play with comparative safety after the interest has been entirely exhausted; but we cannot honestly counsel Mr. Coyne to repeat the experiment. We must not omit to bestow our commendation on Mr. Compton, in the part of *Sam Skrymsher*, a country friend of *Popples*, who intrudes on the wife's gay party, and is at first the butt of their raillery, but becomes at last the triumphant agent of the husband's vengeance. There were truth and nature in the portrait, and his presence on the stage was a seasonable relief to the artificiality of the general manners. The acting throughout, however, can not be conscientiously regarded with the same degree of approbation; not because of any fault on the part of the performers, but the relative unfitness of the respective characters for their representatives. The wrong people were in the wrong places: Miss Swanborough had no business in *Mrs Beardsly*, and *Popples* himself was not well suited to Mr. Buckstone. The character began tolerably; but there was no progress, no climax; and the actor was evidently embarrassed, towards the conclusion, to find he had so little to do. Miss Reynolds, too, gave a tragic expression to her jealous passion which, knowing that the object was only a "speaking doll," uttering "mama" in the next chamber, the audience could not but consider out of keeping. Asa set off against these objections, we may mention Mr Howe's *Captain Handshaw*, which was indeed *ensemblable*. There is a novelty in the final expedient adopted by *Popples* to get rid of his "many friends;" that of proposing a gift to the one that may prove the most faithful, and thus drawing them one by one into private audience of each other, during which it is contrived that each shall overhear the tradneer, and thus all be set down as false. Could all this have been compressed, and some needless matter omitted, so that there had been no necessity for the curtain to fall during the development of the plot, teasingly interrupting it in the middle, this little comedy might have claimed a place beside some of the best pieces of Molière. We are surprised that a veteran dramatist should have missed so good an opportunity of securing a triumph.

ADELPHI.—On Thursday week Mr. Buckstone's dream-like pageant of "Victorine" was revived. Simple in its details, this little piece is calculated for its charm to its visionary environment. Its interest is in its sub-title, and this useful resolution has a fruitful result. In the moments of slumber the course of an entire future is revealed; and the logic of such "night-thoughts" controls profitably the conduct of the day. Such is "Victorine"—beautiful as an apologue, effusive as a drama.

THE PSYCROMANTHEUM—so has the Lyceum theatre been renamed by "The Wizard of the North"—the stage of which has been magnificently fitted up with a magic apparatus of remarkable extent, and no less remarkable efficiency. Mr. Anderson made his début on Monday, and was received by an exceedingly numerous and fashionable audience, among which several philosophical and literary men were not ashamed to appear, and have their wonder excited, confessing their ignorance of the manner in which the startling effects they witnessed were produced. The machinery by which, now-a-days, these results are accomplished is brought to a state of perfection that renders detection impossible for the readiest, after all, to be guessed at as the mesmeric incident; but the mode of its exhibition was certainly startling, if not altogether astonishing. The manufacture of poultry from several gallons of water, the vessel containing which is placed over a salver of fire, is a decided wonder; and the anecdote with which the Professor accompanies the trick is equally unexpected and amusing. Almost equally unexpected, on the Magician's "Pocket-book" are equally surprising, from their number and value. But the most amusing is, perhaps, the inexhaustible bottle, which pours out all manner of wines and spirits at command. The applications were numerous and clamorous, but the genuineness of the respective liquors was indubitable. M. Robin's trick of "Homological Evaporation," was also performed; but instead of two, some four or five persons were extinguished, and found refuge in the table—or, like "earth-bubbles," vanished as "breath into the wind." The instances of magical transition were especially numerous, and the source of perpetual admiration. Anything was found in any place but that in which it was first put: and the means of its transference were not even conceivable. Towards the end a striking trick was performed: the contents of a box placed on a man's head were apparently sent through his cerebrum and the bottom of the chair in which he sat, and from which he was not able to rise, until delivered by this wonderful process. It was in the second part of his entertainment that Mr. Anderson introduced the subject of "spirit-rapping." Suspending two glass bells from the ceiling, placing a table on a platform extended across the centre of the pit, and setting up an automaton figure on the stage, he made every one of them answer every question that he put to the number of letters composing a given word, or the numbe of pips on a card drawn from the pack. The table replied in "raps," the bell by ringing, the automaton by gesticulation. The secret by which the answers were obtained did not communicate. He only stated that the manner employed were merely mechanical, but not more so than those employed by the professed "spirit-rappers," who now profit so much by the credulity of mankind, and whom he denounced as impostors. He affirmed that while at New York he had defied a "spirit rapper" to get out of the table he had constructed any sound that could not be traced to natural means; and that, although he had staked a large sum of money on the result of the challenge, the spiritualist had failed to elicit any sound at all. This part of the performance was distinguished from the rest by the solemn tone with which the Professor expatiated on the mischief done by pretended "media," and was received with serious applause, as the more hilarious achievements were honoured by mirthful expressions of delight. For the completeness and number of his tricks, Mr. Anderson is, we believe, unrivalled; and the unwearied spirit and vigour with which he goes through the twelve long acts of his performances keeps his audience in perpetual good humour. Mr. Anderson, however, not only provides amusement for those within the walls of the theatre, but those without: and an electric light, placed on the pediment of the portico, illuminates half the strand, and invests Waterloo-bridge itself within the line of its radiance.

ON DRAWING ANIMALS IN MOTION

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—As you were tolerant enough to insert in your impression of the 21st July a few curt remarks of mine "on the mode of representing horses at full gallop," I am induced to trouble you with some "more last words" on a similar topic. In spite of Dr. Cumming, I believe that the world will be allowed a good many thousand years for future growth and improvement, and among those studies which are yet in their infancy, I am inclined to class the art which now occupies our attention. We have several eminent artists, at the head of whom is generally placed Sir Edwin Landseer, who can successfully paint an animal at rest and give us a charming idea of the creature's character, but, until Rosa Bonheur's masterly picture, "The Horse Fair," was exhibited, I almost despaired of finding among the present generation an artist who could grapple with the subtle difficulties of depicting horses in motion. The extraordinary beauties of this picture—its vitality, freedom, and power—have been already abundantly eulogised by appreciating and admiring critics: my duty on the present occasion will be to animadvert on certain defects of drawing which tend to mar the perfection of the work.

In my former communication I endeavoured to show that there was one law which ought to be observed in drawing horses in motion, and as that law is rather important I will point out more distinctly what I wish to convey. The reader progress satisfactory and practice less empirical, we must try to assist in establishing certain laws for the observance of those who wish to represent nature.

From the most prominent part of the horse's chest draw an imaginary line perpendicular to the ground; do the same from the extreme point of the fundament of the hip, you will find, no matter what may be the animal's pace or action—trotting, cantering, galloping, rearing, or kicking—that as long as any foot projects outside these imaginary lines, that foot is off the ground. It must, however, be admitted that the hind-feet of some horses in walking and drawing loads will, ghilly depart from this rule, but at an angle of not more than ten or twelve degrees. In Rosa Bonheur's picture there is a fine grey horse—the one towards the right of the picture, and the only grey horse whose entire figure can be seen—which is in a faulty attitude. The "near hind-leg" is firmly established on the ground, inches beyond the limit where it should be; the observer, therefore, must naturally feel anxious for the comfort of the animal's hip-joint. This fault is more objectionable because the artist went out of her way and laboured hard to commit it, without gaining any co-ordinate advantage. We can be tolerant of errors when their perpetration brings us some recompense. To the extreme right of this picture is a small bay horse ridden by a man in a blue jacket. The animal is well foreshortened, but, unhappy, it is represented with three feet off the ground and one foot only on the ground, a difficulty and curiosity of position which, I am sure, many horses would be glad to be taught. There is surely some disproportion in size between the horses and their riders—unclear and brawny fellows as they are evidently intended to be. The large horses look quite diminutive in comparison with the men.

What an insatiable eye and relish for *dirt* Rosa Bonheur possesses. What a precious faculty! Look at her small picture, "The Charcoal Burners," and say where in the world can be found anything so exquisitely dirty and lowlived. In the creatures—men and cattle—she has presented and luxuriated in the midst of their grubby filth. What a scene of happy degradation. The bullocks harnessed to the cart are evidently determined upon being very gay, as indicated by the remainder of their natural gloom; no lashing or cudgelling society could ever give them a single idea to raise them above the trade in which they have been born, christened, and reared. To fire the ambition of these animals for a sub or occupation would be as difficult a task as to stimulate the ambition of London to reform itself. In its way, the picture of Rosa Bonheur's is a matchless and an untiring study.

On the other hand, Sir Edwin Landseer has a keen eye for cleanliness. His animals are always combed, brushed, and polished, as if they were intended for a walk of fashion, where the only work to be done was to say company with the aristocracy in Hyde-park. His animals are generally at rest, and even when he sets them fighting, they are in a dead-lock. In his remorseless picture of "Peace Rules the Day," the otter is drawn impaled on a spear; but, fortunately for our feelings, the artist had not the power to represent the writhings of the victim. The dogs are in the most quiescent state of non-muscle movers. If they were all looking up at a piece of bread-and-butter drawing-room, they could not have a more perfect tableau of well-washed, well-bred expectation. There is an utter want of motion and activity.

An engraving from one of Sir Edwin Landseer's pictures, entitled "A Dialogue at Waterloo," is now to be seen in almost every print-shop window. The wit and poetry of the scene are far above my paper description, my powers, and out of my present critical task—that of fault-finding. The Duke of Wellington is on horseback: it is fortunate for the animal he bestrides that nature does not endow the pasteboard manner de-mounted by the artist, if the horse's legs were alive, instead of pictorial, they would snap off at above the hoofs with the mere weight of the body. Our greatest animal painter is sometimes apt to make his horses' heads too large for the body, though he is not of an caught trespassing against the teachings of nature.

One reason why so many paintings of all kinds are such a jumble of half drawing may be, perhaps, found in the plan adopted for training and cultivating the eye. Pupils are not generally permitted to measure proportions and contours, but they are told that they must trust to their very fallible organ of vision, mechanical aids for securing accuracy of outline are withheld as unartistic. The consequence is that the art of drawing is run wild—we cannot depend upon the truth of any pictorial representation placed before us. Let us hope that the young generation will see their faces and their wills against the cant which forbids us to seek the aid of mechanical science in the art of drawing. When a man is deficient in any particular talent, he is in duty bound to call in extraneous assistance to remedy his defect; and if this aid is not granted he work will be done badly, in spite of the genius which may be manifested in some of its parts.

In drawing from nature at rest, considerable accuracy of outline may be attained by using the following contrivance: Get two upright hollow iron rods, from six to nine feet long, sharpened at the end to stick into the ground. Fasten to these rods a network of very fine wire, and suspend it in front of the view or object to be drawn. The meshes of the net ought to be truly formed about three or four inches square: have the drawing-paper ruled to correspond proportionally to the wire-work. The eye and pencil will then be easily enabled to follow the course of the lines of Nature as seen through this meshed screen. The whole apparatus might be made to fold up, and to weigh only a few pounds.

In studying to depict animals in motion, the young artist must be warned off the "old masters," as travelers are cautioned not to approach jaguars, crocodiles, or alligators. Wonderful and manifold as are the drawings of this human figure by the "old masters," their delineation of animals in the attitudes of movement are as "actively bad" as anything can be. From the point of the nose to the tip of the tail the entire representation is a cruel and barbarous mistake. The student has no other hope of success but to commence his studies afresh, and to go to Nature for his models. Though this course of tuition is expensive, it is the only one that will "pay" in the long run. When the creature in creation is more worthy to be lovingly and truly painted than the picture? How glorious are the drawings of Nature! how unsatisfactory as if a man was underneath your bed and doing his best to lift it up. I was obliged to look to convince myself that there was no robber concealed there for instance.

I remain, Sir, yours, &c.

Hyde Vale, Blackheath. NEWTON CROSLAND.

THE LABOURS OF THE GENERAL REGISTER OFFICE.—In the records preserved in the office of the Registrar-General of 2,414,232 marriages, 9,988,276 births, and 6,662,108 deaths have been registered between the 1st of July, 1837, and the 31st of December, 1854; and the names of upwards of 31,000,000 of persons have been arranged in carefully-prepared alphabetical indexes, which afford a ready reference to the entries whenever certified copies are required by the public.

THE FRENCH SISTERS OF CHARITY.—The *Salut Public* of Lyons announces the departure for Marseilles of a lady, named Josephine Adelaïde B. the widow of a French officer, killed at the siege of Rome, who took the veil in 1834. Sister Véronique, as she is now called, is proceeding to the Crimea, with four of her companions equally devoted and resolute. These pious and courageous women are going specially to attend the wounded in the hospitals and ambulances, but close to the trenches, as near as possible to the spot where they fall, struck with the projectiles of the enemy.

EARTHQUAKE AT SIMLA. A letter from Simla, dated July 8th, gives the following:—"We have at last our fair share of rain. We had a specimen this morning early, accompanied, at about half-past seven, by a few claps of thunder, and a tremendous shock of earthquake. The effect was exactly as if a man was underneath your bed and doing his best to lift it up. I was obliged to look to convince myself that there was no robber concealed there for instance.

RUSSIA AND SWITZERLAND.—If we believe the German journals, the Cabinet of St. Petersburg is seeking to renew the good relations with the Helvetic Confederation, which had been deeply affected by the refusal of the Government of the Czar to recognise the new Federal Constitution. For this purpose it is said to have decided that the staff of the Russian Embassy, which since 1848 have resided at Frankfort, shall now fix themselves at Berne. "In this movement," says a Swiss journal, in mentioning the affair, "there is a consolation, or at least an approach to it, on the part of Russia towards Switzerland, and that power will now cease to be so intractable towards us. These new sentiments has rested in reverses will do us no good. There will be nothing really changed, we presume, in our relations with Russia, or the opinion which has prevailed on the subject of the present conflict. All the difference will, therefore, be to have one legation the more in the federal city."

THE QUEEN'S VISIT TO PARIS.—ARRIVAL OF HER

TY AT THE PALACE OF VERSAILLES.—(SEE PAGE 298.)

LITERATURE.

IMPERIAL PARIS; INCLUDING NEW SCENES FOR OLD VISITORS. By W. B JERROLD. Bradbury and Evans

This is an opportune production, consisting of Essays on various subjects, illustrative of the present aspect of Paris, and well adapted for readers of all classes in the course of the present season, who will contrive to visit the French capital for the first time—induced to undertake the trip by the attractions of the Universal Exposition. Many of the chapters have already appeared in the columns of "Household Words," not a few, however—and these some of the best—are here printed for the first time. Amongst the latter are "Chiffons and Chiffoniers," an extraordinary picture of an industry almost peculiar to Paris; the "French Workie's Story," full of graphic and amusing touches; "Departed this Life at Paris," giving a curious detail of the regulations as to funeral ceremonies in that capital; "Street Notes;" and "Paris under the Bees," giving a striking picture of the architectural reforms, we might almost say crea tions, carried out, or in course of being carried out, under the third Napoleon. The following brief summary of the principal of these works will be interesting to general readers who know anything of the geography of Paris:—

But in the Fine Art display, completed for the Exhibition visitors, I should advise you to note the street improvements—the completion of the Louvre, the long line of the Rue de Rivoli, &c. These improvements have become a perfect mania. Boulevards are to be driven through every corner of the capital. In ten years, if all the projected works be carried out, Paris will be a city of Boulevards. Already the quays have been enlarged and levelled: in three years a way has been perfected from the Rue de l'Echelle to the Place du Marché St. Jean. Two boulevards have been cut—viz., the Boulevard de Strasbourg, from the railway station de l'Est to the Boulevard St. Denis, and the Boulevard de Mazas, near the Lyons Railway station, the Rue de Rivoli to the Bastile: the prolonged still further—to the church of St. Louis and St. Paul. To all these improvements should be added the three important boulevards, or broad roads, which have been recently determined upon viz., the Boulevard Malesherbes, the Boulevard du Centre (which is in reality, only a continuation of the Boulevard de Strasbourg), and the Boulevard de l'Hôtel de Ville, which, is to connect the place of this name, by a straight line parallel with the Seine, with the Place du Châtelet. The Boulevard Malesherbes is already in project, first put forth in the year 1803. From the Madeleine and to start from the Madeleine and go in a direct line to the Barrière de Monceau: but the property through which such a line would pass has become too valuable to be sacrificed. The present line will cross the Rue la Ville l'Evêque, the Rue de la Madeleine, the Rue d'Anjou, the Rue de Lavoisier; and, "taken the Line of the Rue Rumford, will stop at the Rue de la Pépinière: will then bend to the left of the barracks, will pass the Rue d'Astorg, the Rue de Laborde, the Rue de la Bienfaisance, the Rue de Lisbonne, the Rue de la Miromésnil, the Rue de Hambourg, and the Rue de la Caulpine, towards the extremity of the Parc de Monceau. Near the Madeleine the boulevard will be thirty-four metres in width. The total expense anticipated for the completion of this boulevard is twelve millions of francs. The Boulevard du Centre will cause the demolition of nearly 300 houses, and will cost thirty millions. From this sum the amounts reaised by re-selling the ground bought will have to be deducted. In addition to these boulevards there are the three wide streets which have been recently determined upon. The first of these is to the right of the Rue Réaumur, with a place before the church of St. Nicholas des Champs; the second is between the Rue du Grand and the Rue du Petit-Hurleur, and the third at the extremity of the Rue aux Ours. In these improvements are included the widening or suppression of many old and inconvenient streets. The boulevard which is to connect the Hôtel de Ville with the Place du Châtelet, will necessitate the demolition of 122 houses.

The author is a man of practical experience and of common sense notions of mind, leading to the probability of several numbers of his fellow-countrymen of the middle and humbler classes visiting the French capital, in the present and succeeding seasons, he sets himself zealously to work to disabuse them of their appi ehensions of the extraordinary expense of living there, appreciation signally justified by the experience of the writer of this Guide of John Bull tourists, and which an accredited authority in Paris,—*Galignani's Messenger* it appears, for reasons best known to the editor, has sought rather to confirm, than remove. Referring to some recent articles on this subject, in that journal, the author says:

It might prevent the visitors from visiting the Universal Exhibition this year at its gth weather the great social lesson which, we trust, the year will teach. I therefore beg most distinctly and emphatically to declare—and declare from experience—that the prices quoted by *Galignani* are those which rare visitors pay. It is possible to live comfortably in Paris for one-third of the cost than in London. If visitors of limited means will not look about for themselves, but will consent to be hustled into an expensive hotel by an officious touter, they must take the consequences. Yet there are many good hotels in Paris—hotels where English gentlemen will find themselves comfortably lodged and excellently fed for seven francs a day even for five francs. These hotels are neither in the Rue de Rivoli nor in the Rue de la Paix. Yet they are in good thoroughfares, and are the resort of honest folk. I could name them, but I repeat that names are not, were it necessary—but it is not. To all people who know Paris the fact is patent. Melancholy pictures, indeed, are the hapless English, who may be seed wandering about the Boulevard or the Palais Royal—not knowing where to go, asked: eating and ifferent dinners at fabulous prices: disbursing enough for *bonjres* to support an honest family: and scampering back on their road to the Northern Railway, calculating, by the way, the costliness of a week in Par-

He then shows us, after careful calculation, that "a man may visit Paris, and return to London after eight days away, for the small sum of five pounds"—a valuable hint for those who have only five pounds to spare, and are bent upon the excursion; and proceeds:—

Not long ago there was a great outcry throughout England for hotel reform It was suddenly discovered that hotel proprietors were the most rapacious class of dealers in existence. The outcry even took the form of a provisional company—and then the affair, I believe, dropped. Hotel proprietors resumed their time-honoured practices—travellers consented once more to be fleeced. Now, the end of a fair outcry was and, but what can be said of the reaction in favour of hotel abuses, which, it would appear, is to be attempted in Paris! Not only are dear hotels to be supported, but visitors to cheap hotels are to be stigmatised as wandering brutes who care not for decencies in their lodgings, nor for wholesomeness in their diet. If no respectable person in Paris can dine for less than three francs, how many thousands of disreputable people there must be in that capital!

There is a great deal of truth in the s; but it must be taken with qualifications and reserve. In our own experience we have eaten many bad expensive dinners, and many bad cheap dinners both in Paris and in London: but in candour we must add that the majority of bad dinners have been of the latter class.

We have only to add that Paris excursionists, and all who know or care anything about Paris life, will find an agreeable afternoon's reading in this little volume

---

THE PRACTICE OF PHOTOGRAPHY. By PHILIP H. DELAMOTTE, F.S.A. Photographic Institution, and Low and Son.

The second edition of this useful little work, has speedily followed on the heels of the first, and we welcome it, as a decided improvement upon it, in many respects, upon its predecessor. The general plan is the same: but the directions in the manipulation are fuller than in the former edition. In the description of the Collodion and Waxed-Paper processes, more particularly, this remark will be found to apply: at the same time that much valuable information is contained in an Appendix, with respect to the Calotype process to which much advance has been made lately, by Messrs Stewart, Baldus, Martens, and others, in whose works such even here and definition have been attained as to render them quite undistinguishable from glass.

The Albumen process is not much in favour just now, and that, we think, has been treated somewhat cavilierly; but we trust this method will ultimately obtain the consideration that it deserves, and that our author will bestow more space and consideration upon it in a future edition

There is one obvious merit in the present work—the author on appeal to his own productions as a guarantee of his capabilities. The largest exhibited works in Collodion, the views of the interior of the Crystal Palace at Sydenham, are by him; and we think they may fairly challenge comparison, being unequalled as yet, in our opinion, by the works of any other artist. Now it is a grand thing to possess a faithful and candid friend in by one who lays himself eminently, and we think fully appreciate this circumstance as it deserves; for it unfortunately happens that too many treatises on photography have been written by persons whose object is not so much to benefit others as to advertise their own particular goods, and who have really no practical knowledge of the subject themselves, or any works of first-rate merit, to which to appeal. Photography has now become quite a fashion, and happily for amateurs, every facility is afforded them for acquiring this delightful art. There are no new secrets in it, such an idea is absolutely scouted as unworthy and dishonourable amongst the little fraternity of photographers; and we trust that there will soon be no more monopolies.

There is another merit in this little manual, to which we would call attention. Our author loses no opportunity of insisting upon the treatment of photography as a handmaid to art, and not merely as a mechanical means of copying with fidelity. He is himself an artist, and upon this subject, of making photography and art mutually subservient, he speaks feelingly and well. Amateurs should heartily enter into these sentiments, and act upon them: they should follow this author's advice and study well their model with reference to artistic composition, effects of light and shade, &c.; and never rest satisfied with any work, however good *photographically*, which does not fulfil as far as possible the *requirements of art*

But if photography is just now a fashion with the aristocratic and the wealthy, it is no less true that the mass of the public exhibit a somewhat singular apathy with respect to its results. They admire, but do not purchase while bad prints and worse paintings are still as current as ever. This is strange, for there can certa nly be no comparison between a second rate work of art and a first-rate photograph. Whatever defects may be incidental to the latter, in the present state of the art it has at least this advantage, that it can never be vulgar. Drawn by the hand of Nature herself, it must always be in good taste, and may defy criticism in points about which we are accustomed to contend in works of human invention. It is with much concern that we have to comment upon the too notorious state of British art with respect to photography: for here it is unfortunately peculiar to our own country. On the Continent the case is widely different, and, in fact, foreigners are beginning to leave off sending us their works for sale, so little encouragement is given to the art in England, except in the purchase of furniture. Now how is this? We are a wealthy people, and we lay claim to the first rank in the department of landscape painting. The fault is certainly not that of the photographs.

We recommend to amateurs this little manual of photography with the utmost confidence as an excellent and sure guide, and as containing a fund of useful information, well arranged and digested, and brought up to the present state of the art.

THE MICROSCOPE. its History, Construction, and Applications. Second Edition. By JABEZ HOGG, M.R.C.S., &c

This edition has been improved and enlarged, and fifty new illustrations of micro-copic objects have been added. The work commences with a short history of the instrument, and then proceeds to enter into the details of its optical and mechanical arrangements, with drawings of cheap and well constructed microscopes. The accessory apparatus is explained, and a chapter given upon mounting, collecting, preparing, and injecting. Polarised light and the polarising apparatus are explained, with the application of the same to the study of crystals. The author then proceeds to point out the most interesting objects for study in a chapter upon infusorial animalcules, zoophytes, sponges, mollusca, crustacea, arti ulata, which includes a very interesting account of the parasitic insects. He then passes on to the structure of animals, and lastly that of vegetables, and the lowest and the highest forms of life. The adulterations of our articles of food are not forgotten, especially that of flour bread, coffee, cocoa, tea, &c.—illustrations of 78 of which are distributed throughout the text. Altogether it is a complete cyclopædia of information, omitting nothing essential to the study of microscopical science in all its varied details. The whole forms a decidedly good and popularly-written work of the ever-interesting study of the invisible and manifold parts of creation.

A HAND-BOOK OF DORKING; with numerous Illustrations on Wood and Steel. Dorking: Rowe. London. Willis.

Tourists in search of the picturesque will find a pencil, familiar with the fine tract of country which commencing at Letherhead, extends through the vales of Norbury and Wootton, to Leith Hill; about midway between which lies, nestled in the valley, the neat little town of Dorking, at a short distance from the foot of the opposite elevations of Box Hill and Denbies. The country has long been termed "the garden of Surrey," and many a ... mishing tourist has already lamented the cutting of the district by railway for more rapid conveyance through scenes amid which he loves to linger. The town possesses little interest, though it lies upon the line of the Roman road, leading from Arundel to London; and its name is traced to *Dol o cyn dwr*, the Dale of Springs, characteristic of the spot. It figures in Domesday as "Dorckinges," and the manor is stated to have been given by the Conqueror to Richard, the standard-bearer, on her marriage with the first Earl of Warren and Surrey; but for five centuries it has been held by the Earls of Arundel and Dukes of Norfolk. Its celebrities are not, how ever, of the grand historical class: but the picturesque beauty of the country has, from time to time, attracted a large train of visitors, of the period of John Evelyn, who was born in the neighbourhood, about two centuries and a quarter since. His "own dear WOTTON" is the starting-point in the modern life of the locality; the *old reinorva* are its contemporaries; and we scarcely know where to find such a store of pleasant, anecdotic history as may be picked up in the extent of country glanced at in the Manual before us.

The picturesque nooks and corners of the locality are very agreeably noted; these beg the main attractions of the locality. The book is profusely illustrated with views engraved on steel and wood, a map, plans, &c. It is a marvel of cheapness, and deserves an extensive sale.

MATERIEL FOR THE WAR.—The Low Moor Ironworks Company, at Bradford, in Yorkshire, have for several months been employed in making material for the war. They have already delivered 1,000 tons of *Armstrong Ordenance*) can hardly have failed to notice from time to time huge piles of shot and shell of rows of ordnance awaiting transmission to some of the Government arsenals. Every now and then we have heard rumours of some new mode of astounding ponderosity and homicidal power which is being manufactured at these works, but few particulars are allowed to transpire. We understand, however, that of late many workmen have been engaged in making shot of enormous size, weighing more than 12 and 26 cwt. (exclusive, of course, of the charge) and about 13 inches in thickness. When these formidable engines come to be employed against the Russians, whether in the battle or the storm, we shall, doubtless, hear of some startling effects being produced. Hundreds of tons of war material are now weekly forwarded from Low Moor to the order of the Government.

DESTRUCTIVE FIRE AT HAVRE.—A terrible conflagration broke out on Tuesday evening week in a large spirit warehouse at the corner of the Place du Commerce, Havre. Above the spirit cellars the premises were filled with inflammable materials; and these having caught fire added fury to the flames. Very shortly after the conflagration reached the adjoining warehouse, which were a vast quantity of bottles of champagne, and 80,000 boxes of pitchcards, and there destroyed everything. A fireman was burned to death, and several other persons were severely or otherwise injured in the course of the conflagration, but none of them seriously. Prince Jerome, attended by his Aides-de-Camp, arrived shortly after the fire had commenced, and remained on the spot until it had begun to decline. The prefecture, the adjoining houses, and the theatre, which were a vast quantity of bottles of champagne, and 80,000 boxes of pitchcards, and there destroyed everything. A fireman was burned to death, and several other persons were severely or otherwise injured in the course of the conflagration, but none of them seriously. Prince Jerome, attended by his Aides-de-Camp, arrived shortly after the fire had commenced, and remained on the spot until it had begun to decline. The prefecture, the adjoining houses, and the theatre, which were assembled in bringing water. The total amount of damage done is estimated at 500,000 f.

A BRUSH WITH THE RUSSIANS.—M. Huchet de Cintré, Captain of the *Moron*, and M. Lalemant, Commander of the *Mouette*, effected a landing on the Asiatic spit during the dark night, for the purpose of acting de to the Russian shipping in the Channel of Genitchi. One of the parties engaged were to go to the following effect:—"The night was extremely dark, and the ground being very uneven, the position was considered to be rather hazardous. The two Captains, after advancing a short distance, ordered their men to halt, and consulted on what was to be done. We had seen in the morning on shore movements of troops, indicating that the enemy was on the alert. It was accordingly deemed prudent not to advance incautiously with our handful of seamen, lest we should encounter a Russian detachment or ambuscade. As had anticipated, the two Captains decided on returning to the vessels, and postponing the expedition. We accordingly wheeled round, and were marching in the best possible order, when one of the men forming the advanced guard fell back upon us, saying that a body of Russians had passed between us and the coast. It appears that on hearing of our landing, a detachment, much more numerous than ours, had crossed the Strait for the purpose of cutting off our retreat. Nothing can give you an idea of the *sang-froid* and determination shown by our seamen throughout the affair."

—*Letter from Kamiesch, Aug. 17.*

A DISTINCTION WITHOUT A DIFFERENCE. By MR. WILLIAM STYES (His First Appearance in Any Character)

If fellows breaks into a house,
To bone the cash they needs,
And gets off safely with the swag,
The sad the theft *succeeds!*
If bankers does the self-same thing
Upon a larger scale,
And they get safely all the swag,
Da sald the bankers *fail!*—*Comic Times.*

TURBOT has been selling at 5d. per pound in Guernsey, and whitings weighing 5 lb. and 6 lb each, have been selling in that island for 6d. a-piece.

LETTER OF HIGHLAND SHEPHERD.

To the following advertisement, Mr. Macdonald received the subjoined reply from a kilted son of the mountains, which is amusing and characteristic of the peasant Celt:—

"To SHEPHERDS. Wanted, a Pure-bred Sheep Dog. State colour and price, free on board a London Steamer, to Mr. D. G. F. Macdonald, Sydenham."

G——, Rosshire, Scotland, August 23, 1855.

Honourable Sir,—I seed in Fry my last, *Inverness Courier*, a advertisament, for pure breed sheeps Dog, i write your Honur to tell you, that I have exselent one Breed of Pure Bleck, 7 manthes of agee; His Dam have been sed nin, more strong ger than any I ever yet did seed; and He was wise as womans or a man. By half a words of command he will go of 1000 yards, and takes any number of sheps to my best; and Him understood anythings you say to him by sens, like Dummy. Him colour Bleck on the Backe to near end of taile, Him face white; Him hind legs at point white, one of four foots whit, othe. Back: Him white ... [illegible] ... ; and never rest satisfied with any work, however good *photographically*, which does not fulfil as far as possible the *requirements of art* like half Meen. Him ... [illegible] ... Bleck and Dog ... [illegible] ... hours: him ears Bleck, stand up when hear sound, like ears of Fox. One of ears have whit spote near head size of pice, but is very small. Him, will sce as fure as Hake or Eagle: and him skinn as fine as Backs of Lady hand. Him was Breed me myself, and I did keep it from Mothere when it, but Him got plenty of Mothers milk: when yong. Hims name be quiet, called after the yong Herringes, cause him be so mald in love of them to ... he smashed Throes; him not sheutie in hum Bely, will eazes anything: Plenty good shepherds says him a good Dog, but for Prince Halbert, as Him ... pure Breed as most Graceous our Queen of Balmoral: Him pr... board steamer for London, in England, is 37 sun...g, to be paid th... [illegible] ... of Caldonia at Dingwall Rosshire, Scotland, north Brit ... [illegible] ... Mr. W—m Mack—e, G——h, Rosshire, Scotland, north Britton. If you ... [illegible] ... large anything, he so wise, and from what i knowed of your Honur, and of your friends, i would rether you have it in your power this time, than dismay shive: as i as fond of him as of my Childers or Wife; Dog will be tuns before he get over the Gulick, his Mother and Father tong, and learn the Englishers langage in short time. Him act Dummy well for you sheps, and you can yourself put langage to them. He son be smoulted then, and perfect for work in ... sheps—expect answer from your Honur, adressed to as above when you have the time. As Him a pure sheep, sting will be very dear, but i will be glad to ... provide hains and color of lether, so that come too 2 shi...ng more Total of hole 39 shilng—with 1 shilling largesy for gid work to Dog—so Total 38 shilng

I am, your servant,
M——H MACK ——E.

Mr. D. G. F. Macdonald, Sydenham, England.

THE RUSSIAN LOSS AT SVEABORG.—A letter addressed to Admiral Dundas by the English Ambassador at Stockholm, ... [illegible] ... Russian losses upwards of 2000 men at Sveaborg; ... [illegible] ... explosion took place at noon on the first day blew up the magazine, containing the entire stock of shells, and 600 men were killed by it. Every magazine in the place was blown up, immense stores of ordnance, naval and other naval stores. The large Russian man-of-war, which was anchored in the passage between the two islands to the north of the fortress, had her side blown out, and forteen fifteen different descriptions of vessels lying inside the ... [illegible] ... entirely destroyed. The Russian authorities at Helsingfors have for ... all ... persecure between that place and Sveaborg, so anxious are they to conceal from every eye the immense amount of damage done by the bombardment.

PRINCE MURAT AND THE NEAPOLITANS. A good deal has been ... d there of late about a pamphlet which, some will have it, has been printed in London—others, but as I think erroneously, at the Imperial press in Paris—which were now have seen, and all are anxious to see, but which is still wrapped up in mystery. The work is anonymous; but the subject of it, as described to me, is the necessity of getting rid of the Neapolitan Bourbons, of overthrowing the reigning dynasty, and calling the descendant of a man who, whatever faults he committed, had been in arms for the independence of Italy, and whose memory still survives. Prince Murat is, of course, the person spoken of. The author of the anonymous pamphlet is said to be M. Salicetti, who was in the revolutionary period one of the Ministers of the King of Naples, and afterwards figured as one of the Tribunes during the Republican regime at Rome. Salicetti is said to entertain Bonapartist opinions, and was a Member of the Convention. His plan, so far as I can understand it from a description of the work attributed to him, is to overthrow the Bourbon dynasty, and to call Prince Murat to the throne. But it appears no overtures have been made to Prince Murat. It appears also that the author, though proposing to confer supreme authority on the son of King Joachim, does not mean that the family shall continue for ever in power. Prince Murat may be King for a limited period—say twenty years, if he live so long, and then the Italian Peninsula is to grow up into a Republic. He does not appear to reflect that if that Prince, or any one else, were to be placed on the throne of Naples on such terms, one of his first would be to take measures for the suppression of the very party that conferred it on him. If Murat went to Naples it would clearly be to establish a dynasty, and it is not at all probable that he would support measures the success of which must be his own ruin and that of his family. The pamphlet, I am told, contains a letter addressed to the author some time ago by the Prince, in which he declares his conviction that the alone means for the salvation of the civilisation of the Italian problem, but also that he will not come forward until called upon by the people; in a word, that he will not take the initiative.—*Letter from Paris.*

KING BOMBA AND HIS SLAVES. Persecution continues unabated. Hardly a day passes without numerous arrests taking place in Naples. The Neapolitan aristocracy, well known for its base and ignorant admiration of all the cruelties committed by the King and his agents, has at last itself fallen under the lash of the ill-powerful police. The Prince Pallavee Colonna's salons at Capo di monte are thrown open once a week to all the *élite* of the Neapolitan *beau monde*, as well as to foreigners of distinction. A few evenings ago the minions of King Bomba the Falsee was invaded on the ... taking down the names of all the guests as they left their carriages. The porter, not understanding the meaning of the proceeding, remonstrated, and a row ensued, which resulted in the rooms above, alarming the Duke of Sangre, who had just been obliged to sign his name, explained the story. The panic was such that all the company, headed by the Minister of War, Prince Castelcicala, and finishing with Marshal Nunziante, left the house, so that at eleven o'clock there was nothing to be seen but lights and melting ices. This occurrence, with similar facts, have created a feeling of intense animosity against Mazza, Minister of Police, who is not favourable to public opinion, possessing his Sovereign's confidence. On a late occasion the Duke of Bizona, a well-known person in Naples, was reported by a spy, who visited his house, as having spoken against the exercise of the police, whereupon his doorway was watched by police agents, and himself carefully ... [illegible] ... after. The Duke waited upon the King and complained of these proceedings, stating that he had always been attached to the royal cause. His Majesty replied that that might be, but now he was imbued with the spirit of opposition to the Government. Yesterday, the persons who on a late occasion accompanied a deceased deputy to the grave were severely interrogated for so doing. In fact, I am tired of narrating the injustice which takes place every day in this ... city. The King seems to be bent on bringing himself into trouble by ... classes. The King and Government, as you are aware, are thoroughly Russian, and the Swiss soldiers are schooled to hate France and England. Every one is waiting to see what the French and English Governments will do about the medals lately offered to both Admirals. The Sopraintendante of S. Carlo, after the insult offered to Mr. Fagan by the Director of Police, is seen alone in his box—every one is afraid to pay him a visit.—*Letter from Naples, Aug 22.*

THE BATTLE OF TRAKTIR. Long ere this can possibly reach, you will have heard of the great battle which occurred yesterday between the French and the Russians, also part of the Sardinians. On Wednesday evening we all went to bed at the usual hour, 11 at nine o'clock; for, having been given a day orderly officer, and having had to get up at four for a parade, I was ... tired. About one a.m. I was awoke by somebody trying to get into my ... Who is that? cried I. "An orderly, Sir!" "What is the matter now?" "Why, Sir, a parade at twenty minutes to four." "Another affair like the other day! Very well; call my servant, please, and say I must have some coffee at half-past three." I got at once, and dressed myself coolly, and by the time I was ready, the Russians were in motion. We got place, and the musketry was very distinct; a desperate affair was evidently going on to our ... Now, unfortunately, luck was sounded; the batteries lined the hills, and the cavalry were on the slopes, leading to the French road; our right was thrown back, so as to protect the Sardinians should the Russians turn them. Musketry now became less and less, and the batteries opened again; the Russian guns, with a good position, could be seen covering the others as they now have; but their object was to force and retake the heights on the left bank of the Tchernaya. This has taken a very short time to write; but the battle did not, for it commenced at five a.m., and was not entirely over till half-past ten a.m.—*Letter from an English Officer, Aug. 17.*

A large quantity of articles from the Kertch museum have found their way into Southampton. They consist mainly of ancient coins, pottery vases, a d glass, and metallic vessels. The pottery and vessels are specimens of vases, lamps, bottles, pitchers, tear vessels or lachrymatories, of Etruscan, Greek, Roman, and other ancient workmanship.

HER MAJESTY'S VISIT TO PARIS.—BALL AT THE HOTEL DE VI

THE PUBLIC HEALTH.—(No. III.)

THE Metropolis Local Management Bill, framed under the direction of Sir Benjamin Hall, contains several provisions for promoting the public health. The management of the main sewers is to be vested in the Metropolitan Board of Works, who are empowered to take all necessary measures to prevent any portion of the sewage within the metropolis flowing or passing into the Thames in or near London; and the works required to accomplish that end are to be completed on or before the 31st December, 1860. Local sewers, as distinguished from main sewers, are to be placed under the control of vestries and district boards; but it is provided by section 134, "in case it appear to the Metropolitan Board of Works that any sewers in the metropolis not heretofore vested in such Board ought to be considered main sewers, and to be under their management, it shall be lawful for such Board, by an order under their seal, to declare the same to be main sewers; and thereupon the same shall vest and be under the management of the said Board; and it shall be also lawful for the said Board by any such order to take under their jurisdiction and authority any other matters in relation to sewage and drainage, with respect to which jurisdiction or authority is by this Act vested in any vestry or district board."

We have now to explain the constitution of these vestries and district boards. Vestries in parishes are to consist of not less than eighteen or more than 120 members. If the parish does not contain more than 1000 rated house holders, it is empowered to elect eighteen vestrymen; if more than 1000 but less than 2000, it may elect twenty-four; if more than 2000, it may elect thirty-six; and so on, at the proportion of twelve additional vestrymen for every 1000 rated householders; but whatever may be the number of rated householders, the number of vestrymen is not to exceed 120. The incumbent and churchwardens are to be ex-officio vestrymen, authorised to vote with the elected vestrymen.

Parishes containing more than 2000 rated householders are to be divided into wards. No ward is to contain less than 500 rated householders; and the whole number of wards in any parish is not to exceed eight. One of her Majesty's principal Secretaries of State is to appoint the person or persons whose duty it will be to divide the parishes into wards. From Census to Census a revision of the wards may take place by order of the Metropolitan Board of Works, so as from time to time to alter the number of vestrymen appointed to each ward. The qualification of a vestryman is to be an assessment to the poor-rate on a rental of £40; but, in case the number of poor rate assessments at £40 and upwards does not exceed one sixth of the whole number of such assessments, then the qualification is to be on a rental of £25. The vestries are to elect the members of District Boards, and these boards are to superintend the sewers in their respective districts: their powers are large, and their duties well defined. Three members of the Metropolitan Board are to be elected for the City, together with the Lord Mayor for the time being. Marylebone, St. Pancras, Lambeth; St. George's, Hanover-square; Islington, and Shoreditch, are each to elect two members. Seventeen other parishes are each to elect one. In Schedule B parishes united into districts are also to elect one, and districts are united for the same purpose. The Metropolitan Board will consist of forty-seven members, and by section 135 they are entitled to exercise complete control over the Vestries and District Boards, in order to secure the efficient maintenance of the main and general sewage of the metropolis.

On the present occasion we are not called upon to discuss the merits or demerits of this bill on its general principles, though we may observe that it involves real property to the value of more than £13,000,000 sterling, exclusive of railways; our immediate purpose is to consider its special bearings on sanitary reform. When the new Act comes into force, the authority of the present Commissioners of Sewers is to cease, and all their rights, powers, and property to be transferred to the Metropolitan Commissioners, who, as well as the vestries and district boards, are empowered to enter into contracts to carry the Act into execution, and to purchase land; but they are not to possess themselves of land compulsorily, unless they have previously obtained the consent, in writing, of one of the principle Secretaries of State. Powers of such a nature are essential to carry out one uniform and efficient measure; and unless there be combination, and the system of sewerage and drainage be treated as a whole, the permanent purification of the Thames can never be effected. Much depends on the selection of the forty-seven members who are to constitute the Metropolitan Board, and we would earnestly warn the electors of the grave responsibility which attaches to their choice. There ought not to be any trial of political strength; men should be appointed who are known to possess engineering and scientific knowledge, to whatever party they may belong.

In our Number for Aug. 18 we explained Mr. Stothert's plan, which we may here observe, for the sake of perspicuity, admits of four divisions. The first relates to the collection of the sewage into district cesspools; the second division embraces the removal of the sewage from the cesspools: the third involves the deodorising of the sewage; the fourth refers to the means of securing its profitable distribution. A most important consideration is that the rain-fall and the sewage ought not to be conveyed away by the same drains. On this point we shall quote from Mr. Stothert:—

> The sewage of towns is always more or less in a state of decay and putrescence, arising from the numberless ramifications of the sewers themselves, and also from lodgments of old sewage in many parts of them; also from sinking of ground and imperfect masonry, &c. The consequence is, that the old sewage in the aperture acts like leaven to the new, and sets the whole in active fermentation. The result of this, particularly in warm weather, is very detrimental to the health of towns, as the gases engendered by such decomposition are highly injurious to the inhabitants. It is, therefore, most important, in the drainage of towns, that the sewers for conveying the refuse from houses be made quite tight, and used exclusively for that object, and every aperture or connection with them sealed; and, if practicable, the surface-water removed by separate drains. The main reason for the separation is that, as the debris from the roads and streets are constantly being washed into the drains by the rain, they are frequently required to be emptied, and the opening of such drains causes a most offensive emission of unwholesome exhalations. On the other hand, by keeping the drainage of the water separate from that of the feculent matter, the sewers for conveying the latter from houses might always be kept perfectly sealed.

On the margin of the Thames a series of culverts intersecting the drains and sewers may be readily constructed without disturbing existing arrangements. At the centre of each culvert will be a cesspool, in which the refuse will be collected; thus every thing noxious will be intercepted, and not a particle entering the river. An iron pipe will be fixed on each side of the Thames, into which the sewage will be forced from the cesspools by Cornish engines. This pipe, or continued pipe, will carry the sewage to any point determined upon, and its current, becoming a motive power, will turn a wheel so constructed as to drive four or more slurring-machines, each machine being provided with a self-acting apparatus for supplying a quantity of anti-putrescent matter to deodorise the sewage, which will become innocuous by the admixture. It will then be transported into the rural districts for agricultural purposes; and, as was shown in the second article of this series, all crops would be largely increased, and, to speak moderately, increased fourfold. For the supply of cheap and abundant food we should be independent of the countries bordering the Black Sea or the Sea of Azoff, the Baltic provinces, and the United States; and the very same process which would save us from any future risk of famine would guarantee us pure air, pure water, and health. Of course every large town could adopt the same system as is here recommended for the metropolis, and fertility might be spread through the length and breadth of the land. Assuming that 100 tons of diluted sewage matter is required to irrigate an acre of land annually, London alone could supply sufficient for 1,820,000 acres, or 2843 square miles, equal to irrigating an area two hundred miles long and fourteen miles wide. This would be furnished from the north side of the river. The supply from the south side, it is computed, would irrigate 365,000 acres or sixty miles in length by nine miles wide. In fact, if we are wise enough to make the most of our advantages, we may surely find a mine of wealth on either side of the Thames infinitely more valuable than California and Australia united. To this scheme it is to be hoped the new Board of Metropolitan Commissioners will devote a patient and searching investigation.

Another subject invites their attention, though no special reference is made to it in the bill—it is overcrowding. In the metropolitan graveyards at the West-end this evil has been to a great degree corrected; but the consequences have been more fatal than ever to the poorer classes, however much the richer may have been benefited, since the former, for whom new homes have not been provided, are compelled to huddle together still more closely than ever. We write with knowledge, having personally visited their abodes. The following statistics are highly deserving of notice. The aggregate density of the population of England and Wales is in the ratio of 275 to the square mile. Of course in the towns the ratio is much higher than in the rural districts. Taking the average density of population in our twenty-one principal towns, there appear to be 5045 inhabitants to the square mile; but, from the following table, extracted from Dr. Duncan's report on Liverpool, it will be seen that if we select five of our most populous cities, the average in these is much greater, while in others it is equally certain that the crowding is far less than the general standard to which we have referred:—

Towns.	Inhabitants to a Square Mile. Total Area.	Rated Area.
Leeds	20,852 ...	37,250
London	27,421 ...	54,000
Birmingham	33,669 ...	49,000
Manchester	83,224 ...	100,000
Liverpool	100,899 ...	133,344

Dr. Duncan, however, states that there is a district in Liverpool containing 12,000 inhabitants crowded together on a surface of on y 100,000 square yards, which gives a ratio of 460,000 inhabitants to the geographical square mile. In the East and West London Unions Mr. Farr has estimated that there are nearly 243,000 inhabitants to a geographical square mile; but, great as this overcrowding is, the maximum density of Liverpool exceeds that of the metropolis by nearly double. This mass of human beings in narrow and unventilated dwellings is a fearful cause of mortality; and, that our readers may better appreciate the magnitude of the evil, it may be stated that the Inspectors of Prisons in England recommend not less than 1000 cubic feet of air for every prisoner as essential to health and ventilation, yet in Liverpool, according to Dr. Duncan's report, there are cellar abodes so densely crowded as only to supply seventy cubic feet. The case is not so bad in London; but the fact remains that tens of thousands of our poorer classes are compelled to breathe an air far less pure than what public authority provides for the criminals in our gaols; and it is to be hoped that the new Metropolitan Commissioners will remove this reproach.

We have now only to notice the supply of pure water, without which the health of London cannot be secured. If the Thames were purified in the manner we have recommended, existing evils to a very great extent would be removed; but a proper vigilance should be locally exercised in the direction of all the tributaries of the Thames which are now polluted. The water supply of Nottingham is a model worthy of imitation. There it is thrown into every dwelling, so as to be available at all hours; and to the summit of warehouses, so that, in case of fire, it is immediately at command. The high-pressure system should be compulsory throughout the metropolis. It is in evidence that, at New York, the insurance against fire is twenty-five per cent less than that of the same class in Croton water, and the additional effect upon the public health is perceptible. At Philadelphia a similar system is enforced; and in that city insurance risks are taken at one-half the premium chargeable in Boston and Baltimore, which receive water from ponds or natural reservoirs several miles distant.

Great credit is due to Sir Benjamin Hall for the pains he has bestowed on framing the Metropolis Local Act Bill; and it is hoped that the machinery will work well. It is what the public expect, and failure can only arise from defective administration. This summer we have escaped the cholera; but its return is certain, as London is increased in size, unless remedial measures are at once and vigorously adopted. Let it be remembered that a town as large as Salisbury is every year added to the metropolis, and to this circumstance we may measure the additional putrescence of the Thames. Our safety is in our own hands. We have not sounded a note of alarm, but a note of warning; and the ratepayers need not feel any alarm at an expenditure which will quickly repay itself, and become so reproductive as to yield a permanent and certain income. Nor let it be forgotten by those who may think the plans proposed worthy of adoption that we not only offer complete security for the improvement of the public health, but the best guarantee for abundant harvests and crops throughout the whole vegetable kingdom. Here for the present we dismiss the subject.

INCIDENTS OF HER MAJESTY'S VISIT.—The Queen of England, accompanied by the Emperor, admired at the exhibition of M. de Lahrune, a fine group in bronze.—"Le Lion Amoureux." Immediately after the departure of their Majesties it was removed, by order of the Minister of State, to St. Cloud, and placed in the apartments occupied by the Queen. On the evening of the representation at the Grand Opera, just before starting, the Emperor, in the presence of the Queen, offered a bouquet of splendid exotic flowers, contained in a *porte bouquet* of gold, ornamented with diamonds and pearls, and being altogether one of the most exquisite productions of jewellery that you can conceive. The Queen was so enchanted with it, that during the whole evening she was perpetually employed in showing it to Madame de Bauyeul; and, sliding to it later to a lady friend of my own (whose husband is a member of the corps *diplomatique*), her Majesty over and over repeated, "I cannot describe the amiability with which which I am received here; all is so magnificently, and at once so delicately done, that it is impossible to find a fitting expression for its remembrance—a silent remembrance, scarcely betrayed by the rustling of the silk, and the little movements of half-stifled impatience. At last the worldly toilet got the better of the sagacious piety. Reckoned by confusion, the penitent quitted the spot and left the church.

RUSSIAN FINANCES.—A letter from St. Petersburg in the *Silesian Gazette*, says: "At the commencement of the present year there were in circulation in the country credit notes to the amount of 556,337,291 silver roubles (the silver rouble is somewhat more than 3s.), being 244,961,440 roubles more than at the beginning of 1853. The cash in hand, which is to guarantee this paper money has only increased during the same period by 4,986,137 roubles; having been at the beginning of 1853, 146,794,348, and at the commencement of this year, 151,780,485. The debt of Russia at the beginning of 1853 was as follows Due abroad at fixed terms, 87,149,000 Dutch florins (the Dutch florin is somewhat over 2s.); funded debt, 110,867,050 silver roubles; debt requiring to be paid at any moment, 223,861,475 silver roubles, and £9,380,000 sterling. These figures prove that the financial situation of Russia is very critical, and that it must get worse and worse every day, since the expenses caused by the war are estimated at twenty millions of silver roubles a month."

BOOKS FOR THE CRIMEA. The Rev. Mr. Wright, principal Chaplain in the Crimea, appeals to the public for books for the soldiers:—"Not old annual reports of the many religious societies, almanacks of 1817, dark mysterious divinity, heavy controversial tracts, last volumes of novels, Armenian Bibles, trigonometrical tables, Lee-shee grammars, pamphlets on turnpikes, &c.; but tales, novels, biography, Chambers's many publications, Dickens's works, and such like."

COUNTRY NEWS.

A JUDGE FINED FOR DRUNKENNESS.—At the Birkenhead Police Court Mr. Robert Grace, the steward and judge of the Wapentake Court for the hundred of Wirrall, was summoned last week for being drunk and disorderly; but he did not appear. Mr. Richard Jones, the assistant-overseer of Birkenhead, who made the complaint, said he simply asked that means might be taken to prevent Mr. Grace from coming to his premises whilst drunk and annoying him. The judge was fined 5s.

NEWSPAPERS AMONG THE WELSH RUSTICS.—Last week two Yorkshire gentlemen, who had been to the top of Snowdon, when returning to the Beddgellert side of the mountain, had their attention caught by ten labourers mowing a field of grass. They stopped with them a short time, during which a post-office messenger came up to deliver her parcel of clean and unsoiled newspapers. It was Thursday, and the paper she was delivering to those unsophisticated mountain readers was published on the previous Saturday morning; so that noisy railways and breathless telegraphs have apparently made but little inroad on the simple habits of that mountain district. One little fact deserves notice, however: six out of the ten were regular subscribers for a newspaper each.

A LITTLE GLEN TILT.—Visitors to Dunkeld during the present summer have been much annoyed to find one of the most delightful walks in that beautiful locality, and which had previously been open to the public for many years (for anything, indeed, we know to the contrary, from time immemorial), barricaded off and closed against them. The footpath to which we refer is that down by the steps, at the toll-house on the bridge, leading on the west bank of the river from Dunkeld to Murthly. There are few more charming walks in the three kingdoms than this. If, however, you prefer to take that walk now, the toll-keeper informs you that "You'll no get far that way;" and you find, in fact, that the west bank of the Tay is blockaded. We have inquired of the people in Dunkeld who has done this, and they say "The Duke"—of course the Duke of Atholl. The Duke lost a great deal in the Glen Tilt case, but has evidently gained no wisdom.—*Dundee Advertiser.*

RISE OF WAGES.—The quantity of work throughout the county of Teeviot, and more particularly in the parishes of Peebles, Innerleithen, Traquair, and Eddleston, is so great that hands can with difficulty be procured. Wages have accordingly risen; and, if they continue to rise, much work must be necessarily and inconveniently stopped. The wages of day labourers is now from 13s. to 15s. per week, and masons are getting 28s. per week, other workmen's wages being in proportion.

A NEW HOSPITAL AT MANCHESTER.—The foundation of a new building was laid, in Quay street, Manchester, on Monday afternoon, by the Lord Bishop of Manchester, to be called St. Mary's Hospital, for the Diseases of Women and Children. In the course of the ceremony it was stated that Miss Alberton, of Dorset Cold, had given £600 towards the foundation, and that Dr. Radford had presented his medical library and museum for the use of the professional staff to be attached to the institution.

A HANDSOME marble monument has recently been erected in Lichfield cathedral, by the Officers of the 80th Regiment, to the memory of the Officers, Non commissioned Officers, and Privates of that Corps, who died whilst the Regiment was serving in Barbadoes, in 1852-53. The monument was designed by Hollins, of Birmingham, and is placed in the cathedral near the monument to those of the gallant Corps who fell in the Sutlej campaign.

DISSATISFACTION AMONG THE MINERS.—A large meeting of miners took place last week at Rangan Wood, Lanarkshire. The object of the meeting was to concert measures for the purpose of securing a rise in their wages to the extent of one shilling per day. The meeting was attended by several thousands, and was of a very orderly character.

A PENNY DAILY NEWSPAPER SOLD.—The copyright, goodwill, and printing materials of the *Glasgow Penny Daily News* were sold by auction last week. This was the first of the penny dailies started in Scotland, and was announced in defiance of the law before the change in the Stamp-law took place. It has gone on since; and now, after publishing 313 numbers, the whole materials, goodwill, and copyright, have been sold for £200.

NEWSPAPER MORTALITY. The *Belfast Commercial Chronicle*, the second paper in point of seniority published in the capital of Ulster, expired last week in the fifty-fifth year of its age. It had, since the reduction of the Stamp-duty, tried its fortune as a cheap daily instead of a three-day-a-week journal at the average paying price; but the experiment proved to be a complete failure, and the Protestant and high Tory party in Belfast have thus lost the services of an old and zealous champion. The *Newsletter*, which entered upon its 118th anniversary on Saturday, is now the only organ of extreme Toryism in Belfast.

AGRARIAN OUTRAGES IN IRELAND.—"Agrarian legislation" has lately manifested itself in different parts of King's County. Scarcely a night passes that some crime or outrage is not committed; and in almost every case the guilty parties have escaped detection. A wide-spread conspiracy exists among the labouring classes to exact a high rate of wages, and also, by intimidation and violence, to deter farmers from using reaping machines which have been recently introduced into the county, principally by English and Scotch farmers.

THE RECENT PRIZE BABY SHOW AT BOSTON, LINCOLNSHIRE.—A correspondent of the *Manchester Guardian*, giving a brief account of this show, which, he says, attracted an immense concourse of men, women, and children, adds—Under shedding, and arranged in classes, I found the "babies," some on their mothers' or nurses' knees, and others in separate beauties. Five prizes were awarded, one to each class, and each prize consisted of an appropriate piece of plate. The first prize, value five guineas, was for the "prettiest baby," from six to twelve months of age. The prize (in common with the fourth and fifth) was decided by ballot of the first 2000 visitors, and fell to a child of J. Thimbleby, Esq., of Spilsby. The second prize, value four guineas, was for the heaviest baby, from six to twelve months, and fell to a child of Mr Benton, of Aldwick, which weighed two stone, although but eight months old. The third prize, value three guineas, was for the smallest baby, from six to eighteen months of age, and fell to a diminutive Lilliputian, boasting the name of Pring. It weighed only 12 lbs., being sixteen months old. The fourth prize, value two guineas, for the prettiest girl, from two to four years, was awarded to a child of Mr. Jackson, Boston, 84 years old—(the "pretty girl," of course). The fifth prize, value one guinea, for the finest boy, between two and four years old, was balloted to Mr. Johnson's child (Sibsey), three years and eleven month s old. There were between 6000 and 7000 persons present, about 100 babies being exhibited; and Mr. Small (treasurer of the Boston Dispensary Society) informed me that he cleared the by no means despicable sum of £100.

ATTEMPTED PARRICIDE NEAR BATH.—Mr. Charles Fulton, an opulent tradesman of Bath, and a member of the Corporation, has lately had several doses of arsenic administered to him by his only son, a young man of extravagant and somewhat dissolute habits. For some weeks past Mr. Fulton, senior, had been attacked at intervals with sickness and violent pains in the stomach, which came on generally after meals. On Sunday, the 19th ult., he had a very violent attack shortly after his drinking a glass of beer which was handed to him by his son. On the 21st, while eating some fried potatoes and a thin rasher or two of bacon prepared for him, he complained of the same metallic coppery taste which he had observed on former occasions. This was at first ascribed to fancy, but in a few minutes he was seized with violent pains in the stomach and bowels. Inquiries having been made, it was discovered that when the fried potatoes were being prepared, Mr. Thomas Fulton entered the kitchen, and, under pretence of being anxious to prevent delay, volunteered to cut up some of the potatoes; that, after his father's sickness came on, he took the plate of potatoes which remained into the garden, where he must have contrived to throw them away, as the empty plate was afterwards found on a table in the study, and that he was observed also to pour water into the frying-pan, which he placed over the fire to boil, and afterwards emptied the water away. The investigations of Mr. Herapath, of Bristol, have since detected arsenic in the contents of the frying-pan. The wretched thing that has diabolical attempt at parricide had been detected, young Fulton fled from home, and has not since been heard of.

FATAL RAILWAY ACCIDENT.—On Monday morning a labouring man was standing on the rails of the London and North-Western line, between Cheadle and Stockport, looking at a coal train, which was advancing towards him, when a passenger train, which left Macclesfield at 8.40 a.m. for Manchester, came up behind and ran over him. The train was not checked, but the unfortunate man took no notice, and was killed on the spot.

SITTINGS AND DIVISIONS OF THE HOUSE OF COMMONS.—A return moved for by Mr Bernard, shows that the sessions of 1854 and the House of Lords sat last year 1141 hours, the average number of sitting hours in each day being 8 hours and 30 minutes per diem. In the session of 1853 the House sat 1141 hours and 30 minutes, the average per diem being 8 hours and 57 hours in December, 2 hours in July, 7 h. February, 10 h. March, 7 h. April, 16 in May, 10 h. June, 2 h. July, 4 h. August. There was a number of divisions last session, namely, 247, of which 147 were on public business before midnight, 56 on the same business after midnight, and 10 on private business.

A RUSSIAN PRIZE.—Some considerable attention was caused on the arrival one of the Rhone steamers on the 30th ult., at seeing land from her a *fourrier* of the 6th Light Infantry, who had lost his leg in the Crimea, and who was accompanied by a Russian woman of remarkable personal beauty. This woman, whose life he had saved at Kerch, afterwards nursed him with the greatest attention in the hospital at Constantinople, whither she had contrived to follow him. He has decided on marrying her; and he is going with her to his native town, where he intends to establish himself.—*Gazette de Lyon.*

NOTES OF THE WEEK.

THERE is a good deal to say just now, but the unfortunate fact is that there is nobody to say it, or to listen to it. Certainly there never was a greater profusion of topics, diminishing from the colossal importance of a bombardment to the not insignificant proportions of an encroachment upon a park. We have war in two parts of Europe; a rebellion, stirred up by railway officials in India, tyranny going mad in the realms of King Bomba (for whom, it is said, a particularly bitter pill is being prepared); excommunication fulminating—harmless as summer lightning—from the Vatican; Paris, sobering down, after the unexampled excitement of the visit of one Royal stranger, but preparing to welcome another; American Know-Nothings consolidating themselves against the Irish Catholics, and declaring that the Bible shall be the rule of political as well as of personal conduct; negroes presuming to make head against Englishmen, who are glad to invoke French, as elsewhere; Chinese Imperialists putting insurgents to death by thousands, with refinements of torture from which the executioners of Ravaillac and Damien might have taken lessons. Surely here are materials for any amount of wise talk; but Wisdom just now has her eye along a double-barrel, and her finger on a hair trigger.

There was a lady who declared that Parliament ought always to sit, for that the moment it rose the newspapers were filled with nothing but reports of crimes which she never found in her journal during the Session. She had not imagined how different is the value of a "Mysterious Occurrence," or a "Singular Outrage," when debates do not occupy eighteen and twenty columns, and when they do. But at this moment public attention is excited by a series of atrocities, all of recent occurrence, and in all of which the red hand of murder has been at work. There is the slow poison case, and the cruel slaughter of a child, and a still more violent deed of adult murder, with several other less remarkable, though scarcely less wicked, histories to be followed out for judgment. In one of them the murderer is yet untraced, and in more than one there has been much delay in obtaining a clue. It is not to be disputed that the average of savage crime is higher than usual at this season. Whether this be accidental, or whether the great disturbing cause which has unsettled so many minds of men in high places, may have had other agencies, is scarcely to be discussed here; but it has long been remarked that a fierce war is always accompanied by an increase of private crime, even where the immediate and material influence of the struggle is unfelt. The Laureate's theory that war produces a healthier condition than peace is somewhat antagonistic to this fact, which, however, is a received portion of the philosophy of history.

Speculations as to the next Speaker of the House of Commons, and discussions as to which probable candidate is the fittest for the post, have been rendered unpractical by the semi-official announcement that Mr. Shaw Lefevre does not as yet intend to become Lord Hookfield. Among the individuals whose claims have been preliminarily considered are Sir George Grey, Mr. Stuart Wortley, Mr. Baines, Sir Frederick Thesiger, and Mr. Spencer Walpole. The second of these gentlemen is a Peelite, the third is scarcely prominent enough to offer himself, and the fourth may reasonably be supposed to look higher. Sir George Grey has really delicate health, and although a man of much talent and the highest character, is by no means suited for an office which, if sometimes calling for the exertion of the intellectual powers, is generally an affair of forms and ceremonies: I doubt whether Sir George Grey would have patience for the work, and am sure he would have none for chattering and petulant members. Mr. Walpole—if the Great Western can spare him—would, *nec judicio*, be the best man the Commons could choose. He is a person of learning, solemnity, and gravity, very much liked and listened to, even now, late in an exciting debate, with almost as much respect as if he were actually the Speaker. I have seen him instantly obtain the ear of the House, when members of the calibre of Sir Charles Wood or Sir John Pakington would have been impatiently heard amid cries for division.

The two musical festivals are over: Birmingham a grand triumph—Hereford a *fiasco*. Yet I should, privately, have preferred the bad meeting in the old country town to the splendid one in the city, extortionate metropolis of machinery, where you are charged half-a guinea a night for the worst bed-rooms in Europe. But it is in the novel character of the cider-country meeting that the charm lies. If a Festival occurs in fine weather the affair is about as pleasant and picturesque a scene as England can furnish. But then, as it seems to me, you must go to it in a thoroughly lounging spirit, prepared to turn aside from any programme, either of the conductors, or of your own, and to accept any agreeable bit of sight, sound, or sociality that may present itself. You may, if you like, go into the Cathedral as matter of business, get punctually into a good seat, whence you can't get out, have your book and your score before you, be happy that "now in exulting fondness" was taken with due slowness, and be discontented that the drums got wrong in the "grindstone chorus." And when the last echo of the last note has died, you may go away and take an orderly walk and an early dinner, and be in another good place in the hot Town hall for the "miscellaneous concert" of the evening. But that, though a very proper course, is not my notion of enjoying a Musical Festival. I like to have the entrée of the old Cathedral at all doors, and I don't want a seat at all, or a book, or a score. I like to stand for a little time in some ancient nook or other, out of sight very likely, and to wait while some glorious chorus comes flooding and foaming round the old massy column one is leaning against, or the clear resonant voice of the *contralto* goes streaming down the nave—and then I like to go away, and stand under the trees in the Cathedral-yard. There, while the bright sun searches into every cranny of the elaborated carving of the tower, and the glossy jackdaws shine in the light, and even the saints, whose noses the Puritans knocked off, look resigned, if not actually happy, on such a glorious day, the great open door of the Cathedral gives one a curious vista. Over the heads of the crowd at the door, over the unaccustomed and magnificent array of fashionable and unfashionable feminine adornments, and just—as one stands—beyond a pillar of monster girth, the very emblem of endurance, and the strangest contrast with the ephemeral scene around it, one can see the still beautiful face of the great Italian lady who has been brought down, at fearful cost, to increase the attraction of the festival. The tower, and the birds, and column, and the prima donna—there is some material for lazy thinking and vague recollection, and you may get hazily back into the Middle Ages, if you like, and gaze indolently into the Cathedral, until, suddenly, a miraculous note flung by that noble voice, reaches you where you stand, and you mutter something about "La Favorita" and lounge away to the river. And when you come back, the "first part" is over, and highly-dressed ecclesiastics, with hospitality worthy of the old monks on whose spoil they flourish, are hurrying everybody into the coolest houses, where gracious matrons and smiling daughters welcome you cordially, but will not let you waste the few precious minutes in talk—"Pray get some wine"—"some fruit"—"some ice;"—and the first cool mouthful convinces you, Dissenter or whatever you are, of the propriety and advantage of an Establishment. Then the refreshed audience go back to their seats. You have, as hath been hinted, no seat; but this time you find your way high up into a gallery, and at the very back of it, and from under the great stained window you observe the whole spectacle, the sea of spectators, from amid which the stern columns arise like rocks, and you listen to the tremendous intonation of a stalwart Teuton, whose figure and voice make him no unfit representative of the stern Hebrew whose language he thunders forth;—and then, idler as you are, as the chorus rises round him to answer his appeal—you go down stairs and get out and look at the Cathedral from another point of view—and, maybe, you wonder what the old cathedral builders would have thought of a theatrical company singing holy music to an audience admitted by tickets at a rose-noble a head. And then you lounge to your hotel, and write to your wife—or don't. Now nobody can say that this is a practical, English way of attending a musical festival, but one has spent less pleasant hours than in cathedral precincts after this indefensible fashion.

The growling of everybody who has to transmit a newspaper at the postal regulations of the new system has by no means subsided. One is perpetually being called upon for disbursement, on account of a blunder somewhere. And what a farce it is that you must pay twopence, and perhaps threepence, for sending a paper from Charing-cross to Chancery-lane, while for sending the same paper from Charing-cross to Cork you pay a penny only. The rule is that an "unstamped" newspaper, under four ounces, goes *anywhere* for a penny (under the inland book post regulations), but a "stamped" paper, within a "free delivery," which means three miles round the General Post-office, must pay a penny in addition to its red stamp (under the instructions No. 44—1855), or be charged twopence on delivery. This little summary of the case I myself obtained, *proprio marte*, from head-quarters; and I wish the subject could be reconsidered by Mr. Rowland Hill.

TO THE GERMANS.—1855.

WHEN next a weathercock will turn 'tis more than vain to ask;
To look into Futurity's a very bootless task,—
But, Germans! we are right to warn, e'en though we *may* suspect
Our warnings, like Cassandra's, will not have the least effect.

Your hands have held the scroll of Death, since Bloodshed was proclaim'd,
And outraged Earth saw Man bring forth unnatural birth, unshamed,
When from the mischief-hatching brain of him, the Northern Thor,
Pallas, infuriate, sprang forth, caparison'd for war.

In the far East, a cry was heard, and from their slumbers deep
Some started up to slink away—some turn'd again to sleep;
But soon old Ocean bore in pride upon his foaming crest,
Freighted with thousands of brave hearts, the navies of the West.

Two nations—Europe's noblest—(nay start not at the word,
In our life-blood it is written—we have proved it by our sword)—
Forewarn'd (as ye have done) the Fact heard but the voice that cried,
And in a righteous cause went forth to battle side by side.

Who does not know their story? Has Alma ceased to flow?
Is Inkerman's bleak hill-side laid, like those who held it, low?
Have "the Six Hundred" forced the jaws of Death's dark vale in vain,
That, even to *you*, we need recall those triumphs o'er again?

Go to the palace of the peer! go to the peasant's cot!
What mean these tears? Has Death been here? O God! where has he *not?*
Where did they die? They do not lie beneath the churchyard sod—
No, where they fell; *there* "they appeal from Tyranny to God."

There, where Sebastopol yet stands—'gainst which the living tide
Of France's, England's chivalry has dash'd itself and died—
Must they rise in ghastly myriads, to witness from the dust
That ye are guilty of their blood?—ye Germans!—Yes, they must!

To your honour, to your promises, we have appeal'd in vain;—
Shame is no shame—lies are not lies—if but your end ye gain.
But blood is God's, and *theirs* has stain'd your very garments' hem:
They died to save your liberties; and *ye*—look'd on at them!

But the cry of blood is heard not—what is there ye *will* hear?
Pity has fail'd to touch your hearts—will Selfishness? will Fear?
Though Huns be hush'd, Italians crush'd, or Poles draw Russian blades,
Vienna! dost forget thy siege? Berlin! thy barricades?

"Where is the Germans' Fatherland?" Is't mid Sans-souci's Halls?
Or where the insulted Danube rolls along Vienna's walls?
Ten million voices cry aloud, from Denmark to Tyrol,
"*Where'er* the German tongue is heard, lives Germany's free soul!"

Ha! lives it still? In books? In songs? In speeches over wine?
What! In your hearts? Lift up thy voice, "thou free-born German Rhine"
O waft the precious burden, great Danube, to thy sea,
And startle Europe with the news that Germany is—free!

Free to oppress—or free to save? It matters much: yet show
Whether you've soul to be a friend, or dare to be a foe;
Throw down the pen which hitherto more than the sword you've prized,
And though you draw to be abhorred, yet cease to be despised.

Ay, grasp the hand ye long have kiss'd, and blood-stain'd though it be,
It cannot make your fatherland less *honoured* or less *free!*
Make common cause, enforce new laws of Tyranny on Man,
Get Poles, Hungarians, Lombards, to help you if you can!

Heed not the tales of foreign fleets which scour the Baltic Sea—
Of armies hovering near your Rhine. What matters? Ye are free!
Rouse all your exiled malcontents from many a secret lair
And bid defiance to the world, *free* Germans! if you dare.

O, that we wrong'd you! O that we saw harbour'd for the Russ
Less unmistaken sympathy—less jealousy for us;
No cause but ours ye *dare* embrace. You will not. O, parade
Your boast of liberty no more, ye last to give it aid!

Land of the mighty Frederick! Proud home of Hapsburg's race
Ye were not wont, in days gone by, to cause or brook disgrace.
Weigh'd in the balance of great States, O blush whilst we record
Your fathers' sons are "wanting" found because they lack—a sword;

There is a rock, but not of strength, which shadows o'er you both;
And a tree, which is *not* Liberty's, of Giant Upas growth;
Its branches wave above your grave—there's poison in its dew—
And lava simmers in that rock to pour itself on you.

The warning has been given. Your aid no more we ask.
God will not suffer us to fail where He has set the task.
Peace shall return to Europe when its Freedom we restore,
And the hands that would have crush'd it are palsied—not before.

But to our work! While victory soars on the eagle's wing,
And to Sardinia's battle-shout Tchernaya's echoes ring,
Our goal in view—we cast no more vain hoping looks behind;
And He who sees and suffers long, have mercy on mankind! R. C. G.

* The German national song by Arndt commences with the words "Was ist des Deutschen Vaterland!"

TELEGRAPHIC UNION OF MALTA WITH THE ISLAND OF SARDINIA.—A project has been submitted by Signor Bonelli, of Turin, to the Governor of Malta, and by him to the British Government, to execute in two months at the expense of £10,000, the junction of Malta with Cagliari by one of the telegraph cables of his own construction. Lord Palmure has received the proposal most favourably, and has requested of the Governor to be informed, without loss of time, what portion of the estimated amount would be contributed by the Island treasury, in the event of the proposal being sanctioned by the authorities at home. Signor Bonelli has also proposed a more extended plan of operations, by continuing the chain to Candia, and thence two branch lines—the one to the Dardanelles, the other to Alexandria in Egypt. This latter course would, it estimated, require £30,000 and six months' time.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A guard of honour from the Royal Perthshire Rifles is to be dispatched to Balmoral, on the occasion of her Majesty's visit to her Highland residence, and to be stationed there during her stay.

The King of Sardinia is expected in Paris on the 16th inst.

The King of the Belgians, on the occasion of the return of the Duke and Duchess de Brabant, gave a grand dinner at the Palace of Laeken, at which the Ministers and great officers of the Royal household were present.

The Hereditary Grand Duchess of Mecklenburg-Strelitz, accompanied by her youthful family, will close her visit to the Duchess of Cambridge in a few days, and take her departure for Germany.

Lady Westmoreland, with her family, left Vienna on the 30th ult. for England.

The Archduke Max, attended by the Austrian navy, has arrived at Naples, where he received a most flattering reception from his cousin the Queen, from King Bomba, and the Neapolitan nobles.

The Duchess of Montpensier, accompanied by the Duke of Montpensier, will visit England again next week. The object of their coming is to pass a short time with the ex-Queen of the French at Claremont.

The *Times* Vienna correspondent says that the King of Denmark has dropsy in the chest, and that the disease is slowly gaining ground.

Sir Charles Wood arrived at the Admiralty on Monday night, from Ireland, from his tour of inspection.

The French Emperor, by decrees of the 29th ult., has confirmed two nominations to the rank of Officer in the Legion of Honour, and thirteen to that of Knights of the same Order, made by General Pelissier in the Crimea; also the grant of twenty-six military medals by the same General.

The Duke of Buccleuch is about to build a splendid mansion in Whitehall, on the site of Montague House. The cost, it is estimated, will be upwards of £100,000. Mr. Burn, of Edinburgh, architect, has drawn up the plans.

The King of Prussia has sanctioned an extension till September, 1856, of the free importation of corn and flour, the right of which would otherwise expire on the 30th September, 1855.

It is not believed that Abd-el-Kader will visit Paris soon. He is said to be seriously ill of cholera at Marseilles.

The Court of Directors of the East India Company have appointed Mr. William Ritchie, of the Calcutta bar, to be Acting Advocate-General of India during the absence of Mr. Prinsep, with the reversion of the office when a vacancy occurs.

The sculptor Rauch has just completed the monument of the late Ernest Augustus, King of Hanover. The dead monarch lies on the sarcophagus in an Ducal dress, watched by four angels, two praying and two sleeping.

The Rev. William Vaughan, "Bishop Elect of Plymouth," is to be consecrated at Clifton, on Sunday, 16th Sept. He is in his forty-first year, and is nephew to the late Cardinal Weld.

Three pupils of the Heversham Grammar Schools, named Cowell, Rigby, and Goodwin, were recently drowned while bathing in Heversham Mere.

The surveys of the projected railway from Aberdeen to Inverness are now completed, and the average cost is estimated, for a single line of rails, at £8000 per mile.

A working engineer of the name of John Ross, residing in Montreal, claims to have discovered a new motive power which will waft a ship across the Atlantic Ocean in three days.

A monster bell is about to be hung in a wooden tower forty feet high, close to the police-station in the Southampton-dock, to sound an alarm in case of fire breaking out amongst the shipping or warehouses in the docks. The bell will weigh 6 cwt.

The total arrivals of specie during the month of August amounted to £1,387,361; of which sum only £436,028 came from Australia. The recorded shipments during the same period amount to £1,184,086.

Letters from Jassy give a most flourishing account of the present state of Moldavia citing in proof of it the wonderful harvest of the present year, which is stated to exceed all former ones.

Two youths named Edwin Lister and Robert Lister, brothers, have been found drowned in an exhausted clay-pit at Broad Pill, on the eastward side of the river Avon.

A New York paper has put forth an elaborate estimate that the United States and Canada together will this year have the enormous surplus of 77,200,000 bushels of wheat.

Next Session a bill will be brought forward for regulating the usage of banks and other marks, and to settle the rights and rules of the same, under the control of a public officer, to be called the Master of the Marks.

At the end of the present month Dover Castle will be closed as a prison for debtors, when those who are in custody will be removed to Maidstone County Jail.

The police books show that 741,374 foreigners visited Paris during the Queen's stay.

The number of persons who arrived at Southampton from various parts of the world during August, was 4263; giving an increase on the corresponding month in 1854 of 1033 persons.

The newest Muscovite dodge at Hamburg is to pack a couple of hundredweight of lead into the middle of a large cask of sugar, and it then passes through Prussia into Russia.

The Lake district has seldom been fuller of visitors than at the present time. At Keswick, Bowness, and Ambleside, numbers have been unable to obtain lodgings; and in other localities the demands upon the inns and private lodgings have been no less pressing.

The *Ocean Chief* made the passage from Liverpool to Hobart Town in seventy-two days—the quickest passage ever made.

Colonel Waugh has followed up his recent generosity to the Bournemouth Sanitarium by holding a grand bazaar at his manor residence, Branksea-castle, Poole, which commenced on Wednesday and terminated on Saturday last. Between £500 and £600 were realised.

M. Bach, Austrian Minister of the Interior, is expected in Paris.

Among other marks of consideration of which Madame Ristori has been the object in Paris, she had the honour to receive a special invitation for the late ball given to her Majesty Queen Victoria at the Hôtel de Ville.

The *Madrid Gazette* of the 27th ult. announces that the Carlist Chief, Del Pino, was killed lately in the neighbourhood of Bolxol, in Catalonia.

The *Dublin Evening Post* announces the arrival in Dublin of the library of the late Thomas Moore, presented by Mrs. Moore, as a memorial of her husband's taste and erudition, to the Royal Irish Academy.

M. Thalberg is at present at Rio Janeiro, where, by the last advices, he was about to give a series of six concerts.

The late Mr. Hope's splendid mansion in the Rue St. Dominique, Paris, on which he is said to have expended, from first to last, no less than six millions of francs, was sold a few days ago to Baron Soulieres, for the comparatively trifling sum of 1,892,050 f.

Mdlle. Rachel and her *troupe* have arrived in New York.

A number of enthusiastic archers propose to establish in Scotland an archery meeting on the basis of the "National Archery Meeting." The first assembling was to be held at Glasgow on the 4th inst.

Champollion's celebrated Calendar has, it is said, been discovered at Medinet Habou by an American traveller. A colossus of Ramses III. and a granite pavement are also advertised as found.

The *Messager de Bayonne*, in giving an account of some bull-fights which took place there on the 26th and 27th ult., remarks that the taste for those spectacles, formerly so strong there, is fast declining. The performers were received with loud invectives, and even missiles were thrown at them.

A deputation from the Scottish Temperance League is at present visiting the principal towns in Scotland, for the purpose of collecting statistics in reference to the operation of Forbes Mackenzie's Act.

The *Siècle* speaks of a project for bringing out a new journal in French and English, to be called the *Alliance Industrielle*. This paper will be the organ of the commercial interests of the two nations.

The *Midland Counties' Illustrated News*, a newspaper started in Birmingham a few weeks ago, price 2d., ceased to exist on Saturday last.

The Finland papers announce that, in consequence of the war the University of Helsingfors will be closed this year.

The electric light has not been approved of at Deal as a means of lighting streets, and the use of gas has been resumed.

The Royal rescript to the Danish Diet is published. It expressly guarantees civil and religious liberty, and the freedom of the press; also the right of association.

At the South Shields Brewster Sessions last week, the Bench declined to renew the license of parties keeping music saloons, the superintendent of police declaring that they were a source of crime and dissipation.

Upwards of fifteen thousand reaping machines have been manufactured and sold in the United States this year. The cost of these amounted to 3,000,000 dollars.

HER MAJESTY'S VISIT TO PARIS.—THE A

RIOMPHE DE L'ETOILE, ILLUMINATED.—(SEE PAGE 298.)

THE TRANSPORT AND COMMISSARIAT SERVICES IN THE CRIMEA.

(From our Artist and Special Correspondent)

SINCE the installation of Sir George Maclean in the place of General Filder, and since the arrival of Admiral Freemantle at Balaclava, questions arising out of the employment and uses of various transports-ships have been discussed, and afford matter for serious consideration. Not long since I noticed the continued stay in harbour of several ships, employed originally as transports, and used after their arrival in the Crimea as store-ships. I cannot pretend to say that an unavoidable expenditure has been incurred in the past use of these vessels as store-ships; but, leaving the past without comment, is it not time to put an end to a system which makes England pay £1000 a month for a ship that only contains 1400 tons of goods, when ample room exists on shore to erect storehouses, which could be put up at a cheap rate if there were hands sufficient to build them? This is no longer the time, indeed, to raise the old and burning question of labour in the Crimea. It has too long been proved that want of labour was the original cause of our misfortunes in the campaign, and that, had we been supported as we ought and might, the camp roads might have been made, the harbour of Balaclava might have been improved, and every measure taken to ensure the landing and transport of stores of every kind. The question of labour ought no longer to be, as the French say, "à l'ordre du jour." We can no longer admit any excuse on that ground, and if failures or omissions are still charged upon that score, the sooner ought they to be exposed, and the source of complaint dried up

One example amongst many of large ships lying idle at Balaclava, in the care of the Commissariat or Quartermaster-General, will suffice to enlighten you as to the losses incurred under the present system. The ship *Bucephalus*, transport 127, left England on the 23rd of September, 1854, and, after encountering extremely heavy weather on her voyage, reached Balaclava on the 20th of November. She was hauled into a berth in the harbour, where she lay until the 10th of December before it was thought necessary to commence discharging her. Her boats, it is true, had been employed in the mean time in the transport of sick from the wharves to the vessels appointed to receive them; boats at that time being much in request, and the size and capabilities of those belonging to large ships having much weight in the mind of the authorities when they decided on her movements. Perhaps, in truth, the great size of the long boat of the *Bucephalus*, and the use to which her other boats were constantly put, may be noted as causes for her detention in harbour. Be that as it may, the *Bucephalus* continued to discharge cargo until the 27th of December, when it was determined to use her as a store-ship, and the crew were daily occupied "taking in and discharging," whilst the boats plied between the sick wharves. Finally, the Commissariat having laden the ship with stores for which they had no present use, ordered the *Bucephalus* round to Kazatch Bay, where she lay from the 3rd of March to the 1st of June. Her employment during that time is best described in the words of her log-book, which for days together runs thus:—"March 10.—Light variable airs, fine clear weather; crew employed as most requisite, under boatswain." This employment of the crew, which consists mainly in washing decks, turning rigging, or spinning yarn, was all that the crew of a large ship of 1000 tons was put to do for three months; except, perhaps, the occasional order from some of the authorities to tow dead cattle out of the bay to sea.

On the 2nd of June the *Bucephalus* was taken into Balaclava again, and her cargo was discharged by order of the Commissariat. She was then transferred to the Quartermaster-General's department, whose active and excellent officer, Captain Gordon, proceeded to load her with blankets, boots and shoes, flannel, clothing, and other things not wanted for immediate use. These stores she discharges daily as they are required, taking in more to fill up the void made by the continual drain of the service Such is the routine of a store-ship in Balaclava

A few words now upon the question of expense. The ship itself costs £12,000 per annum. The stores which she takes in are, with considerable labour, landed from the vessel in which they have been brought from England, they are transported to the wharf in front of which the store-ship lies, and fatigue parties take them on board. They are stowed by the crew, and landed again when required In this process two or three operations are performed which would be needless if there were storehouses on shore. One transfer from the original carrying ship to the store of issue would be all the labour in one instance. In the present practice two transfers are necessary—the labour of carriage, tally, and accounts employs double the number of men really required, and the goods are exposed to wear and tear, equivalent to the certain loss of a portion of them. I point out these facts merely with a view that they may be remedied; and although captains of ships used as store-ships are prone to complain that they are picked out for this service for reasons unfair to themselves, the question must rest on a broader basis than this. At all events, whatever may be the grievances of the commanders of vessels so employed their complaints are amply counterbalanced by the satisfaction of the owners, who, instead of having a ship returned upon their hands to repair at a cost of perhaps £4000 or £5000, are glad to let her lie in harbour with sails unbent, rigging secure, and free from wear and tear, whilst the crew, diminished in number by sickness or desertion, cost no more than two-thirds of the expense required by a ship at sea. In all this the only sufferer is the public purse, which is ever ready to meet demands whether fairly incurred or not. I believe that—partly to meet the objections I have noticed, and partly because tonnage is lower in the market—it has been determined to force the sailing transport to serve at a lower cost than £1 per ton per month; and some vessels have consented to reduce their price to fifteen shillings; but this economy, desirable as it is, is not the only one that circumstances render possible, and reductions in the price of tonnage can be no excuse for the continued grievance of demurrage.

If we turn from the question of transports to those which more particularly concern the Commissariat, there are also many points which have lately been made the subject of inquiry. Standing some evenings since on the deck of a large ship moored to the quay at Balaclava, I observed a boat approach the shore deeply laden with white bags, some of which, having been broken in the carriage, exposed the contents—onions, destined for the army. Two men who were in the boat, having with some trouble piloted her under the maze of warps which stretch from the shore to the ships, lashed her alongside of the quay and left her. Shortly after this a large gang of Crosts was told off to land the bags of onions; and they began their work to the number of about thirty men. They were led by an old Crost, whose badge of authority was a stick. His first exercise of office was the laying out of a handkerchief which was instantly filled with onions. The leader having helped himself, the whole gang of Crosts did the same thing, and in the course of a few minutes the sacks were landed—minus, perhaps, the contents of four, which found their way into the pockets of the Crosts. It was ludicrous to notice some of these, stuffed all over with round protuberances utterly unaccountable as part of the human frame. Whilst this was proceeding a sentry stood over the place, whilst an officer of the Commissariat sat quietly by in a little wooden box, either unaware or pretending not to see what theft was taking place. I had the curiosity to land and speak to the sentry; who said that so long as the "gafer," as he called the Commissariat officer, was there, he could not interfere. "But," he added, "very few inions have this wharf when he goes, I can tell you." This scene is only one amongst many of a similar kind taking place all over the wharves. Sacks of barley are broken and unaccounted for; potatoes are missing in large numbers, and no one knows where they go to. I have no doubt, however, that the chiefs at the Commissariat-office are not answerable for all this; and still they have to answer for the disappearance of certain things; and then the question arises, how are the deficiencies in the potatoes, the onions, and the barley accounted for? There is the weather, which may be said to destroy many things on the wharves—that may be a fertile excuse for losses and thefts; then the water rises in the harbour with a south-west wind; breakages of sacks take place, and so an immense quantity of stores disappear; and the disappearance is probably accounted for in the same way that lost ships are—by the visitation of God." This forcibly reminds me of a scene I witnessed not long since between three soldiers, two of whom were heaving a cask of bottled beer on to a pack-mule. As they were doing so, a third joined the party, and thus addressed them:—"I say, mates, that's rather heavy." "It is." "I wonder it sin't had a fall yet." "It has had a fall." "But it sin't broken. Can't you make it fall again?" Of course the cask had a fall in a few minutes, and the soldiers had a drink. I should like to be able to give you the difference in the Commissariat accounts between the quantities of each species of provisions landed at Balaclava and the quantities issued. The quantities remaining in store would, if given, form the materials for a pretty little arithmetical problem, out of which you might deduce what is actually lost to the country by deficiences—no matter from what source arising—as they occur in the Crimea. The loss from deficiencies is calculated at seven millions sterling since the commencement of the war. How would private merchants stand this?

WAR OBITUARY.

(Continued from page 170.)

SHADFORTH (Colonel Thomas), of the 57th Regiment, was killed in the attack on the Redan on the 18th of June The following letter from his brother officer, Lieutenant-Colonel Warre, to Colonel Shadforth's widow affords a feeling and elegant testimony to the esteem with which Colonel Shadforth was regarded by his regiment, and the courage with which he led them to the assault:—

Camp before Sebastopol, July 18th.

My dear Mrs. Shadforth,—I trust the report from head-quarters will have prepared you to receive the painful intelligence it becomes my duty to convey to you. When I landed in the Crimea I regard all the officers and men of the 57th Regiment felt for our lamented Colonel, it is with unfeigned grief that I am obliged to inform you that he is no more. His gallant spirit fled while leading his men to the unfortunate and unsuccessful attack on the 18th of this day. As a soldier, his thirty years' service in the 57th Regiment has endeared him to officers and men. His remains were brought up by his assembled men, and they will be interred to-morrow, in the cemetery allotted to the Division, where our late Colonel Goldie and Lieut.-General Gumbart already rest in a soldier's grave. Pray accept my deepest sympathy and heartfelt condolence for your irreparable loss; and believe me your faithful servant,

HENRY J. WARRE, Lieut.-Col. 51st Regiment.

In citing us this letter is, one from Shadforth to his wife and children the night before he died the hero's death is more affecting still: a remarkable one that it is scarcely possible to peruse without tears, for it breathes the holy spirit of a Christian warrior, and displays in the modern soldier all the fervent pious chivalry of a St. Louis or a Sir Philip Sydney. In this beautiful letter Shadforth, the night before the assault, then takes leave of his family:—

Before Sebastopol, June 17, 9 p.m.

My own beloved Wife and dearly-beloved Children,—At one o'clock tomorrow morning I head the 57th to storm the Redan. It is, as I see, an awfully perilous moment to me; but I place myself in the hands of our Heavenly God, without whose will a sparrow cannot fall to the ground. I place my whole trust in Him. Should I fall in the performance of my duty, I fully rely on the promises, based on our Saviour, that I or mine, that I may be saved through Him. Pardon and forgive me, my beloved ones, for anything I may have said or done to cause you one moment's unhappiness. With God I commend my body and soul, which are His; and should it be His will that I fall in the performance of my duty, in the defence of my Queen and country, I most humbly say, "Thy will be done." God bless you and protect you; and my last prayer will be that He, of His infinite goodness, may preserve me to you. God ever bless you, my beloved Eliza and dearest children, and if we meet not again in this world, may we all meet in the mansion of our Heavenly Father, through Jesus Christ. God bless and protect you and ever believe me your affectionate husband and loving father,

THOMAS SHADFORTH.

A few hours after this was penned its writer was no more, but his own perfect valour, and the bereavement of those he loved so well, were not unnoticed Her Majesty, with an ever-anxious consideration for those who suffer in her cause, signed at once a warrant granting a pension of £300 a year to Mrs. Shadforth, and intimated that she will take advantage of any future opportunity which may occur to manifest her appreciation of Colonel Shadforth's services. Colonel Shadforth had hereditary connection with the 57th—his father, who was severely wounded at Albuera, having for thirty-two years served in it. Two of his brothers were also officers in the same regiment

TYLDEN (Colonel Richard), of the Royal Engineers, C.B., and Aide-de-Camp to the Queen, was born on the 22nd of November, 1819. He was the second son of the late Brigadier-General Tylden of the Royal Engineers, and Lucinda (his first wife), eldest daughter of William Baldwin, Esq., of Stade-hall, in the county of Kent. Colonel Tylden entered the Military Academy at Woolwich, as a Cadet, in 1834: he became a Colonel, a C.B., and Aide-de-Camp to the Queen, the 29th of June, 1855. After being on foreign service at Corfu in 1840, he was, in 1847, ordered to the Cape of Good Hope, where he remained until 1854. His service of five years at the Cape was highly distinguished. He there, with a small detachment of Sappers and Miners, about twenty mounted Burghers, and two or three hundred Fingoes, attacked and completely routed a body of 2000 Kaffirs under the warlike chief Sandilla, and thus secured the safety of the Amatola district entrusted to his command. This was the first and most successful general action with the Kaffirs during the war, and, speaking of this brilliant exploit, Sir Harry Smith thus expressed himself:—"If anything dashing is to be done, Tylden is the man to do it." At the close of the war Tylden got leave to return to England, but remained at home a very short time, he in three weeks from his arrival joined the Russian campaign as a Brigade Major. He was present at the landing of the army in the Crimea, and at the battle of the Alma, and two days after that battle he had the melancholy satisfaction of being with his gallant father when he died of cholera. On arriving before Sebastol Colonel Tylden had the command of the right British attack. From that time until he received his fatal wound he was never absent from the trenches, and was present at every skirmish and sortie that took place near his batteries, and particularly distinguished himself in the attack and capture of the enemy's rifle-pits and ambuscades in April last. In the attack of the 18th of June he was severely wounded in both legs, from the effects of which he died at Malta on the 2nd ult. His mother-in-law, Mrs. Burton Tylden, left England for the Crimea the very day she received the news of his being severely wounded, and had the melancholy satisfaction of being with him when his gallant spirit left his mangled body

HAMMET (Commander Lucon Usher), R.N., was killed in the trenches before Sebastopol, on the 17th August, whilst in command of the right attack of the batteries of the Naval Brigade. A cannon-shot struck him whilst he was gallantly encouraging his men to stand to their guns in the face of the severest fire from the Russian batteries. His premature death is much lamented by his brother officers, by whom he was deservedly beloved. Commander Hammet was present at the siege and capture of St. Jean d'Acre: and, in the last Burmese war, as First Lieutenant of the *Serpent*, of which ship he was for some time acting Commander, he served in the Baltic last year as Flag-Lieutenant to Admiral Plumridge, who mentioned him most honourably in his despatches. He was born July 5th, 1820, and was the youngest son of the late Mr. James Esdaile Hammet, banker, of Lombard-street, and descended, on the mother's side, from the ancient family of the Forsters, of Bamborough Castle, in Yorkshire. He was also nephew to that distinguished officer the late Admiral Sir Thomas Ussher.

PREPARATIONS FOR A WINTER CAMPAIGN. The Piedmontese Government is actively making arrangements for the demands of a winter campaign. It has already purchased two hundred wooden barracks at Marseilles, at the rate of 950 fr. a-piece, capable of lodging forty men each. These, however, are only intended for hospitals and stores. For the men it is likely that corrugated iron will be substituted for wood, by which a great saving will be effected, not only in the first cost, but in the freight to Balaclava, and the far greater portability of the material will considerably increase the chance of its reaching the Camp thence, while the risk from fire will be obviously much diminished. A barrack of this kind, large enough to hold two hundred men, would not weigh more than six tons, and might be put together with strong, rough materials by the men themselves in a few hours, and the expense would be little more than half that of the wooden huts. The objection generally made to iron has been that it is not so good a preservative from the changes of temperature as wood; but, as the great desideratum sought is to secure a good waterproof dwelling for soldiers in winter, and as iron is much better for this end than wood, and is so very much easier of carriage, besides not offering a temptation to consumption as fuel, it might be hoped that it would really be applied to the purpose for which it was sent out. In a model of one of these iron barracks, erected here for the inspection of the Government, there is a double tier of hammocks for the men, which very much economises space, and gives a more comfortable and healthier bed than the inclined-plane floors.—*Letter from Turin, Aug. 29.*

OBITUARY OF EMINENT PERSONS.

LIEUTENANT-GENERAL TICKELL.

LIEUTENANT-GENERAL RICHARD TICKELL, C.B., of the Bengal Engineers, died on the 3rd ult., at his residence, Ravensworth-lodge, Cheltenham, in his seventy-first year, having been born on the 10th of September, 1784. He was son of Thomas Tickell, Esq., of the county of Kildare, in Ireland, and great-grandson of Tickell the poet, who was the friend of Addison. He first entered the Army as Lieutenant of Artillery, in August, 1803; was promoted to a Second Lieutenancy in the Corps of Engineers on the last of September, 1803; and rose to the rank of Major-General on the 23rd of November, 1841; and of Lieutenant-General on the 11th of November, 1851. General Tickell served during the Mahratta campaign of 1804-5; was present at the battle of Deeg, siege and capture of that place, and pursuit of Holkar into the Punjaub under Lord Lake. He shared gloriously at various subsequent sieges and actions in India. Lieutenant-General Tickell was twice married, and leaves a widow and thirteen children to lament his loss.

FEARGUS O'CONNOR

This well-known political partisan died on the 30th ult., in the 60th year of his age. He was formerly, from 1832 to 1835, representative for the county of Cork, and was afterwards elected for the town of Nottingham in 1847. In Parliament he never had much influence, but by the violence of his declamation, and throughout the country by his demagogue speeches and agitation. To him the notable Land Scheme, so calam tous in its results, owed its existence; and in his great ovation of the 10th April, 1848, originated the famous muster of the special constables. At that time so formidable was the movement considered that the Government offices and the Bank of England were actually armed and fortified. Feargus O'Connor was second son of the late Roger O'Connor (the last tenant of Dangan, county Meath, the celebrated seat of the Wellesleys), and nephew of Arthur O'Connor, who was so deeply implicated in the Irish rebellion as to be compelled to expatriate himself. His grandfather, Roger Conner, Esq., of Connerville, co. Cork, who married Anne, sister of Lord Longueville, was fourth son of Will am Conner, Esq., of Connerville, M.P. for Bandon, and grandson of Dan el Conner, of Bandon, merchant, who realised a large fortune, and purchased considerable estates. The unfortunate gentleman whose death we record, was declared in 1853 by a commission *de lunatico inquirendo*, to be of unsound mind; and by the kind interference of a few friends he was placed with Dr Tuke, of Manor-house, Chiswick, whence he was recently removed by his sister, Miss O'Connor

In former years Mr. Feargus O'Connor was a member of the Irish bar, and the editor and proprietor of the *Northern Star*, a newspaper now defunct.

MAJOR-GENERAL SIR ROBERT NICKLE

NEWS has arrived of the death, in May last, of Major-General Sir Robert Nickle, Commander of the Forces at Melbourne. This gallant officer entered the Army in Dec., 1793, as Ensign in the 88th. In 1807 he volunteered and led the forlorn hope at Buenos Ayres, and was severely wounded in the assault. Two years afterwards he embarked with the 88th for the Peninsula, and served thr ughout the whole of the campaigns from 1809 to 1814. At Toulouse he received a dangerous wound; and, proceeding subsequently to America, he was again wounded, leading the advance across the Sarinac river. In 1837, when the insurrection broke out in Canada, Sir Robert Nickle went out to that colony; and in 1855 was appointed Commander of the Forces in Australia. There his energetic and conciliatory conduct rendered him a most remarkable degree to the quelling of the riots at the gold-diggings of Ballarat. From his first military exploit—the leading of the forlorn hope, before he was twenty-one—to the period of his death, at the age of ninety-two, his military career was eminently serviceable to his country and honourable to himself.

ADMIRAL EKINS

SIR CHARLES EKINS, Admiral of the Red, G.C.B., K.W.N., who died recently, at Bath, at the age of 78, was a son of the late Rear-Admiral Ekins, Dean of Carlisle. He entered the Navy in 1791, and was present at the action off the Dogger Bank, and at the relief of Gibraltar. In 1795, while commanding the *Ferret*, 14, he captured *Le Réconore* privateer. He became a Post Captain in 1796, and was appointed to the *Amphitrite* frigate, in which ship he took several privateers. He was at the reduction of Surinam in August, 1799; he obtained possession of the Devil's Islands, on the coast of Cayenne; and he assisted at the seizure of St. Martin's, in March, 1801. He subsequently escorted a convoy of two hundred sail from the West Indies, and commanded the defence in the Baltic, and wintered there on one occasion. In 1815, Captain Ekins was appointed to the *Serpent*, 78, and selected by Lord Exmouth to accompany him in the expedition to Algiers, where his activity and zeal placed him among the most conspicuous, and where he was for the second time wounded. For his conduct at Algiers he was created a C.B., and K.W.N. He was made a Rear-Admiral in 1819, was nominated K.C.B. in 1831, and enjoyed a good-service pension since 1851. In 1824 Admiral Ekins published his well-known work, "Naval Battles Reviewed." The gallant Admiral married, in 1810, a daughter of John A. Parlby, Esq., of Stone-hall, Devon, but left no family.

GENERAL TREMENHEERE

GENERAL TREMENHEERE, late of the Royal Marines, whose demise has been recently noticed, was the eldest officer in her Majesty's service, having received his commission in January, 1779. He served in the Dutch war in 1781, and was in the action of the Dogger Bank. He subsequently was employed in the West Indies, and was appointed Lieutenant-Governor of the island of Curaçoa, on its surrender to the British squadron under Lord Hugh Seymour, in 1794. He was afterwards engaged on the Jamaica station with the squadron under the command of Sir Richard Strachan. General Tremenheere was appointed, by William IV., one of his Aides-de-Camp, and was made a Knight of the Royal Hanoverian Guelphic Order. He also received a good-service pension of £300 a year

DR. FOX, PROVOST OF QUEEN'S COLLEGE.

THE Rev. Dr. Fox, Provost of Queen's College, Oxford, died at the Provost's lodgings, on the 4th ult., in the eighty-first year of his age. Dr. Fox never took any prominent part in University politics, and was rather of a retired character, but was greatly beloved by all in his College, to which he was warmly attached. Dr Fox was educated at St. Bees' School, Cumberland, whence he was elected on the foundation at Queen's College. He took his B.A. degree in 1795, and his M.A. in 1802. He was elected a Fellow of his College, and was for many years Senior Fellow on the foundation, and held it in conjunction with the headship of Northleach School. In 1827 he was elected Provost of Queen's College, on the death of Dr. Collinson; and shortly afterwards took the degrees of B.D. and D.D. He held the Provostship for twenty-eight years; and, at the time of his death, was one of the delegates of the press. Dr Fox, as a proof of his attachment to his place of education, as well as to his College, and his desire to benefit them permanently, founded an exhibition of the value of £30 per annum for natives of Cumberland or Westmoreland educated at the school at Bees.

COLONEL BLAKE.

COLONEL FREDERICK R. BLAKE, C.B., of the 33rd (the Duke of Wellington's) Regiment, died on the 24th ult., at Nottingdean, Sussex, where he had gone for the benefit of his health. The gallant Colonel was the second son of the late William Blake, Esq., of Danesbury, Herts. At the breaking out of the war he proceeded to the East in the command of his regiment, and at the battle of the Alma he led his men with brilliant and able daring. The Colonel continued to serve in the Camp before Sebastopol until his shattered health, combined with a severe attack of fever, compelled him to return home. The effects of the fever eventually proved fatal to him.

MISS LOVETT.

ELIZABETH, eldest and sole surviving daughter of the late Sir Jonathan Lovett, Bart., of Liscombe, Bucks, died on the 18th ult., at Liscombe House, in that county. At the demise of the late Sir Jonathan Lovett, of Liscombe, who was created a Baronet the 23rd October, 1781, and died the 13th January, 1812, leaving daughters only, the male representation of the Lovett family devolved on Sir Jonathan's uncle the Rev. Verney Lovett, D.D., of Kingswell, Vicar of Lismore and Chaplain to the Prince of Wales. It eventually came to Richard Donoghmore Lovett, Esq., the present heir male and representative. Miss Lovett, the subject of this notice, was the first who took the Buckinghamshire property under will, the canal having previously kept it in the direct male line for nearly 600 years.

*** In addition to the notice given of the late William Selwyn, Esq., Q.C., it should be stated that the eldest son of that learned and lamented lawyer is the Rev. W. Selwyn, B.D., Margaret Professor of Divinity in the University of Cambridge. Mr. Selwyn, Q.C., and three of his four sons were Chancellor's medallists, or the first classical scholars, in the University of Cambridge, each in his year, a circumstance probably unprecedented in any other family.

OFFICIAL DESPATCHES.

THE BATTLE OF THE TCHERNAYA.

War Department, Sept. 3, 1855.

Lord Panmure has this day received a despatch and its inclosures, of which the following are copies, addressed to his Lordship by General Simpson:

Before Sebastopol, Aug. 21, 1855.

My Lord, In my despatch of the 18th inst. I was unable to give as detailed an account of the part taken by the Sardinian troops in the battle of the Tchernaya as I could have obtained. I have since received from General La Marmora's report, of which I have now the honour to send you a copy. The killed and wounded of the Russian army exceed, if anything, the number I originally stated. An armistice was granted to enable the enemy to bury the dead, and 1,200 bodies were carried away.

The fire from the batteries of the Allies has been very effective, and the result attained has been sufficient to cause the works against the position to progress satisfactorily.

I beg to append the list of casualties to the 19th inst. Major McGowan, 93rd Highlanders, who was reported by me as missing, in my despatch of the 11th inst., I have since ascertained was attacked whilst pushing his sentries in advance of the trenches, wounded severely, and made prisoner.

I have, &c., JAMES SIMPSON,
The Lord Panmure, &c., &c., &c. General Commanding.

SARDINIAN ARMY.

Head-Quarters of the Expeditionary Forces on the East, Kadikoi, August 17, 1855.

SIR, The interest which you are so kind as to evince in everything relating to the Sardinian Expeditionary Army makes it imperative upon me to inform your Excellency of the share taken by the troops under my command in the engagement on the Tchernaya yesterday.

Upon receiving the report of General Dessanti, attached to the French head quarters, which you were good enough to communicate to me on the evening of the day before yesterday, and by which we were led to expect very sharp attacks on the line of the Tchernaya, I immediately gave orders that my troops should be under arms yesterday morning at an earlier hour than usual.

At break of day our outposts stationed on the Mamelon which commands Thouguin were engaged in a well-sustained fire of artillery, when presently there came three battered pieces upon the eastward by which our outposts were covered, and on the two Mamelons further to the right, with the fire from the two batteries of the Section. They were at the same time vigorously charged by three Russian columns, which came on with fixed bayonets, and attacked over the banks with the greatest zeal. The men composing the columns carried ladders with them to scale the parapets. The preconcerted signs of alarm was immediately given, and the troops took up the positions which had been assigned to them in anticipation of the attack.

I begged his Excellency Osman Pasha to bring up the Turkish troops which were stationed further off, and I ordered the fourth battalion of Riflemen (Bersaglieri) to the support of our outposts, which only consisted of three companies, in order that the latter might be enabled to hold their ground as long as possible, and thus give us time to complete our arrangements.

Attacked in the rear by the enemy's artillery, and charged by three columns of infantry, the outposts, after an obstinate fighting, fell back, the retrenchments and the batteries on the second height.

At the same time vigorously charged by three Russian columns, which came on with fixed bayonets, and attacked over the banks with the greatest zeal. The men composing the columns carried ladders with them to scale the parapets. The preconcerted signs of alarm was immediately given, and the troops took up the positions which had been assigned to them in anticipation of the attack.

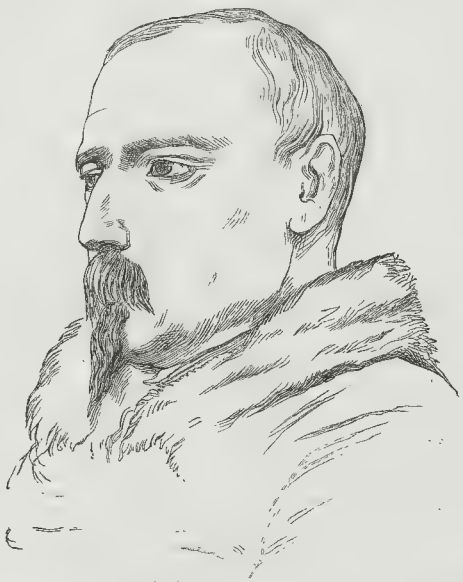
HER MAJESTY'S VISIT TO PARIS.—NOTRE DAME, FROM THE SEINE.—(SEE PAGE 236.)

THE ILLUSTRATED LONDON NEWS

No. 761.—VOL. XXVII.] SATURDAY, SEPTEMBER 15, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE FALL OF SEBASTOPOL.

THERE is no mistake this time. Sebastopol has fallen. The town is a mass of ruins. The Russian fleet—whose only achievements were to overawe Turkey, and to inflict the cowardly massacre of Sinope—has been burned by the victorious Allies, or sunk by the orders of Prince Gortschakoff. At daybreak on the 5th instant began the terrible bombardment—which Prince Gortschakoff, in a despatch to his Imperial master, profanely but tersely designates as a "fire of hell." It was continued without cessation the whole of the day. At night a Russian man-of-war in the harbour was set on fire by a shell, and burned to the water's edge. On the 6th the bombardment continued. On the 7th another Russian vessel was destroyed by the Allied fire; and during the night a violent explosion in the doomed city announced to the French and British that the work they had undertaken went bravely on. When day dawned on the 8th the flames of a vast conflagration were observed in the very centre of Sebastopol. At noon on the 8th—a day to be for ever memorable in the annals of Europe and of the world—the long-delayed and anxiously-expected assault upon the Malakoff was ordered by General Pelissier. Attacks were simultaneously made by the French upon the Careening Bay Redan and the Central Bastion; and by the British upon the Grand Redan. The French were repulsed from the Careening Bay Redan and the Central Bastion, and the British from the Grand Redan, and both suffered severe losses. But the glory of the day was in nowise dimmed by these casualties. They but showed the difficulty and the peril of the enterprise, and enhanced the splendour of the ultimate triumph. The assault of the French upon the Malakoff, brilliantly made, and desperately resisted, was entirely successful. They made good their position, and held it against the whole force that Prince Gortschakoff could bring against them. The struggle was hand to hand—the French fighting with the energy inspired by hope and the consciousness of a good cause, and the Russians with the obstinate courage of despair. But the bravest resistance—and it must be added that the Russians fought well—was useless against the dashing bravery of the French. The Malakoff was taken, and the fate of Sebastopol was sealed. The day closed upon a scene of such horror as history has rarely had occasion to recount. Finding it useless to continue resistance, the Russians determined to abandon the Southern side and to transport the remnant of their army to the North. By orders of Prince Gortschakoff, the mines were sprung in every direction; the town was set on fire in several places and utterly destroyed; the ships in the harbour were burned or scuttled, and an immense quantity of provisions and military stores were consumed.



GENERAL BOSQUET, THE CAPTOR OF THE MALAKOFF.—FROM A DRAWING BY E. ARMITAGE.
(SEE NEXT PAGE.)

All night long the lurid glare of the burning city illumined the French and British lines, and on the morning of the 9th it was found that the long-coveted prize of the war was a heap of ruins, that the Russians had totally evacuated the town, and destroyed the bridge of rafts which they had formed across the harbour within the last few weeks in anticipation of the inevitable catastrophe. So great was the haste with which this operation was effected, that they left not only their dead, but upwards of five hundred wounded men among the still smoking and burning rubbish. Such, in few words, is the history of this magnificent achievement—the news of which has caused every gallant heart in Great Britain and France to throb with patriotic emotion; and which will cause satisfaction scarcely less intense in every part of Europe. And not only in Europe, but in Asia, and along the immense frontier of the Russian empire, the news of the mighty deed will be received with exultation. The world has been relieved of an incubus. The dread spectre of Russian aggression no longer fills it with alarm; and none remain to deplore or regret the result, except the friends of tyranny and wrong, and the enemies of peace and justice.

Perhaps by the time this sheet is published the northern forts of Sebastopol will be in the possession of the Allies. But if not, their fate is none the less certain. However strong the forts may be, however obstinately the Russians may be determined to defend the last remnant of their insolent power, they cannot make an effective or a lengthened resistance. They are not only defeated and demoralised, but in a few days or hours will be hemmed in on every side. They must either

THE MALAKOFF TOWER, SKETCHED FROM THE OLD ADVANCED TRENCH, BY AN OFFICER OF THE 72ND HIGHLANDERS.—(SEE NEXT PAGE.)

surrender or be conquered by the slow process of starvation or the rapid one of the sword. It is idle to speculate on the next movement of the Allied forces. General Niprandi, with his army, have to be dealt with, and the northern forts have to be destroyed or taken—if they be not in the mean time evacuated by a foe, who is powerless to hold them. The public—greedy of victory as it is—will be content to await the next evolutions of the mighty game, certain, as all are, that the Generals and soldiers of France and England are more than equal to their task, and that the work so gloriously begun will be still more gloriously completed.

But of one thing the public and the rulers of the two nations must be jealously on their guard. The destruction of Sebastopol is a great peace movement; but it is no more than a "step in the right direction." It is not sufficient to put an end to the war. It is not defeat and humiliation enough for Russia. It has not crippled to the full extent the resources of the Czar. It has not inflicted such damage as to make it morally and physically certain that he or his successors—if allowed to escape without further disaster—will not on the first opportunity endeavour to wipe off the stain and take revenge for the dishonour. The duty of Europe is to insist upon ample security against the renewal of the war. If Russia be thrown back a century in her schemes of universal conquest and dominion, as we fervently trust she will, there will be a prospect at which such men as John Bright and Mr. Gladstone ought to rejoice if their peace-at-all-price theories will allow them to rejoice, at such things as the honour and the prosperity of their country,—there will be a prospect of peace for Europe for the next two or three generations, and the reconstitution of the European policy on a basis which will for the future render war as unlikely and preposterous between any of the States composing it as between Massachusetts and Missouri, or between Kent and Huntingdon. The danger is that this grand result may be impeded or prevented by the misjudging efforts of the friends of a sham peace, or by the ambition of such dastardly States as Austria and Prussia, who, having borne no portion of the heat and danger of the day, may attempt to act the part of mediators, when their mediation is not required. Neither these, nor any other Powers or persons, must be allowed on pretence of putting an end to the horrors of the struggle, to get up a pacification which would leave Russia with the power as well as the will to break loose on a future, and perhaps not remote, opportunity. England and France cannot fight against the secret thoughts and wishes of the Czars or of their people; but they can fight against the Muscovite power. They cannot restrain thought; but, by the blessing of Heaven on their just cause, and for the sake of a permanent peace, they can and they must—take efficient and sufficient security against the abuse of physical force. The neutrals must hold aloof; and the people of this country more especially must narrowly watch the conduct of their own public men, lest, for the sake of to-morrow's peace, they incur the risk of renewed and re-emlittered war the day after. If the Czar throw himself upon the mercy of his opponents, so be it. They will know in such an unexpected contingency, how to be merciful to the fallen as well as just to Europe and to themselves. But of such a result there is no immediate hope. The Czar, true to the traditionary policy of his dynasty, will doubtless continue to offer a sullen resistance. He will still, in all probability, defy the might of the Powers which have humiliated him; and will still endeavour, by means of the tricky diplomacy of his clever friends at Vienna and elsewhere, to sow disunion among his opponents. PERSEVERANCE—that is the only wise and merciful policy; and Perseverance will, in due time give the world a peace that will be worth having—a peace nobly acquired solidly guaranteed, and impossible to be broken without the condign punishment of the offender by the whole of Europe.

GENERAL BOSQUET.

THE two Generals to whom General Pelissier gives the credit for the successful assault of the Malakoff fort—the taking of which compelled the Russian evacuation of Sebastopol—are Generals Bosquet and McMahon—McMahon, is of Irish descent. Bosquet is in many respects a very remarkable man.

When the French army was marshalled for the expedition to the East, much was said of the obscurity of the Generals selected. Canrobert, Cavaignac, Lamoricière—the European names of the French army—were not appealed to, though it was supposed that in their patriotism they would forget and forgive the Empire; while the men on whom commands were bestowed were regarded as the creatures of Louis Napoleon, the creatures of an Emperor being generally assumed to be mediocrities. St. Arnaud had never done anything, in a military way, beyond chasing flying Arabs, and bombarding Parisian barricades on the 2nd of December. Canrobert, St. Arnaud's successor, was not distinguished as an unknown man; for he was known to be a useful officer. In Europe generally, and in England especially, a notion had got abroad that Louis Napoleon was resolute not to risk anything by opening a path of glory to any General of distinct capacity; and, moreover, that his Majesty would not employ any General of whose subservirncy to the Empire there could be any question. Now the employment of General Bosquet disproves both suppositions—the instance indicating the generosity and high-mindedness of the Emperor.

Bosquet, who obtained distinction (we are not sure whether it was at St. Cyr) as a Cadet, was early spoken of throughout the army as an officer of great promise. The young French officer is usually of a light, reckless character—his familiarity with the men not being calculated, however it may please him a favourite, to give him influence. Bosquet impressed himself on all around him by the solidity and repose of his manner, his cool judgment, and his firm will. When the Revolution of 1848 broke out he was among the first in the upper grades of the army to pronounce distinctly for the Republic. To that faith he has held with a consistency which, it must be admitted, was somewhat hazardous. When Louis Napoleon put the "Yes or No" to France, General Bosquet, with all his division, voted "No." This was heroic; it made him a great character in the army, it constituted the fondest hope of the Republicans. For the moment, however, it diminished the General's chances in his profession. He was placed en *disponibilité* relegated to retirement as deep as that of Lamoricière. When the expedition to the East was decided on it was but natural that that armament would come. But General Canrobert represented to the Emperor that his friend General Bosquet was an admirable soldier, if a bad politician, and that, as a politician, he opposed to the new dynasty had ended with his one vote. The Emperor pointed to the appeal, and nobly gave Bosquet a division. The army was united.

From the opening of the war he has distinguished himself. It was he who, with the French landed at Gallipoli, astonished the English by the judgment with which he displayed his organisation; rousing by said together the Turks, both lazy and bedeviled Turks; improvising a commissariat by spurring the Zouaves over the country; massing, naming, severing, surveying, re-sketching fortifications, cafés, restaurants, &c., &c. At Alma and at Inkerman, as at the last successful assault on Sebastopol, it was Général Bosquet's good fortune to be the man to do the important thing at the right moment. At the Alma he commanded on the extreme right of the French, and it will be remembered that it was his outflanking the Russians on the left on both sides of the battle, made a torrent of the Russian [illegible] the heights on the left. At Inkerman it was General Bosquet with his 6000 French who rushed to the relief of the British troops, and, with them, drove back and across the Tchernaya, on the north side, the masses of Russians. He had nothing to do with the late 18th June affair, so that his laurels are untarnished. To his intrepid and enduring daring in the last assault on the triply fortified Malakoff do we owe that "crowning mercy," the capture of Sebastopol.

There is no doubt that "luck" is with General Bosquet; it is his name which will be most associated in France with the great victory, and the future career of a man of such a character, of such antecedents, cannot but be eminent.

The accompanying Portrait is from a drawing recently made by Mr. Armitage for a large print, to be published shortly by Messrs. Gambart.

THE MALAKOFF TOWER.

(Sketched before the Recent Attack.)

WE are indebted to an officer of the 72nd Highlanders for the accompanying Sketch, taken from the right of the old advanced trench—the limit of our lines during the past winter. The hill leading up to the Malakoff is exceedingly steep at the sides of the ravine, running along its base; and the rocks jut out almost perpendicularly, rendering any approach very difficult. The embrasures of the Malakoff work are revetted with gabions, and beautifully finished showing the edges as clean and unbroken as possible. On the left of the work is a mortar battery, constructed on the edge of the inner ditch: the revetting (with barrels) is clearly shown, and this line continued shows the edge of the inner ditch; the outer ditch runs along near the line of abattis (constructed of trunks of trees, &c.), and down the side of the hill on the left in front of the lower batteries.

The extensive buildings at the foot of the hill are Russian Government storehouses; they are all painted white, and are of immense extent. Fort Constantine is shown firing at a steamer which has approached rather close. It has now only two lines of casemated embrasures, and the upper lines are earthen.

The trench running along the foot of the hill was formerly the Russian advanced trench, and extends on the left as far as the Quarry work. The next trench to it running up the face of the hill is French, and it joins the trenches pushed from the Mamelon as soon as the nature of the ground permits. The progress of the French attack on the Malakoff is shown by the way their trenches have been constructed, in spite of every obstacle, up the hill, zigzag after zigzag, continuing over the crest of the hill, and working round it.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

PREPARATIONS are being made all over Paris for a general illumination in honour of the events of Sebastopol, to take place this evening. The satisfaction with which the intelligence was received has unfortunately been much damped by the heavy loss of life which attended the success—though, indeed, such a consequence might have been reposed as inevitable.

It required an event of such universal interest and importance to efface here the impression made by the last attempt on the life of the Emperor an attempt, if possible, more rash, desperate, and inscrutable than that of Pianori. It having been *officiel* that the piece—the last representation of *Maria Stuarda*, by Madame Ristori—was by Imperial order, the intended assassin (whom the first accounts relative to the event erroneously stated as being of deranged intellect) stationed himself near the entrance to the private staircase leading to the Imperial box, and on the instant that the first carriage (containing three ladies of the household and a chamberlain of the Emperor) drove to the door, he rushed forward, and before any of the persons by one battalion of regular troops and some thousands of Bashi-bozouks. descended, approached so close as to place his hand on the carriage-door, and then fired off two pistols in rapid succession. Fortunately the arms were so small and insignificant as to be little capable of producing any very serious mischief even had the shots taken effect. The malefactor is a young man, about two-and-twenty, named Bellemarre, and was one of the prisoners of Belleisle lately pardoned. He is a shoemaker the same trade, it will be remembered, exercised by Pianori and is fair, with a long beard. On being arrested he was, in the first instance, taken to the shop of an upholsterer in the theatre itself. On being questioned, he declared that for years he had the intention of making the present attempt, and that it was only his detention at Belleisle—where he has been confined since 1851 for taking part in the events of that period, having been already in 1849 convicted of having displayed placards containing threats against the President of the Republic—that prevented his sooner executing his intention. An older man was arrested on suspicion at the same time as Bellemarre, but has since been liberated.

It is to be regretted that a Ministerial misunderstanding prevented the presence of Abd-el-Kader in Paris at the time of the Queen's visit; this was a source of serious disappointment to the Emir, who was extremely desirous to be on the spot at that period. Since his landing in France his health has been the subject of much uneasiness, and at one time it was feared that a fatal termination was near. It seems little likely that his present malady, which is complicated, and of some standing, can be long combated with success, the fatigues and mental trials of his remarkable career having seriously affected his constitution, still further acted upon by the *ennui* and forced inaction of his sojourn at Brousse. All honours have been shown to him since his landing in France; a secretary of the Affaires Etrangères was dispatched to greet his arrival, and a splendid hotel taken for him in Paris.

An old saying bids us not holloa till we are out of the wood. A short time since some young officers in Paris were rejoicing in public at having escaped, not the dangers, but the *ennui* and the hardships of the Crimean campaign, and congratulating themselves and each other on their good fortune with many jokes and *plaisanteries*. The result of this untimely triumph was an immediate order to start for Marseilles, *en route* for the Crimea.

It is now generally stated that the Exhibition will be kept open till the end of November. This will be highly desirable, as in some degrees contributing to repair the ill effects resulting both to Paris and those foreigners who have not this season ventured to visit it, deterred by the highly-exaggerated accounts which many of the journals and other authorities continue to give of the difficulty of obtaining lodgings and living at any but the most extravagant prices. Certainly, before and at the period of the Queen's visit, it would have been difficult to overdo the description of these expenses; but within a week of her Majesty's departure all had fallen to a level as reasonable as can be expected with the dearness of a season where prices are high from the same causes that affect the rest of Europe. Indeed, at present, most of the foreigners who arrived for the earlier part of the season having departed, and a large proportion of the residents having gone out of town, many facilities are afforded to those visitors whose means would have rendered the excursion at an earlier period impossible.

On Saturday last Toulon suffered from one of those violent thunderstorms which have of late years been of such frequent occurrence during the later summer months. Some lives and much property were destroyed.

The cholera continues in Paris, but not to any very serious extent.

The works for beautifying and terminating the old and new Louvre are advancing rapidly. The trottoirs are being laid down, the foundations of the iron gates laid, and the statues arranged along the terrace.

A most interesting collection of autographs, from the cabinet of M. Duchesne *aîné*, Conservateur of the Department of Prints of the Imperial Library, has just been disposed of. Among these is a singular series of manuscript cartons on playing cards—the Processions of the Middle Ages—engravings and prints; "Les Entrées chez le Roi," and "L'Etiquette de la Cour de France"—quaint and highly interesting and unique scripts; a curious letter of Sophie Arnould, one of the *chansonnier*s of the Regency; a receipt on parchment, written and signed by Molière, whose autographs are peculiarly rare; and a large number of others no less valuable.

A new piece of Léon Gozlan's, entitled "Le Gâteau des Reines," has made its appearance at the Théâtre Francais with considerable success. It is founded on the incidents attending the marriage of Louis XV., and brings in the intrigues by which M. le Duc and Mdme. de Prie, his beautiful and vicious accomplice, achieved the event by which the former calculated on preserving his position. The piece is clever, and perfectly represented.

NAPLES AND THE WESTERN POWERS.

Austria is said to have again remonstrated in warm terms with the Neapolitan Government on the odious, tyrannical, and barbarous practices of the police authorities. Austria is perfectly aware that such conduct may provoke, and would justify, open resistance; and she naturally fears that insurrection, once begun in the south, would fly like wildfire all over the Peninsula. Disturbances in Italy would not be a very agreeable prospect for any one, but they would be for Austria particularly a serious complication. It is not said that the Neapolitan Government shows any disposition to modify its system.

A Paris correspondent of the *Indépendance Belge*, whose writings are generally considered semi-official, intimates that the state of politics in Greece and in Naples has engaged the serious attention of England and France. The explanations extorted from the Neapolitan Government on the insult offered to Mr. Pagan at the theatre, are considered as neither serious nor sincere. On no point has the Neapolitan Government given satisfaction to the repeated and frankly-expressed representation of the Western Powers which have again and again failed to recall the King of Naples to a proper sense of the obligations of neutrality. "The Western Powers cannot any longer tolerate positions so hostile to them. Engaged at a distance of eight hundred leagues in a war in which they have made immense sacrifices to conquer peace for Europe, they cannot allow in the rear of their army, on a road traversed by their convoys of provisions, the progressive organisation of hostilities which would render their situation still more difficult. The Governments of France and England have now decided to correct the hostile inclinations of Greece and Naples, and to relieve them of the annoyances which partially divert their attention from the grand enterprise they pursue in the Crimea. They have not spared counsels nor remonstrances, and they have voluntarily facilitated by their moderation the system of patience and forbearance which they have had the right to exact. But if their words are not heard—if diplomatic relations do not succeed—they have resolved to have recourse to all the means in their power to re-establish affairs in these two countries on such a footing as will enable them to devote all their energies to the war against Russia. There is reason to believe, however, that the Governments of Greece and Naples will render unnecessary the energetic and efficacious measures which the Allies are resolved to employ." The news of the great victory over the Russians ought to have a salutary effect in teaching King Bomba how little he can rely upon assistance from that quarter.

WAR IN ASIA.

The last advices from the seat of war on the Turkish frontier in Asia are contained in a letter from the correspondent of the *Gazette du Midi*, which confirms the intelligence already given of a success obtained by the Turks near Erzeroum. The Russian General, being desirous of dispatching a convoy to Gumri (Alexandropol), feigned an attack on Erzeroum in order to occupy the attention of the Turks. Unfortunately for him the column of convoy lost its way during the night, and came upon a Turkish battery, which immediately opened a smart fire of grape. The Russians were taken by surprise, and before they could beat a retreat, according to the despatches they lost one general and fifteen officers, and left 280 soldiers on the field. The intentions of General Mouravieff are difficult to understand. It is hard to tell why he burns on Erzeroum, which is defended only by one battalion of regular troops and some thousands of Bashi-bozouks. It is supposed that his movements are paralysed by the difficulty of getting supplies. Kars holds out well, with its garrison of 10,000 regulars, and a larger number of Bashi-bozouks, but the troops are full of courage and confidence in their commander. The *Presse d'Orient* repeats that the spirit of the troops at Kars is excellent, but that they cannot hold on unless they receive the supplies of food and ammunition demanded by Vassif Pacha. General Mouravieff is said to be still in the Soghanli High mountains, and Zarif Tchervetchide was marching on Van.

The *Presse d'Orient* of the 3rd inst. states that Omer Pacha has left for Varna, where he has to embark with 16,000 men. He intends going from that place to the Crimea, and thence to Batoum, where he will concentrate 40,000 men. The English Contingent had embarked for the Crimea.

THE RUSSIANS ON THE DANUBE.

We stated last week that from the naval preparations going forward in the Black Sea, there was good reason to believe that important operations would probably take place soon. The Russians seem to be apprehensive that their Danubian frontier will be the next point of attack. A letter from Bucharest, of the 31st inst., says:—

Within the last week large bodies of Russian troops have arrived and taken up a position on the swampy and unhealthy islands between the principal arm of the Danube, and the shore-batteries have been inspected and put in a good state of defence. Another fact is that the passable fords of the river are attentively watched and strongly guarded.

Now that the Russian Black Sea fleet is entirely destroyed, and that we have a number of gun-boats in that quarter, we may expect to hear some account of the Russian gun-boat flotilla on the Danube being destroyed, unless it has been taken to a place of safety.

AMERICA.

By the mail steamer *America*, which arrived at Liverpool on Sunday we have news from Boston to the 29th ult. The political news as regards the States is not very important. General Cass has published a letter in a Detroit paper, defining fully and clearly his views upon Know-Nothingism, and the power of Congress over the territories. He has no sympathy with the Know-Nothing organisation, none whatsoever; neither with the means it employs, nor the object it seeks to attain.

A dreadful accident happened on the Camden and Amboy Railroad, by which twenty three persons were killed and seventy were wounded amongst the latter is Senor Sir Arnaud, French Consul at Philadelphia, and several officers of the United States Coast Survey.

The intelligence from Mexico is important. Santa Anna left the city of Mexico on the 9th of August, signed his abdication at Perote, and proceeded to Vera Cruz, where he embarked on the 17th for Havannah. He was escorted in his flight by 2500 troops; but shortly after leaving the capital one third of them revolted, killed several of the officers, and then joined the revolutionists. On arriving at Vera Cruz another revolt broke out; but a single regiment continued faithful to their fallen chief, and the mutineers, vanquished, fled in confusion. With regard to the reconstruction of the Government, the intelligence is very brief. It appears however, that the plan of Alvarez has been adopted, and that General Carro is Provisional President, and General La Vega Commander-in-Chief of the army.

Further particulars received at New Orleans from Mexico confirm the news of the flight of Santa Anna, who left the capital on the pretence of quelling the insurrection in Vera Cruz. The office of the *Universal* and forty other buildings had been demolished by the populace during the excitement consequent upon Santa Anna's departure. The military interfered, killing forty persons and wounding a large number. The statue of Santa Anna had been torn down and trampled upon by the people. Delegates met in the city of Mexico on the 10th of August who chose General Carro President for six months, and also ordained the liberty of the press.

News from the Great Salt Lake City to the 1st ult. had come to hand. The grasshoppers had destroyed the third crop of grain and starvation or an abandonment of the settlements was the alternative presented to the Mormons. The death of Judge Kinney took place on the 29th of June on a march from Fort Bridger. It is said that Brigham Young is only awaiting the appointment of a successor to be appointed, Colonel Steptoe having virtually declined.

The Chicago *Tribune* of the 24th ult. says—"Revelations have been made to us by one who is entitled to know the designs of the Kinney expedition, which leave no room for doubt that a descent upon Cuba is the ultimate object of the party now at Greytown, and their friends and backers in the States. To this end they are now buying vessels, purchasing stores, and collecting recruits all along our Atlantic coast, though the latter are paid out principally in Louisiana and other slave States. Handbills are posted in the Cuban towns in New York and New Orleans, which promise the [illegible] of the funds [illegible] objects."

THE FALL OF SEBASTOPOL.

THE latest letters from the Camp before Sebastopol come no further down than the 1st inst. (last Saturday week) which was five days before the terrific bombardment began. It is interesting now to mark the hopes and fears of the writers, as they speculate on the probability of an assault and the chances of another repulse, which, had it taken place, would have been a far greater blow, after so much preparation, than that of the 18th of June. A very general belief seems to have prevailed that General Liprandi would make another attempt upon the Allied lines, but the result has proved how little ground there was for such an anticipation.

It was on the 5th inst. (last Wednesday week) that the bombardment commenced. Prince Gortschakoff, in a despatch of that evening, describes it in the following terms :—"This morning the enemy opened a very sharp fire on our right flank. Afterwards their fire was extended to the left. Our batteries replied with vigour. This evening the fire of the enemy has slackened." The Russian troops were assembled in large masses in the neighbourhood of the Malakoff that day, under the impression that the assault would take place. Our batteries must have made dreadful havoc among them, but nothing is said about that in the Russian bulletin. On Friday Prince Gortschakoff again telegraphs to St. Petersburg that the "*feu d'enfer*," as he afterwards described it, continues without intermission. "The bombardment against our right and left continues night and day, and, for the moment, is strong. We repair our works with success. To-day a strong cannonade was opened by the enemy at daybreak. By eleven o'clock it grew weaker."

On Saturday last, at noon precisely—twenty-four hours after this despatch had been sent off by the Russian Commander—the assault on the Malakoff took place. The Malakoff Tower, as our readers are aware, is the highest point of the fortifications which defended Sebastopol. It is flanked on either side by the Great Redan -the object of the English attack and the Redan of Careening Bay. Behind these forts the Russians had constructed a second line of formidable earthworks, heavily armed, which commanded all the works in front, with the exception of the Malakoff Tower, and this exception was due to the over care of the Russians, who, in their anxiety to strengthen the Malakoff, had built its works in three tiers, the one rising above the other, whereas the Redans were constructed only with one tier of guns. The consequence of this was, that when the French swarmed up to the first tier of the Malakoff, the second tier saved them from being hurt by the fire of the earthworks in the rear of the Tower; and, in like manner, when they attained the second tier, the third saved them in its turn. Consequently, thousands of French soldiers thronged its ramparts, protected from the Russian fire The combat raged on the flanks, where the enemy could only attack them with his musketry, and their own rifles and brilliant impetuosity were too much for him.

The assault on the Great Redan and the Central Bastion, which took place at a later hour on Saturday, was not so successful. It is true that the gallantry of the allied troops carried those works; but they had no sooner done so than they found themselves exposed to a terrific close fire of grape. The forts, built in one exposed tier, were open to the full range of that second line of earthworks, which the Russians had prepared so skilfully, and in vain our gallant men—in vain our chivalrous allies tried to hold their position. They would not retreat, but were swept away by the pitiless storm of grape. The tenacity of our struggle may be easily conceived when it is known that in carrying, and in endeavouring to hold, the Redan alone, the English loss amounted to two thousand men killed and wounded.

Our allies and we ourselves had, therefore, to retire from these points; but the Malakoff was in the hands of the French, and that was everything. The proof of this is in the result. The Russians set to work at once to burn and destroy. They sunk or burnt their ships, exploded mines in all directions, and raised such havoc, that General Pelissier described Sebastopol as one vast circle of conflagration. The Russians then escaped *en masse*, breaking the bridge they had recently constructed, and without time to carry off their killed and wounded, for whose removal Prince Gortschakoff was compelled to solicit an armistice.

We are still without any detailed account of this great victory. The total loss of the Allies is variously reported at from 6000 to 10,000 killed and wounded. We have elsewhere given the names of the English officers killed and wounded, from which it will be seen that the number killed on the 8th was 26 -precisely the same as at the Alma. The wounded officers number 114—which is 41 more than on that occasion. The regiments most deeply engaged, so far as the loss of officers may serve as a guide, were—first, the 28rd and 90th, of which the former has lost 2 officers killed and 12 wounded; and the latter, 3 killed and 11 wounded. Next comes the 30th, which has lost 3 killed and 7 wounded; the 89th, with 1 killed and 8 wounded; the 97th, with 4 killed and 5 wounded; and the 19th, with 8 wounded. The 7th and 77th, the 62nd and 55th, the 41st and 49th, the 1st and 3rd, it will be seen occupied an honourable position. The other regiments engaged were the 11th, 17th, 20th, 33rd, 34th, 47th, 63rd, and 95th. The Rifle Brigade has lost as many as 10 officers, 2 killed and 8 wounded. The Royal Engineers have lost 2, and the Royal Artillery 3 officers.

It was reported at first that there were three French Generals among the killed during the attack on Sebastopol. It is now said that there are four. The death of General de Salles, who made the attack on the Central Bastion, is not confirmed. The names of those killed are Generals Rivet, Le Breton, and Niol; and General de Marolles is missing. This last, it is feared, met his death from the explosion of a mine. General Couston is severely wounded, and the favourite Aide-de-Camp of General Pelissier mortally so.

The general opinion is that the Russians will not attempt to defend the forts on the north side of the bay, but they will probably blow them up and try to gain Perekop. Two divisions are said to have been sent to Eupatoria to intercept their passage, or to hasten their retreat.

On Wednesday morning General Simpson telegraphed that the enemy had destroyed the last few vessels of their Black Sea fleet, from which it may be inferred that they are likely to leave that quarter as speedily as possible.

As the telegraphic despatches from the Crimea contain all the precise intelligence which has yet been received of the great victory, we have given the whole of them :—

Crimea, Sept. 8.

Another Russian frigate was destroyed by fire, yesterday afternoon, in the Great Harbour of Sebastopol. A large fire is burning this morning about the middle of the town of Sebastopol. Last night, about five minutes past one o'clock, a great explosion took place, supposed to have been one of the enemy's magazines on the north side

On Monday afternoon the following two despatches from General Simpson announced that it was all over with Prince Gortschakoff, and the welcome news was accompanied by a brief despatch from Sir Edmund Lyons, which says: "During the night (Saturday) the Russians have sunk all the remainder of the line-of-battle ships in Sebastopol harbour"

[illegible] Crimea, September 8

Sebastopol is in possession of the Allies. The enemy during last night and this morning [illegible] on the north side, after exploding the [illegible] and setting fire to all vessels of war that [illegible] during the night, with the exception of [illegible] the harbour. The magazines on the north side are known [illegible]

Crimea, September 10.

The casualties, I regret to say, are somewhat heavy. No general officer killed. Names shall be sent as soon as possible.

FRENCH OFFICIAL DESPATCHES.

The following despatches from General Pelissier contain a greater number of particulars relating to the contest :—

The Crimea, Sept. 9, Eight p.m.

I have to-day secured that the enemy has sunk his steamers. His task of destruction was continued under the fire of our bombs. The successive explosions of mines all year only a less made it my duty to defer our entrance into the town, which presented only a vast focus of conflagration. Closely pressed, however, by our fire, Prince Gortschakoff has asked for an armistice to carry off the remaining of the wounded near Fort St. Paul; the bridge having, as a measure of precaution, been broken by his orders. I am collecting the statements of our loss, and you shall have the number as soon as it is known to me. All goes on well: we are watching the Tchernaya

Brancion Redoubt, Sept. 9, Three a.m.

The Karabelnaia and the south part of Sebastopol no longer exist. The enemy, perceiving our firm occupation of the Malakoff, flooded upon evacuating the place, after having destroyed and blown up by mines nearly all the defences. Having passed the night in the midst of my troops, I can assure you that everything in the Karabelnaia is blown up; and from what I could see the same must be the case in front of our left line of attack. This immense success does the greatest honour to our troops. I will send you a detailed account of our losses during the day, which, of so many obstinate combats, must be considerable. To-morrow I shall be able to form an estimate of the results of this great day's work, a great portion of the honours of which are due to Generals Bosquet and MacMahon. Everything is quiet on the Tchernaya, and we are watching there

Crimea, Monday, Sept. 10, Eleven at night.

To-day I have gone over the town of Sebastopol and its lines of defence. The imagination would strive in vain to realise the full extent of our victory; nothing short of actual inspection can on the spot could supply an idea of the extent and multiplicity of the works and material means of defence, which very far surpass all that is recorded in the history of war. The capture of the Malakoff, which compelled the enemy to fly before our sages, three times victorious, has placed in the hands of the Allies immense establishments and material, the importance of which it is impossible to estimate yet in detail. To-morrow (Tuesday) the troops will enter the Karabelnaia suburb and the town. Under their protection an Anglo-French commission will take an account of the material abandoned to us by the enemy.

Our soldiers are elate with joy

The *Moniteur* of Tuesday contains the following telegraphic despatch from Vice Admiral Bruat

The Crimea, Sept. 9, 10.15 a.m.

The assault upon the Malakoff Tower was made yesterday at noon, and later in the day on the Great Redan and its Central Bastion. A gale from the north kept the ships at anchor. The mortar-boats, to be enabled to fire, were obliged to enter Sebastopol Bay. They fired 600 shells against the Quarantine Bastion and Fort Alexander. The six English mortar-boats, also at anchor in Streletzka Bay, fired about the same number of shells. Last night violent explosions and vast conflagrations led us to believe that the Russians were evacuating the town. We ascertained to-day that the Russian vessels had been sunk. The bridge was covered with troops retiring to the north side. After eight o'clock the bridge was destroyed. Only a few steamers remain in the port, anchored near Fort Catherine. I approached the Quarantine batteries this morning, on board the *Brandon*, and as ordained myself that they are now evacuated. They have just blown up. Our soldiers have left their trenches and spread themselves in isolated groups on the ramparts of the town, which appears to be completely abandoned

SARDINIAN OFFICIAL DESPATCHES.

General Marmora reports from

Kadikoi, Sept. 9.

The general assault was made on Sebastopol yesterday. It was crowned by a brilliant success. The Malakoff Tower was taken by the *corps d'armée* of General Bosquet. Our soldiers, though they did not take part in the assault, had forty men killed and wounded in the trenches. The French and English assaulted with real heroism. During the night the Russians retired, after having burnt the town, and blown up the fortifications and buildings, and having sunk their last ships.

PRINCE GORTSCHAKOFF'S ACCOUNT.

The following despatch from Prince Gortschakoff, if the date be correct, shows that he was not in so great a hurry announcing his "extraordinary success" as the French General was. He says that the troops as if they were crossing over at the moment he sends off the despatch (ten p.m., Sept. 9), whereas the flight of the Russians must have taken place early on Sunday morning. Admiral Bruat says the bridge was destroyed at eight o'clock on sunday morning :—

Sebastopol, Sept. 9, Noon.

The enemy is constantly receiving fresh reinforcements of troops. The bombardment is fierce and violent

Ten p.m.

The garrison of Sebastopol, after sustaining an infernal fire, repulsed the enemy in six assaults, but could not drive him from the Korniloff Bastion (the Malakoff Tower). Our brave troops, who resisted to the last extremity, are now crossing over to the northern part of Sebastopol. The enemy found nothing in the southern part but blood-stained ruins. On the 9th, the passage of the garrison from the southern to the northern part was accomplished with extraordinary success, our loss on that occasion being but 100 men. I regret to say that we left nearly 500 men grievously wounded on the southern side.

OFFICIAL LIST OF BRITISH OFFICERS KILLED AND WOUNDED

War Department, Sept. 12, 1855.

Inclosed is a list of officers killed and wounded at Sebastopol, which Lord Panmure has this day received from General Simpson.

Lord Panmure thinks it right at the same time to observe, that in the transmission of the list by telegraph several mistakes occurred in the names of the officers wounded, and he cannot, therefore, hold himself responsible for its accuracy :—

KILLED

Lieutenants-Colonel Patullo, 90th Foot Caddy, 55th: Handcock, 97th.

Major Welchert, 97 a Foo

Captains J. C. N. Stevenson, 97th Foot; — Every, J. A. Lockhart, 41st; G. Hoshyer, 49th; A. A. Cox (Staff); W. B. G. A. Parker, 77th, H. W. Grogan, 88th, R. Preston, 90th; Hutton 97th; — Hammond, Rifle Brigade.

Lieutenants L. Blaksley, 33rd Foot, W. Wright, 0 Colt, 7th; R. H. Sommerville, D. Rynsky, 7th; H. Donovan, 33rd; A. D. Swift, T. Wilmer, 90th; D. M'Gregor, 97th; S. Ryder, Rifle Brigade

[illegible] 30th Foot

Deputy Assistant Commissary W. Hartle

DANGEROUSLY WOUNDED.

Lieutenants-Colonel T. H. Gough, 33rd Foot; J. Eman, 41st.

Majors F. F. Maude, 3rd Foot, H. H. Chapman, 34

Captains Sudley Royal Engineers; W. H. Poole, 23rd Foot; C. W. Lumley, 97th.

Lieutenants W. Kerr, 7 th, Foot; W. M. Jones, 7th; P. Godfrey, A. Goren, W. G. D. Massey, 19th, W. Tomlinson, 17th; L. O'Connor C. Beke, J. S. Holden, 33rd.

Ensign C. Mitchell, 49th Foot.

SLIGHTLY WOUNDED

Lieutenants Colonel B. Lysons 23rd Foo [illegible] Lindsay, 33rd; L. B. Tyler, 62nd; D. S. F Hay 3rd, 7th; F. Marvell, 88th; S. Hunt, 19th

Majors W. Rooke, 47th Foot; A. Cane, 34th; J. H. Kley, 47th.

Captains Perrot, 30th Foot, E. Burne, 49th; H. Hibbert J. Hickie, 7th; F Vane, 23rd, J. Bu ie, 77th; B. Man ower, 11, H. B rford, 88th; H. Grove, W. Twiss, J. Wade, H. Vaughan 90th; R. Ribb n, 97th [illegible] Royal Artillery

Lieutenants H. C. Hig [illegible]ston, Royal Engineers; C. Williams R. Caton, 1st Foot; M. Fiele, G. Sands, 30th; G. A. Morgan, W. Johnson, 34th; F. R. Cavendish, 41st; W. Downport, 62nd; R. Molesworth, 90th, A. C. Mills 23 J. Williamson, R. M. Darby, Fusiliers, 23rd; J. Trent 33rd, J. Laurie, N. Harris, 34 h, W. Cambert, E. Hepton, L. Scott, Watson, 55th M. Wynne, C. Knowles, 77th; H. Chamberlain, — Taylor, Royal Artillery.

Ensigns A. Leith, 3rd Foot, A. Mart n, 11th, C. Mc. Vicker, 88th.

SLIGHTLY WOUNDED.

Generals Van Straubenzee, Shirley [illegible]

Colonel Hon P. Herbert

Lieutenants-Colonel Mayleverer 39th Foot

Majors Campbell, 30th Foot; Pratt, 41st, Turner, 7th; Warden, 19th; J. H. King, 49th.

Wounded—Rifle Brigade

Captains G. Hood, Buchan [illegible] [illegible] [illegible]

SKETCHES IN THE CRIMEA.

THE VILLAGE OF BAIDAR.

and grand by its wildness of tree and rock. Small round portions of the latter, rolled down perhaps by the spring falls of snow, look like giants' games of bowls upon the green. The road, which seemed to stop abruptly at the base of the gorge, takes a sharp turn round and ascends the sides of the hills on the right in the most approved zigzag method. The views here obtained of Baidar and its vale are splendid; and the rocks which slope down towards them are found also to be bulwarks against the sea. The last curve of the road brings one in front of a large stone gate, which imitates in style and purpose that of Trajan on the Balkan. Beyond this gate the road runs along precipices which border on the sea, and sink their perpendicular sides into the deepest water. Here, for the assistance of our cavalry, which might be disturbed by parties coming from Aloushta, are five steamers of war, which cover with their guns every inch of the road. Nor is this an unnecessary precaution; for Colonel Peel has been pursued on the heights above by two or three regulars of Russian cavalry whilst reconnoitring the ground in person."

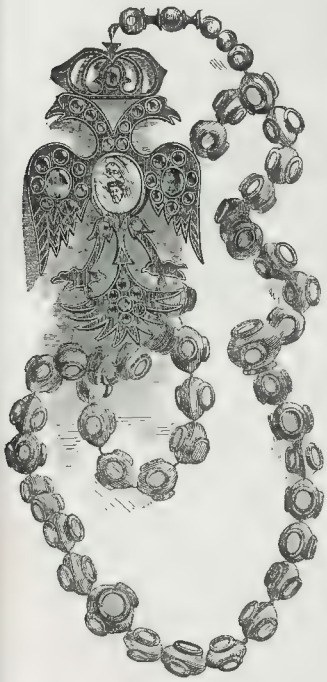
A letter from the Camp to a contemporary journal states:—

Since the late attack the French waggon train, which had been collecting the hay in the valley of the Baidar, have been continually on the move, according to the reports which reached us of the enemy's movements. Whenever the news came of an attack for the next day they fell back towards the valley of Varnutka, and occupied the wooded ridge which runs along from Bajuk Ma kousa down to Kaitou, and which separates this latter valley from that of Baidar. When again the rumour proved false they descended, and pushed forward reconnaissances to the heights towards Kokoulkoi and Mraoul These precautions became necessary on account of the large number of waggons and arabas which, having only the Woronzoff road to retire by, would run the risk of being captured should the Russians attack in force. Besides the French have lately brought over great part or their cattle to these valleys, where the grass is still plentiful, while the neighbourhood of Sebastopol is quite scorched. Notwithstanding their late frequent begirse the cattle have very much improved by this change, and have lost that skeleton look which they shared formerly with their comrades confined to the neighbourhood of the Monastery of St. George; but—I don't know whether from change of diet, or because they were already too far gone—many of them have died, and the two valleys, so sweet formerly, are now anything but sweet, for the carcasses are left lying about or thrown among the bushes without any attempt to bury them. If one remembers the host of these scavengers vultures to feast upon them. If one remembers the host of these scavengers which i feasted us during the winter this part it see us strange that there is not one seen now. Whether they have been disgusted by the numbers of paid Tartar and Great scavengers enlisted by the Allied armies, and feared to starve, or whether they found more choice morsels on the Russian side, where there may be likewise a good deal to excite their gluttony, or, lastly, whether they are driven away by the heat, I cannot tell.

THE ROAD TO BAIDAR.

RUSSIAN ROSARY, OR RELIQUARY.

This relic may be said to possess especial interest at the present moment. It is made of bone; the cross is formed of the double-headed eagle of Russia crowned, and makes a good Maltese cross. Around this bird, and following somewhat its shape, are thirty-two small openings, not pierced through, but made so as to receive relics, no doubt, of some favourite saint, and filled up with crystal or glass. There are, besides, two larger ones, and an oval, in which there is a small painting of the Virgin sup-



RUSSIAN ROSARY, OR RELIQUARY.

porting the head of our Saviour on a napkin; on the reverse is a corresponding oval, with a gold ornament and Latin inscription. The crown also bears a space for a relic.

The beads commence with four in the shape of a head and veil. The string is then composed of fifty-four beads, fifty of which are three-sided - not unlike the Brazil nut. In each of these sides is a circular panel for small subjects in relief, covered with crystal; a few are either lost or were never filled up. Between every tenth bead is a large four-sided bead, also containing a circular opening fitted with crystal.

THE WIND-MILL BEFORE SEBASTOPOL.

THE WINDMILL BEFORE SEBASTOPOL.

The Windmill here represented is a conspicuous landmark to the bewildered novice in the Crimea as he wanders among the broken ground where the Allied Camp has hitherto been pitched. Now that the town of Sebastopol has been deserted by the enemy, the Windmill will not be quite so notable a feature in the Crimean landscape. At the commencement of the siege this point was found to be fairly out of reach of the enemy's reshot, but it has not been so recently. In a letter from our Special Correspondent before Sebastopol, dated August 11, he says: "The Russians have resumed a habit in which they indulged at first; and at short intervals in the night the furthest camps of the Second and Light Divisions are visited by 34-pounders, which roll in among the tents, and far beyond the famed Windmill, up to which of old they had not been able to reach. Deserters from the Russians, of whom there are great numbers, tell us that guns which can no longer hold on their carriages, or have been condemned for other reasons, are imbedded in the ground, fired by a train of powder, and thus gifted with the tremendous force which enables the shot to be projected to a great distance without danger to the artillerymen."

PRINCE WORONZOW'S PALACE.

The whole of the south coast of the Crimean peninsula, with its romantic valleys and mountains, has been termed the Switzerland of Russia, while the pretty villages of the Tartars, with their tiny mosques and minarets, embosomed in the foliage of rich orchards, add a novel and peculiar feature to the scenery.

Upon the romantic coast, at Aloupka, Prince Woronzow has built a magnificent palace, on a spot where the rocks approach very near to the sea. Mr. Brierly, upon his return from Kertch, sketched this remarkable abode of the Prince, which Mr. Danby Seymour thus felicitously describes:—

The promontory or Ashdor is seen to the east jutting out into the sea, and giving a curve to the coast, which adds greatly to its beauty; while immediately behind the palace rises Mount Ai Petri, or Mount St. Peter, to a height of nearly four thousand feet.

The strata of schist, from the promontory to the mountain, may be seen rising in a great arch up to about thirteen hundred feet above the level of the sea, heaved up by the volcanic rocks which are seen beneath, and bearing on its stupendous span the limestone a gullies which form the mountain.

The palace of Aloupka is built after the design of Mr. Blore, the English architect, in the Moorish style, and was at first intended to be a small villa, which afterwards grew to be a vast palace. The whole exterior is faced with a green granite, which is extremely difficult to cut, but takes a beautiful polish. In consequence of the immense labour required to work it, the green sandstone from Nikita and Ourcouf, which is soft and of the same colour, has been used for the less important parts of the buildings. The palace stands at the height of about one hundred and fifty-five feet above the level of the sea, and the gardens descend to the shore. Behind it the mountains rise at once precipitously, so that there is no room for the stables, which were intended to have been built on the other side of the public road running close behind the palace. The gardens and the park extend to the east of it, where the view is more open, in the direction of Miskhor, and here cascades, and fountains, and lawns, and shady thickets, succeed one another. The vegetation is most luxuriant, and the trees grow to an enormous size. M. de Castelnau measured three walnut-trees, which were respectively sixteen, eighteen, and twenty-one feet in circumference; and an olive-tree, at four feet

PALACE OF PRINCE WORONZOW, ALOUPKA, ON THE SOUTHERN COAST OF THE CRIMEA

from the ground, measured eleven feet round; and several vines from two to three feet. There are also two remarkable cypresses, and to have been planted by Prince Potemkin, when the Empress Catherine visited the Crimea in 1787. In the midst of all this vegetation vast masses of granite rock are seen lying about, in some places piled into grottoes, or bordering the edges of a beautiful little lake, fed by the purest streams, and inhabited by a number of trout. Behind the garden the visitor is led to a very different scene, which is the solution of the whole enigma of the appearance of the surrounding country. Here is a large hollow basin, filled with masses of granite of every conceivable shape, both angular and rounded, forming the crater of a volcano, while around rise the perpendicular walls of schist, through which the fiery agent forced its way. There is a second crater like this near the village of Aloupka, and both have a depression on the south side next the sea. The explanation of these phenomena appears to be, that the granite formed a solid bed, which, by a violent commotion from underneath it, was broken and forced up to the point of eruption, and some of the blocks rolling down over the ground as far as the sea-shore, are scattered over the garden, and give to it so picturesque an appearance.

Such is the character of this singular spot which has been chosen by the venerable Prince Woronzow as his favourite residence, and in which he hoped to spend the declining years of his life. For the last twenty-five years he has been Governor-General of New Russia, and Governor of Bessarabia, and in 1844 was made Lieutenant of the Emperor in the Caucasian provinces, Commander-in-Chief of the army of the Caucasus, and Admiral of the Caspian Sea—so that he held the supreme command over all the country from Poland to Persia.

Since his assumption of the reins of government in the Caucasus the whole aspect of the country has changed. Towns have been built, roads made, peculation checked, honours and offices conferred on the officers, and the condition of the private soldiers greatly improved. The natives have been raised to a level with the Russians, and all have been alike treated with urbanity and respect.

CALENDAR FOR THE WEEK.

SUNDAY, Sept 16—15th Sunday after Trinity
MONDAY, 17—St Lambert
TUESDAY, 18—Martyrdom of the Seven Sons, 1810
WEDNESDAY, 19—Ember Week. Emmanuel executed, 1803.
THURSDAY, 20—Battle of Alma, 1854. Peace of Ryswick, 1697.
FRIDAY, 21—St Matthew
SATURDAY, 22—New Post-office opened, 1829

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING SEPTEMBER 22, 1855

LIST OF ENGRAVINGS

IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

Sketches in the Crimea
The Malakoff Tower, sketched from the Old Advanced Trench *page* 313
The Village of Baidar 316
The Road to Baidar 316
The Windmill left re Sebastopol 317
Palace of Prince Woronzow, Alupka, on the Southern Coast of the Crimea ... 317
The Battle of the Tchernaya—Attack upon the Sardinian Picket (page cut) 320
Ditto—The Conflict on Traktir-bridge (page cut) 321
The Camp at Kamiesch—Rue Napoleon (page cut) 328
The "Terrible" Steam Gun-boat 321
Portrait of General Bosquet, the Captor of the Malakoff 324
Russian Rosary, or Rehgary 317
The Fall of Sebastopol: The French Embassy at Aberd Gate Illuminated 324
Her Majesty's Visit to France
The Galerie des Glaces, in the Palace of Versailles (page cut) .. 329
Reception of her Majesty at the Paris Universal Exhibition 332
The Grand Ball at the Hôtel de Ville—Le Entrée (page cut) ... 333
The Grand Review in the Champ de Mars (two-page cut) . 336 337
Silver Statue of Napoleon I. 332
Bust of Napoleon III. 333
Sketches in the Baltic, by W. W. Carmichael:
The "Arrogant," "Magicienne," and "Cossack," with the Gunboat "Ruby," attacking Frederickshamn 340
Admiral Dundas, in the "Merlin," Surveying Sveaborg—Explosion of Infernal Machines 340
The Bombardment of Sveaborg—Burning the Sixty Gun-boat Sheds (page cut) 341
The New Bandstand, Llandudno, North Wales 341
Marble Statue of the late Duke of Wellington, just erected in the East-India House 325
The Doncaster Race Plate for 1855 325
Sir James Graham commencing the Silloth Railway 325

STORMING AND DESTRUCTION OF SEBASTOPOL AND THE RUSSIAN BLACK SEA FLEET.—We expect to receive, from J. A Crowe, Esq., and E. A. Goodall, Esq., in time for engraving in our next Number, Sketches of the leading incidents of the Great Victory by the Allied Armies over the Russians.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 15, 1855.

IN the hour of triumph, and when peace is so much nearer than it seemed to be but a fortnight ago, it may not be altogether useless to consider what in all probability the chances of peace would have been at this moment if Lord John Russell, Sir James Graham, Mr. Cobden, Mr. Gladstone, and Mr. Bright had had the direction of our affairs since the year 1853. Non-intervention in foreign politics is the avowed creed of some of the members of the Peace party; the non-necessity of intervention in this particular instance of the dispute between Russia and Turkey is the no less openly-avowed creed of others: while intervention by protocols and diplomacy only, but in no case by the *ultima ratio*, is the rule, which, if we are to believe them, would have guided the councils of another portion of the coalition of which Lord John Russell and Mr. Bright are the head and the tail. There was a point in the history of the war when the principles—if we may so call them—of these three different sections of the Peace party would have been in strict and intimate accordance; and that was in April last, when Lord John Russell—unfortunately for his own reputation and for the diplomatic credit of his country—was British Plenipotentiary at Vienna. At that time, according to the party in favour of a limited intervention in foreign policy, we had gone quite far enough, and were bound to withdraw on the terms proposed by Count Buol, and acceded to by Prince Gortschakoff and M. Titoff. According to the opinion of another section, we had no right, at that or any other time, to interfere in that particular quarrel, and were consequently bound to retire from it as best we might. According to the honester, but stupider, theory, of the ultra-Peacemongers, we had no more concern with that dispute, or any other international quarrel, than with the affairs of Timbuctoo or the moon; and were bound by still more cogent reasons to withdraw from it. So strongly were these persons enamoured of their own doctrine—so firmly were they persuaded that a regard for honour, safety, and material prosperity, alike counselled adherence to it—that they maintained it to be the duty of Great Britain to make peace on the terms proposed at Vienna, even though France should not be a party to the compromise.

Supposing—though the supposition is absurd enough—that such an agglomeration of Peace patriots had had the power to cause this great nation to adopt and act upon their policy—it would follow that France either would or would not have become a party to it. In the first case, if France—and we must beg the pardon of its clear-headed and resolute Emperor for indulging, even for the sake of argument, in a supposition so degrading—had, with this country, abandoned the defence of Turkey, and withdrawn his ships and armies from the Crimea, and his fleets from the Baltic, what would have been the state of Europe at this moment? We should in all likelihood have been at peace; but Russia would have been preparing for war. Sebastopol would have remained intact and uninjured; and from day to day would have been increased in strength, and stocked and replenished with matériel of war. The Black Sea fleet would have been in existence—sailing and steaming from shore to shore—making war upon the Circassians—overawing the Turks, and conveying stores and men for the construction of other forts as strong as Sebastopol itself, all useless for the defence of Russian territory, which no one would have been in a position to assail, and intended only for purposes of offence against the coveted Danubian provinces, or the still more ardently coveted city of Constantinople. War, though perhaps not raging, would have been imminent from day to day, and the names of Great Britain and France would have stunk in the nostrils of every nation in the world. Prussia and Austria—faithful to their friend the Czar, and conscious of the weakness of the Western Powers—would have entered into a league offensive and defensive with Russia, and the three combined would have been in a position to give the law to Europe. Popular freedom would have been crushed in the Central and Southern States; while France, in all probability, would have been exposed to the throes and perils of a new and bloodier revolution than any she had ever before experienced. Great Britain, having become an object of contempt, would have found herself, at no remote period, exposed to the attacks of a swarm of enemies. So sheep-like a nation could not, if true to her principles, attempt to make head against the wolves around her. The Americans would have debated the feasibility of taking possession, not only of Cuba, but of Jamaica, and the other West Indian Islands, and converting them into breeding-places for slaves—like Georgia and Carolina. In the East, every subjugated and tributary State of India—every fierce chieftain among the Sikh and Mahometan princes every potentate to whom British rule is galling or disagreeable, would have been on the watch to strike a blow for our expulsion. Our distant colonies, of Canada in one hemisphere and Australia in the other, having lost faith in our power and inclination to protect them, would have speculated on our approaching downfall, and taken means to secure their independence. Great Britain—so peaceable, so idolatrous of the ledger—would not, of course, seek occasion of quarrel. But what if Russia were so inclined? What if the United States desire to grasp her possessions? Where, in such a case, would be the peace for which we had made such sacrifices? Where would be the immense trade in cotton goods, which we had considered the be-all and the end-all of political and national existence? And where would be the freedom and civilisation not simply of these islands but of Europe?

But supposing that France had not joined with us, in allowing Russia to carry out her schemes of aggrandisement? What would our position have been then? France true to the generous instinct of her people, and the genius of her illustrious chief—would either have carried on her opposition single-handed, or sought allies among the populations and nationalities of Europe. We know how her appeals for assistance would have been answered in Italy, in Germany, in Hungary, and in Poland—perhaps, too, in Denmark, in Sweden, and in Finland. We know, too, what opinion France would have formed of England, and how justly the French would have been entitled to rank this country among the friends of Russia and of Absolutism. How long do the Peace party think, under such circumstances, we should have remained at peace with France? Peace, on the terms of the Peace party at that or any other time would have been war; and, what is worse than war itself it would have been war without honour, without principle, without hope, without the consciousness of a great cause, and with the hatred of all that was generous and true-hearted in Europe.

But, thanks to the public spirit of France and England, such a result was impossible. They persevered in the war, and peace, instead of being postponed for twenty or fifty years, and brought about at last by the degradation and ruin of two great nations, will be gathered out of the burning ruins of Sebastopol, and affirmed on a basis so solid that it shall defy Russia, and all her secret or open adherents, to overthrow it. The fall of Sebastopol and the destruction of the Russian navy in the Euxine, are arguments for peace that will work more strongly in the minds of the Czar Alexander, and his advisers and people, than all the protocols and treaties which the ingenuity of a thousand Buols, or a million of Brights and Gladstones could have formed or imagined. When peace is restored (and may the day be speedy of arrival!) we shall have to thank Marshal Pelissier and the gallant armies of Great Britain and France for a result which the members of the Peace party have done all in their power to prevent. The old spirit of Englishmen and Frenchmen is not quenched. The fire of generous feeling burns among them as brightly as ever; and by their alliance—cemented as it is by the brave blood poured out in such copious streams before Sebastopol—the two nations, loving peace for its own sake when it can be acquired with honour, will be enabled to maintain the foremost rank in the world. And while they are foremost, Peace and Civilisation will be foremost also.

AMID the grand events in the South, it is hardly to be expected that much attention will be given to some minor events of earlier date in the far North and East; and yet some of them are connected with what may prove the beginning of new and serious complications of interest. To dispose, in the first place, of the least important, we learn, by despatches from Rear-Admiral Bruce, the Commander-in-Chief of our squadron in the Pacific, that in May he appeared before Petropaulovski, the Russian fortress on the Kamschatkan Sea, which on the 1st and 4th September last resisted the attack of the French and English—in connection with which affair a melancholy instance of self-destruction indicated a commander's unfitness for his responsible office. Rear-Admiral Bruce states that no resistance was, upon this occasion, offered; for that the Russians had, some weeks before his arrival, cut through the ice and escaped—the garrison, three ships, and two transports thus getting away. On the 30th May he took possession, abstaining from all damage to the town, but destroying the batteries, which had been greatly increased and strengthened, with a view to further resistance, had not orders from St. Petersburg enjoined the evacuation of the place. Another Russian stronghold is therefore swept away. But here all satisfaction ends. The escape of the vessels from our powerful force, whose vigilance might have been expected to be extreme, and exerted rationally, and with knowledge of what was going on upon the coast, has yet to be explained by those who permitted it. In the meantime we shall not prejudge a case in which the efficiency, if not the honour, of brave men is involved.

Russian aggression is never idle, whether in the heart of Europe among the mountains of Asia, the bleak shores of the North, or the undeveloped resources of the Eastern Seas. Russia has planted her foot firmly in the Chinese Empire, and the recent troubles in those regions have enabled her to secure her *locus standi*. Any reader who will turn to the map of Asia, and, carrying his eye from the Sea of Japan northwards, will trace the coasts of Mandchouria and Saghalianoula upwards, nearly to the extremity of the strait formed by that coast and Saghalian, will observe that a river of importance empties itself into that strait, its mouths nobly protected by Saghalian from the swell of the Pacific. This is the river Amoor, which traverses the above coasts, and enters the Russian territory in the province of Irkoutsk. The mouth of this magnificent river is, as the crow flies, a thousand miles from the boundary of Russia; but the latter has taken possession of it, and erected powerful fortifications there, by which means an admirable communication is kept up between the Pacific and Siberia. To this place of refuge the garrison and ships of Petropaulovski have been allowed to escape, and the resources of Russia, at the Amoor mouth, have been strengthened by the addition of some 1500 men.

The obstinate and systematic aggression practised by Russia is thus illustrated anew at the very moment that we hear of its tremendous chastisement elsewhere. Nothing could be more judicious and farsighted than this last encroachment, which enables the Government of St. Petersburg to protect at once it Asiatic and American possessions. And when it is added that an angle of this river, Amoor, touches at a point a few hundred miles only from Pekin, it is unnecessary to say what eventuality Russia might have had in mind when erecting her fortifications. For the moment, however, it is quite enough to observe, as Europe now may do, that by an unheeded act of aggression, as unjustifiable as the passage of the Pruth, Russia has silently secured "right of way" through China to the Pacific.

We hope to hear that Rear-Admiral Bruce, having discovered the retreat of those who ought now to be his prisoners, has followed them to the mouth of the Amoor, and, supposing the improbable fact that he is furnished with such weapons as will enable him to reduce the forts, that a British *caveat* has been entered against the Russian assertion of right. Where the Russian vessels could go, the English frigates can probably go also. But we are not very sanguine on the subject. The Rear-Admiral seems to think it a circumstance to the credit of our captains that they have actually sailed to Petropaulovski, though it is 2000 miles off their regular beat. Certainly, 2000 miles are a long way, but if the voyage is made for nothing—the feat is rather that of those who reef and steer, than that of "the service." We will at present merely add that the sparing New Archangel (or Sitka), the capital of Russian America, under some readily-embraced understanding in which the Hudson's Bay Company is mixed up, does not evince any great readiness to strike, because the question does admit of some doubt, of which, in these days of cautious Admirals, it would be unfair to deny our Pacific commander the benefit. But if we hear that he has done at the mouth of the Amoor what was done at the mouth of the Danube, the country will perhaps be inclined to make him an exception to the doctrine just now unfortunately prevalent, namely, that our land-service has its heart in the work, and our sea-service its head only.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rural Deaneries:* The Rev J. P. Parkinson to Southesk and Sudburgh. No. 1. Rev. F. Martin to Southesk and Sudburgh. No. 2: Rev. W. P. Vyner to Calcewaite, No. 1; Rev. J. B. Travers to Calcewaite, No. 2; Rev. H. Holdsworth to North Holland: Rev. G. F. R. Bayley to Gartree; Rev. W. P. Worsley to Grafton; Rev. H. Maclean to Yarborough. Rev. W. Whitehote to Lafford; Rev. W. Milner to Horncastle. *Prebendary:* Rev. J. Simpson to Fenton, near York. Rev W. P. Pillpson to Bradley, near Great Grimsby, Lincolnshire; Rev. F. Bourchier to Woodbeding, near Midhurst, Sussex; Rev. J. Farr to All Saints' and St. Mary's, Chingham, near Beccles; Rev. J. Sanson to Ruddington, near Market Rasen; Rev. G. Hunter to Horsington, near Hornscastle; Rev. H. Werkly to Fleet Marston, near Aylesbury, Rev. J. B. Vale to Crostwright, near North Walsham, Norfolk. *Vicarages:* Rev J. T. Brown to Cockham, near Maidenhead; Rev. H. J. Hotham to St. Michael's Cambridge; Rev. H. J. Ellison to Windsor. Rev M F S nyth to Rathmell, near Giggleswick, Yorkshire. *Incumbencies:* Rev C Hayes to Brampton-Barlow, near Sheffield; Rev. J. S. Sergeant to Netherthorpe, near Sheffield; Rev. J. Miller to St. Paul's Church, Preston.

NEARLY £400 has been raised at Wells for a memorial to the late Rev Canon Barnard. It is proposed that it shall consist in the restoration of the parish church of St Cuthbert, and that a stained-glass window shall be placed in it, to the memory of the deceased, who was Vicar of the parish. The subscription, it is anticipated, will speedily amount to £1000.

EASTON-PARK.—A few days since her Grace the Duchess of Hamilton and the visitors now staying at Easton-park, Suffolk, honoured Mr. Clarke, of Easton, with a visit in respect of the same, and of paintings by the early masters, and also a large hall screen painted by Gainsborough, with rural scenes, including a portrait of the artist. They also inspected a pair of carved bed-posts, a carved chest (very fine), patent desk, a sea-box, carved with the martyrdom and burial of Saint Stephen, a tobacco ditto, the meeting of Joseph with his Father and Brethren, also various curiosities, including the Framlingham jug dated across the handle, 1561. With these several relics the visitors expressed themselves highly gratified.

FETE IN WELL VALE.—On Thursday week, the 30th ult., the members of the Mechanics' Institute at Alford and Louth enjoyed a delightful fete in the fine old park of Well Vale, near Alford. The Hall, a new occupied by Thos as Cartwright, Esq., through whose gardens and out of Mr. R pairs, the agent to the estate, the grounds were thrown open to the members of the institution. The amusements consisted of dancing on the green, foot-ball, quoits, cricket, &c. There were from 2000 to 2500 persons present.

THE COURT.

The Queen and Prince Albert, with the Royal children, arrived at Balmoral about seven o'clock in the evening on Friday se'nnight the journey to Banchory by railway was performed within the appointed time. Thence forward to her Majesty's Highland home the Royal party used relays of horses being provided at Aboyne and at Ballater. An immense number of the Marquis and Marchioness of Huntly, with their youthful family, were present, to pay their respects to the Sovereign; and at Ballater the clan of Mr. Farquharson of Invercauld rode out in full dress to receive the Queen.

The Queen and the Prince alone occupy apartments in the new palace of Balmoral, a covered way connecting them with the old building, in which the Royal children and the ladies and gentlemen of the Court are lodged.

On Saturday her Majesty and the Prince drove out in the vicinity of Balmoral.

On Sunday the Queen and his Royal Highness attended Divine service in the parish kirk of Crathie. The congregation received large additions from tourists in the neighbourhood, and there were not less than 500 persons present. The Rev. Professor Robert Lee, one of her Majesty's chaplains in Scotland, performed the service, and delivered an excellent discourse from Acts xvii. 30-1. The Royal children did not attend the kirk.

On Monday the Prince Consort went out shooting in the mountains near Balmoral. At ten o'clock in the evening her Majesty the Queen received the glorious intelligence that Sebastopol "was in the hands of the Allies." Her Majesty graciously directed that this intelligence should be generally communicated. His Royal Highness the Prince, attended by Earl Granville, Major-General the Hon. C. Grey, Colonel Bruce, Captain and R. Becker, Esq., immediately proceeded to the summit of Craig Gobhain, where a quantity of firewood had been collected. The joyful tidings had circulated rapidly through the neighbourhood, and the highlanders were seen approaching in groups on every direction. The main body was led by Ross, her Majesty's piper, late of the 42nd Highlanders, playing the favourite national air. A considerable number of which were reflected from the windows and walls of the Castle. The picturesque figures of the Highlanders, who had now collected in considerable numbers, were seen against the flaming beacon, and among the brave Armies of the Crimea" were drunk, whilst the air rang with enthusiastic cheers. Their Royal Highnesses the Prince of Wales and Prince Alfred, attended by Mr Gibbs, shortly after arrived. Her Majesty the Queen on several occasions sha...ed in the cheering, while the ladies of her Majesty's household, and the Duchess, is scarcely two miles distant from Balmoral.

The Court will return south on the 13th of October

Her Royal Highness the Duchess of Gloucester is enjoying good health at her residence in Richmond-park. On Tuesday her Royal Highness took carriage exercise.

The youngest daughter of the late Sir Robert Peel is about to be married to the Hon. Frances Stonor, second son of Lord Camoys

REJOICINGS AT WOOLWICH.—On Wednesday evening Lord Panmure had a visit to the Arsenal at Woolwich. He was hospitably entertained at General Dundas's house, and was received by the heads of the different departments, and after a short delay proceeded on a kind of visit of inspection through the workshops. In all the factories connected with the firing and discharge of artillery, the art of shot and shell, the artisans for the last three or four months have worked day and night, in order to complete the immense demands which the siege of Sebastopol and our operations in the Baltic have made upon the gigantic resources of the Arsenal. Lord Panmure passed through all the departments, glancing at each process as he went along; and after spending an hour there, the Lording proceeded to the new Repository at Woolwich Marshes, where a crowd of from 15,000 to 20,000 persons were already assembled. Shortly after ten o'clock the fireworks commenced, and from that hour until near midnight there was a constant succession of rockets, Roman candles, saxon rockets, star bombs, and fiery serpents in the air. Some of the figures of rockets were beautiful beyond all description, and were so disposed as to form a mimic representation of the Russian fleet in flames, and the destruction

THE BATTLE OF THE TCHERNAYA.—THE ATTACK UPON THE SARDINIAN PICKET.—(SEE PAGE 322.)

THE BATTLE OF THE TCHERNAYA.—THE CONFLICT ON TRAKTIR-BRIDGE.—(SEE PAGE)

THE BATTLE OF THE TCHERNAYA.

THE scene represented in the Engraving in page 320 took place at an early hour on the morning of the battle. The Russians made a regular assault upon the Sardinian picket, nearly half of whom were rendered *hors de combat* before reinforcements arrived. A good deal of hard fighting took place on this spot before the Sardinians withdrew for a time before the overwhelming numbers of the enemy.

It was in the neighbourhood of Traktir-bridge, which is represented on the preceding page, that the severest part of the struggle took place. The Russians crossed the river several times, by the bridge and by fording, but were repulsed by the fearful fire of the artillery, and, on gaining the sloping sides of the hills crowned by the French camps, by the fatal discharge of the French rifles. About half-past eight o'clock, as their columns were returning to the north side of the valley, a terrible discharge of congreve rockets poured into their ranks from the French position on the right flank, which committed great havoc among their numbers. The field of action on both sides of the Tchernaya, more especially for a wide distance round the Russian side of the Tchernaya-bridge, was strewed with killed and wounded troops and a great number of horses.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 13.

Month and Day	Corrected Barometer Reduced at 32°	Thermometer Highest	Thermometer Lowest	Mean Temperature of the Day	Departure Degrees of Temperature from Average	Degrees of Humidity	Direction of Wind	Rain in Inches.
Sept. 7	Inches. 30·441	69°	44°	55°	2°	84	N.	0·00

" 13	29·942	69·0	46·0	57°	1° 4	82	S.W.	0·24

Note.—The sign — denotes that the [illegible] is below the average. The number in the seventh column [illegible] that the variation of the Barometer as is represented by 100.

Rain.—The [illegible] fell on the 7th, 12 inches at the beginning of the week; on the 8th, 0·1 inch; on the 9th, 0·1 inch; on the 10th, 0·1 inch; on the 11th, 0·1 inch; on the 12th, 0·1 inch; and on the 13th, 0·24 inch; making a total fall of 0·64 inches.

The mean temperature of the week was 54·50—being 2·0 below the average of thirty-eight years.

The range of temperature during the week was 38·0—being the difference between the highest and lowest readings on the 8th.

The mean daily range of temperature during the week was 2· . The greatest was 38·0 on the 8th; and the least, 23°, on the 13th.

Rain fell early on the morning of the 13th, to the depth of rather more than two-tenths of an inch.

The Weather through out the week was for the most part fine, and the sky but slightly covered with cloud.

Lewisham, 14th September, 1855. JAMES GLAISHER

HEALTH OF LONDON. During the week ending last Saturday the births of 1577 children were registered in London, exceeding the average of the ten corresponding weeks of the ten preceding years by 163; the number of boys was 818, and of girls 774. The number of deaths was 1016, of whom 501 were males and 484 females, and is not large for a season in which the metropolis is always more unhealthy than in the autumn months. To diarrhœa 107 deaths are attributed; to cholera, 61; to small-pox, 14; to scarlet fever, 42; to hooping-cough, 31; and to typhus fever, 61. to diseases of the tubercular class, 138—to atrophy, caused by consumption; to diseases of the heart, 40; to diseases of the respiratory organs, 88; to diseases of the digestive organs, 58; and to violence, cold, privation, and intemperance, 36 deaths are referred.

TEMPERANCE CONFERENCE.—On Tuesday morning the annual Temperance Conference was held in St. Martin's-hall, Long-acre, at which delegates from several of the provincial towns were present, and many members of the London temperance league. Mr. W. Tweedie, solicitor at Leviges, presided. The proceedings had reference almost solely to the late and present Sunday Beer Bills, and to the steps to be taken to counteract the effect of the Conference to-day. It was resolved not to procure the closing of public-houses during the entire Sunday throughout the whole country. Several gentleman addressed the Conference, and resolutions were agreed to for the more complete organisation effected by the new Sunday beer Bill are calculated to increase intemperance and its accompanying evils, and are altogether unworthy of the Legislature and of a Christian country; that as the Sunday closing bill has made drunkenness to[illegible] place on Saturday night and on the evening of Sunday, it is important that petitions numer[illegible] should be prepared for presentation early in the next session of Parliament praying that the public-houses and beer-shops may be closed at ten o'clock on Saturday night, and remain closed the whole of Sunday in every part of the United Kingdom, and that strenuous exertions should be made to reduce as speedily as possible the number of public-houses, with a view to their utter extinction, so far as the sale of intoxicating liquors is concerned.

KENSINGTON GARDENS. Owing to the state of the weather these Gardens were crowded on Sunday last by visitors to hear the band, which played from four till six. The number present amounted to between 50,000 and 75,000, being greater than on any previous Sunday. On the 26th of August they amounted to 61,414, and on the 2nd inst., in consequence of the rain and cold, they reached only 43,855. The band will continue to play each Sunday in the present month from four till six, and will probably be then discontinued on account of the change of the season.

SEBASTOPOL AT CREMORNE GARDENS. We are glad to state, on the authority of the secretary to the Welsington College, that the accident which took place at the fête given at Cremorne Gardens, for the benefit of the College on the 19th ult., has proved to be less serious to the soldiers engaged than was anticipated. Of the wounded brothers most of the men were able to return to their duty in a few days after the accident, and it is expected that the others will soon be able to do so. The wife of one of the brothers, Mrs. Reed, is the lamentable exception. It is the opinion that the accident is not attributable to any defect in the arrangements made by Mr Simpson, the proprietor of the gardens, or to any want of care on his part. He has very generously given the proceeds of a fête to be given, on Monday next, at Cremorne Gardens, for the benefit of the wounded, and the widows and children of those troops who fell at the storming of the Redan.

HOSPITAL FOR CONSUMPTION, BROMPTON.—We are glad to state that at the committee of this excellent charity have opened the new wing of the hospital—rendered the more interesting by the association of its convalescent inhabitants with the Crimea. One hundred and twenty additional patients are now within its walls. Thus the long delay to which all patients for admission had to submit, exists no longer. The Sanatorium is devoted in all since, as we learn, be opened for the reception of convalescent patients on the list of next month. This branch will undoubtedly be of eminent use, and render charity complete in every respect.

SWIMMING.—On Tuesday evening last a grand display of the above art took place at the Albion Baths, Kingsland, when several prizes were competed for by some of the first swimmers of the day. After a most exciting contest the first prize for swimming was won by Mr. F. Stanley, beating Messrs. Rollins and Deane, second prize for fast swimming, by Mr. Jaques, beating Messrs. Gravely and Thomas. Professor Pepper then exhibited his extraordinary feats in diving, plunging, and scientific swimming, smoking, eating, and drinking under water, to the great astonishment of the spectators.

DESTRUCTIVE FIRE IN LAMBETH. The most extensive conflagration which has taken place in Lambeth for many years broke out on Tuesday morning in the premises of Messrs George Baker and Sons, Builders, New Stangate Wharf, near Lambeth Palace. The works, which comprise several acres of ground, comprised saw-mills, pan-planing mills, joiners' shops and carpenters' shops, and at the extremity on the south side there were large piles of mahogany and other timber, worth several thousand pounds. The fire was first discovered shortly after six in the morning, in the workshops adjoining the drying-house. Several engines were speedily on the spot, and were set to work, but the flames had by that time spread with such rapidity as to render all further attempts to save them, in spite of all the efforts of the firemen, the whole of the iron-planing mills and saw-mills were destroyed, joiners' and pressers' shops were entirely gutted, and the whole completely shattered, and several piles of mahogany and wainscoting, reduced to ashes. The greater portion of the valuable trees in the park adjoining the Archbishop of Canterbury's Palace were set on fire, and at eleven o'clock there seemed little chance of saving any on the eastern side. Fortunately the Palace did not receive the least injury, but the alarm amongst the domestics, especially while the eastern wall of the park fell, was exceedingly great. The loss is said to be at present unknown, but will reach to nearly £50,000. The workmen employed in the premises number about twenty-five hundred; upwards of £2000 worth of tools; and it is understood that none of them were insured. No less than 120 workmen have been temporarily thrown out of work.

COMPOSITORS' LIBRARY.—This institution was opened on Monday at No. 3, Racquet-court, Fleet-street; and from the catalogue before us we are glad to perceive that its shelves are graced by 2000 volumes of sterling literary merit. The strenuous efforts that have been made by the London compositors for the establishment of their library and reading-room are at length crowned with complete success. The committee have done justice to other bodies of workmen to "go and do likewise." This gratifying fact will be read with pleasure by those who are earnestly watching the varied social features of our present times, and hailed by the philanthropist and the friend of educational progress as a pleasing proof that there is a spring of improvement swelling irresistibly upwards. From the catalogue we perceive that many of the most valuable works have been presented by compositors themselves—a fact which says much for the literary taste and judgment of that numerous and important body. One of the most gratifying features of the institution is the liberality and liberality with which literary men and publishers have come forward to aid the onward progress of this good work, thus lending the high sanction of their names and social position to a movement which, if followed by other professions, may yet be destined to effect a great but peaceful change in the social condition and educational acquirements of the industrial classes of the community. The opening of such an institution as the Compositors' Library and Reading-room is a significant fact; and, let us hope, an example which will be speedily followed by other bodies of workmen—not only in this densely-populated metropolis, but throughout the length and breadth of the land. A great social problem is in course of solution; and the compositors of London may well feel proud of the distinguished literary and other aid which has been so generously and spontaneously afforded to them in their praiseworthy efforts at self-improvement. Among the noble patrons of this institution we perceive the names of the Earl of Harrowby, the Earl of Shaftesbury, Mr. Gladstone, Major-General T. P. Thompson, Messrs. Chambers, of Edinburgh, the Society for Promoting Christian Knowledge, and a number of other gentlemen whose names and influence are never wanting in the cause of educational progress. The canal gas before us is necessarily incomplete, as additions are being daily made to the library, but we don't not an improved edition will be speedily published. After the publication of the catalogue a magnificent donation of 16 volumes, of sterling merit, and unsolicited, was received from H.R.H. Prince Albert, affording another proof of the deep interest which his Royal Highness takes in everything affecting the welfare, intellectually or materially, of the working-classes. The peculiar feature of our times that, by a combination of rank and literary talent, a body of men like the compositors of London have been enabled, by their own untiring energy, to establish a library which will reflect credit on a body of much higher pretensions. All honour to those gentlemen who have stepped forward to aid this movement, and by their disinterested assistance have [illegible] the compositors in adopting as their motto "Manute et manu."

THE PUBLIC LIBRARIES ACT.—Mr. Anderton has given notice of motion, on the next Common Council day, "That the Lord Mayor be requested to convene a public meeting of all persons rated and assessed to the consolidated rate in the city of London, in order to determine whether the Public Libraries Act, 1855, shall be adopted in the said City."

FUNERAL OF MR. FEARGUS O'CONNOR.—On Monday the remains of the late Mr. Feargus O'Connor were buried in the cemetery at [illegible]. From an early hour the several places of meeting [illegible] Clerkenwell, Russell square, were crowded with persons anxious to witness the spectacle. Strong bodies of the Metropolitan and City police were in attendance, but strict orders were issued that they were not to interfere unless a breach of the peace was attempted. The line of route through which the procession passed was also thronged with spectators. Between eleven and twelve the procession, consisting of several thousands, was formed in Russell square, and moved thence in slow time to the Lodge. Notting-hill, the residence of Miss O'Connor, where the funeral procession was formed, and the remains of the late leader of the Chartists were conducted to Kensal green Cemetery. After the performance of the obsequies the assembled [illegible] addressed by several speakers, all of whom eulogised the intentions and the acts of the deceased.

DEATHS BY DROWNING IN THE THAMES.—On Monday there were no less than eight notices of bodies found in the Thames posted up at Bow street, they being rangers, and not identified.

EXTENSIVE ROBBERY FROM THE HOSPITALS AT SCUTARI AND PALACLAVA. At the Southwark police-court, on Monday last, a case was investigated wherein a woman named Jane Colson, who had lately been a nurse at Scutari and in the Crimea, was found in the possession of an immense quantity of linen, books, and other property belonging to the Crimean hospitals. Wolfe Farrell, it seems last Saturday week, some time in all Scotchwoman, forty-three years of age, who has been similar return a nurse in St. Thomas's Hospital was selected by Mrs. Sidney Herbert's recommendation for the East in consequence of [illegible], however, she was discharged for drunkenness, and sent home in disgrace. On Saturday night last, in consequence of information received, the police proceeded to Colson's residence in Bermondsey-street, Bermondsey, and there found a number of linen shirts, books, table-cloths, chemises, nightcaps, hospital shoes, &c.—all of which the prisoner said had been given to her. Her statements were very contradictory, but it was affirmed by a witness who had been a nurse in the East at the same time as the prisoner, that they were incorrect. The prisoner was remanded for a week, in order that communication might be made with the [illegible] and with Mrs. Sidney Herbert; but she was admitted to bail.

THE LATE EXTENSIVE ROBBERY IN GOLD AND NOTES. At the July session of the Central Criminal Court a young man named Dennis Ashburnham, who is very respectably connected, and who filled an office of trust in the establishment of a professional gentleman in the city, pleaded "guilty" to an indictment which charged him with stealing a sum of money—more than £2000—in notes and gold, the property of his employer. No sentence was passed upon the prisoner, in the expectation that he would, by giving information with regard to the property, or the means of its restitution, or, at all events, a considerable portion of it consisting of Bank of England notes—quite open to arrest, and justify the passing of a more lenient sentence than that usually inflicted for such an offence. The story he told eventually was, that he merely appropriated the sum of about sixty sovereigns to his own use, and he asserted that the remainder of the money consisting of the Bank notes was placed by him in a small black bag with some brickbats, and that he threw the bag over Westminster-bridge into the river. This story was not regarded as very probable, and consequently time was given for further inquiry. Since then the greater portion of the notes have been paid into the Bank of England, some of them having been traced to the prisoner, by the officers, in a very extraordinary manner. It is shown, therefore, quite clearly, that the prisoner has endeavoured in a most imprudent manner to deceive them by whom he was tried, and he will, consequently, be brought up for judgment next session, in the usual course.

ON Saturday last an inquest was held by Mr. Walday, upon the body of Mr. Ng. Wood, aged forty-two, who committed suicide by means of poison. Mr. Wood, who held a lucrative post in the mail department of the General Post-office, had applied to be elected to the head of that office, which had become vacant some months ago.

The result of the application was, that he was placed on probation for six months. During this period the unfortunate gentleman became very desponding, as he found out that he was not fitted to fill the onerous duties of the situation. As the time passed on he became gradually more and more depressed, and several times exclaimed, "It must be either insanity or prison." There was nothing beyond depression of spirits, however, that could induce his friends to suppose he would actually commit suicide. At the expiration of the probationary six months, on going to his office, he found that he was not confirmed in the appointment, not being considered sufficiently competent. He returned home to his house at St. John's-wood, completely broken-hearted, and retired to his bed-room about eight o'clock in the evening. About eight o'clock indeed his housekeeper to go up and call him; and, upon receiving no answer, she had the door opened. The deceased was then found lying on his bed in the above figure, but quite dead, life having been extinct for some time. A glass and a bottle, which had contained cyanide of potassium, used by the deceased for photographic purposes, was found by his bedside. From the smell of the contents of the bottle it appear that he had taken five or six ounces a quantity sufficient to kill fifty men. A small piece of paper was found near the body, on which was described the name of the deceased, and the money due to him by the Post-office. Verdict—"Insanity."

AWFUL ACCIDENT ON THE VERSAILLES RAILWAY. A most lamentable accident took place at eight o'clock on Sunday night, on the Versailles railway. The passenger train returning from Versailles came [illegible] on with a luggage train just come in the Paris Station, and actually cut it in two. Several carriages were broken to atoms, but the most unfortunate part of the affair is that several lives have been lost. Nine killed on the spot, and seventeen badly hurt, are already the numbers. It is supposed, however, that the number killed is at least fifteen, if not more, and over thirty persons wounded. To what fault the accident is to be attributed is not clearly made out. The Imperial engineer proceeded on Monday morning to the spot, accompanied by the judge d'instruction and the administrators of the line. The gendarmerie of police, assisted by the captain of the gendarmerie and his subalterns, also attended. The *procès-verbal* was made out, and the dead bodies deposited in one of the buildings of the station, in order that their friends should claim them. All were recognised. The wounded were, at their own desire, conveyed to their homes. A child only eighteen days old was killed in the arms of its mother, who had a leg fractured. The father saved the roof, and at the moment of peril he leaped on the ground and only received some contusions. Some hours after the accident the road was cleared of the remains of the carriages, and the two locomotives were dragged away by horses.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE glorious news brought to London on Monday last by the electric wire is about to send (so runs rumour) a whole cargo of artists and authors to the smouldering ruins of the Malakoff and the Redan. Publishers are preparing Handbooks to the Crimea, and photographers are adjusting and enlarging their apparatus so as to ensure accurate and ample representations of what the august Sebastopol has at last become. The ingenious and active Mr. Burford is making arrangements for a new panorama of the place; and Mr. Greave is busy devising new attractions, fresh from headquarters, for his attractive Gallery of Illustration. It will be difficult to satisfy the curiosity of the public with respect to this City of Ruins. Whatever is early and accurate will be purchased with avidity. Nor is it too late for the tourist (who starts immediately) to see Sebastopol under a warm Crimean sun. A grander and more suggestive sight than this blood-stained heap of ruins in the shape of what was once Sebastopol, it would indeed be difficult to imagine.

The present prospects of a firm and honourable peace will be the means, it is said, of loosening the purse-strings and unbolting the tills of the lending publishers. At this moment the capital invested by the Row and Albemarle-street in the preparation of works likely to endure is indistinguishably small. We cannot, indeed, hear of any one work in hand for which the projector looks for a sure return at a distant date. There has been an unwillingness to adventure. Whatever was published was flown as the kite of the day. The publisher either foresaw a small and immediate loss, or a large and immediate return. Every work has been published with a view to the Circulating Libraries. Mr. Mudie, since the war begun, has been the presiding deity among publishers—

His word [illegible] stows

If Mr. Mudie will take two hundred and fifty copies, a profit, it is said, is certain, and the book is a good book. Imprimatur—and the half yearly balance-sheet shows that the Mudie test was correct, and the venture a good one.

The propriety of collecting and publishing the far-famed "Noctes Ambrosianæ" of Wilson and Blackwood has been lately a leading subject of conversation in literary circles. The first volume has recently been issued, and the bulk of the critics speak for or against the work much as their personal predilections determine them. Those who knew John Scott, and Taylor, Hazlitt, and Leigh Hunt, are dead against the reproduction. Some of Mr. M'Culloch's over-warm admirers (no man has more friends) think the republication as altogether unnecessary. Men who have gone through the whole Puddleduck and Billingsgate of vituperation against others assume an air of indignant and moral regret at the reproduction of what they affect to think ought have been left to die out in its own rottenness. Others delight in the [illegible], from its playful wisdom, its genial sarcasm, its wit and humour. Some care for the "Noctes" solely for the Shepherd (a very happy portraiture and creation at the same time); while a larger number delight in the papers as an exhibition of the political and literary feeling of the period to which they relate. We confess to a full belief that the reprinting of the series is a service to literature; while we wonder that one literary oracle should be hardy enough to describe these inimitable papers as "insufferably tedious."

Covent-garden churchyard, rich in the remains of illustrious Englishmen, has presented a curious appearance during the present week. This celebrated burying place of poets, painters, and players, has been very properly closed against future interments. It is small, and is already the repository of more than two centuries of the inhabitants of this once-fashionable and always interesting locality of London. It was time, therefore, that it should be closed. But is it proper to move the tombs which remain? We think not. Many headstones which Old Mortality would have loved to restore have been and are still being taken away, each to tell its own *hac nacet* no one knows whither. There was the headstone of Edwin *Elite's* Edwin—which has often suggested many a pleasant thought to those who passed from the fruits and flowers of the market to sit in a reverie before his portrait in "the little G." How often have we heard our fathers speak of Edwin, and the pleasure they derived from his excellent acting. Now, since his headstone has gone nothing remains of him but a pleasant memory and his portrait at the Garrick. How true is it that monuments themselves memorials need. Yes, it is a suggestive sight which Covent garden churchyard is now presenting. It seems ready for an even coat of green grass, and, if London smoke will permit, it would look well. What fine fellows are lying beneath this mass of very corrupt earth, and in a very small space of ground! First of all there reposes Samuel Butler, the author of "Hudibras"—the inimitable in a species of poetry which he made for himself; there lies Sir Peter Lely, whose ready pencil has preserved to us the faces of the wits and beauties of the Court of King Charles II.; there rests Grinling Gibbons, whose skill carved graceful flowers in still more graceful festoons in lime-tree wood—as witness Windsor, St. Paul's, Hampton Court, Petworth Chatsworth, &c. Close by the side of Gibbons lies Sir Robert Strange, whose skill on copper was so marvellous in the rendering of flesh and human character. There lies "manly Wycherly," whose "Plain Dealer" has never been surpassed; and near to him lies Mrs. Centlivre, whose "Busy Body," and "Wonder" want actors and actresses, and not language, incident, and situation. There lies *Gentleman* Wilkes, Farquhar's only fitting representative; and Tom Davies' "very pretty wife," and old Wolcot, and older Macklin, together with an et cetera of good names as long as Homer's catalogue of ships. Surely their names should preserve their monuments.

We hope there is no truth whatever in a rumour—only too prevalent—that the road and bridge which are about to spoil St. James's-park (unless some active interference prevents so uncalled-for a barbarism) were designed by Sir Charles Barry, to assist the architecture of Bridgewater House and the new Houses of Parliament—two of his own pet buildings. It is proposed to be projected in a line from Marble yard in St. James's Palace, close to Bridgewater House, over the ornamental water into Great George-street, Westminster, and the new Houses of Parliament. If it be made, we may bid farewell to St. James's-park. The water will sink into a poisonous Rosamond's Pond, and the Park into a second Leicester-square. Why should we lessen a garden that is already too small? Why should we spoil what already requires improvement?

There is every prospect of our having this winter the first instalment of the collection of Southey's letters, which Mr. Warter, his son-in-law, has been collecting with such exemplary care. Southey is amongst our best letter-writers—better than Cowper, and quite as good as Gray. Pope's letters are not letters—but something better.

There is a talk among architects, that the State Paper Office in St. James's park is about to be raised a story. Another story would improve the building. When the State Paper Office was erected, low buildings were in fashion with King George the Fourth and his architects, Mr. Nash and Sir Robert Smirke. Now there is a different and a better taste

MISS LOVETT.—The late Miss Lovett, of Liscombe, Bucks, we understand, has devised her estates to trustees for the benefit of Phelips Cosby Lovett, Esq., for life, and then to his issue male. Mr Phelips Cosby Lovett is now in possession of the mansion and estates. Richard Digweed Lovett, Esq., stated in our last week's paper as being "the present heir-male and representative," takes no interest under Miss Lovett's will, and is not named in it. The baronetcy became extinct on the death of the late Sir Jonathan Lovett, in 1812

COLONIAL NEWSPAPERS. By the new postal regulations regarding newspapers, a penny each is charged on Colonial newspapers sent from one colony to another, and also on newspapers sent from one port in a colony to another port in the same colony. These regulations have caused dissatisfaction in the West Indies, because hitherto no such postal charge was those mentioned above have been made.

THE THEATRES.

SADLER'S WELLS.—The reopening of this theatre, under the conduct of Mr. Phelps, may be regarded as the commencement of the dramatic season. On Saturday this event was celebrated by the manager appearing in a new character—that of *Master Walter*, in Mr. Sheridan Knowles's play of "The Hunchback." Mr. Phelps has previously shown a penchant for eccentric characters, such as *Bottom*, and *Justice Shallow*; but these he has generally deferred to the latter end of a season. On the present occasion he has inaugurated the series of his performances with not only one but two eccentric assumptions, having adopted, on Monday, the Hunchback with the Bailie *Nicol Jarvie*, in the drama of "Rob Roy." In both he manifested intelligent peculiarities, by which his impersonations of these stage favourites are distinguished from the ordinary manner Mr. Phelps has a special aptitude for personal interpretations of old characters; and has always, in such experiments, succeeded in ensuring their being much talked of. In the first place a débutante (Miss Margaret Ebsmer) appeared in the character of *Julia*. This young lady has scarcely physique for parts of such *ambre*. Her voice, indeed, is altogether unequal to the strain upon it in the arduous situations of the later acts But she showed a commendable appreciation of their requirements, and an amount of mental exertion that could at least grapple with the difficulties that it would in vain surmount. A tendency to rant is inevitable under such circumstances; but this is a vice to which the fair artiste will have less temptation in *Yolos* more within the compass of her means; and it is to be hoped that the débutante will be hereafter exercised in a line of business in which she is better qualified to succeed. The house was fully attended. To night "The Tempest," which has been frequently well placed on these boards, will be revived. In due course we are promised a new historical tragedy, which we trust will prove a prosperous venture

PRINCESS'.—On Friday the revival of "Henry VIII." reached its hundreth night in one season. This is, perhaps, the largest run on record for such an experiment, and justifies the lavish expense bestowed on it by Mr. Kean. With this triumph the manager has appropriately and gracefully brought his season to a close.

STANDARD. This theatre commences its dramatic season with the return of Mr. James Anderson to its boards. On Tuesday was performed the tragedy of 'Iegomar," in which Mr. Anderson enacted the barbarian hero with admirable spirit and appropriate action.

LOVERS BEWARE.

A TRUE TALE OF THE POST-OFFICE

A FAMILY of respectability had resided for some time at one of our fashionable watering-places. The youngest and fairest of this family—we will call her Ida—has long felt a peculiar interest in a gallant fellow on board the—No! we will betray no secret—on board a ship lying in the harbour of Thalassa. Little have passers by thought, when observing the listless gaze of two dark eyes, shaded by "an ugly," that 3000 miles of ocean were being traversed in a barque built by Fancy and freighted by Love. Yet so it has been until the gentle heart of Ida swelled with her bosom, and could find relief only by unpacking itself in words, addressed in the neatest calligraphy to the loved and absent sailor. One of these [illegible] the tongue never could have uttered [illegible] in simply, but "Dear Ida," and many a watchful hour did the fair writer spend in recalling what she had there set down of hope and love, confident that he who was to receive those avowals would esteem them beyond all that was ever written by sage or poet. Three weeks had passed, when for the twelfth morning the postman had called, but left no letter for Ida or her friends—strange!

On the fourth day she thought she heard a name mentioned by the Government functionary which made her hear, beat quicker than it had done during a weary month up to that day. Was it—could it be—that the *did* ask for Mrs. Arthur Trevor—the name of the one she loved. To rush to the door was the impulse of a moment; and then she saw in the hands of her respected landlady a letter addressed to Mrs. Arthur Trevor (Yes! Her brain reeled (I believe that is the phrase) Was he false? Had he deceived her? Could he have married and she not know it? The suspense was too terrible. She tore open the envelope, and discovered—her own letter! What was the explanation of this mystery? Had not *three* days elapsed for the mountain dispatch-sail to the church's rites had been observed, and that "Your Ida" was the affianced wife of Arthur Trevor, to whom the letter was addressed? Remember, fond hearts at home, remember, that a letter from London to the Crimea requires three stamps only, but that from every other part of the kingdom you must attach four.
